The legislators who are responsible for this damage to honest working men and women under the guise of so-called reform, must be prepared, of course, to be held accountable for this action.

The true tragedy of this legislation is that it is class legislation, a concept that is alien to our free American traditions. And since it is class legislation, it will establish a dangerous precedent in our society. Those who now seek to weaken the economic effectiveness of the American labor movement will do well to remember that while this Congress can legislate against labor along class lines, another Congress, in another time, can just as easily legislate against business and industry along class lines. That is the true and tragic import of this antilabor class legislation.

A Visit to Taylor Tells Our Story

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. JOHNSON of Texas. Mr. President, an inspiring story of international cooperation and friendship appeared on August 23, 1959, in the Austin American-Statesman. An article entiled "A Visit to Taylor Tells Our Story" reveals a brand of good neighbor policy in the truest sense of the word—citizens of one country stretching out the hand of friendship to those of another—being practiced by the University of Texas in their orientation program for foreign students.

Mr. President, I think this article will be of great interest to all Members of Congress, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VISIT TO TAYLOR TELLS OUR STORY

(By Marj Wightman)

There was a time when the young men and women of those lands a thousand air miles to the south learned about Yanquis from books, newspapers and the products of Hollywood imagination.

They missed the taste of chicken barbecued Texas style.

A couple of days ago the citizens of Taylor plugged a few of those holes left by English language courses and the few American tourists who've braved the highlands of Chile or Peru. They took a busload of South Americans to their hearts and told them just a little about Texas.

It's all part of a University of Texas orientation program for foreign students, the kind of practical handshake that introduces people to people.

Forty-one young graduate students and professional people from Central and South America are spending 6 weeks at the university before scattering across country from Seattle to Boston. They are learning about America from the folks of central Texas.

Five years ago the Texas International Center introduced its first group of South American students to Los Estados Unidos. It tossed out most of the books and turned to people.

You can't roll the taste of catfish on your tongue by reading about it, or shoot color pictures of a rodeo parade you see in the movies or finger a cotton boll in a picture book. But, this is American life in central Texas.

And it will go home to Chile with Jorge Guzman as surely as his brand new Spanish literature degree from the University of Iowa.

Jorge is one of those 41 young men and women who saw the door to Taylor open wide on Thursday. They watched the tall green motorized cornpicker strip the stalks on the Julius Wittliff farm near Coupland, held their ears against the clank and whirr of a cotton gin, and took a hundred color shots of the little kids on big horses in the rodeo parade.

Then they ate barbecued chicken on the Dr. I. A. Shepherd lawn until they knew all American Rotarians were chosen for their ability to cook.

Next week they will scatter to 20 Texas towns from Grandview to Kingsville for a 4-day look at the people who make the wheels turn up in this part of the world. A medical student will live with a doctor, an education student with a teacher, and an electronic student with an engineer.

"We hope, in this way, to give these students a true picture of American life," Dr. Joe W. Neal, international center director, points out. "After 1 year or more of study up here, they will take home more than a degree; they will carry a true picture of America."

Between visits to Texas towns and chats with Texas people, the students go to class. Experts in language and research help them sharpen their English verbs and run the maze of the university library system. When they leave Austin for Dartmouth or Duke, Cornell or Kansas, these young men and women will already know much about Americans.

The Needs of the Aged

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. LEVERING. Mr. Speaker, there is one thing that is certain besides death and taxes. It is that, if we live long enough, we are going to get old and have to retire. The number of retired persons in our society now runs into the millions, and it is estimated that in just a few years, there will be some 20 million persons 65 years old and older.

Therefore, as can be expected, many of our very largest publications are taking a vital interest in the problems of the aged. The medical profession—which is responsible, in a certain sense, for the tremendous strides we have made in increasing life expectation in the United States—also is devoting more time and attention to the medical needs of the aged.

In Mount Vernon, Ohio, one of the most progressive little cities in the Nation, in my own 17th Congressional District, the Knox County Medical Auxiliary and YMCA Arts and Crafts, both sponsor the Golden Age Club for senior citizens to which my good friend, Mrs. Gordon Pumphrey, has devoted so much time and effort. This is only a part of the town's program for the people who are nearing retirement age, or past it, but it indicates what can be done in every town and city throughout the Nation.

Because of the great interest so many of my colleagues have in the problem of the aged, under leave granted to me, I am inserting in the Appendix of the RECORD two small articles from the AMA News, issue of August 24, 1959. These tell of two developments of primary interest to elderly people. The articles are as follows:

AGING HEARINGS TO BEGIN IN FALL

The Special Senate Subcommittee on Problems of the Aging charted more than a month of hearings at cities across the Nation to get an on-the-spot picture of how communities are tackling the financial, psychological, medical, and other difficulties that elderly persons may face.

The sessions will begin in the second week of October and carry through December. The tentative schedule calls for visits to Detroit and either Lansing or Grand Rapids, Mich., Miami, Fla., San Francisco, probably Boston, and major cities in Pennsylvania and West Virginia. More cities may be added later.

Senator PAT MCNAMARA, Democrat, of Michigan, subcommittee chairman, has said he planned to hear testimony from, among others, physicians on the progress of local medical societies toward solving problems of health care of the aged. He has declared that unless the problems can be solved locally and through private initiative, the Federal Government might have to take a hand.

Other members of the subcommittee are Senator JOSEPH CLARK, Democrat, of Pennsylvania; Senator JENNINGS RANDOLPH, Democrat, of West Virginia; Senator BARRY GOLDWATER, Republican, of Arizona; and Senator EVERETT M. DIRKSEN, Republican, of Illinois.

LIFE STRESSES NEEDS OF AGED

Action by the Federal Government in caring for the aged should be undertaken if individual families, communities, and States cannot meet the challenge.

This was suggested in a series of four articles on problems of the aged which appeared in Life magazine. The series began in the July 13 issue and concluded in the August 3 issue.

In the third article (July 27), Dr. Michael M. Dacso, director of physical medicine and rehabilitation at Goldwater Memorial Hospital, New York City, wrote:

"I believe there is one thing that both State and Federal Governments can do now. They can see to it that a sound concept of aging—taking the element of fear out of it and stressing the potential rewards—is presented throughout our educational system."

Christian Treatment of Unwelcome Guest

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. ROBERTSON. Mr. President, while there is a wide difference of opin-

ion concerning the wisdom of the President's invitation to the head of the Soviet Union to be his official guest in Washington and elsewhere in this country, there should be no difference of opinion concerning our traditional courtesy of treatment of foreign visitors. With that thought in view, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful letter to me dated September 2, 1959, from Mrs. John A. Wood in which she asks that those in the Nation who still believe in prayer will pray that the visit to this country of the Khrushchev party will not be marred by any untoward incident that might imperil the peace of the world.

Mrs. Wood is the wife of a distinguished retired Presbyterian minister and the mother-in-law of the late Dr. Peter Marshall who was one of the Senate's most distinguished and best beloved Chaplains.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EVERGREEN FARM,
Lincoln, Va., September 2, 1959.

Hon. A. WILLIS ROBERTSON,
U.S. Senate,
Washington, D.C.

DEAR SENATOR ROBERTSON: Ten years ago, shortly after the death of our son-in-law, Dr. Peter Marshall, you were wonderfully kind, and through your influence did much to aid us in placing Bibles in the public schools of Northampton County, on the eastern shore of Virginia. Following our correspondence, and the publishing of my letter in the CONGRESSIONAL RECORD, I believe you talked with my daughter, Catherine Marshall. I remember her saying that she shared the opinion that Peter had frequently expressed, that you were deeply interested in spiritual welfare, and were one of the most outstanding Christians among the fine group of leaders, who met together in the morning prayer meetings.

Peter's association with the men in the Senate during the years that he served as chaplain, changed his entire attitude toward your work, and the burden of responsibility that you carry.

This, no doubt, accounts largely for the persistent challenge back of this letter. Last week, after reading President Eisenhower's statement at his news conference (Washington Post, Wednesday, Aug. 26): "We are talking about the human race and what's going to happen to it." And as I have followed him closely through Germany, Great Britain, and France, and think of the forthcoming visit of Khrushchev to the United States, it seems to me that this is truly a dedicated effort toward world peace.

We all know that the Khrushchev visit is crucial. Since many of our difficulties with Russia seem to stem from a serious national inferiority complex on their part, any untoward incidents toward the Khrushchev party, either violence or merely psychological unfriendliness, might have frightening repercussions. I think, for instance, of all the minority groups in the nations whose relatives have suffered greatly in Europe.

The Christians know what it is to disagree with someone, yet grant him the courtesy of gracious hospitality. If we could achieve this Christian ideal during the Khrushchev visit, it just might be the turning point in the cold war.

I am convinced that this is the sort of situation where prayer might make all the difference. But those in the Nation who still believe in prayer, need leadership and need to have the prayer-effort pointed and directed by just such a leader as you are.

If this suggestion has any merit, your own inner convictions will tell you so, as also you will know what steps might be taken.

We are retired from the active pastorate now, and are greatly enjoying Evergreen Farm, 9 miles from Leesburg. It is a lovely old place which Catherine bought and had prepared for our retirement. If you or any small group wished to have a secluded spot in which to discuss such a matter, it would be our joy to have you. The farm is 1 hour, 15 minutes from Washington. In any case, I send my warmest good wishes to you.

Most cordially,

LEONORA W. WOOD.

The Fourth Seacoast

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. TOLLEFSON. Mr. Speaker, a forward-looking era in maritime transportation in North America has resulted from the opening of the St. Lawrence Seaway, carrying a potential of far-reaching benefits to all segments of our population. This revolutionary development has been described as the "Fourth Seacoast," and spokesmen for private enterprise and Governments of both the United States and Canada have emphasized the worthiness of the undertaking in question.

The current issue of the Grace Log contains a vivid description written by J. Peter Grace, one of the Nation's foremost authorities in this field of endeavor. It is commendable that Mr. Grace has focused his interests on this broad expansion, as he is possessed of a rich experience in dealing with questions relative to our internal activities as well as international relationships. W. R. Grace & Co. has long since gained prominence in its varied operations and continues to afford leadership in pursuits so vital to our national economy. The comment of Mr. Grace deserves widespread reading and is as follows:

The opening of the St. Lawrence Seaway is one of the most important landmarks in the history of world commerce. The trade routes that it creates will make a significant contribution to strengthening our economic ties with the nations of the free world and particularly with Latin America with which the Grace operation has been associated for over a century. We are, therefore, particularly proud that the Grace Line was selected by the Federal Maritime Board to establish the first U.S.-flag service between the Great Lakes and the Caribbean and north coast of South America. We look with considerable optimism to the development of trade over the new route between the industrial and agricultural heartland of the United States and Canada and the fast developing nations to the south.

In addition to an intensely interesting article by the Honorable George Hees, Minister of Transport of Canada, a statement by Chairman Clarence G. Morse of the Federal Maritime Board presents all of the salient features of this novel undertaking, and is worthy of the attention of citizens of the two countries, so particularly interested in this venture.

In order that widespread reading of Mr. Morse's statement can be afforded, I include for reprinting in the CONGRESSIONAL RECORD the article appearing in the Grace Log:

THE FOURTH SEACOAST

(By Clarence G. Morse, Chairman, Federal Maritime Board, Maritime Administrator, U.S. Department of Commerce)

The American merchant marine is doing a pioneering job in putting U.S.-flag service on the Great Lakes-St. Lawrence Seaway routes and, as is to be expected, trailblazing is rugged.

The completion of the seaway will open new opportunities for the privately owned American merchant marine along with the ships of our allied nations to serve the trade and commerce of the United States. With the opening of our fourth seacoast will come an increasing awareness by Americans of the fundamental necessity to support in larger measure the American-flag ships at their disposal.

Up to April of this year all of our overseas trade moving via the Great Lakes has been carried exclusively in foreign-flag ships. Foreign operators have been quick to recognize the potentialities and profitableness of this trade. In 1946, for example, there were only three lines, operating 12 ships, which carried a total of 27,000 long tons of imports and exports. Contrast these figures with the 17 lines that operated 95 ships and carried almost 500,000 long tons of cargo in 1957.

Despite the growth of this commerce, American-flag operators did not find it feasible to engage in this trade. The need for small specialized ships and higher American operating costs were militating factors.

As a result of the economic studies covering Great Lakes-oversea trade, which the Maritime Administration began some years ago, three trade routes were declared essential to the foreign commerce of the United States: Trade Route 32, between the Great Lakes and Western Europe; Trade Route 33, between the Great Lakes-Caribbean area; and Trade Route 34, embracing Great Lakes-Mediterranean commerce. Two other studies are in process that are concerned with the essentiality of trade between the Great Lakes and Africa on the one hand and South America on the other. Press reports indicate that some of the Japanese lines are taking a look at possible service between the Great Lakes and the Far East, despite the great distances involved, which suggests that no part of the world can be overlooked as a possible trading area by ships transiting the St. Lawrence Seaway.

The Federal Maritime Board approved and awarded contracts to Grace Lines, Inc., and American Export Lines to make up to 50 sailings from the lakes to the Caribbean and Mediterranean areas, commencing with the opening of the seaway. The lines will use 10 C-2 type freighters in this service pending their replacement with superior vessels.

Four other U.S. companies have applied to the Board for operating subsidy contracts covering 84 to 126 additional U.S.-flag ship sailings on the essential routes. These applications are being processed as quickly as possible.

The Great Lakes-St. Lawrence Seaway, like any new facility, presents many complex and unique problems, the solution of which can be found only in time and through experience.

We are now aware that it is going to take outstanding seamanship and business man-

agement to get this fourth seacoast venture on its sea legs.

To the credit of the American lines that are opening up this new fourth seacoast is the fact that they are doing a lot more than just complaining about conditions and inadequacies. They are carefully noting the difficulties they are encountering and they are constructively advising the governmental authorities involved of what must be done to make it possible for our essential Great Lakes routes to be properly, safely, and adequately serviced.

For instance, we have been put on notice that the Canadian approach walls and locks are unprotected in both the St. Lawrence area and the Welland Canal and as vessels are continually touching, scraping or landing against the solid concrete during transit, hull damage has resulted.

It is felt that this situation could be improved considerably by installing fenders on the approach walls, rubbing pieces in the locks and pile clusters off the end of the shorter walls opposite the regular mooring walls to provide structures to land on when wind is unfavorable for approaching the locks from the regular moored position. American locks already are fitted with fenders and rubbing pieces and it is reported to us that, to date, there has been no incidence of ship damage in either the Snell or the Eisenhower locks.

As we have said, the Great Lakes-St. Lawrence Seaway, like every other attempted improvement to transportation, brings with it new problems. Our ability to properly exploit any progressive advance lies in our adequacy to meet, overcome and perhaps even turn to our advantage its by-products of inconvenience and dislocation.

Great Lakes port facilities and stevedoring, from the reports which have been coming to us, are a study in paradoxes. Some facilities are excellent; others leave much to be desired. In general, we feel that it is a pity that more and better facilities are not on hand at all the ports to take the fullest possible advantage of this advent of ocean shipping. A great deal has been done. The early experiences point up the necessity for doing a great deal more until all Great Lakes ports have adequate berthing facilities, capable marine superintendents, necessary gear and equipment, trained and adequate stevedores and winch men.

We feel sure the experiences of American shipping lines to date indicate that adequate facilities, when provided, will be adequately used.

We are certain that private shipping and the governments involved will cooperate fully to bring the potential of the Great Lakes-St. Lawrence Seaway to full fruition.

Profile of a Distinguished Soldier

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. JOHNSON of Texas. Mr. President, recently the Houston (Tex.) Post published an article in profile of a distinguished soldier, Brig. Gen. Stephen D. McElroy of the Civil Air Patrol, based at Ellington Field in Texas. General McElroy has served his country with honor and ability, and he is a credit to his service.

Mr. President, I ask unanimous consent that an article from the Houston Post of August 25, 1959, entitled "General McElroy in City To Command Civil Air Patrol," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENERAL MCELROY IN CITY TO COMMAND CIVIL AIR PATROL

(By Nathan Broch)

A man who commands an "air force" that cannot be knocked out and one which gets by on an annual budget of only $1 million arrived Monday in Houston, the new nerve center for his organization.

Brig. Gen. Stephen D. McElroy, commander of the the Civil Air Patrol, which is now based at Ellington Air Force Base, heads 75,000 civilian volunteers who are in an organization that is one of the world's largest educational ventures.

Until recently the Civil Air Patrol headquarters was in Washington, D.C.

McElroy has flown more than 800 combat hours in World War II and Korea. He flew heavy bombers.

But this heavyweight experience has only sharpened his appreciation of "those little civilian planes" and their part in America's security and everyday life.

McElroy addressed the American Legion convention at Minneapolis over the weekend.

"I told them about the Civil Air Patrol," he said. "I told them about its accomplishments and shortcomings."

He clarified that the shortcomings of the organization are those "found in all volunteer groups—where shortcomings are also part of their strength."

The annual budget of the Civil Air Patrol runs to about $1 million. Of this, some $750,000 will be spent on salaries in Houston.

The "armada" under command of General McElroy is actually the Nation's "grassroots air force." It numbers around 6,000 planes of the smaller variety. All of these are privately owned. The pilots are citizens who are known as the "civilian arm of the Regular Air Force."

"It's the kind of an organization you simply can't knock out," McElroy said. "It's spread all over the country and also operates in Hawaii, Alaska, and Puerto Rico."

McElroy had his first contact with the Civil Air Patrol in World War II while on antisubmarine patrol along the eastern seaboard. Private flyers participated in these patrols and won the general's respect.

The general likes to emphasize that the Civil Air Patrol in its present form came into existence December 1, 1941—6 days before Pearl Harbor.

"The Civil Air Patrol is organized along military lines," McElroy said. "The Secretary of the Air Force has authorized Civil Air Patrol members to wear Air Force uniforms."

There are some 39,000 youths in the Civil Air Patrol. These are boys and girls between the ages of 14 and 19. The CAP also sponsors an international exchange program covering about 20 allied countries.

The McElroy family is currently making its home in an apartment on Cambridge Street. The Civil Air Patrol is making quarters for the family available on the base at Ellington.

Last month, two Air Force captains protested they were being evicted from their Ellington living quarters to make room for the general and his family.

McElroy, said Monday, "he was an innocent bystander in the matter of housing." He said, he had no knowledge of the captain's protest until I heard about it through the newspapers.

The two officers were Capts. Joe Saldinger and Paul F. Gilliland. They based their protest on the fact that they were vacating their Ellington quarters anyway by this week—Gilliland to be transferred to Washington, D.C., and Saldinger to civilian status.

One of the major functions of the Civil Air Patrol is educational, McElroy pointed out. Its message is aimed strongly at schoolteachers who are expected to pass it on to their pupils. This is designed to promote airmindedness among youngsters.

As chief of staff of the Air Force Academy at Denver, McElroy found the impact of this educational program. (He held that position until April of this year, when he assumed his present command.)

"The youngsters who had become interested in the Civil Air Patrol program during their years in high school were well prepared for the elements of military discipline they encountered at the Air Force Academy," General McElroy said. "Many of them had actually been Civil Air Patrol cadets before coming to the academy."

The general's only child, Stephen D., Jr., 15, is a Civil Air Patrol cadet.

The educational emphasis of the Civil Air Patrol is also expressed in the presence of 10 educators, all holding Ph. D. degrees, on the staff of the organization. Their job to acquaint the Nation's educators and the public in general with the objectives of the Civil Air Patrol. This is done through the publication of books and pamphlets and the making of films.

The Farmer Is Still an Important Citizen

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. BREEDING. Mr. Speaker, because it pertains to the present-day farmer and his importance to the American way of life, I feel the following editorial, which appeared in the August 30 edition of the Kansas City Star, worthy of serious consideration and trust every Member of Congress will take a few minutes to read it:

THE FARMER IS STILL AN IMPORTANT CITIZEN

As we near the end of summer, this growing season is producing crops that approach last year's alltime record. Let's take our hats off to the farmer and take a good look at what he is doing for this country. For the moment let's deemphasize agriculture's price troubles.

The farm problem has dominated the agricultural scene for so long that it has become almost a legend. The public has become accustomed to day-by-day argument over farm programs, surpluses, subsidies, and parity. No wonder many people who are not fully familiar with the situation look upon the farmer as a man who can't run his own business and one who is always looking for a handout from the Government.

He does have his troubles, let's not deny it. But does America have any greater asset than its farmers?

Food is more important to the human race than any other product. In America, we haven't the slightest worry about where it is coming from. A great highway building program, industrial expansion, the production of luxury items, all can be undertaken with confidence in adequate manpower. Each year more and more people can be

spared from the farm. This isn't true in many countries.

If our major worry were producing enough food we couldn't spare the manpower to turn out the many things that are a part of the modern American way of everyday living. Even in war, this country has not gone hungry. It has been the breadbasket for its allies.

Our farmers are producing this abundance with fewer and fewer workers. In the earliest years of the Nation, nearly all people were farmers. A man, who had the help of his family, produced enough for that family. Today's farmer produces enough for himself and 23 other persons. This point can't be overemphasized. If we are to be an industrial nation, these other 23 people must have plenty of food and fiber. Economic progress halts whenever a nation fails to produce the necessities of life with less and less labor.

The farm surpluses, troublesome to farmers and the Government, are in effect insurance. We are virtually guaranteed an abundance for months and years ahead. These surpluses bear down upon farm prices. It is ironic that the farm efficiency which produces the surpluses is so often costly to the farmer. In effect the farmer pays for the insurance against hunger in this country instead of collecting on it at the marketplace. We don't want continued surpluses that are too big to handle.

While the housewife may regard food prices high at the store, farm organization authorities point to the fact that an hour's work will buy more food today than ever before in history. Also, more and more of the cost of food is represented in the expenses of delivery, processing, retailing and built-in maid service.

No longer do you buy a live chicken and take it home to be killed and cleaned. In fact, more and more foods are fully prepared for cooking or even serving on the table. These services all add to the food bill.

Farmers resent charges that their prices account for the high cost of living. The reverse is true. In the cost of living index food prices have either held stable or dropped. If food had been going up, like everything else, obviously the cost of living today would be much higher than it is.

Last year Americans spent $57.7 billion for food. The farmers who grew it received about 36 percent of that amount.

So much has been said about farm subsidies the the average person may well believe that farmers alone have benefited from Government largess. Here again farm organizations, some of which are clearly unsatisfied with current farm programs, point out that farm subsidies are only a part of the benefits handed out through Government channels to American business. The tariff, they suggest, is the greatest subsidy ever granted business and labor. Its costs are hidden as the public pays through prices at the market rather than in taxes as in the case with farm subsidies.

Subsidies helped build the railroads, ships and airlines. Government payment of postal deficits subsidizes mail costs of magazines and other publications. Government contracts assure profits to manufacturers of war materials. In fact, an extremely impressive list of subsidies can be developed by those who wish to make the point that farmers are not alone in getting financial assistance from Uncle Sam.

Of course, the fact that someone else has or is receiving a subsidy does not automatically indicate that farmers, also, should be put into a Government program. Neither does the amazing job of producing food necessarily suggest that they should have Government aid. The Nation faces a practical problem of finding a workable plan. The farmers are dissatisfied with their present lot, despite 30 years of Government programs. This fact indicates that subsidies do not automatically solve their problems.

Too many people are ready to suggest adoption of any kind of a Government price support program on the theory that "others are getting theirs, too." Conceivably, if farmers were better off without any programs, it would be logical to eliminate the programs. We don't think this is going to be done, but the theory holds just the same.

Agriculture is tremendously important to the economy of the Nation. Kansas City always has realized this fact. It was given a forceful demonstration in the spring of 1958 when improving conditions on the farm sparked a strong pickup in business.

Agriculture is a dynamic industry despite its price troubles. Since 1940 total farm output has increased 40 percent. During the same period the number of farmers or farm workers has dropped faster than at any time in history. Today's farmer produces as much in an hour as he did in 2 hours in 1940. Nonfarm labor and manufacturing productivity, on the other hand, have increased slightly less than 50 percent in the same period.

Recently C. Pearls Wilson, director of the School of Agriculture at Kansas State University, compiled data to show the status of agriculture in the American economy. He found among other things:

Agriculture is the biggest buyer, seller, and borrower in the United States.

The inventory of farm machinery alone is greater than the assets of the American steel industry and five times that of the automobile industry.

Agriculture uses 6½ million tons of finished steel a year—more than is used in a year's output of passenger cars. It consumes 17½ billion gallons of crude petroleum—more than is used by any other industry—and 285 million pounds of raw rubber—enough to make tires for 6 million motor cars. Agriculture takes 22 billion kilowatt-hours of electrical power—more than enough to serve Chicago, Detroit, Baltimore, and Houston for a year.

Each year farmers purchase farm supplies worth about $16 billion.

The agricultural plant each year increases its use of capital, of science and technology, of management and research.

There are twice as many jobs in industries that serve farmers as in farming.

The U.S. population is increasing rapidly. Right now it is about 177 million. A conservative estimate used by Government authorities is that the population will grow from the present 177 million to 230 million by 1975. This means total farm production must be increased another 35 to 45 percent by that time. No one doubts that it will be done. Presumably there will come a day in the distant future when this country, along with all others, may face food shortages. But this generation in America has no fears.

What does this summation of the farm situation suggest?

First, we should not discount the importance of farming to the Nation just because we have no worries about food or because farmers presumably are always caught in price troubles. Per capita income on farms is about half the income of nonfarm employment. This is disparity. A way to change it must be found.

In its dilemma agriculture requires the understanding of the urban population. In fact, it also demands greater understanding from farmers themselves. Agriculture is involved in vast changes—declining farm population, the increase in the size of farms and mechanization. The changes bring problems of adaption of technology, of staggering surpluses, and increased costs. The complex situation perplexes the experts.

Because of their strength, industry and labor unions have been able to a large degree to take care of themselves. Farmers, as individuals, have turned to the Government in the hope of getting a better share of national income. Years of dissatisfaction suggest that the Government programs to date have not been successful. More changes are in order.

Let's not count the farmer out. He's a mighty important fellow to have around.

History of Postal Service in Texas—Where National League of Postmasters Was Founded—Postmasters Serve Well

---

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. YARBOROUGH. Mr. President, the postmasters of our country are constantly working to improve their system and service. These men and women perform their many and varied duties quietly and without limit on the number of hours they work per day. They have established a reputation for themselves, and it is a tribute to them and the entire postal service that, in legal terms, when a letter is mailed it is automatically presumed delivered.

The history of the postal service shows a long list of improvements. The Postmasters Advocate, official publication of the National League of Postmasters, recently published an article on the history of the postal service in Texas. It was a Texas postmaster, Oscar Pogue, who founded the national league. This story of growth reflects the entire story of progress in the postal service.

Mr. President, as a salute to the National League of Postmasters, which will hold its 56th annual national convention later this month in Memphis, and to all postal employees, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Postmasters Advocate for August 1959 entitled "Texas—Largest State in Union, as Far as League Membership Is Concerned; League Was Founded in Texas."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS—LARGEST STATE IN UNION AS FAR AS LEAGUE MEMBERSHIP IS CONCERNED; LEAGUE WAS FOUNDED IN TEXAS

Texas is still the largest State in the Union, as far as membership in the National League of Postmasters is concerned. No other State can boast of such an aggressive membership activity as has the Lone Star State, under teh stimulation of the State officers and a group of coworkers.

President Cloy "Junior" Allen and Secretary-Treasurer J. Maxwell Holder have built a fire under postmasters in Texas, and everybody is happy, including those who have recently joined. A few Texas postmasters have not yet joined, but are expected in the corral soon. Then they, too, will be happy.

Texas, as the historians relate, was a political department of Mexico from 1825 to 1835. Texas maintained communication with the United States during this time. When it be-

came an independent republic a special committee of the permanent council was appointed, in October 1835, to establish mail routes. John Rice Jones was named Postmaster General. A post office department was established by an ordinance and decree of the provisional government. This was approved on December 12, 1835, and the Post Office Department of the Republic of Texas was formally created by an act of Congress, approved on December 20, 1836.

Jones headed the postal service until he was succeeded by Robert Barr during Sam Houston's first term as president. When Barr died in October 1839, Jones was again named postmaster general, remaining in that office until January 1841, when the Fifth Congress created the General Post Office as a division of the State Department. A clerk was appointed to take over and perform the duties of a postmaster general. Jones, who organized the Texas postal system, followed the U.S. plan of organization, acquiring its blanks for his guidance.

Sam Houston had "courier" service between military and defensive points as early as May, 1835. The first route, established in 1835, was from San Felipe de Austin to headquarters of the Army, to Bexar, to Velasco and to Cantonment Jessup in the United States. The latter was in Natchitoches Parish, 379 miles from New Orleans.

The first post office in Texas was established in Galveston May 22, 1838, by President Sam Houston of the Republic. Houston decreed that a mail route be established between Galveston and Matagorda, and that the mail be transported every 2 weeks. Peter J. Menard, one of the founders of Galveston, was the first postmaster. Others who succeeded him, prior to the turn of the century after Texas had become one of the United States, were J. H. Branham, R. D. Johnson, J. B. Root, Henry B. Andrews, James A. McKee, W. F. Clarke, C. B. Sabin, S. Gareisen, W. H. Griffin, Thomas A. Gary, W. H. Sinclair, Harry Griffin, and O. S. York.

After Houston's decree, mail for the entire State was to arrive in Galveston on ships of the Morgan line. As soon as this mail hit the docks, clerks would go to work sorting it, working late into the night by the light of tallow candles. The letters were marked by hand on the letters themselves, as envelopes were not introduced until much later.

After the letters were marked, they were stuffed into saddlebags. The horses would be led through the deep sanded streets toward west beach, down 30 miles of deeper sand to the end of the island, San Luis Pass, where a ferry would be waiting to take the carrier to the mainland, free of charge.

The first Texas postage rates established were 6¼ cents for one letter sheet for a distance up to 20 miles; 12½ cents for the second zone up to 50 miles; 18¾ cents for the third zone, up to 100 miles; 25 cents up to 200 miles, and 37½ cents for further distances. Ship mail paid an additional fee of 6 cents. Additional sheets brought the same fees for each additional sheet. Magazines and pamphlets were sent for 1 cent a sheet for any distance up to 100 miles; 1½ cents and 2 cents for greater distances.

A later schedule for letters charged 6½ cents for a distance not exceeding 50 miles; 12½ cents for distance not exceeding 100 miles; and 25 cents for distances between 100 and 300 miles.

The postmaster marked the amount due on the letter in ink, the fees being paid by the sender in coin of the realm.

Texas became one of the United States on December 29, 1845, and effective in February 16, 1846, the postal system of the United States was extended thereto. Under the act of May 29, 1846, the Postmaster General was authorized to pay mail contractors in Texas for service duly performed by them since February 16; and also officers employed in superintending the mail service. This act limited the compensation to that set up by Texas, and provided that the several postmasters in Texas, appointed by the late government of the Republic of Texas, shall duly account to and pay over to the Postmaster General of the United States, all balances accruing to their offices from and after February 16, 1846. Provisions of law for collection of these sums were set up in the same manner as applied to postmasters of the other United States. The same rates of postage also were to be used in Texas, and all laws concerning the Post Office Department, and regulations thereof, were to have full effect and operation in Texas from and after February 16.

Galveston, established as a U.S. post office on April 8, 1846, appears to be the first such in Texas. Galveston was the first Texas post office to receive stamps when the United States began printing them, in the denominations of 5 and 10 cents, on July 1, 1847.

Delivery of mail in Galveston was quite a problem. The carriers had to wade ankle-deep in the street sands. The rains turned the sand into rivers of mud.

Headquarters for the Galveston post office had a roving existence in those early years. There were more than five changes of address before the ornate permanent structure was built by the Federal Government on a site at 25th and Church Streets, where a more modern Federal building now stands.

The Civil War was deeply reflected on the postal system of Galveston and the new State. Vessels carrying letters had to run the blockade set up by Federal ships. During the last years of the struggle, there was no ink, so letter writers made a passable substitute from the juice of berries.

A special agent of the Treasury Department was dispatched to Galveston in 1867 to keep the mail going. In 1868, James A. McKee was appointed postmaster while serving as mayor. He received his appointment from the reconstruction governor in Austin.

McKee was succeeded by Gen. W. T. Clarke, who had been an officer on Grant's staff during the Vicksburg campaign. He came to Galveston in 1865 as a cashier of the First National Bank, the first in Texas.

One of Galveston's more distinguished postmasters was E. R. Cheeseborough, who served under Woodrow Wilson. He was the leading figure in the costly undertaking of raising the grade of the city which was nearly wiped out of existence in the storm of 1900. He instituted a number of reforms in the local administration. As of this writing, he still goes to his real estate office nearly every day, at the age of 92, and shows little sign of his advanced years.

A number of other post offices in Texas had interesting histories.

During the republic days, when San Felipe de Austin was the capitol site, and where the Post Office Department had its headquarters, and Postmaster General, the Alamo fell. San Felipe was burned to the ground to avoid capture by Santa Anna's troops, with a well being the only remaining landmark. The post office, which was built shortly afterwards, was in use for about 75 years, and is now all of 100 years old.

The Fort Worth post office was established on February 28, 1856, and Julian Feild was appointed the first postmaster by President Franklin Pierce. But a postal service had been established before that, in 1849, by Henry Daggett and Archebald Leonard, who operated a general merchandise store. Mail was received by pony express from Dallas, and was distributed from the store. The first post office was a one-story wooden building on the west side of Main Street, between present-day Second and Third Streets. Mail was distributed at irregular hours, depending upon the arrival of the stage, whose schedule was determined by the weather and the condition of the roadless prairie between Dallas and Fort Worth. The postal receipts the first year amounted to $91.99.

Julian Feild resigned after 1 year, and was succeeded by M. J. Brinson in February 1857. Other prewar postmasters were Hiram C. Jewell, September 1857; Leigh Oldham, March 1859; and John M. Murchison, July 1859. George Boon was appointed in June 1860, and served through the Civil War until May 1866. During this period, mail was received from Waxahachie by pony express rider by way of Johnson Station and Birdville. One of the riders was George H. Mulkey, about 1862.

The El Paso post office was established July 26, 1852. It was known as Franklin until 1859, when it was officially changed to El Paso. The first mayor, Ben S. Dowell, was not elected until 1873, so the post office antedates the city government. The first post office was located at the stage station, and supervised by Postmaster Jarvis Hubbell, appointed by President Millard Fillmore.

El Paso was included in the first transcontinental postal service, the San Antonio and San Diego Mail Line. It was known colloquially as the "Birch" or "Jackass" Mail. Butterfield started operating September 16, 1858. Birch's contract was effective July 1, 1857, for a 4-year period, and his first mail for the Pacific coast left San Antonio 8 days later. He pioneered for later operators, over the great desert mail route of the Southwest, leading from San Antonio to El Paso, via Forts Clark, Lancaster and Davis; from El Paso via Mesilla, Tucson, the Pima village of the Gila Valley, and Fort Yuma on the Colorado, to San Diego.

Early travelers described the stage route between San Antonio and the oasis of El Paso as one long battlefield. Marauding Indians kept the riders on the alert.

El Paso del Norte was a way station for north and south traffic, with mail being carried, as early as 1824, trimonthly trips being made between Chihuahua (Mexico) and Sante Fe, N. Mev., mule pack trains, wagon trains, and Mexican stages or "diligencias" traveled this early route.

The U.S. stagecoach era in the West owes its big stimulus to the discovery of gold in California in 1848. As the Mexican War ended, and the great rush got underway, the Government began surveying emigrant roads across country. Three of these emigrant roads came through El Paso.

On the day of the establishment of the post office in El Paso, Postmaster Hubbell awaited the arrival of the rider nervously. This rider would make the inauguration of the post office a success, or a dismal failure by his delay from Santa Fe. El Paso was a dusty adobe village. The rider finally appeared through the dust, with only two letters in the pouch, but the mail service was established.

David Wasson got the first contract to carry mail between San Antonio and Santa Fe once a month, in 1854. This was transferred to George H. Giddings in 1855. The Army provided an escort for this route, the trip requiring 25 days. The contract was let to James E. Birch, for a stage line, which became a weekly mail, and later a passenger service, escorted by troops through Indian territory.

By 1858 letters increased from 4 to 10 letters twice a week, all handled by the postmaster. In 1959 the daily average is 431,000 letters, with a post office staff of 620. At the time of the increased business (to 10 letters twice a week) the guard of Army men from Fort Bliss and Fort Fillmore was authorized by President James Buchanan. The post office was promised removal from the adobe

hut near the stage station to more commodious quarters and the salary of the postmaster increased from $150 to $200 per annum, if the future increase in mails justified it.

El Paso now has its 27th postmaster, Charles T. Boyce, who took office September 1, 1953.

Similar to many other post offices, that of Amarillo was first conducted in a dry goods box. This fourth-class establishment was established on November 23, 1887, with Robert McKenzie "Mack" Moore, as postmaster. He was required to furnish his own quarters and equipment.

Moore secured a dry goods box, fitted a few pigeon holes into it for mail separation, hinged a lid to another box for stamps, and he was ready for business. When he tired of the strenuous work, he resigned, and George S. Berry became postmaster, moving the business to his real estate office May 24, 1888. Berry augmented his income from cancellations, by installing and renting boxes.

Evidence in the changes of post office structures is shown in the accompanying photo of the Waco, Tex., edifice, which was erected about 1890. A part of this building still stands and is occupied by other tenants, but at the time of this photo, it was on the principal corner of the city, Eighth and Franklin Avenue. The post office was moved in 1930.

The post office at Abilene is comparatively new, being established February 14, 1881, with Henry Montgomery as postmaster. Succeeding him were William Reinhard (1882); Thomas Davies (1884); Henry H. Harden (1884); H. W. Morrow (1889); Mary W. Morrow (1897); Turner S. Rollins (1910); Robert E. Rankin (1914); Lindsey C. Payton (1923); Oliver A. Hale (1936); and the present postmaster, Clyde E. Grant, January 31, 1951.

Rural delivery service was started at 7 post offices in Texas in 1900. These include Alvin, Fate, Grandview, Hallettsville, Hillsboro, LaGrange, and Weston.

The present league president in Texas, a former secretary-treasurer, and the present secretary-treasurer, a former president, have enlisted a large group of workers for their membership progress. The officers were elected on a pledge to work or get out. Printing is done for a number of events at a time, such as a series of district meetings. The programs are prepared on one side, and a mimeograph job on the inside provides an impressive mailing piece at a nominal cost. These district meetings are attracting three times as many postmasters as they did a short time ago.

The Texas Leaguer, and the La-Tex Leaguette newspapers are expected to compete strongly for the league publications trophy at the Memphis convention. The several letters bring out something new for postmasters each issue, and bring in new members, because they offer service. For example, the questionnaire to all fourth class postmasters asking them to give figures pertaining to their office receipts, and their projected changes in pay with the new rate schedules. The Texas branch went to bat for those who might suffer a loss in salary through this adjustment.

Texas tried a time-payment membership plan, with considerable success. The year's dues were divided into two payments, now and 6 months later. This brought many new members, although most of them paid for the year in full.

The Texas branch is carrying the ball for a new division of dues between State and national organizations. There are a lot of new ideas in Texas. Some of them will stand out as greatly progressive. Others may be rejected. But they are thinking and working. Certainly any postmaster in Texas who joins the league, knows that he is on the bandwagon and going places.

The league was born in Texas, under the leadership of Oscar Pogue, now living at Cleburne. Pogue, as is generally known, lost his postmaster's job for his activity in organizing postmasters, but his work lives on.

Not only has Texas made sizable contributions to the development of the postal service in the South and Southwest, but it was also the birthplace of the National League of Postmasters.

In May 1904 Oscar Pogue, then postmaster at Blum, sent postcards to 12 or 14 postmasters in Hill County asking them to meet for the purpose of organizing a league. The fledgling organization then extended a call to all Texas postmasters to meet in Hillsboro on July 4 for the purpose of setting up a State league. Mr. Pogue was elected president of both organizations.

In Mr. Pogue's words, "We immediately set in motion a plan, or the idea, of organizing the national league, and since there were reduced railroad fares from all over the country to St. Louis on account of the World's Fair, that city was chosen as the place to organize. We all went there." As a result of that meeting, the National League of Postmasters came into being—with Mr. Pogue as the first national president—and it has flourished ever since. Its first project on a national scale was that of obtaining civil service status for postmasters, a goal ultimately achieved.

Mr. Pogue says, "When I look at the league now, and the fine fellowship that exists between it and the Post Office Department, it just puts joy in my heart to know that I had a part in bringing it about." Postmasters throughout the Nation have benefited through the years because of the foresight and energy of this outstanding Texan.

Love of Country

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting and thought-provoking editorial which appeared in the Stars and Stripes, the National Tribune, issue of September 3, 1959:

LOVE OF COUNTRY

When it truly exists love of country is one of the most admirable traits to be found in humanity. It is difficult to develop a sincere love of country when the citizen of the country has little or no knowledge of its history.

It is extremely unfortunate that here, in our own land, the average teenager or the group composing the college men and women, have little or no knowledge—scarcely an acquaintanceship—with the history of the United States of America.

This, of course, may be due to the fact that some 30 or 35 years ago, in the hectic twenties it became fashionable to belittle historical facts by what was known as the process of "debunking."

Patriotism as it had been understood up until the time of World War I was frowned upon as something plebeian, something to be stifled as showing a lack of the sophistication which was the standard of the times.

This scorn of our country's history later developed to a gradual lessening of the teaching of this history in our grade and high schools to the extent where it has been almost altogether omitted in the curriculum of our modern educational system.

And what a great pity this is when we think back and recall the splendid history of the founding of our country and the manner in which it developed until, with the successful conclusion of the Spanish-American War, it had come to take its place among the great nations of the world.

Fifty to sixty years ago we recall how the history of our land fascinated us as a wonderful story—its study was never a chore—and how as youngsters we thrilled at the exploits of those men, and women, too, who made our independence possible. True, it may be that time has made some of the stories somewhat legendary but the general facts of those important days in our country's making remained and, once learned, have never been forgotten.

With this background of knowledge of our struggles and growth it is small wonder that the generations who preceded the so-called intellectual era of stark realism were ever ready to answer their country's call to arms when the need arose.

This spirit may be readily identified by the songs that were sung in our earlier wars by the men who fought those wars and the folks who remained behind to await their defenders' return.

Both the North and South had their share of such melodies—some sad, some gay and some of a rollicking nature which permitted the fighting men to face hardships with a smile.

The same was true for the men who fought the war with Spain, the China Relief Expedition and the Philippine Insurrection and it was likewise true for those who left home for service in World War I. All these conflicts brought out words and music to stir the hearts of our fighting men.

The same cannot be said to any great extent for the songs America produced during World War II and the Korean war. As a matter of fact we recall but one song of the time that had a real fervor to it and that was the famous "Praise the Lord and Pass the Ammunition," a product of World War II.

This may seem a far cry from the subject of the teaching of a nation's history to the young but is brought up to show the trend of thought which developed here during the past 30 years.

How could we expect a young man to be fired with patriotism by the spirit and words of such a popular melody as "Don't Sit under the Apple Tree With Anyone Else but Me?"

The very nature of the lyrics brought up at once a thought of abandonment by the loved one in the minds of those who were leaving to serve their country. In the older days the soldier and sailor going off to war knew that the girl he left behind would be waiting for him and there was no spirit of dejection in the goodbys—tender though they might have been.

As we think of the present lack of knowledge of the history of the United States which was born of the frivolity and smartness of the twenties and nutured by the new trend in educators, it is easy to understand why true love of country has diminished until now it is considered "simple" to express any emotion at the thought of our past or the sound of martial music or the passing in review of our glorious flag.

There has been a certain desire shown on the part of some of our present day teachers to want to revert to the old system where the young students were taught to read and write in their childhood and we feel that this is wholly desirable.

Teach the children how to read and then give them the study of our Nation's history and we feel certain that once again there will surge in the hearts of the generation which will have had that advantage an appreciation of just what the history of our land means.

The history of the United States should be made a must in our grade and high schools and we are hopeful enough to believe that this future generation of which we write, once having been taught to read will, as their forefathers, thrill to the brave doings of those who made their country possible.

As we look at it a country without a history will as a sequence, develop no tradition, and a country without history or tradition cannot develop patriotism which, after all, is simply love of country.

Jantzen Knitting Mills, of Portland, Oreg., Marks 50th Anniversary of Firm Which Has Become International in Scope

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. NEUBERGER. Mr. President, imaginative men and women built the West and helped it develop into a prosperous and growing realm of America. New industrial firms have been a vital factor in this progress.

One of the firms of which we are most proud in my native State of Oregon is the Jantzen Knitting Mills, which grosses nearly $50 million in annual sales and has spread into 17 other nations.

Jantzen Knitting Mills has recently celebrated the 50th anniversary of its founding, a most appropriate occasion because this is the 100th year of Oregon statehood.

Jantzen Knitting Mills are a monument to the original founder of this great firm, John A. Zehntbauer, who still functions actively as chairman of the board.

Although I realize it is a redundancy to add this fact, Jantzen Knitting Mills have become world famous as manufacturers of women's bathing suits and other sports garments.

In the Portland Oregonian of August 30, 1959, appeared a comprehensive article by Mrs. Phyllis Lauritz about the 50th anniversary of Jantzen Knitting Mills entitled "Pooling of Ambition, Ingenuity Builds Worldwide Jantzen Firm."

I ask unanimous consent that this article from the Oregonian may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POOLING OF AMBITION, INGENUITY BUILDS WORLDWIDE JANTZEN FIRM

(By Phyllis Lauritz)

Fifty years ago two young men—with little to work on except their own ambition and ingenuity—pooled their abilities to develop a business in Portland which since has spread into 17 countries and does nearly $50 million in sales a year.

The firm was Jantzen Knitting Mills, now and for several years officially named Jantzen, Inc.

The golden anniversary of the Portland firm that became a giant in the swim and sportswear field will be celebrated this week with a 6-day convention at the Multnomah Hotel. More than 150 sales representatives from all parts of the United States will attend.

An attractive young lady in a red swim suit—the Jantzen diving girl—had a lot to do with the success. It has been recognized as the best-known apparel trademark in the business.

The story of Jantzen is far from a typical one in the history of American business. The classic ingredients are there—two poor boys with ambition, almost overwhelming difficulties to be encountered over many years, and finally the happy hit on a successful item which changed the entire future course of the business to a $46,676,284 per year industry.

One of the interesting aspects of Jantzen to others in the fashion field is that it maintains its headquarters in Portland, far from other fashion centers.

Ask John A. Zehntbauer, founder and chairman of the board, "why," and he'll probably answer, despite his well-known antipathy to the State tax structure, "because it's home."

QUALITY CONTROL CONSTANT

Here they spin, they dye, they knit their own yarns, up to completion of the garment and sewing on of the label. Quality is thus under constant control. Through the Portland spinning plant reel approximately 42,000 miles of yarn each day. It's enough to circle the world more than one and a half times.

As Dorothy L. Wallis, feature columnist for Women's Wear Daily, said: "Jantzen has made Portland a sportswear center of the world. Other sportswear manufacturers have gathered around Jantzen Center, until Portland, Oreg., has come to be a real force in the merchandising world of men's and women's fashions."

The founders were the late Carl Jantzen, whose name the company bears, and John A. Zehntbauer, whose original idea the whole thing was.

The company's first products were hosiery, heavy sweaters, knitted jackets for Chinese workmen in the lumbering industry and knitted gloves. Knitting of heavy rowing trunks, for use in a popular Portland sport (Zehntbauer and Jantzen were members of the Portland Rowing Club and wore the first knit swimsuits in 1913), led to invention of the rib stitch swimsuit for men, a product which eventually diverted the company almost exclusively into the swimsuit field. It coined the term swimsuit, now unanimously adopted.

FIRM EXPANDS LINE

From swimsuits the firm gradually added more and more types of sports apparel, until today executives like to think of Jantzen as the one-stop sportswear resource. Jantzen produces swimsuits for the entire family and does the same with sun and play clothes. It even makes girdles.

Jantzen merchandise is produced in Argentina, Brazil, Colombia, Cuba, New Zealand, Peru, South Africa, Venezuela, England, Australia, Canada, Germany, France, Switzerland, Italy, Spain, and Chile.

There are plants at Hollywood, Dover, N.J., Philadelphia, Seneca, S.C., Eddington, Pa., and Westminster, S.C.

Biggest is the Portland plant, employing 1,200 persons, and the Vancouver, Wash., plant, with an approximate 600 employees for a combined payroll in excess of $6 million per year.

The year 1916 was the first year the firm made money—and the year the name Jantzen first became official.

The Jantzen Diving Girl, now 37 years old and revamped in major alterations four or five times, carries her age lightly, and has stamped the firm's identity on the mind of the world.

She was originally the creation of Frank Clark, a newspaper artist, and made her appearance on a Jantzen catalog cover.

By 1923 the graceful cutout figure was popular in sticker form on automobile windshields—notably on roadsters piloted by rakish young men.

She still appears on Jantzen suits where it is appropriate—notably on solid color suits—but no longer on the patterned models.

VA Disability Rating Schedules

EXTENSION OF REMARKS
OF
HON. ODIN LANGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. LANGEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication:

BEMIDJI, MINN.,
August 30, 1959.

Hon. ODIN LANGEN,
Member of Congress, Representative Ninth District Minnesota, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN LANGEN: This is an appeal to Congress at large, and I request it be included in the CONGRESSIONAL RECORD. The following tables are the products of two committees using two different measuring sticks, but the same VA disability rating schedule, applied to the disability problem from wartime and peacetime, in the armed services.

The practical effect desired by Congress of adequately caring for disabled young officers is ridiculously made fiction by the services, as uneducated 90-day recruit VA compensation is much more or out of proportion to retired disability retired pay. A lot of longevity takes care of the vast majority; it is only the beginners, where most casualties occur, who get crucified unduly.

Services pay tables (authority, Department of Defense) 80 to 100 percent disability retirement

Length of service		Those retired before June 1, 1958		Those retired after June 1, 1958		*VA pay table: 90 days recruit, married, 100 percent disability compensation, no educational or attainment status required*
Under 2 years	O-3 Capt.	$274.75		$259.20		$248 per month plus statutory awards to $450; also additional dependents allowances, all no part of services disability retirement.
	O-2 1st lt.	218.56		206.10		
	O-1 2d lt.	187.33		176.72		
Over 2 years	O-3 Capt.	159.20		259.50		
	O-2 1st lt.	217.97		218.25		
	O-1 2d lt.	188.51		188.25		
Over 3 years	O-3 Capt.	279.05		279.00		
	O-2 1st lt.	266.64	*Overage for 1 year 1 day* $4.30	270.00	*Overage for 1 year 1 day* $19.80	
	O-1 2d lt.	235.53		235.00		
Over 4 years	O-3 Capt.	297.65	48.08	311.25	63.81	
	O-2 1st lt.	266.64	46.31	277.50	56.28	
	O-1 2d lt.	235.63		235.50		

Because these unlucky, college graduate, beginner officers got disability in a short war or early in a long war, and because the services in 1955 and 1958 rigged their active duty

pay rates with no raises, their retired disability pay becomes ridiculous compared to the uneducated 90-day recruit compensation allowance.

The victims look at it as the U.S. Government doing it to them regardless of what committee recommends it to Congress.

It all stems from the adoption of a policy of underpayment, like prisoners, slaves, or the indentured, because the beginner officer for 3 years is "hooked" by military obligation requirements. He could be still "hooked," but paid free market wages that existed prior to the 1955 pay legislation. Current wages for active duty beginner officers are now 10 years behind the times, 1 percent under what the much lauded Hook Commission established as fair wages in 1949.

Mostly it is geared to large Academy education expense as cadets' pay is one-half that of a beginner second lieutenant. The graduates of 250 universities and colleges with ROTC who become officers, largely pay for their own college expenses, yet have to tag along at cut rates and thus pay for something they never got, by a sort of payroll deduction.

Also the cutrate (not raised since 1952) pay rates reflect the stigma of the draft as a discount excuse, for officers who volunteer, as well as for forced into service draftees. It degrades a commission on a presumption of disloyalty basis. It takes undue advantage of green, unorganized, capable young men in an unchivalrous manner, not becoming the reputation of forthrightness expected of services' planners. The application of disability laws to active duty pay rates doubles the insult to human dignity, as no one expects disparagement of the disabled to be any small part of democratic U.S. policy.

I have discussed all this to no avail with committees, so I ask that Congress at large know these facts in the hope some champion will come forward with a reasonable solution.

Respectfully,

HOWARD L. MCLEOD,
First Lieutenant E.O.R.L., (Volunteer Before Draft Laws, 1917).

Ship Cargoes in Hawaii

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. DODD. Mr. President, the August 9 issue of the New York Herald Tribune carried an interesting account of an antimonopoly action currently being undertaken by the Justice Department.

The occasion arises from the rejection of the Federal Maritime Board of the Pacific Far East Line's application to compete with the Matson Line in the Pacific coast-Hawaii cargo trade.

Involved in this case is the question of whether this rejection permits the Matson Line to enjoy a complete monopoly in cargo trade between the Pacific coast and Hawaii.

Now that Hawaii is a State of our Union, it is all the more reason to prevent the establishment or maintenance of any monopolies on trade of any kind.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD this article from the New York Herald Tribune of August 9, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES JOINS LINES' FIGHT FOR CARGOES IN HAWAII

(By Robert S. Burns)

The Department of Justice has taken over the Pacific Far East Line's fight for the chance to compete with the Matson Line in the Pacific coast-Hawaii cargo trade.

The next round is scheduled for later this month in the U.S. Court of Appeals for the District of Columbia in Washington. There Justice Department attorneys will seek to have the court rule that the Federal Maritime Board erred in barring Pacific Far East Line from the route.

The Justice Department has entered the controversy in an attempt to get a clear-cut definition of what constitutes "unfair competition" between subsidized steamship lines engaged in foreign commerce and unsubsidized lines in the Nation's domestic service.

The controversy has stirred wide interest in the maritime industry because the Federal Maritime Board overruled its own examiner and counsel in rejecting Pacific Far East's application to enter the Pacific coast-Hawaii trade.

TURNED DOWN IN 1957

In December, 1954, Pacific Far East Lines (P.F.E.L.), which operates a subsidized transpacific service, requested Maritime Board permission to begin an unsubsidized cargo service between Hawaii and ports in California, Oregon, and Washington.

On May 10, 1957, the Board turned down the request. It ruled two-to-one that P.F.E.L.'s proposed service would "result in unfair competition to an operator (Matson) engaged exclusively in the coastwise or intercoastal service, and would be prejudicial to the objects and policy of the 1936 Merchant Marine Act."

In taking the case to the court of appeals, P.F.E.L. charged, among other things, that it was being discriminated against. It asserted that the Board has already granted permission to two lines to carry cargo between the west coast and Hawaii with subsidized vessels.

One line is Matson's wholly owned Oceanic Steamship Co. Oceanic vessels stop at Honolulu on their way to New Zealand and Australia. The other line is Pacific Transport Lines whose ships call at Hawaii on the way to the Far East.

SECTION 805 QUOTED

Section 805(a) of the 1936 act requires a subsidized line to get permission from the Federal Maritime Board (FMB) to enter the coastwise or intercoastal trade. Routes between the United States and Hawaii, Alaska and Puerto Rico are considered part of the Nation's domestic trade. For the most part they are served by unsubsidized lines who are protected by law from foreign-flag competition.

Section 805(a) protects the unsubsidized lines from "unfair competition" from subsidized American lines. Briefly, the section makes it unlawful for the FMB to pay subsidy to vessels in domestic service, and to allow subsidized vessels in the trade if their presence will result in "unfair competition" to lines "operating exclusively" in domestic service, or if their presence would be "prejudicial" to the objects and policy of the 1936 act. It also makes it unlawful to divert "directly or indirectly" subsidy payments into domestic operations.

Justice Department attorneys contend that in writing the 1936 act, Congress "sanctioned subsidized carriers to compete with domestic operators as long as such competition is not 'unfair'." They contend the FMB has misconstrued "unfair competition."

They said the Board decision gave no facts to explain how P.F.E.L. "would gain any competitive advantage over Matson by virtue of its subsidy. They pointed out that a Matson witness admitted that P.F.E.L.'s subsidy would not give it any advantage in competition with Matson for cargoes.

In rejecting P.F.E.L.'s application, the Maritime Board found that:

1. Matson's Pacific coast-Hawaii service is exclusively domestic.

2. Oceanic's participation in the service is irrelevant to Matson's status as an exclusively domestic operator.

3. There is nothing in the record indicating Matson's service has been supported by Oceanic subsidy.

VICE-CHAIRMAN DISSENTS

Clarence G. Morse, Board chairman, and Thomas E. Stakum Stakem, Jr., overruled the findings of F. J. Horan, the Board's examiner, and three of its attorneys in turning down P.F.E.L.'s application. Ben H. Guill, Vice Chairman of the Board, dissented.

Mr. Guill did not agree that Matson was solely a domestic operator. He said Matson had developed a "virtual monopoly" in the trade and he did not see how P.F.E.L's competition could be called unfair. He also noted that he found no arguments to "warrant our reversal of the examiner's findings."

Mr. Horan's findings were directly opposed to those of Messrs. Morse and Stakem in virtually every important question in the case. He made them after hearing over 70 witnesses in 45 days of testimony. The record, one of the longest in Board history, consists of over 9,400 pages.

Very Low Serious Crime Rate in Chicago

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PUCINSKI. Mr. Speaker, it gives me great pleasure to include in the RECORD today an article which appeared in the Chicago Daily Tribune of September 3, quoting the latest crime statistics released by the Federal Bureau of Investigation for 1958, which show that Chicago ranked 85th among 156 metropolitan areas in the United States in serious crime last year.

I am particularly anxious to call these statistics to the attention of those who so frequently, without justificaion, denounce Chicago as a crime-ridden city.

It is lamentable that those who need subjects for motion pictures and sensational television productions have to reach back more than a quarter century to Chicago's past and use this as their basis for judging Chicago as a city.

It is my firm belief that these statistics compiled by the FBI will put to rest once and for all these scandalous attacks on the city which today is destined to become the No. 1 metropolis of the world.

The fact that the entire Chicago area, with a population of almost 6½ million people, had less than 1 percent of its people involved in crimes during 1958—is a tribute to the diligence of public officials and the police department of

that entire community. I think the splendid record in fighting crime being written in Chicago today is a tribute to Chicago's great mayor, Richard J. Daley; his outstanding police commissioner, Timothy J. O'Connor, and to every man and woman on Chicago's great police force.

As a Chicagoan, I am proud of the record that Mayor Daley is writing in our city. Through his dedication and diligence, he has purged the city of its horrible reputation of the past, and in its place has built a metropolis whose chief assets today are culture, harmonious community living, and unprecedented industrial, medical, and scientific progress.

This is the Chicago of today, and let those who would continue to cite the morbid history of the Chicago of yesterday, ponder the FBI figures before they continue their slander against the fine people of a great city.

Mr. Speaker, the Tribune article follows:

CHICAGO 85TH IN 1958 SERIOUS CRIME RATINGS—WELL BELOW AVERAGE FOR 176 AREAS

WASHINGTON, September 2.—Chicago ranked 85th among 176 metropolitan areas in the United States in serious crime in 1958.

With a rate of 943.5 serious crimes per 100,000 population, Chicago was well below the average of 1,154.9 for the 176 standard metropolitan areas.

Chicago was only slightly above the rural and urban rate of 896.9 for the entire country.

LOS ANGELES HEADS LIST

The serious crimes categories include murder and nonnegligence homicide, rape, robbery, aggravated assault, burglary, larceny, and auto theft.

The crime figures were released Wednesday in a joint report by Director J. Edgar Hoover of the Federal Bureau of Investigation in the 1958 edition of Uniform Crime Reports.

The report fixed Los Angeles as the No. 1 crime area with 155,259 serious crimes, an average of 2,507.6 per 100,000 of population for an area population of more than 6 millions. The area included Los Angeles and Orange Counties.

The total number of crimes in the Chicago area of almost 6½ million population was 61,056. The Chicago area includes Cook, DuPage, Kane, Lake, and Will Counties in Illinois, and Lake County in Indiana.

NEW YORK RANKS 61ST

Los Angeles was topped in the number of crimes by New York with 164,973 but New York ranked 61st among the 176 metropolitan areas in crimes per 100,000 population with a rate of 1,145.3, well ahead of Chicago. The New York metropolitan area, with a total population of almost 14½ millions, included New York City, Bronx, Kings, New York, Queens, Richmond, Nassau, Rockland, Suffolk, and Westchester Counties, N.Y.; and Bergen, Essex, Hudson, Middlesex, Morris, Passaic, Somerset, and Union Counties, N.J.

Chicago was second in murders and nonnegligent manslaughter with 384 to 468 for New York.

Chicago's serious crime rate was below that of Decatur, Ill., which had a rate of 1,034.9, but exceeded that of Peoria with 902.1. Chicago's rate was lower than that of most metropolitan areas in the area except for Milwaukee with 652.6 crimes per 100,000.

CITIES THAT TOP CHICAGO

The following table lists cities with a greater crime rate than Chicago by rank, the number of serious crimes, and the rate of serious crimes per 100,000 population:

Rank and city	Number of crimes	Number of crimes per 100,000
1. Los Angeles	155,259	2,507.6
2. Miami	19,382	2,303 3
3. Phoenix	11,738	2,139.2
4. Jacksonville	8,508	2,004.4
5. Lexington	2,316	1,971.0
6. Tucson	4,640	1,885.8
7. Stockton	4,348	1,861.1
8. Oklahoma City	8,082	1,821.6
9. Pensacola	2,949	1,784.7
10. New Orleans	14,108	1,720.7
11. Savannah	3,321	1,675.3
12. Nashville	5,986	1,669.2
13. Denver	13,751	1,653.2
14. Albuquerque	3,553	1,645.6
15. St. Louis	33,146	1,634.5
16. Norfolk-Portsmouth	9,459	1,609.1
17. San Antonio	9,810	1,582.5
18. Lubbock	2,625	1,573.6
19. Little Rock	3,974	1,570.3
20. Orlando	3,647	1,544.6
21. Houston	18,216	1,541.1
22. Hampton, Newport News, Warwick	2,927	1,540.8
23. Seattle	13,224	1,519.2
24. Muskegon	2,247	1,510.4
25. Bakersfield	4,050	1,495.0
26. Atlantic City	2,194	1,485.1
27. San Bernardino	10,483	1,484.4
28. Charlotte, N.C.	3,602	1,462.2
29. Louisville	10,476	1,456.9
30. El Paso	4,198	1,421.0
31. Greenville, S.C.	2,991	1,419.9
32. Sacramento	6,206	1,419.2
33. Galveston	2,045	1,402.4
34. Raleigh, N.C.	2,215	1,400.8
35. San Francisco-Oakland	37,047	1,389.6
36. Charleston	2,849	1,382.8
37. Tulsa	4,636	1,371.1
38. Indianapolis	9,204	1,368.4
39. Columbia, S.C.	3,175	1,365.2
40. Detroit	51,897	1,343.0
41. Atlanta	12,386	1,336.1
42. Corpus Christi	3,165	1,328.6
43. Waco	2,030	1,326.1
44. Richmond	5,353	1,325.9
45. Tampa-St. Petersburg	8,599	1,320.3
46. Fort Worth	7,846	1,302.8
47. Baltimore	20,797	1,295.8
48. Columbus, Ohio	8,253	1,264.1
49. Salt Lake City	4,642	1,255.9
50. Toledo	5,598	1,219.4
51. Birmingham	7,481	1,212.2
52. Chattanooga	3,222	1,210.1
53. Pueblo	1,432	1,188.6
54. Santa Barbara	1,409	1,177.2
55. Providence	8,626	1,174.5
56. Amarillo	1,663	1,173.7
57. Mobile	3,433	1,162.9
58. Knoxville	4,182	1,157.2
59. Akron	5,584	1,152.3
60. Fresno	3,834	1,148.7
61. New York	164,973	1,145.3
62. Evansville	2,356	1,135.6
63. Dallas	9,656	1,120.9
64. Flint	4,088	1,117.8
65. San Diego	10,215	1,117.2
66. Wichita Falls	1,519	1,113.8
67. Des Moines	2,935	1,091.9
68. Palm Beach	2,300	1,080.0
69. Terre Haute	1,174	1,079.7
70. Montgomery	1,806	1,078.6
71. Beaumont-Port Arthur	3,188	1,067.0
72. Memphis	6,451	1,064.1
73. Topeka	1,360	1,059.3
74. Portland	8,956	1,052.2
75. Macon	1,789	1,049.5
76. Decatur	1,129	1,034.9
77. San Jose	5,703	1,023.8
78. Asheville	1,399	1,006.5
79. Baton Rouge	2,114	1,006.3
80. Roanoke	1,555	984.4
81. San Angelo	747	983.0
82. Washington	18,937	981.5
83. Minneapolis-St. Paul	13,356	977.8
84. Austin	1,957	965.0
85. Chicago	61,056	943.5

The standard metropolitan areas have a total population of 105,735,561 and reported 1,221,208 crimes or 1,154.9 for every 100,000 population. Other cities, with a population of 25,489,735, reported 161,238 serious crimes. Rural areas, with a population of 42,035,033, reported 171,476 crimes.

OVERALL RISE OF 9.3 PERCENT

The total number of serious crimes in the United States in 1958 was given as 1,553,922, or 896.9 per 100,000 for a total population of 173,260,329.

The report revealed crime increased 9.3 percent in 1958 over 1957, as a crime was committed every 20.3 seconds during 1958.

There were increases in all of the individual classifications as follows:

Murder, 8,182 in 1958 and 8,027 in 1957, an increase of 1.9 percent; forcible rape, 14,561 and 12,866, 13 percent; robbery, 75,247 and 66,843, 12.7 percent; aggravated assault, 113,530 and 110,672, 2.6 percent; burglary, 679,787 and 603,707, 12.6 percent; larceny over $50, 391,550 and 354,972, 10.3 percent; auto theft, 270,965 and 265,178, 2.2 percent.

RECORD FOR YOUTHS

Youths under 18 represented only 12.1 percent of all persons arrested. They accounted, however, for 64.1 percent of all arrests for auto theft, 49.9 percent of those for burglary, 48.5 percent of those for larceny, 30.9 percent of those for receiving or possessing stolen property, and 22.8 percent of those for robbery.

Crime increased more than five times as fast as the population.

The New York Times Analyzes the Educational Revolution

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Thursday, September 3, 1959

Mr. YARBOROUGH. Mr. President, one of the basic principles of our Founding Fathers—as expressed by farsighted Thomas Jefferson—was the ideal of an enlightened electorate.

In this science-attuned world of today this has been expanded to mean education of people through high school and partially through college. We have come to recognize that it is our duty to prepare our young people for the many and varied activities and pursuits of our present day and to teach them to adapt to the changes of a world in which ideas as well as ways of living change with dizzying speed. This is one of the greatest tasks, duties, and objectives of our democracy.

The New York Times discusses this in a recent editorial. It points to the opportunity for improving the world by education if we but desire it.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Times for Monday, August 31, 1959, entitled "The Educational Revolution."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE EDUCATIONAL REVOLUTION

Within a few days the "back to school" movement will be getting started again. As we look forward to another school year the National Commissioner of Education, Dr. Lawrence G. Derthick, has given out some interesting and significant figures. It is a good thing to see our whole educational structure in some sort of focus.

In this year one person out of every four in the United States will be in school. In the so-called critical age group, 14 to 17, which covers most of the high school body, 9 out of every 10 persons will be enrolled. At the top level, college enrollment will get close to 4 million, with 3,780,000 expected.

Naturally this continuing increase in enrollment poses the expected problems. There will be a shortage of qualified teachers. There will, in many communities, be inadequate classroom space. In some institutions there will be conspicuous limitations on admissions. There will be, at every turn, one ground or another for viewing with alarm.

To look only at these problems is shortsighted. They are not insoluble, although they may often be complex and difficult. What must be remembered is that we are in the very midst of a gigantic social revolution in which the changing and expanding place of the whole educational pattern is one phase. Within less than two generations we have come, quite unconsciously, to accept the thesis that formal education, even at the higher levels, is a natural and expectable part of our society. When 9 out of every 10 children of high school age, for example, are actually in high school we have adopted a norm of behavior. When nearly 4 million students are expected in institutions of higher learning we are making a different sort of use of those institutions.

Education, in short, is no longer merely a specialized and restricted learning process. It is a function of a democratic society. This may not be working out in precisely the way that Thomas Jefferson had in mind when he insisted that an enlightened electorate was the only real assurance of good governance. On the other hand, it is working out in such a way that we take it for granted, now, that every child and young adult must have an opportunity to enjoy as much of that enlightenment as he can absorb.

Having made that assumption, we are constantly faced with problems of adjustment and adaptation, as well as those involved in gigantic expansion. We are being obliged to set a variety of standards for various aspects of this huge educational structure. Obviously no one thing is likely to be right in all cases, nor is anything likely to be wrong in all, so long as so many dedicated persons are giving their attention, imagination, and devotion to meeting these problems as they arise. What all of us need to do is to recognize that we are living in the midst of a greatly changing world and that we have an opportunity to make changes for the better, if we so desire.

Defense Lobbying

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. SANTANGELO. Mr. Speaker, in their book, "U.S.A., Second-Class Power?" Drew Pearson and Jack Anderson set forth a series of incidents in which they spell out influences in the obtaining of defense contracts, giving rise to excessive cost in our defense program. The Hébert committee, headed by Congressman F. EDWARD HÉBERT, of Louisiana, which is investigating the subject of influence by retired military officers and defense officials in the obtaining of Government contracts, heard testimony of Mr. Pearson.

I believe an article by Drew Pearson contained in the Washington Merry-Go-Round, August 18, 1959, will explain the viewpoint of representatives of defense contractors in their relations with the Pentagon. Defense lobbying may be considered as the giving of information or the attempt to influence according to the tendency to be gullible or critical.

Mr. Pearson's remarks will prove interesting and informative reading:

DREW PEARSON SAYS: "ADROIT DEFENSE LOBBYING COSTS TAXPAYERS MILLIONS; WESTERN ELECTRIC LOBBYIST WON'T ADMIT HE'S LOBBYING; HE MERELY GIVES INFORMATION"

(By Drew Pearson on the Washington Merry-Go-Round)

WASHINGTON.—A lobbyist may repent, but he seldom learns. This is what Congressman EDDIE HÉBERT of Louisiana discovered while grilling Vice President C. R. Smith of Western Electric regarding his lobbying efforts to continue an Army missile contract even though contrary to Eisenhower policy.

Western Electric has long demonstrated its ability to get what it wants out of the Eisenhower administration even when it opposes Eisenhower policy. It, together with its parents company, American Telephone & Telegraph, was sued for antitrust violation during the Truman administration. But when Ike took over, the two companies virtually thumbed their noses at the Justice Department and got Charlie Wilson, then Secretary of Defense, to write a letter demanding that the suit be dropped. Eventually it was.

Later, the Defense Department also tangled with Western Electric—and came out second best. It planned to curtail the Nike-Hercules missile which partially duplicates the Bomarc missile. But Western Electric, together with Douglas Aircraft, both manufacturing the Nike, launched a lobbying campaign to continue their profitable contract. In the end they won. Both the Bomarc and the duplicating Nike-Hercules are being continued—at double expense to the taxpayer.

LOBBYIST SQUIRMS

Congressman HÉBERT, who's probing the munitions lobby, tried to get Vice President Smith to admit Western Electric was lobbying.

"I can't believe for a minute anything we would do would have any effect on Congress," insisted Smith. "We certainly wouldn't want to do anything like that."

"Then what purpose was served in going to the Senate Appropriations Committee?"

"We just wanted to give the Senators information."

"You really went to put your position as to why this cutback should not be made," suggested the Congressman from Louisiana.

"No, sir," replied Smith. "Merely to let the public know how we felt about it."

"Then why go to the Senate Appropriations Committee?" repeated HÉBERT.

"To let them know how we felt."

"Regarding the cutback?"

"No, sir."

"I'm still trying to find out why you went to the Appropriations Committee," queried HÉBERT wearily.

But he got no satisfactory answer. Trying another tack, he asked: "Why did you go to Governor Hodges of North Carolina and to the Congressman (CHARLES JONAS) in whose district your plant is located?"

"We work very closely with those gentlemen and try to keep them posted on the employment situation in our North Carolina plant," replied Smith. "We have about 17,000 employees down there."

"Yes, but you would expect them to do what?" asked the committee chairman.

LOBBYING IS NOT LOBBYING

"I don't know what action they would take," answered Smith. "I would expect that they might raise some questions as to the cutback."

"And to whom would they raise these questions?" queried HÉBERT.

Mr. SMITH. "I would suspect that the questions probably would be raised here in Washington."

Mr. HÉBERT. "To the Defense Department?"

Mr. SMITH. "Yes, sir."

Mr. HÉBERT. "They would then come forward in an effort not to allow your employment to be cut—is that correct?"

Mr. SMITH. "I would think they would raise some questions; yes, sir."

Mr. HÉBERT. "Of course, they would raise questions. Whatever word you want to use, Mr. Smith, is all right with me."

Mr. SMITH. "Maybe we were ill advised, sir, in doing that. But at the time it seemed to make sense."

Mr. HÉBERT. "Are you going to continue to do it, if you were ill advised in the past?"

Mr. SMITH. "No, sir."

Mr. HÉBERT. "In other words, from now on you are not going to inform the Congressman from the district that is affected or the Governor of the State?"

Mr. SMITH. "If it is not the proper thing to do, of course we are not going to. I would need a little instruction, I think, in that regard."

Mr. HÉBERT. "You said you were ill advised. So I asked you if you were going to do it again. If you are ill advised in the first place, what are you going to do in the second place?"

But the vice president of Western Electric was incorrigible. "Well, sir, I think we have an obligation to keep these gentlemen informed," he said.

Mr. HÉBERT. "Therefore you will keep them informed though it is ill advised?"

Mr. SMITH. "I beg your pardon?"

At this point Republican Congressman LEON GAVIN rushed to Smith's defense.

All this is one reason why the taxpayers have to spend so much money for national defense.

GTA Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup, prepared by the GTA public relations department, St. Paul, Minn., on Wednesday, August 26, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF AUGUST 26, 1959

Here's a good question: With what group do you associate the word "subsidies"? The answer: Farmers. So says Editor Dick Hanson, of Successful Farming magazine, in a full-page editorial in his most recent issue. He says he'd be surprised if 9 out of 10 city people didn't answer the question that way.

But he explains that there are two sides to every story. And on the question of subsidies the other side hasn't been mentioned very often. So the magazine publishes a list, made up by the U.S. Budget Bureau, of "aids and special services" for the year ended last June 30.

Now here's the Budget Bureau's list of subsidies paid by Uncle Sam:

To business: One and a half billion dollars in airline and shipping subsidies, navigation aids, postal subsidies, patent service, rivers and harbors work, and so on. Also, oil-depletion allowances are a tax break for the oil industries amounting to more billions of dollars.

To labor: $744 million for unemployment compensation and mine safety work.

To veterans: $5 billion for compensation and pension benefits, hospitals, medical, and readjustment programs.

To other nations: $1.4 billion for economic aid plus $2.3 billion for military aid.

To agriculture: $1.9 billion for price supports, soil bank, sugar, and wool subsidies.

In addition, other subsidies benefit so many people at home and abroad that it is hard to pin them down to any certain group. They include $1.5 billion for Public Law 480 which fights communism and aids less privileged nations and at the same time uses up some American farm surpluses. Government officials disagree as to what this should be charged to so they are tossing it into the farm budget now. Then some $2.3 billion are being spent for public assistance to those in need here at home, the aged, blind, disabled, needy children. Also, for school lunches, hospital operation, the public health service, and so forth.

All told, says Successful Farming, subsidies paid by Uncle Sam come to an amazing and largely unpublicized total of $6.5 billion about one-fifth of total Government spending. The farm subsidy is only about 10 percent of the total subsidy bill.

In the light of the above list, concludes Editor Hanson, it would seem that those who associate subsidies solely with agriculture have their heads buried deeply in the sands of ignorance.

That's the subsidy story, as told by Successful Farming magazine. These radio reports are a service to the upper Midwest by the farmers who own and operate GTA, the co-op way.

Summing Up and Looking Ahead

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include an editorial appearing in the Boston Traveler of August 22, 1959, entitled, "Summing Up and Looking Ahead." Of particular interest in this editorial is the quotation from a speech made in Leningrad in 1931 by Dimitri Manuilsky, a high Soviet official, when he addressed the Lenin School of Political Welfare of the U.S.S.R., and who years later presided at the United Nations. The statement made by him at that time is one of the fundamental plan, intents, and purposes of international communism, and of the Soviet Union, and the quotation from his speech follows:

War between communism and capitalism is inevitable. Our time will come in 20 or 30 years.

To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we will begin by launching the most spectacular peace movement on record. Capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction.

As soon as their guard is down, we shall smash them with our clenched fist.

In my remarks I also call attention to a quotation from a speech made by a truly great American, the late President Theodore Roosevelt, which speech was made at Asheville, N.C., many years ago. At that time President Roosevelt said:

The things that will destroy America are prosperity at any price, peace at any price, safety first instead of duty first, the love of soft living, and the get-rich-quick theory of life.

In a speech made many years ago in San Francisco, the late President also said:

Americanism is a question of spirit, conviction and purpose, not of creed or birthplace.

It is well for Americans of this time and generation to remember those statements.

The editorial follows:

SUMMING UP AND LOOKING AHEAD

Ever since it was announced that President Eisenhower and Soviet Premier Khrushchev would get together in Washington, a loose-thinking segment of the American public has been making plans for everlasting peace.

Millions of otherwise intelligent people have been daydreaming about big disarmament cuts, tax reductions, a lowered cost of living and all the other advantages that normally approach as the threat of war recedes.

"Khrushchev is coming," they reason. "He'll learn to like us and he'll put away his missiles."

But that attitude is not only infantile, it's dangerous.

To keep it at bay, we'd do well to remember a speech made by Dimitri Manuilsky, a high Soviet official, when he addressed the Lenin School of Political Welfare of the U.S.S.R. in Leningrad in 1931. Manuilsky, who years later presided at the United Nations, had this to say:

"War between communism and capitalism is inevitable. Our time will come in 20 or 30 years.

"To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep, so we will begin by launching the most spectacular peace movement on record. Capitalist countries, stupid and decadent, will rejoice to cooperate in their own destruction.

"As soon as their guard is down, we shall smash them with our clenched fist."

Those words are still on the Soviet books. They echo the earlier threats of Lenin. They fit neatly with the announced objective of Soviet communism, to dominate the entire world. They have never been refuted, nor has the objective ever been renounced.

And no matter what quips or smiles or good fellowship talks Khrushchev may produce as he goes bumbling around the United States, he is not going to change basic Soviet Communist philosophy. We'll still be on communism's critical target list when Nikita goes home, just as we were when Manuilsky made his speech 28 years ago.

We can expect, however, to see some necessary cutbacks in defense budgeting in the weeks immediately ahead. And several administration officials, frankly, are grateful for the timing of the Khrushchev visit, since it apparently will ease cold war tensions and make military cutbacks more palatable.

As the Wall Street Journal puts it, quoting a Pentagon policymaker:

"After all, we're no longer waiting for a war to break out in Berlin any day. It'll be easier now to convince the public and Congress that cancelling marginal weapons programs will be a wise move."

In other words, we were going to have to trim part of our weapons program this year anyhow. And the air of false optimism created by Nikita's decision to come over and take a look at us will dilute some of the criticism of the cutbacks.

The surgery that's about to be performed on military hardware probably will not shake our defense spending this year from its $41 billion level. But it will mean less spending on certain items in the years just ahead.

Secretary of Defense McElroy has decided, for example, that the Air Force can get along with 32 new B–58 medium bombers instead of 40 as planned, which means a saving of $200 million. Plans for the new souped-up version of the B–58 have been dropped, on the ground that it would be obsolete when ready.

The Air Force B–70 supersonic bomber and the F–108 fighter, each designed to fly at 2,000 miles an hour, are being threatened with cancellation moves. The chief objection in the Budget Bureau is that both planes might be outstripped by missile age developments before becoming effective.

The Army faces the possible loss of its Nike-Zeus antimissile missile. Critics of this missile have not been convinced of its capabilities, and they point out that to keep the program in operation another 3 or 4 years would cost $10 billion. The Army also wants an additional $4 billion at once for modern ground weapons and a boost in manpower. But the Pentagon doesn't appear to be impressed by the need.

The Navy warns that 81 percent of its ships will be worn out or obsolete in the next 3 to 5 years. But nevertheless, it's going to have to trim its shipbuilding plans in general if it wants to go ahead with its Polaris submarine and atomic carrier projects.

Meanwhile, several military missiles now in the experimental stage may be dropped, including the powerful ocean-spanning Titan. The Pentagon trend is to concentrate more effort on fewer missiles rather than to spread thin effort over too many.

All of this does not mean necessarily that we're weakening our defenses or our national security. What it means instead is that the Defense Department wants to take a closer look at where its billions are being spent, and to trim waste and duplication wherever possible, even at the sacrifice of somebody's pet project.

As one Pentagon official explains it:

"Our weapons plan is like a cornfield. We plant lots of seeds and later thin out those that aren't growing too well."

There will be opposition to these cutbacks, but the false glow of harmony that Khrushchev's visit will create is bound to soften that opposition in many political quarters. Once he starts bouncing and babbling on his good will tour, it will be more difficult than usual to stir up resentment back home against military cutbacks.

But we should be careful not to let the public lower its guard too far.

Manuilsky meant what he said, when he threatened to use the clenched fist.

And what has Khrushchev ever said or done to alter the threat?

Nixon Committee Takes a New Tone

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Nixon Committee Takes a New Tone," published in the Denver Post on August 19, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON COMMITTEE TAKES A NEW TONE

When President Eisenhower asked Vice President NIXON last January to head a Special Cabinet Committee on Price Stability and Economic Growth, the main idea was to emphasize the administration's battle against inflation.

The committee dutifully issued an interim report in June, warning that inflation imperiled U.S. prosperity and taking issue with economists who argued otherwise.

Last weekend, in a second report, the Nixon committee registered a significant change in tone.

While it reiterated the need for stable prices, its major emphasis was on economic growth. The word inflation wasn't mentioned at all.

The new emphasis appears to represent an important step forward in the administrations' economic thinking. NIXON and his Cabinet colleagues seem to be recognizing two important points.

The first is that the danger of inflation is not as great now as it was thought to be earlier in the year.

Congress is likely to balance the Federal budget. A wage increase in steel, if one is granted, will probably be moderate.

Consumer prices, which have remained relatively stable for more than a year, are not expected to show any marked upward spurt.

The second is that fighting inflation is not an end in itself but only a means of promoting the overall well-being of the American economy.

In its preoccupation with the inflation problem, the administration has appeared at times to be losing sight of the broader aims of economic policy.

The battle against inflation has to be reconciled with the need of the economy for more plant and equipment, more production, and more jobs.

It must also be reconciled with the need of the American people—for more schools, more roads, more urban renewal, more reclamation, and more effective defense against Communist aggression.

One of the difficulties in fighting inflation is that the conventional method calls for an attack on spending.

If the attack succeeds, consumers will spend less money on installment purchases, small businessmen will spend less on new plant and equipment, the Government will spend less on the schools and roads the Nation needs.

The drop in spending can be expected to reduce the pressure on prices, bringing some of them down and keeping others stable.

The trouble is that a good deal of spending is necessary to sustain prosperity and the necessary expansion of the American economy.

If the anti-inflation measures work too well, the economy could stop in its tracks and the Nation would have to struggle through another recession.

Meanwhile, educational and other needs of the people would be unmet.

So the Government must proceed against inflation with an alert eye to see that the growth and well-being of the Nation are not impaired in the process.

In the latest report of the Nixon committee, there is new evidence that the administration understands the danger. The committee's new emphasis on economic growth is a step in the right direction.

Remarks of Hon. John F. Kennedy, Democrat, of Massachusetts, Before AFL–CIO Convention, Seaside, Oreg., August 3, 1959

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mrs. GREEN of Oregon. Mr. Speaker, recently the distinguished Senator from Massachusetts, Senator KENNEDY, addressed the Oregon State AFL–CIO Convention, at Seaside, Oreg. His remarks were very appropriately directed to the subject of the pending labor reform legislation. Senator KENNEDY, in characteristic fashion, refused to duck the issue, refused to equivocate, refused to waver before the controversial nature of his work and his bill. The Seaside speech by this great American was a superb discussion of labor legislation, and of other vital issues before the American people. It is with a good deal of pride that I include this speech in the Appendix of the RECORD:

REMARKS OF SENATOR JOHN F. KENNEDY, DEMOCRAT, OF MASSACHUSETTS, AFL–CIO CONVENTION, SEASIDE, OREG., MONDAY, AUGUST 3, 1959

It is a high honor to have this opportunity to participate in the discussions of this illustrious convention. In many ways I may be considered a fugitive from the most restrictive closed shop in the country—the U.S. Senate. We have a guaranteed annual wage for 6 years—but we have no job security, no pay for overtime, no unemployment compensation, and no assurance that our contract will be renewed. The strange part about our closed shop is that there are plenty of workers who want to take our place—but none of our current union members ever want to go out on strike.

In any event, I hope that I can—in the words of the oldtime orators—claim kinship here and have it allowed. I have been closely associated with the leaders and members of the AFL–CIO for 13 years, while serving on the Labor Committees of the House and Senate. And my credentials are written in the record of those 13 years. I come to you today as a friend of labor—I have never concealed or apologized for my friendship with labor, and I do not intend to start now.

Neither do I apologize, I should make clear, to my friends in organized labor for the record of recent years. Jimmy Hoffa may not approve of me—but I do not apologize for having earned his hostility. John L. Lewis may not approve of even the original Kennedy bill, as endorsed by the AFL–CIO—but I make no apologies for that legislation.

THE LABOR BILL AND INVESTIGATIONS

I do not say that the bill as it finally passed the Senate was perfect in every respect. Certainly I do not blame the AFL–CIO for trying to change some of the amendments added on the Senate floor. Certainly I share their regret that the reasonable, fair and responsible bill reported by the Senate Labor Committee—worked out carefully with President Meany and his lawyers, and supported by the executive council—was altered, undesirably and unfortunately altered, on the floor of a supposedly friendly Senate. But that debate—and the vote on the so-called McClellan bill of rights amendment—showed you and me the political facts of life which confronted us. And when that amendment carried by a one vote margin, we were forced to go on the defensive to prevent the antilabor forces from completely taking over.

It is easy to say that none of this would have happened had there been no Kennedy labor bill at all, going back to 1958—or to accuse George Meany and the executive council of making a tactical error in supporting responsible reform legislation in 1958 and 1959. But remember, if you will, that our only other alternative last year was to accept the Knowland bill of rights. Let us not forget that we succeeded in defeating those repressive amendments on the Senate floor only because Senator MORSE and I gave our assurance that a reform bill would be forthcoming from our committee; and the AFL–CIO executive council agreed there had to be a bill.

In short, there was a vacuum there, which the Knowlands and the Goldwaters and the Mundts were determined to fill—and it was my responsibility, as chairman of the Labor Subcommittee, to see that we reported a bill aimed at hoodlums and racketeers, not at collective bargaining. So I could only be gratified by the fact that in both years my bill has been endorsed by the AFL–CIO, attacked by Mr. Hoffa on the one hand, attacked by the NAM and the chamber of commerce on the other—and cosponsored both years by the man who is probably the most distinguished labor law expert in the Senate, Oregon's senior Senator WAYNE MORSE.

So I repeat: I have no apologies. I do not say these have been easy assignments, working on the bill and serving on the McClellan committee. There have been unpleasant occasions—there have been mistakes on both sides—and there have been some disagreements among friends. There has been a tendency among some people to lump in one confusing indictment both the Kennedy brothers, all the labor bills and all the McClellan committee investigations. I could have avoided service on the McClellan committee—as others did. I could have left the Labor Committee—as others did—for a less sensitive assignment. But bear in mind the fact that, along with Senator MCNAMARA—later succeeded by Senator CHURCH—we constituted a small minority on the McClellan committee. To leave the committee—or to abandon efforts in my own committee for a bill—would have simply turned the field over to the GOLDWATERS, the MUNDTS and the coalition of Republicans, aided by a small group of Democrats, who still control the Senate on these critical issues (as they did just 10 days ago in recommitting my bill to repeal the loyalty oath).

The danger now is that this same kind of Republican-southern Democratic coalition in the House of Representatives will substitute for a responsible committee bill, an antilabor, unworkable, punitive measure—and I hope you are lending your efforts to prevent that.

I did not intend to take this much of your time in presenting my own credentials—and I hope you will excuse these personal refer-

ences. I only wanted to make clear what I said at the outset: that I come to you today as a friend of labor.

Certainly there has been nothing in the findings of the McClellan committee to change my attitude about the labor movement as a whole. There are roughly half a million local union officials in this country, another half a million business agents, lawyers, and other paid officials, and another 750,000 shop stewards and others employed in serving the labor movement. Of these nearly 2 million labor leaders, the select committee has neither investigated nor received complaints about more than the tiniest fraction—considerably less than one-hundredth of 1 percent.

The union movement, like any other part of American life, has its share of wrongdoers and corruption. But when we hear about bankers who embezzle funds, or financiers who misuse trusts, or politicians who betray the public, we don't condemn all bankers or all financiers or—I hope—all politicians. Why, then, should we penalize the labor movement as a whole? There is no reason whatsoever why anyone should blacken labor's name and restrict its legitimate activities simply because a few bad apples have been found in the barrel—and I hope we can make the press and public realize that fact.

THE ROLE OF MANAGEMENT

It is easier, I know, for the press and public to play up the misdeeds of the few hoodlums who have infiltrated the labor movement. But if that is true, then it is high time they also played up the findings of the McClellan committee concerning the misdeeds of management and the business community. It is time that the public recognized the employers' responsibility for labor-management racketeering. Our committee found numerous employers, large and small, collaborating in these racketeering practices—preventing legitimate unions from entering their plants—using mobsters to force their competitors out of business—financing the racketeers and their illicit operations in order to obtain their help in breaking strikes. I think it is clear that we are not going to get rid of the Dave Becks and the Jimmy Hoffas in this country until we get rid of the Nathan Sheffermans.

The NAM and the chamber of commerce do not like the Kennedy bill as it was reported by the Senate Labor Committee—they do not like the bill which Congresswoman GREEN has helped report in the House Labor Committee—they do not even like the bill in the form in which it passed the Senate. I think it ought to be obvious by now that they do not really want any bill at all unless it completely paralyzes labor at the bargaining table. They are not interested in penalizing irresponsible racketeers—they are interested only in penalizing responsible labor leaders. They want either repressive legislation or no legislation at all. They are more interested in breaking the power of unions at the bargaining table than they are in breaking the power of hoodlums.

They don't want racketeering to be eliminated. They would rather have a political issue—an old reliable whipping boy. They want a legislative vacuum, which they can then fill at the Federal and State level with the worst repressive measures you have ever seen. Despite the results of last fall, they are still talking about so-called right-to-work legislation. And I want to make it unalterably clear once again that I am now, always have been, and always will be completely opposed to right-to-work legislation in any form at any level.

NEW ISSUES

We face these same hostile forces on a number of other issues of importance to labor, as you know. I realize that there are some cynics, to be sure, who say that there is no longer any need for such action. They say that there are no longer any major issues—that the battles of the past have all been won—and that the American public in general, and our workers in particular, can now sit back and enjoy what they have achieved during the past 30 years.

But I am certain that no one in this hall agrees with that analysis. For the problems are not all solved and the battles are not all won and the issues are not all gone.

On the contrary, our agenda today is, if anything, even longer than it was in the 1930's. We have not yet eliminated the malignant effects of poverty, injustice and illness from the land. We can be encouraged by the recent trend toward reduction in unemployment but we can feel no elation while nearly 4 million people are still searching for work—and those that are still able to receive unemployment compensation checks must get by on an average benefit check of less than $31 a week. We have not yet met the needs of nearly 7 million families, in this, the richest land on earth, still trying to get by on less than $2,000 a year. We have not yet met the needs of some 15 million families housed under what the Bureau of the Census classifies as substandard conditions—of nearly 17 million persons who are unable to purchase enough food to achieve a bare subsistence diet. We have not yet ended the waste of our natural resources—reversed the decay that is blighting so many of our major cities—or, most tragic of all, found the means of stopping man's destruction of man.

Far from being a period of resting on past achievements, the period which lies ahead confronts the American economy with an unprecedented challenge. We can no longer invoke the solutions of the past—the programs and the policies which served us so well during the last generation. For now, once again, the age of consolidation is over—and, once again, the age of change and challenge has come upon us. We are faced with a whole new set of problems—a whole new set of dimensions. We are approaching the day of a 200 million population, a $600 billion gross national product, a trillion dollar economy. We are at the edge of this Nation's greatest age of expansion, growth, and abundance—at the edge of a new era for our Nation, our world, and all mankind.

This Congress—the Democratic 86th Congress—must lay the groundwork for the next 25 years—just as the 73d Congress in 1933, during the first 90 days of Franklin Roosevelt's New Deal, laid the groundwork for the generation that followed.

And there are three items in particular requiring action by the Congress to make certain that this great new abundance which lies ahead—this unparalleled prosperity—is shared by all Americans. There are three gaps, serious gaps, in income protection; and those who fall into those gaps must look to the Congress for assistance. I am talking about the unemployed, the aged, and retired, and the unorganized workers who are unable to receive even a decent minimum wage.

INCREASING THE MINIMUM WAGE

There are those who say we cannot afford to increase minimum wages to $1.25 an hour and that we cannot afford to extend the law any further, and, with the cosponsorship of Senator MORSE, I have introduced the bill to carry out these obligations, and hope to report it to the floor next week. But I am convinced that we cannot afford to do less. Department of Labor statistics show that the average single worker, much less a family man, cannot survive on a wage of $1 an hour. Department of Labor statistics show that, since the dollar level was set 4 years ago, prices have risen substantially, productivity has risen substantially, and wage rates have risen substantially. But the head of that Department, the Republican Secretary of Labor, nevertheless came before our subcommittee this summer and opposed paying all American workers a decent wage. Substandard wages, inevitably, mean poor health, low efficiency, and great personal tragedies. This is what America cannot afford. Our greatest asset in the race for industrial supremacy is a strong, healthy, vital labor force. Our greatest handicap would be an ill-fed, ill-housed, ill-clothed labor force.

Unions such as yours cannot assume the full burden. The unprotected, unorganized workers at the bottom of the economic scale can only look to the Congress for protection—and Congress must provide that protection this year in the Kennedy-Morse bill.

STRENGTHENING UNEMPLOYMENT INSURANCE

If we are to meet the challenge of the future we must also modernize our unemployment insurance system. When enacted, it provided benefits to workers large enough and long enough to enable them to pay their rent, their grocery bills and their doctor bills until work could be found. It was intended to put back into the community at least 50 percent of the loss in wage payments.

But a schedule of unemployment compensation payments that was adequate 21 years ago is grossly inadequate today. Less than 20 percent of lost wages is replaced today. Whatever data you may hear about prosperity, there has been a disturbing increase in the number of persons without a job for 4 months or longer. In many States that means the complete exhaustion of meager benefits and reliance upon either the bounty of relatives or public assistance. That is not the choice we should offer in a country with the highest industrial capacity in the world. Along with Senator MCCARTHY, of Minnesota, I have introduced a bill to give all unemployed workers at least one-half their pay for at least 39 weeks. I believe in our programs of foreign aid and mutual security—but we should also take care of our own. And the place to begin is by enacting decent nationwide standards for unemployment compensation.

IMPROVING CARE OF THE AGED

Third and finally is the challenge offered by the increasing number of older persons in our population. The death rate in this country has been cut in half during the 20th century. In 1900, a baby girl born into a nation where influenza, pneumonia, tuberculosis, and typhoid still took a high toll—where public sanitation was rare, nutrition was inadequate, and medical science was barely underway—could expect to live some 48 years. Today she could expect to live to the age of 73—and soon 10 percent of our population will be over the age of 65.

But their social security checks have been eaten away by inflation—their chronic illnesses are not covered by group insurance. Their housing needs are unmet. Those still able to work are the first to be fired and the last to be rehired. They are, in the words of the song, "too old to work and too young to die." The treatment of its older citizens is said by anthropologists to be one of the most basic tests of how civilized a society or nation has become. Surely the rich, powerful, democratic United States of America is not going to fail that test. These three items are, of course, only the beginning of our agenda. But the important thing now is to get started. This is no time for mere oratory instead of action. This is no time for halfway measures—for inaction or inertia. It is a time to move ahead—to meet the challenge of the future—to remember the words of Justice Holmes, that "whether we sail with the wind or against the wind, we must above all set sail—and not drift or lie at anchor."

Statement of Need for Revision of Code on Interstate Extradition

EXTENSION OF REMARKS
OF
HON. EARL HOGAN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. HOGAN. Mr. Speaker, I am today introducing a bill to revise the Federal statute on interstate extradition—18 United States Code, No. 3182—to do away with the requirement of Governors' warrants in the demanding and rendering States and confine the hearing in the rendering State to a review by habeas corpus.

Let us look at a common example of present extradition procedure. A police department in Indiana has a bench warrant for the arrest of John Smith, who has recently moved to California. The Indiana police send the warrant or a telegraph message to the law enforcement agencies in California, and Smith is arrested, thrown in jail, and bond is set—arrest prior to requisition is authorized by Nos. 13 and 14 of the Uniform Criminal Extradition Act. California officers then wire the Indiana officers that a hearing on the extradition will be held 30 days later—often without telling Smith he can waive extradition or often giving him the erroneous impression that signing the waiver constitutes an admission of guilt. The Indiana officer then takes a copy of the indictment or affidavit to the Indiana Governor for certification that Smith has been substantially charged with a crime in Indiana. When he reaches California, he must get a California Governor's warrant and present all these papers at the extradition hearing in the court of the jurisdiction where Smith is held—see No. 10 of the Uniform Criminal Extradition Act. Meanwhile, Smith has been sitting in jail for 30 days.

The present redtape procedure has become routine and is merely a cumbersome hangover from the internation concept of asylum for political prisoners which is unworkable on the interstate level and contrary to the modern American concept of full cooperation among sister States embodied in the full faith and credit clause of article IV. Section 2, clause 2, of that article makes extradition of criminals between the States a part of the supreme law of the land, and is not governed entirely by comity and agreements between the States. It has been so handled in recent years by the passage in the States of the Uniform Criminal Extradition Act because of the failure of Congress to provide detailed legislation on the subject.

The statute—now 18 United States Code, No. 3182—which was passed in 1793 to implement article IV, section 2, clause 2, has remained substantially unchanged since that date. It was drafted from the provision in the Articles of Confederation and was intended to provide an efficient method to secure the return of fugitives by using the swift and influential means of communication and transportation available only to the Governors in those pioneer times. Its design was, in effect, to eliminate for this purpose the boundaries of States so that each State could reach out and bring to speedy trial offenders against its laws—see *Biddinger* v. *Police Commissioner* (245 U.S. 128 (1917)). But, in our modern era of rapid communication and transportation and of close cooperation between the local law-enforcement officers of the sister States, a procedure that at an earlier time expedited the return of fugitives has now become an obstruction to the swift administration of the law.

I feel this proposal is sound because the issue in extradition is not the guilt or innocence of the accused, and no substantive right is being destroyed. The constitutional framework and relevant statutory and case law do not recognize a right of asylum for fugitives from justice of the States. The use of Governors partially led to the result—among other factors, such as the fact fugitive was a Negro from the South escaped to the North just before the Civil War—in *Kentucky* v. *Dennison* (24 How. 66 (1860)) where the Supreme Court held that, even though the Constitution and the statute used the word "shall" and the duty to extradite was ministerial and not discretionary, it would not compel a Governor by mandamus to perform this duty. I feel that the Court here was not only influenced by the political circumstances of the time but also was recognizing an immunity from suit of the Governor of the State, and if given the occasion to decide a similar case where Governors are not involved, it could reach a different decision. It has been held that both Federal and State courts can control lesser State officials by mandamus—see discussion of the distinction in *Huidekoper* v. *Hadley* (177 Fed. 1, 11 (1910)); *General Oil Company* v. *Crain* (209 U.S. 211 (1908)); see also note 85 in 66 Yale L.J. 97, 113).

For these reasons I believe that the use of Governors in interstate extradition proceedings is now outdated and unwise. But there remains the consideration of whether the use of Governors is essential to maintaining extradition procedures consistent with our constitutional scheme of a division of powers between State and Federal Government. The Constitution states:

> A person charged in any State * * * shall, on demand of the executive authority of the State from which he fled, be delivered up.

I think that executive authority is here broad enough to include law-enforcement officers and not necessarily Governors, and it would seem that Congress in legislation to implement this provision could so define the term. The 1793 statute used both of the terms—"executive authority" and "Governor"—implying that the two were not necessarily coextensive. Several cases have said "executive authority" is a general term and merely designates the branch of government, not a single individual—see "Words and Phrases"; *Comm.* v. *Hall* (75 Mass. 262, 267); *State* v. *Collett* (138 O. St. 425, 35 N.E. 2d 568, 570 (1941)).

The present scheme actually works a hardship on those accused of crime, who frequently refuse to waive extradition because of the erroneous impression that they are making some damaging admission of guilt by signing such papers, or because they are uninformed of their right to waive. Furthermore, the usual inability to post bond or failure of arresting authorities to inform him of his right to waive extradition or have bond, often results in the lengthy confinement of innocent persons who languish in jail awaiting the documents and hearings in the courts and before the Governors. Yet, the proposed revision will not in any way limit the present scope of review of extradition in the rendering State. The fugitive's right to habeas corpus remains unimpaired and guarantees the fullest extent of review to which he is presently entitled. This includes: First, correctness of the requisition papers; second, the relator's identity; third, whether relator is a "fugitive"; fourth, whether a crime is substantially charged. In fact, several cases indicate that review by habeas corpus is broader than on routine extradition hearing and includes the potential abuses of extradition process to aid in the service of civil process or where there is a threatened deprivation of constitutional rights—see discussion at 47 Col. L.R. 470; 23 S. Cal. L.R. 441.

Therefore, the proposed bill merely removes the cumbersome routine procedure which at present obstructs the speedy and efficient extradition of fugitive criminals without depriving the individual of any substantial right to challenge the validity of the extradition.

Ten Thousand Return to School

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. GIAIMO. Mr. Speaker, I wish to bring to the attention of this body a most excellent editorial which appeared in the Milford (Conn.) Citizen, on Sunday, August 30, 1959.

The editorial speaks for itself, Mr. Speaker, and I wish to present it now for your consideration:

> HOW ABOUT THE TEN THOUSAND?
>
> Only 10 days from now nearly 10,000 boys and girls will swarm to Milford schools. They will meet new teachers, start a new year of adventures in education. There will be complaints from some parents whose children will have to walk where there are hazards.
>
> Thanks to the conscientious work of a faithful board of education and a competent school administration, the 10,000 will emerge from the classrooms next June with a solid year of educational advancement behind them.
>
> But it will be a difficult year because our swelling school population has once again

outgrown our school facilities, and our school budget has been shrunk so far that our children will be denied educational advantages most of their contemporaries in other towns will enjoy.

Through the long, hot summer days the schools have not been in the forefront of the news. This has been a summer in which Milford news has been dominated by politics.

But when the 10,000 hit the schools, their families will once again become painfully aware of our limited facilities.

We shall hear again the arguments about finance, and there will be many who will insist that Federal aid to education is dangerous. It will be argued short-sightedly and selfishly that Connecticut would not get its full share of such aid, as though ignorance elsewhere could not injure us.

And it will be argued that Federal aid to education would put Milford's schools under the control of the Federal Government. To be sure, local authority over education must be preserved. But to assume that Federal control would be a subversive influence displays a dangerous distrust of the officials we ourselves elect. Possibly we cannot find out enough about what our elected officials are doing, because of the thickening curtain of secrecy around them.

But if there is a sinister plot to put the school systems of America under a commissar and pump brainwashing fluid into young heads, it must be masterminded by patience unusual even in the smart politician.

Milford has been receiving Federal aid to education for some 5 years already, and there has not yet been a hand lifted to take control over the schools.

It is better to get the help needed to make our educational program adequate for today's needs, than to sacrifice it for a groundless fear of control that an informed public could throw off if it materialized.

The Agricultural Hall of Fame

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. GEORGE. Mr. Speaker, the national shrine to agriculture is now becoming a reality. My home county of Wyandotte near Kansas City, Kans., was finally selected as the site for the Agricultural Hall of Fame.

When completed, the Agricultural Hall of Fame will be a national shrine to tell the story of agriculture and of the men and women who have contributed so much to it. This shrine will be composed of:

First. A museum portraying vividly the history of agriculture;

Second. A statutory hall where the immortals of agriculture will be honored;

Third. An agricultural library;

Fourth. An educational unit designed to familiarize children with agriculture;

Fifth. A farm village complete with a sod house, log cabins, and school buildings;

Sixth. An Indian village which portrays the practices and crops of the native Americans;

Seventh. An outdoor amphitheater for pageants, field events and special farm meetings;

Eighth. A special room to honor farmers who have distinguished themselves as Members of the U.S. House of Representatives and the Senate; and

Ninth. An international shrine to honor farmers throughout the world.

Resolutions were approved commending, encouraging and sanctioning the development of the Agricultural Hall of Fame.

More than 50 cities throughout the Nation bid for this project. After thorough investigation, it was awarded to Kansas City, Kans. A site consisting of 409 acres surrounded by 300 acres of park land was offered by the city as part of its bid. It is located in my county of Wyandotte approximately 10 miles west of Kansas City on the Kansas Turnpike.

Dr. A. Webster Tenney, for a number of years beginning 1943, a specialist in agricultural education with the U.S. Office of Education and national executive secretary of the Future Farmers of America for 14 years, has been given a 5-year contract to actively administer the Agricultural Hall of Fame.

A financial drive headed by Raymond Firestone of Akron, Ohio, to obtain $5 million to complete this national shrine to agriculture is now in progress. The campaign is being financed in its early stages with $100,000 offered by the banks in the Kansas City area as a loan to provide operating funds.

The Honorable HAROLD D. COOLEY, chairman of the Agricultural Committee, introduced a bill similar to mine, but urged that H.R. 5789 be considered since this hall of fame is to be located in my congressional district, for which I am very grateful.

The Future Farmers of America, Mr. Speaker, hold their annual conventions in Kansas City and the American Royal is located there. When the Agriculture Hall of Fame is completed, it will be a psychological boost for farmers everywhere.

The Kansas City Star recently published an editorial from the Richmond Times-Dispatch which emphasizes the psychological value of this shrine to America, and which I include as part of my remarks:

[From the Richmond Times-Dispatch]

A PSYCHOLOGICAL BOOST FOR THE FARMER

Over the postwar years the farmer has become the economy's whipping boy. Geared to intensive war time production, but deprived of much of the world market; bedeviled by rising costs of labor and equipment, hagridden by overproduction and falling free market prices, he finds himself in a seemingly hopeless dilemma.

Taxpayers and consumers look at him with a jaundiced eye, as his electoral power wanes with his decline to 12 percent of the population.

He fears to continue precarious dependence on Government subsidies, but he's afraid to cast away the Federal crutches, lest he stumble, break a leg and lose his farm to the mortgagee.

In this doleful situation, the farmer is much in need of something to restore lost pride and the respect of fellow citizens.

What he needs is a psychological "pick-me-up." The Agricultural Hall of Fame being planned for some 400 acres in Wyandotte County, Kans., could be just what the doctor ordered.

The Hall of Fame is to be a national shrine to honor past and present farmers who, on their steady march westward, pioneered American civilization, and from crude beginnings developed the most efficient, most productive agriculture in world history.

City folk who think of cereal and milk as having come from the grocery store need to be reminded that the farm is the birthplace of our food and fiber, and that, in a very real sense, we are all dependent on the brain and brawn of the people who produce them, often in a desperate gamble against whims of the weather.

The proposed, centrally located shrine and museum to commemorate leading farmers, inventors, scientists and statesmen who did much to make this boon of plenty possible, will really be more than the words "Hall of Fame" suggest.

It will be to the history of American agriculture what Colonial Williamsburg signifies to the history of Virginia.

It could be a permanent source of inspiration to millions of farmers, and a mecca for visiting foreigners who come to study the evolution of American methods.

Freedom

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, September 3, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poem entitled "Freedom," written by Thurza Gould of Hartford, Conn.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

FREEDOM

At dusk you lift the latch of the gate,
And later sit on your porch,
Smoking your pipe through the evening late,
Discussing subjects of all sorts,
Or you may just listen to the sea,
Breaking on wide sands somewhere,
And a mountain see in your fancy,
Supporting the sky on its shoulder.

This, then, by right you call your freedom;
Approaching footsteps outside
Your closed door bring no apprehension
That some danger may betide
Those within your house you hold most dear;
Freedom is all this—more, too;
It is filling your lungs with clean air,
And meeting each day anew.

It is all the things you do worthwhile—
It is the tilt of your chin
And bringing to some sad face a smile;
It's helping to rid the world of sin
That all may live by the Golden Rule,
All may worship as they please
And send their children to any school;
Freedom—it is you and these.

—*Thurza Gould.*

Sharp Decline in Aircraft Manufacturing Employment Stresses Further Need for Federal Legislation To Aid Distressed Economic Areas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following press release of September 2, 1959, issued by the Area Employment Expansion Committee, New York City, and a fact sheet released by the same organization on labor supply classifications and aircraft employment for 40 selected industry centers:

PRESS RELEASE BY AREA EMPLOYMENT EXPANSION COMMITTEE

NEW YORK, September 1.—Aircraft manufacturing has declined so sharply in the last 2 years that 14 of its principal centers show a substantial labor surplus and 9 are among the Nation's chronically distressed areas, with 6 percent or more unemployment for 18 months or longer.

These figures were revealed today by Solomon Barkin, secretary-treasurer of the Area Employment Expansion Committee, a citizens' group which is pressing for passage of the area redevelopment bill (S. 722) by Congress.

Aircraft employment has fallen 146,500, or 16.4 percent, from its peak of 892,000 in April 1957, Barkin said, with much of the loss concentrated in a relatively few communities. The drop has been 38,500 in the Los Angeles-Long Beach area; 11,200 in Buffalo; 9,600 in Dallas; 5,000 in New York City; 2,900 in Detroit; and only slightly below the latter figure in Chicago and Paterson, he reported.

"Thus aircraft has joined coal mining, textiles, automobile parts, pottery, and other shrinking industries that have inflicted severe and permanent distress upon many communities," Barkin said.

In 40 selected centers where there were 1,500 or more aircraft workers, this industry accounted for 30 percent of the job loss from May 1957 to May 1959, he went on.

"The fact that an industry so closely identified with modern progress has so quickly been affected is dramatic evidence of the need for Federal redevelopment legislation," Barkin added.

The creation of distressed areas is a natural byproduct of our highly dynamic economy, Barkin said, in which older industries and older plants give way to new.

"We can expect this process to accelerate along with the rate of technological change," he continued. "In itself, of course, such technological progress is more than welcome—it is essential.

"However, to achieve and maintain a stable and fully productive economy we must minimize the waste of manpower and capital that results from the collapse of an industry that has traditionally supported an established community. Federal aid must be available for such communities, where it is needed and where it is economically feasible, so they can get their full share of the new industries that arise to replace the old."

The alternative is the concentration of unemployment in those centers that have been hit hardest by the cyclical development of industry, Barkin said. This has been the case during the recent economic recovery, he noted, with the chronically distressed areas remaining static while the rest of the Nation moved toward prosperity.

[Release by Area Employment Expansion Committee, New York, N.Y.]

Fact sheet No. 39—Labor supply classifications and aircraft employment for 40 selected industry centers

[May 1957 and May 1959 classifications; May 1959 employment totals and changes since May 1957]

Support of Proposed CCC

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, September 3, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Letters to the Star—Favors CCC," published in the Sunday Star, Washington, D.C., on Sunday, August 30, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LETTERS TO THE STAR—FAVORS CCC

In your editorial of August 21, "No Need for a New CCC" you were, I judged, careful not to argue that there is no need for the sort of conservation work the enrollees might be expected to do. I am sure you realize that even before President Eisenhower introduced his policy of inaction or reduced action, with reference to conservation there was already plenty of need for that sort of work. Evidences of such a need exist within less than a hundred miles of this city. The same or similar need exists in most all parts of our country.

As for the cost, about $3 for each U.S. resident per year, I think we can manage that as well as many other, possibly less essential Government services.

It is true that a new plan will encounter some difficulties not encountered by the old. The fine corps of reserve officers, many of them engineers, which was available in the depression years will not be available now. Good leadership is essential to such a plan. I do have faith that Senator HUMPHREY and others interested in the reinstituted CCC will have an answer to that problem. There may be no great rush of enrollees. Not because of the lack of a depression, some areas are still depressed, but because many boys may not welcome the challenge of the outdoors life, regular hours and a certain flexing of muscle which any CCC program would promise. The boys might just prove me wrong there, too. The plan certainly deserves a thorough trial. Admittedly, the backers of such a plan did not present it as a reform school but if boys with criminal records or with such tendencies did happen to enroll the very nature of the life would do much to "straighten them out." Petty thievery in a barracks may not be difficult but it is often very unhealthful.

The life of a CCC boy would not be a bowl of jelly. The program would not solve all of our problems but it would do much for a rather large segment of our population which needs a helping hand. I say give the plan another try.

CHARLES L. STOUT.

America's Religious Freedom Omitted From U.S. Exhibit in Moscow

EXTENSION OF REMARKS
OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. PUCINSKI. Mr. Speaker, I would like to call attention to an article which appeared in the Christian Science Monitor on Friday, August 21, 1959, describing the American Exhibition in Moscow.

I think all of you will agree that the Christian Science Monitor is one of the most highly respected newspapers in America, and it is safe to presume that the reports of this newspaper's correspondents are factual and trustworthy.

It is because I have such profound confidence in the integrity of this newspaper that I was particularly disturbed about the following paragraph which was part of the story about the American Exhibit in Moscow in the August 21 issue of the Christian Science Monitor.

The paragraph stated:

> There are also reports that many Soviet visitors have been both perplexed and disappointed that there was not more on religion and religious life in the United States at the exhibition.

It is indeed ironic that the following paragraph in this story is as follows:

> But in certain areas visitors' opinions appear to be highly favorable. One of these is the hi-fi area, which attracts a large number of young people who know a great deal about American music, particularly jazz.

While I have no reason to question the accuracy of the Christian Science Monitor report, in order to assure myself that this report was indeed correct, I sent an inquiry to Mr. Erwin D. Canham, editor of the Christian Science Monitor, who only last week returned from an inspection of the American Exhibit in Moscow. I should like to point out here that Mr. Canham is also president of the U.S. Chamber of Commerce.

In answer to my inquiry, Mr. Canham was kind enough to forward me the following reply:

> Yes, I agree that religious life in America could have been more effectively and explicitly presented. However, there were many pitfalls, including denominational pressures and probably difficulties with the Soviets. It is a subtle problem, since we need to persuade Russians of the real meaning of religion and religious freedom to Americans, not just formal worship as they have known it. It is gratifying that American guides and specialists have often been able to give meaningful and impressive answers to religious questions asked by Soviet visitors.

It is of particular interest to me that in his reply, Mr. Canham does confirm the fact that the Russian people are obviously asking questions about religion in America.

I submit, Mr. Speaker, that on the basis of these two reports, the Office of the American National Exhibition in Moscow has broken faith with me and the other Members of this Congress.

I should like to recall here that on May 1, 1959, the general manager of the American exhibition, Mr. Harold C. McClellan, assured me in a rather lengthy letter that the "pervasive influence of religion throughout the American society" would be adequately included in the exhibit.

For some time prior to receipt of Mr. McClellan's assurance, I had carried on considerable negotiations with both Mr. McClellan and the U.S. Information Agency to impress on these people that it is my firm belief that the American exhibit should show the Russian people the real dynamics of religious freedom as we know them in this country.

I had pointed out to Mr. McClellan and his associates that the very cornerstone of our freedom in the United States is our deep belief in the Almighty, and I had urged Mr. McClellan to provide perhaps a special exhibit dealing with the subject. Throughout my discussions with Mr. McClellan and his associates, I tried to impress the fact that millions of Russian people who will visit this American exhibit should be made aware that the very basis of our Republic is the spiritual foundation which gives us understanding and compassion in dealing with each other as Americans.

It was on the basis of my firm position on this subject that I received an assurance from Mr. McClellan by letter on May 1 that "we shall do our best to reflect properly the religious side of American life."

I submit, Mr. Speaker, that on the basis of this article in the Christian Science Monitor, Mr. McClellan has not kept his word, and I strongly urge that that the appropriate committee of this Congress undertake a full investigation to ascertain what factors came into play in omitting this very important aspect of our American life in the exhibit at Moscow.

Ever since the exhibit opened, we have seen press reports of severe censorship of the entire exhibition by Soviet officials. We have seen that our American authorities were not given a free hand in preparing the exhibit so that it would reflect the full meaning of freedom in this country. Only the other day the press carried stories that American officials were compelled to remove a photograph of a hungry child in China holding a bowl of rice.

It was my understanding that some 13 million American dollars have been spent on this exhibit, and I think it is the duty of this Congress to find out what factors were influential when the original agreement for this exhibition was reached with the Soviet authorities. It is my firm conviction that some study should be given to just how much backbone and stamina our American representatives have in dealing with the Soviet Union. There is no question in my mind that if they yield to the Soviet Union on the subject of an exhibit such as the one we are now financing in Moscow, then I hardly think they are capable of dealing with the Soviets on the more profound problems facing the survival of civilization.

I am deeply concerned that those who have set up this exhibit have put their greatest emphasis on the material wealth of American when actually our greatest strength as a nation lies in our spiritual foundation—our freedom of speech, our freedom of the press, our freedom of elections, our freedom of religion, our freedom of assembly.

I need not tell you how chagrined I am that while the organizers of this exhibit could not find sufficient space to tell the Soviet people about our great religious freedom, they did find sufficient resources to emphasize hi-fi and jazz.

Mr. Speaker, I am enclosing the entire text of Mr. McClellan's letter to me of May 1, 1959:

> OFFICE OF AMERICAN NATIONAL EXHIBITION IN MOSCOW,
> *May 1, 1959.*
>
> Hon. ROMAN C. PUCINSKI,
> *House of Representatives, Washington, D.C.*
>
> DEAR MR. PUCINSKI: I acknowledge receipt of your thoughtful letter of April 24 in reference to our conversation concerning the presentation of religion in the American National Exhibition in Moscow this summer.
>
> I have reviewed your letter and its enclosures very carefully and have discussed them with the policy experts on my staff and elsewhere in the executive branch of the Government. It remains my best judgment that we should not present a separate religious exhibit at Moscow, but rather that we should portray the pervasive influence of religion throughout the American society.
>
> I recently returned from Moscow where I have reviewed our plans with Ambassador Thompson, his top officials, and our own exhibit staff. I believe in all sincerity that we are following the proper approach.
>
> I should like to give you an idea of some of the ways we intend to present religion in the exhibit.
>
> 1. One of the most striking features of the architectural exhibit will be a set of panels devoted to churches and the creativity of American architecture in the religious tradition.

2. The two motion pictures to be shown at the exhibit will contain photographs of churches and people entering these churches. These two motion pictures are Circarama and the special seven-screen documentary on American life presently under production by Charles Eames.

3. There will be religious literature at the exhibition in the book, magazine, and newspaper section.

4. There will be an exhibit of university catalogs in which courses in religion will appear. There will also be a certain number of catalogs of theological schools.

5. There will be a considerable number of questions in the Ramac electronic calculating machine concerning statistics and information on religion in American life. I cannot yet tell you how many questions because they are still being prepared in the U.S. Information Agency.

6. The exhibit on the American worker in community life will contain phoographs and textual material on religious life in the community.

7. There will be some paintings with religious themes in the painting exhibit.

8. The large photographic exhibit, entitled "The Family of Man," has a considerable number of photographs depicting human belief in God.

9. The Gallery of Americans, which is a special exhibit composed of photographs of famous Americans, will include several of the national figures mentioned in your attachment and will include quotations which refer to the subject of religion.

10. Religious music will be included as part of the musical programs presented in both the high-fidelity area and the outside rest area.

Please accept again my appreciation of the time and thought you have given this problem and my assurance that we shall do our best to reflect properly the religious side of American life.

Sincerely yours,

HAROLD C. MCCLELLAN,
General Manager.

Khrushchev: The Real Story of the Man and His Deeds

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. CHAMBERLAIN. Mr. Speaker, I am sure that those who favor, as well as those who oppose, the invitation to Premier Khrushchev to visit the United States, are fully aware of the potential dangers involved. U.S. News & World Report, in its September 7, 1959, issue, gives an unvarnished account of the Mr. Khrushchev behind the sometimes smiling face.

In the belief that we all should be fully informed as to the type of person we are dealing with, I include under leave to extend my remarks the article, which follows:

KHRUSHCHEV: THE REAL STORY OF THE MAN AND HIS DEEDS

A few days from now Nikita S. Khrushchev is to step off a plane in the United States and the American people are to get their first close look at a Soviet dictator.

For 2 weeks Khrushchev is scheduled to tour this country as a guest of the U.S. Government. He is expected to dine at the White House, talk with President Eisenhower, speak over U.S. television and radio networks, visit several cities, and be seen by millions of Americans.

What kind of a man will Americans see?

If Khrushchev runs true to his usual form, they will see a smiling man. The smile is on the face he uses to charm strangers. Americans may get glimpses of the shrewd and capable Khrushchev who has helped build Soviet Russia into a world power. Khrushchev may bluster a bit for his American audience, or scowl, or even shout angry threats. For Khrushchev is a man of many faces.

But what kind of man is he in fact? And what is behind this outcry of protest that is welling up in the United States about his visit to this country?

For the answers, it is necessary to study the Russian's record—to go behind the official Soviet accounts and get the truth about Nikita Khrushchev. You must go back to Khrushchev's youth as a roistering worker with his hands, follow his rise in the Communist Party, see the part he played in Joseph Stalin's bloody purges. Then you must watch him, after becoming the boss himself, carry on in Stalin's tradition—sending the Soviet Army to crush Hungary's bid for freedom, shooting down unarmed American fliers, stirring up trouble around the globe, and threatening civilization with a nuclear world war III.

The man that emerges is the real Khrushchev—the man that Americans will not be shown in his brief visit to this country.

You get glimpses of the hidden Khrushchev in incidents.

BLOODY HANDS

While quarreling with Kremlin confederates in 1957, Khrushchev is reported to have shouted:

"Your hands are stained with the blood of our party leaders and of innumerable innocent Bolsheviks."

"So are yours," they shouted back.

"Yes," Khrushchev answered. "So are mine. I admit this. But during the purges I was merely carrying out your orders. I was not then a member of the Politburo and I bear no responsibility for its decisions. You were."

TEN THOUSAND CORPSES

The following incident was uncovered by the U.S. House of Representatives' Select Committee on Communist Aggression, in a 1954 investigation:

In 1943, German troops who had invaded the Ukraine dug into an area which had been used by Soviet secret police. They found 95 mass graves containing nearly 10,000 corpses whose hands were bound and who had bullet holes in the backs of their necks. From objects found on the bodies, they were identified as victims of the bloody purge that had been carried out in the Ukraine in the years 1937 to 1939.

Nikita S. Khrushchev had been sent to the Ukraine by Stalin to direct that purge.

APPROVED MURDERS

In his famous denunciation of Stalin in 1956, Khrushchev accused the former Soviet dictator of forcing old Bolshevik leaders into false confessions and then having them executed.

Yet the files of the official Soviet newspaper, Pravda, show that in January 1937, Khrushchev made a speech defending those executions. According to Pravda, he told a Moscow crowd of 200,000 people:

"We are gathered here in Red Square to make our proletarian words resound, words full of approval of the sentence passed by the military collegium of the supreme court on the enemies of the people, the traitors to the motherland, the betrayers of the cause of the toilers, the spies, the diversionists, the agents of fascism."

TRICKERY AND TANKS

When the Hungarian people revolted against Kremlin tyranny in 1956, it was Khrushchev who ordered the Russian Army to invade Hungary and massacre the civilians who demanded freedom. It was Khrushchev who invited a Hungarian leader, Gen. Pal Maleter, to negotiate under a flag of truce and then had him arrested by secret police. It was also Khrushchev who offered safe conduct to the late Hungarian Premier, Imre Nagy, to lure him out of sanctuary in the Yugoslav Embassy, and then had him kidnaped and executed.

While the fighting in Hungary was going on, U.S. Ambassador Charles Bohlen in Moscow asked Khrushchev what he was going to do about stopping the slaughter of Hungarian patriots. Khrushchev's answer:

"We will put in more troops, and more troops, and more troops, and more troops—until we have finished them."

BEHIND THE PROTEST

It is from such incidents as these that you get an understanding of the protests against Khrushchev's visit.

To thousands of Ukrainian refugees in the United States, Khrushchev is known as the "hangman of the Ukraine." To Hungarians, he is the "butcher of Budapest." To Americans of Polish descent, he was a participant, with Stalin, in the 1939 dismemberment of Poland. And, to millions of Americans whose ancestors came from the countries of central or eastern Europe that are now Soviet satellites, Khrushchev is the man who holds their ancestral lands under Red subjugation.

Today, as Khrushchev's visit nears, Americans of all extractions are remembering other incidents involving this man of many faces.

GENEVA DOUBLE CROSS

It was a smiling Khrushchev that President Eisenhower and other Western leaders met at a summit conference in Geneva in the summer of 1955. At that conference Khrushchev and his then-Premier, Nikolai Bulganin, agreed to work toward reunification of Germany—where Khrushchev today is threatening another Communist takeover in Berlin. It was at Geneva, too, that Khrushchev campaigned for peaceful coexistence, and increasing friendly contacts between East and West across the Iron Curtain.

It turned out later that Khrushchev was using the Geneva Conference to screen one of the biggest political moves of his career—a Soviet advance into the Middle East. While they smiled and talked at Geneva, the Communists were arranging to supply arms to President Nasser in Egypt. This deal gave the Kremlin its first foothold in the Middle East—a foothold that was later enlarged to include deals with Syria and a near takeover in Iraq.

The Soviet arms deal with Nasser served also to embolden Nasser for his seizure of the Suez Canal. That seizure, in turn, brought the short and sudden war in which France, Britain and Israel sent forces into Egypt in the autumn of 1956.

It was at the time of the Suez invasion that Khrushchev made one of his first nuclear threats against the West in blunt language, he told the British and French to call off the war or face the threat of missile-borne weapons from Russia.

DEATH OF U.S. AIRMEN

On Sept. 2, 1958, Soviet military planes shot down an unarmed U.S. transport plane with 17 Americans aboard. Khrushchev's Government denied the shooting. Khrushchev's Ambassador to Washington, Mikhail Menshikov, refused even to listen to a tape recording which presented proof that the plane was attacked deliberately by Soviet fliers acting under direct orders. The tape

recorded the radio conversation of the Soviet fliers as they gunned the American plane to earth.

The Khrushchev with this background is now the head of one of the most powerful nations in the world. He controls a Communist empire of 900 million people that stretches over most of Asia and a large part of Europe. Vice President RICHARD NIXON describes Khrushchev as "a man who holds in his hands the greatest power any one man has ever held in the history of civilization—who by his decision alone could press the button which could start a chain reaction which would destroy civilization as we know it."

UP FROM OBSCURITY

How did Khrushchev grow so high and mighty?

There was nothing in the first 40 years of his life to indicate such a future.

Khrushchev was born in poverty in the small Ukrainian village of Kalmovka. The date was April 17, 1894. His father is variously described as having been a coal miner and a blacksmith.

Events of Khrushchev's boyhood are shrouded in an obscurity which has been deepened by the rewriting of history that is customary in Soviet Russia. Official Soviet accounts say that Nikita as a boy hired out as a shepherd and then went to work as a coal miner, following in the footsteps of his father.

Other, unofficial, biographers say that the only sheepherding that Nikita did was to look out after his father's few pigs, cows, and goats, and that he then learned his father's trade of blacksmithing.

Khrushchev often refers to himself as a Ukrainian. But Ukrainian refugees claim that his family was Russian in origin and point out that Khrushchev, even after living for years in the Ukraine, speaks the Ukrainian tongue very badly.

In his boyhood years, when most youngsters are in school, young Nikita got very little formal schooling and showed little interest in education.

At an early age—17, by one detailed account of his early life—Khrushchev left home to become a wandering worker in the factories and coal mines of the industrial Donets Basin, or Donbas, as it is commonly called. This is an area in the southeastern Ukraine, near the Sea of Azov. Unofficial accounts say that Khrushchev's trade was that of turner and pipefitter, that he also was a locksmith. Official Soviet accounts speak of him as working in the mine pits and learning to operate the lift cage.

TALENT FOR DRINKING

One of the few signs of the future Khrushchev that appeared in his youth was this: He was noted, even then, for his ability to drink enormous amounts of alcohol.

A biography, "Khrushchev of the Ukraine," written by Victor Alexandrov, contains an episode about Khrushchev's youthful drinking, as related by Vladimir S. Andriyevsky, a Ukrainian who grew up in Khrushchev's hometown. According to this account, Andriyevsky encountered Khrushchev, accompanied by two young ladies, in a Kharkov beer hall in 1914. Khrushchev was described as drinking yorsh, a mixture of beer and vodka.

When Khrushchev was asked if he weren't afraid of getting tight on such a mixture, Andriyevsky relates, he burst out laughing and said "Yorsh has no effect on me."

"And he was right," Andriyevsky is quoted as saying. "I saw him swill five bottles of beer and a bottle of vodka, Smirnov 56, without batting an eyelid."

When Russia entered World War I, Khrushchev, although of military age, did not go into the army. But he did begin to show a belated interest in education, attended evening classes, borrowed numerous books from libraries.

CAREER IN THE PARTY

When the Bolshevik revolution toppled the Czar in 1917, Khrushchev was not a participant. But he soon joined the movement. He fought with Red troops against the whites and Cossacks in the civil war that followed the revolution. Then, in 1918, he joined the Communist Party and began his long climb to its leadership.

After the civil war subsided, Khrushchev returned to the mines, where he helped organize Communist units. Then, in 1922, he was sent to a workers' school, the Donets Industrial Institute, where he studied agriculture, among other things.

It was about this time that Khrushchev married. Mr. Alexandrov's biography says the marriage took place in 1922 and that his bride was a fellow student of agriculture. Some other accounts give the marriage year as 1920.

The Kremlin is always secretive about the private lives of Soviet officials, and Khrushchev has done little to clear up the mystery about his own. He once said he had two sons and several daughters.

TWO MARRIAGES

Recently, when entertaining Eric Johnston, president of the Motion Picture Association of America, at the Khrushchev vacation home, the Soviet Premier became more specific. He said he had two daughters and two sons, and that one of the two sons had been killed while serving as a pilot in World War II. He also told Mr. Johnston that his present wife is not the mother of his children, but is his second wife. The second Khrushchev marriage is reported to have occurred in 1938, after the first wife died.

Upon completing his workers' school course, Khrushchev became a full-time party worker. He was an organizer and propagandist in various cities of the Ukraine. In this effort he acquired a reputation as a hard and effective worker and as a rough-and-tumble orator who could more than hold his own in arguments at party meetings.

Here came Khrushchev's first big break. He won the notice of Lazar M. Kaganovich, then first party secretary in the Ukraine. With the help of Kaganovich, Khrushchev won assignment to Moscow's Industrial Academy for further studies. This was 1929. Khrushchev, the Ukrainian shepherd boy, had arrived in Moscow, the center of the Communist world. His star was rising.

STALIN'S UNDERSTUDY

At the Moscow institute, Khrushchev added industrial training to the agricultural background that he had acquired in the Ukraine. He also won a powerful new friend—Joseph Stalin.

As the story is told, here is how he caught Stalin's eye: At the institute, Stalin's wife was a fellow student. At a students' political meeting, Mrs. Stalin made a critical report which aroused concern in party circles. But Khrushchev, as secretary of the meeting, suppressed her report, thus saving the Stalins considerable embarrassment.

From that time on, Khrushchev's advance was rapid.

In 1931 he won his first party office, as head of the party committee for a district of Moscow. The next year he was elected a secretary of the Communist organization for the entire city of Moscow. In this post he was active in the rebuilding of Moscow and the construction of its famous subway system.

Then in 1934, at the age of 40, Khrushchev entered the chosen circle: He became a member of the central committee of the entire Communist Party.

TRAINING IN MURDER

In his Ukrainian posts, Khrushchev had helped to "finger" minor party functionaries for removal. But in Moscow he got some real training in the Communist technique of purge.

A purge of the party organization in Moscow was underway in the early 1930's. Khrushchev's participation is shown by a report published in 1932 in Pravda, which quoted him as telling a district party meeting:

"The aim of this purge is to track down and expel those party members who secretly persist in their dastardly oppositional activity against the party and against the Soviet State. They are traitors, and will be treated as such."

According to published reports of this purge, about one-fourth of the Communists in Moscow were expelled from the party and more than 500 were handed over to the secret police for execution, imprisonment, or exile in slave-labor camps. In February 1934 Khrushchev reported: "We have conducted a purge in the Moscow organization which further strengthened the militancy of our ranks."

Then, in the middle thirties, began Stalin's great purge which reaches into all parts of the Soviet Union and high into the ranks of party leaders. The reign of terror lasted for several years. By conservative official estimates, thousands were executed and tens of thousands were imprisoned.

By less conservative estimates, the victims of the great purge numbered in the millions.

In a series of show trials, some of the top officials of the Communist Party were paraded in the dock, forced to make public confessions, and then were shot.

Throughout all this purge, Khrushchev was a member of the central committee, the ruling clique of the Communist Party. From 1935 on, he was also a member of the Presidium of the U.S.S.R. Central Executive Committee.

You get Khrushchev's own version of his role in the blood bath from that statement he made to his Kremlin confederates in 1957: "During the purges I was merely carrying out your orders."

A PURGE OF HIS OWN

In 1938, Khrushchev got the opportunity to carry out a purge of his own. Joseph Stalin sent him to the Ukraine to clean up the party organization there and to whip the rebellious Ukraine into line. The Ukraine had been an independent republic before it was conquered by the Russians, and the Ukrainian people were still intensely nationalistic and resentful of Moscow's rule.

Ukrainian refugees have given graphic accounts of the bloody purge which Khrushchev carried out. He started by calling all the leaders of the Ukrainian Government to a meeting in Kiev, then surrounding the meeting with secret police and arresting most of the officials on the spot.

This trick worked so well that he later used a similar method in the arrest of Stalin's secret police chief, Lavrenti P. Beria.

Khrushchev's efficiency in the Ukraine won him a quick reward. In 1939, he was made a member of the Politburo—one of the nine men who ruled the Soviet Union. But he remained in the Ukraine and carried on his purge.

With Hitlerite Germany expanding, war was threatening Eastern Europe. The Kremlin was anxious to remove all rebellious elements from the Ukraine, which bordered on Poland, Czechoslovakia, Hungary, and Rumania.

By some Ukrainian estimates, 400,000 people were killed in a single year of Khrushchev's prewar purge of the Ukraine. Those

mass graves found by German soldiers in 1943 contained, by actual count, 9,439 bodies. Those victims included peasants, workers, and priests as well as party officials. Masses of Ukrainians were deported to Siberia.

KHRUSHCHEV'S WAR RECORD

When war came, the Kremlin found that the Ukraine was still anti-Russian. As the Nazi troops drove into the Ukraine in 1941, its people surrendered by the thousands, greeting the Germans as liberators from Moscow's rule.

Khrushchev, during most of the war, assumed a military role. He was given a high officer's rank and helped plan Soviet military strategy in the Ukraine. He is credited with active participation in the defense of Leningrad.

DICTATOR OF THE UKRAINE

After the Nazis had been driven out, Khrushchev turned back, in 1944, to a civilian role in directing the restoration of the Ukraine. For this task, Stalin made Khrushchev a virtual dictator of the region, subject only to Stalin's personal orders.

Ukrainians describe the postwar purge in the Ukraine as worse than that which preceded the war. They claim that 3 million Ukrainians were killed, imprisoned, or deported to slave-labor camps for collaborating with the Germans.

Yet Ukrainian resistance to Moscow grew until it resembled a civil war, with an underground army, known as the UPA, engaging large units of the Red army in battle.

Khrushchev's failure to pacify the Ukraine was followed by his only political setback. In 1947 he was removed from his Ukrainian dictatorship. But not for long. A few months later he was back in command of the Ukrainian Communist Party.

In 1949, Khrushchev returned to Moscow—this time to stay. He was given the leadership of the Moscow party committee and made a member of the secretariat of the central committee. For the next 4 years, Khrushchev worked busily at building up his power and prestige and getting ready for the opportunity that came with Stalin's death. One of his projects was to set in motion a reorganization of the agricultural system, forcing the already collectivized farmers into huge "state farms."

THE POWER STRUGGLE

When Stalin died, in 1953, Khrushchev was only No. 5 in the party hierarchy. Georgi M. Malenkov became Premier in a sort of "collective leadership" which included the diplomat, Vyacheslav M. Molotov, the police chief, Beria, and Marshal Nikolai A. Bulganin.

But Khrushchev moved up fast. Within 9 days after Stalin died, he displaced Malenkov as First Secretary of the central committee. This is the post which carries with it leadership of the Communist Party.

It was the party leadership that Stalin had used as his ladder to the Soviet throne, and Khrushchev showed he had learned his master's methods well. He spotted Beria as his most dangerous rival. So he teamed with Malenkov to get Beria.

In June 1953, just 3 months after Stalin died, Beria was lured to a Kremlin meeting. Here Khrushchev used the same tactics that had worked so well for him in the Ukraine in 1938. He deployed troops to cut off Beria from his own men, then arrested him. The following December, Beria's execution was announced, along with that of 29 of his confederates. here was no public trial. It was another Stalin-type purge.

Malenkov was the next of Khrushchev's rivals to go. In February 1955 Malenkov made a public "confession of errors" and resigned from the post of Premier. Khrushchev's candidate, Bulganin, succeeded Malenkov. But, here, Khrushchev introduced a new purge technique. Instead of having Malenkov shot, he merely demoted him to an obscure post.

For the next 3 years, Khrushchev ruled the Soviet Union by proxy, using Bulganin, the Premier, as his front man, but leaving no doubt as to who was really boss.

At home, it was Khrushchev who made all the important policy announcements. On their trips abroad, it was Khrushchev who did most of the talking while Bulganin stayed in the background. At the summit meeting in Geneva in 1955, it was clear that Khrushchev, not Bulganin, ran the Soviet delegation.

THE SHIFT ON STALIN

While Stalin lived, Khrushchev served and praised him. Three years after Stalin died, Khrushchev denounced him. This was another turning point in the career of today's boss in the Kremlin. It occured in February 1956 at a secret session of the Communist Party's 20th Congress.

In that session, Khrushchev delivered a historic speech accusing Stalin of brutal murders of his fellow Communists and of acts damaging to the Soviet Union.

A TEAR FOR COMRADES

Accounts of the meeting show Khrushchev weeping as he named comrades whom Stalin had killed. Among those named was Stanislav V. Kossior, who disappeared in the Ukrainian purge of 1938. The record shows that Khrushchev, as Stalin's investigator of the Ukrainian organization, "put the finger" on Kossior to be purged, and then succeeded to his post in the Ukraine.

While denouncing many of Stalin's crimes, Khrushchev defended the liquidation of millions of peasant farmers in the Communist campaign to collectivize them. The record shows that Khrushchev was active in that campaign in the Ukraine.

Khrushchev told the secret party session that Stalin was able to commit his crimes because he had been permitted to grow too powerful. He called for an end to the "cult of the individual," and for a return to "collective leadership."

A year later, in 1957, Khrushchev resumed the building of his own power. He did it by purging some of his oldest and closest friends. The victims: Molotov, Malenkov, Dimitri Shepilov, and Lazar M. Kaganovich, the man who had "discovered" Khrushchev in the Ukraine, brought him to Moscow and sponsored his rapid rise to high Communist office. All were accused of intrigue against the party leadership and were expelled from the Central Committee.

Again, Khrushchev's purge victims lived. But they were effectively removed from his path to power.

In ousting these rivals, Khrushchev used the help of a World War II hero, Marshal Georgi Zhukov. A few months later, Khrushchev turned on Zhukov and ousted him from his post as Defense Minister and from his high party offices.

ALONE AT THE TOP

In 1958, Khrushchev made his final grab for power. He removed Bulganin as Premier and took over the Premiership himself. Then he had everything that Stalin had—control of the government and control over the Communist Party. Khrushchev stood alone at the top.

Now this man who fought his way from shepherd boy to boss of the world's biggest empire is coming to visit the United States—the only country that can challenge his empire's domination of the world.

Latin Red Chiefs Confer in Chile

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the New York Times of Sunday, August 23, 1959, written by Mr. Tad Szulc, staff correspondent for the New York Times:

LATIN RED CHIEFS CONFER IN CHILE—DISCUSS HEMISPHERE ISSUES—PROPAGANDA CAMPAIGN AGAINST UNITED STATES MOUNTING

(By Tad Szulc)

SANTIAGO, CHILE, August 22.—Several important Latin-American Communist leaders met here this week to exchange ideas. They discussed the situation in the Western Hemisphere after the recently concluded conference here of the foreign ministers of the American republics.

While Communist quarters insisted that no full-fledged conference had been held, the meeting did coincide with the unleashing of a major anti-U.S. campaign. The Communists charge that the foreign ministers' meeting had been engineered by Washington to overthrow the regime of Premier Fidel Castro of Cuba.

What is perhaps most disturbing to Washington in that the Cuban revolutionary leadership, or part of it, for their own reasons appears to be willing to go along with the campaign.

REDS SQUIRE RAUL CASTRO

How adept the Communists are at courting the Cuban revolutionaries was demonstrated here this week during the brief visit of Maj. Raul Castro, the Cuban Premier's brother and commander in chief of the country's armed forces.

After the Chilean Government and military had ignored the major's presence—largely because they were angry over the appearance here Monday of a Cuban Air Force plane with armed soldiers—the Communists and their allies took him under their wing.

Senator Salvadore Allende, an extreme leftwing politician who was allied with the Communists through Chile's popular front and who recently visited Cuba, was a full-time guide for Major Castro.

At Señor Allende's home Major Castro met at a cocktail party the entire popular front leadership, including Luis Corvalan, secretary general of the Communist Party. Senor Corvalan is regarded as one of the most important Communist leaders in Latin America.

Escorted by Senator Allende, Major Castro visited Pablo Neruda, the poet, a Communist senator and the holder of a Stalin peace prize. At his departure Thursday, Major Castro was seen off by Communist members of Congress and other representatives of the popular front, as well as a group of Christian Democrats.

CUBAN PICTURE REVIEWED

While there are no indications that Major Castro engaged in any serious political discussions with the Chilean Communists, the Cuban situation and its significance for Communist propaganda purposes were reviewed here by Communist representatives from four Latin American countries in addition to Chile. On hand were the secretary general of the Argentine Communist Party, Rodolfo

Ghioldi, the Paraguayan Communist leader, Miguel Angel Soler, the editor of the Cuban Communist daily Hoy, Carlos Rodriques, and the influential Venezuelan Communist newspaper man, Hector Mujica.

Senor Ghioldi and Senor Mujica delivered lectures at party headquarters here on the situation in their countries. Senor Soler had to cancel his appearance because he had to leave Santiago suddenly.

Communist propaganda against the United States, the Organization of American States and the foreign ministers' conference has been going on since the meeting began. This is in line with the standing party policy of opposition to the inter-American system. But it soon took a form in which Cuba was presented as the victim, the United States as the villian and the Communists as something of a rescuing hero.

CONTRADICTORY CHARGES

On one hand charges were made that the United States forced Latin Americans to vote for nonintervention policies to protect the dictatorship in the Dominican Republic, while at the same time Washington was accused of trying to force a policy of intervention so that it could oust Premier Castro.

A pro-Communist magazine photographed a group of U.S. correspondents at the door of the U.S. delegation suite at a hotel here and published it over a caption: "North-American newsmen awaiting instructions. • • • They met every afternoon to make their dispatches uniform."

Increase in Interest Rates on Government Bonds Unnecessary

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PUCINSKI. Mr. Speaker, there has been a great deal of discussion in recent days about the President's request to raise the interest rates on long-term Government bonds. The administration is urging this Congress to remove the present 4¼-percent ceiling on long-term bonds with threats that if this is not done, the Treasury Department will not be able to continue financing the Federal Government.

I am today inserting two recent articles which appeared in the press on the subject of Government bonds and interest rates.

The first is an article by Miss Sylvia Porter, one of the Nation's outstanding financial observers, who points out that the little investors are joining the big rush for U.S. bonds.

It is significant to me that the moment there was a slump in the stock market, with stock quotations taking a serious dip in the last 2 weeks, the rush for Government bonds started; and I submit that the demand for higher interest rates is nothing more than a ruse now being perpetrated on the American people by a syndicate of Wall Street financiers so that they can build into their investments a guarantee of a higher interest yield for many years to come on long-term Government bonds even though the rest of the Nation's economy may suffer a setback.

Simply stated, what these financiers are doing is this: There is a possibility of a setback if defense spending is curtailed because of a possible thaw in the cold war. I submit these financiers now want to remove the 4¼-percent ceiling on long-term Government bonds so they can "lock" themselves in for a higher yield on their investment in these long-term Government bonds, regardless of what happens to the rest of the Nation's economy.

The other article which I am including today is by Drew Pearson, who clearly demonstrates what a closed corporation has existed in the purchase of Government bonds.

Mr. Speaker, the two articles follow:

LITTLE INVESTORS JOIN BIG RUSH FOR U.S. BONDS—MARKET LIVELIEST SINCE WAR II—4¾ PERCENT RETURN DOES TRICK

(By Sylvia Porter)

For the first time in many years, the little investor is nibbling at the market for U.S. Government securities, is putting new savings or cash obtained from sales of stock into small blocks of U.S. Treasury obligations to get the income they will pay until maturity.

"They showed up out of nowhere," remarks a leading Washington economist. "One day there appeared to be just about no buyers for U.S. Government securities. The next day, there they were, buying steadily."

"We got telephone calls last month from customers who've never even inquired about Government bonds asking us to buy them some of the 'new 4¾s'," marvels a partner of a large Wall Street stockhouse. "When we did and sent them confirmation slips, they were astonished to find out they had bought a note due a year from now. They thought they were buying long-term bonds due in 20 or 30 years."

What is happening is a first hint of a revival of interest among individuals in U.S. Government securities at today's comparatively high annual rates of return. (These securities have nothing to do with U.S. savings bonds which can be bought for a fixed amount, are nonmarketable and can be cashed in at any time at the purchase price plus interest due.)

INTEREST RATES SOAR

During World War II, the great war loan drives attracted individual investors to U.S. Government bonds, but since then the Government market has been practically the private preserve of the big financial institutions.

But also since World War II, interest rates have been rising, and since mid-1958 they have soared.

As rates have climbed, prices of the older outstanding Government securities with their picayune coupons have slumped to record lows. And on new U.S. issues the Treasury has been offering higher and higher coupons to attract investors.

FOUR AND THREE-FOURTHS PERCENT IS POWERFUL LURE

Then last month an unexpected switch occurred when, to encourage holders of $14 billion of maturing IOU's to extend their loans, Treasury Secretary Anderson offered them one note due in a year carrying a 4¾-percent coupon and another due in 1964 paying a 4¾ percent too.

Suddenly, both sophisticated and unsophisticated individual investors apparently decided a 4¾ percent yearly return on a U.S. obligation—the highest offered since the 1920's—was mightly juicy.

It may well be that the highest coupons on new U.S. Government securities have not been seen. The Treasury may be paying even more than 4¾ percent for money if business booms in the months ahead.

BANK TRUST SUSPECTED IN WALL STREET

(By Drew Pearson)

A tightly organized group of 17 Wall Street money manipulators who can and do tell the U.S. Treasury how it can float its bonds has just been unearthed by congressional investigators.

The Senate-House Economic Committee, wanting to avoid hiking interest rates on Government bonds, stumbled into this solidly entrenched money trust.

They suspect the financial tycoons were the chief conspirators behind the drive to remove the 4¼-percent ceiling on interest rates and let the sky be the limit. This will automatically boost the cost of consumer borrowing on automobiles, homes, and appliances.

The congressional fiscal sleuths discovered that virtually all trading in Government securities is handled by 17 dealers, who have direct telephone lines to each other. They use these lines not to transact business but to coordinate prices. This results in uniform quotations and might be of interest to antitrust officials as a violation of the Sherman Act.

The largest dealer, Discount Corp., is owned by five big banks which deal in Government securities. They are Bankers Trust, Chemical Corn Exchange, First National City, Morgan-Guaranty Trust, and New York Trust. Two other banks, Chase Manhattan and Manufacturers Trust, have directors on Discount's board.

These seven banks monopolize the Government securities market, which amounts to a fantastic $200 billion business each year. Without counting the fabulous interest, the annual profit on buying and selling Government bonds exceeds $680 million.

The interest rates are not set by competitive bidding but by Government decree based upon the advice of the same tycoons who profit from the money market.

The Federal Reserve Board and the Treasury Department no doubt would deny that Wall Streeters fix the interest rates. Yet their recommendations are always adopted.

"The only trouble with this investigation," commented Senator PAUL DOUGLAS, Democrat, of Illinois, the Economic Committee chairman, "is that the stakes are too big. The public doesn't seem to understand scandals involving more than $2 million."

Public Power Again

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. HIESTAND. Mr. Speaker, the very effective testimony of William Jackman, president of the Investors League, before the House Subcommittee on Irrigation hearing on S. 281, to establish another public power project, that on the Snake River Valley, Idaho, is so eloquent and convincing that I am sure all Members should have an opportunity to read it. It is submitted herewith:

Mr. Chairman and members of the committee, on behalf of our thousands of in-

vestor members I wish to thank you for the privilege of presenting the viewpoint of American investors on S. 281, a bill by Senators HENRY DWORSHAK and FRANK CHURCH, of Idaho, and H.R. 1235, a bill by Congressman HAMER H. BUDGE, of Idaho, "to authorize the Secretary of the Interior to construct, operate and maintain a reregulating reservoir and other works at the Burns Creek site in the upper Snake River Valley, Idaho, and for other purposes."

We strongly urge the committee not to recommend this proposed legislation.

The description of the purpose of the bills as stated above is deceptive in character by failing to state frankly that the project is designed primarily as a Government-owned hydroelectric power project.

Inadequate hearings were held in the Senate on S. 281 and inadequate hearing (1 day only) are scheduled before this Subcommittee in the House of Representatives. A vast majority of the taxpayers of the United States are totally unfamiliar with the purposes and probable effects of this legislation.

Testimony before the Senate brings into sharp focus the following points which should be brought to the attention of all of our voting citizens for their information and approval before any final action is taken by their elected representatives in Congress—

(1) The project would cost about $50 million of which 98 percent would be charged to power and less than 2 percent to irrigation. There is no actual or foreseeable power shortage in this area. It is well served by two large taxpaying investor-owned power companies operating under State supervision.

(2) There is no proven need of the project for irrigation purposes. The Bureau of Reclamation estimates the 100,000 acre-feet of storage in Burns Creek would be used only two of three times in 50 years. No water would be used on present land; the project would not enable 1 acre of new land to be brought under cultivation.

(3) This project would cost the Federal Government $40 million of lost taxes that would otherwise be paid by private utility companies. Total annual revenue of the project estimated at $1,125,000 would be $311,000 short of meeting annual interest payments of $1,436,000.

(4) The alleged need of this project for "reregulation" has never been proven. Even if it were, a true "reregulation" project could be provided for around $9 million, or over $40 million less than the project contemplated.

The substantiation of the above comments have been made fully available to Congress in documented form by qualified experts in and outside of Government.

Why, then, at a time when the Nation needs new sources of tax money; at a time when our able and conscientious Ways and Means Chairman WILBUR D. MILLS and his committee members are approaching a monumental task of tax reform; at a time when our very solvency is being strained by the vast and necessary costs of national defense; why, at such a time, gentlemen, should Congress vote to unnecessarily squander $100 million or more of the taxpayers' money?

The valid charge has been made over and over again that there are powerful forces within this Nation, encouraged by our enemies from abroad who, wittingly or unwittingly, would weaken or destroy our entire economic and social order in favor of a bureaucratic socialist welfare state. To accomplish this purpose most effectively, they would first socialize our basic energy resource industries. If we do not want this to happen, we must be constantly on the alert.

The $50 million Burns Creek project, small as it may seem in a world in which we talk of billions of dollars, can set a precedent that will spread socialized Federal ownership of American industry like a poisonous weed. The end result? Nothing other than gradual loss of our human freedoms.

INVESTORS LEAGUE, INC.,
WILLIAM JACKMAN, *President.*

Personal Income Tax Exemption

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. CARTER. Mr. Speaker, I introduced in the House of Representatives today a bill which proposes to amend the Internal Revenue Code of 1954 by increasing from $600 to $800 the personal income tax exemption of a taxpayer, including the exemption for a spouse, the exemption for a dependent, and the additional exemptions for old age and blindness.

Out of regard for our national debt, and for the obvious necessity of revenue raising measures in our tax structure, I could not have introduced a bill such as this in good faith without having introduced three previous bills in this session of Congress which I feel would correct many of the present inequities and loopholes in our tax laws and which, if carried through, would make a tax reduction such as I propose in this bill feasible. The bills that I introduced were as follows: H.R. 6919, which would repeal the special deduction for the depletion of national resources. This bill would close a loophole which I consider to be the most flagrant giveaway in our entire tax structure and would save the American taxpayers literally hundreds of millions of dollars annually. The second tax bill previously introduced by me was H.R. 8753, which would change existing tax law by eliminating provisions which presently allow an individual to exclude from gross income for tax purposes the first $50 of dividends received in a taxable year. This bill would also effect a substantial increase in revenues accruing to the U.S. Government each year. The third bill which I introduced was a measure to increase the holding period for long-term capital gains from 6 months to 1 year. It is my feeling that this would serve to eliminate much of the speculation and fast shuffle being given the present tax law by persons who deal in tremendous sums of money on short-term "sure things." If the holding period were increased to a year, economic trends could not be so readily foreseen, and there would be a much greater hesitancy on the part of speculators to invest large sums of money in business ventures to take advantage of long-term capital gains provisions, as is now being done.

I believe that this bill to increase the personal exemption from $600 to $800 will afford tax relief where it is most needed, namely in the low- and lower-middle income categories. These are the people who most acutely feel the pressure of our present income tax laws—the people who live on more or less fixed low-scale incomes who are subjected to withholding and who are unable to take advantage of any special exemptions or deductions.

I know that many Members of the House of Representatives have introduced from time to time similar legislation, and I am confident that we are of a single purpose in trying to afford tax relief to many of our constituents who we feel deserve such relief. I hold high hopes that the Committee on Ways and Means, when it undertakes a searching reexamination of our tax laws this fall, will work to close the present loopholes and inequities which are so obvious to all of us and try to bring much needed and long-sought relief to Americans living on small incomes.

A Bill To Establish a National Seashore Park on Cape Cod

EXTENSION OF REMARKS
OF
HON. HASTINGS KEITH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. KEITH. Mr. Speaker, I have today introduced a bill for the establishment of a national seashore park on Cape Cod.

Senator SALTONSTALL, Senator KENNEDY, and I have been working on this bill for several months now, and have come up with, in my opinion, an excellent piece of legislation. The Senators are introducing the identical bill in the Senate today.

There have been several measures introduced previously which would establish a national seashore on Cape Cod. It is certainly understandable that there is tremendous national interest in reserving for future generations the scenic, historic, and scientific treasures of Cape Cod.

However, as I have studied the prior legislation on this matter, I, as the Representative from this area, have become increasingly concerned with the problem of providing adequate protection for the property owners, along with sufficient space for the normal economic growth and development of the towns involved.

When we are dealing with Cape Cod, we are not dealing with the usual, relatively undeveloped national park area. As you know, several well-developed and prosperous communities are involved in this proposition. Therefore, any legislation creating a national seashore park on Cape Cod must recognize the unique character of the area and its problems.

Our bill is more than a statement of the principle that preserving shoreline recreational areas deserves our support.

It embodies a knowledge of the distinct nature of the area, the people, and the character of the cape. A national seashore park and the individuality of the cape can exist together and serve each other with mutual benefit.

The bill specifically suspends the power of condemnation insofar as adequately zoned summer and year-round residential property is concerned. This provision safeguards the individual rights of property owners. It preserves, too, the tax revenue from these homes which the communities so badly need.

The bill contains a clause which would, in effect, allow the towns to control and develop a substantial amount of land within the proposed park area. This will provide adequate room for expansion and growth of these towns. It will keep them self-sufficient and enable them to adequately service the many demands that the national seashore will impose upon them.

Further, the bill sets up an Advisory Commission composed of representatives of each of the six towns involved, the Governor of Massachusetts, and the Secretary of Interior. This Commission will speak for the towns and the park residents in their many negotiations with the Department of Interior.

The bill retains generally, the same boundaries originally recommended by the National Park Service. When we drafted the bill, we felt that we should not arbitrarily include or exclude particular properties. I recognize that the boundaries proposed in my bill will not be satisfactory to all concerned. But neither do I think that I should change the Park Service's boundaries until reasonable and competent testimony is made available to me by the towns and individuals concerned.

Both the Senators from Massachusetts and I have stressed that this legislation is by no means inflexible. We have chosen to introduce it at this time in order to allow all interested parties, both governmental and individual, to study the proposal carefully and recommend such changes as are deemed necessary.

We have in this legislation an excellent framework for establishing a national seashore park. I know that the towns affected by this proposal and the individals who are interested in it will help us to preserve for the present and for posterity the particular charm, character and historical significance of Cape Cod and its communities.

Regarding Statement by Governor Ribicoff on Gas Tax Increase

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. BARR. Mr. Speaker, this afternoon I was asked whether I was aware that Governor Ribicoff, chairman of the Governors' road committee, had stated that the Governors had withdrawn their objection to the gas tax increase. I answered that I was aware that Governor Ribicoff had issued this statement. However, a subsequent check this afternoon showed that the Governor of Indiana, the Honorable Harold Handley, as late as Sunday stated that he was not in favor of a gas tax increase. I have also checked with the Members from five other States and find that the position of their Governors has not changed with respect to the opposition to this increase in the gas tax.

In the light of the above I cannot understand the authority for Governor Ribicoff's statement. All these Governors were under the impression that the original position opposing a gas tax increase had not changed.

Who's Irresponsible?

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 6, 1959

Mr. KARTH. Mr. Speaker, yesterday I voted to override the President's veto of the public works appropriation bill for 1960—H.R. 7509—because I was truly appalled at the flippancy with which the President disposed of this major appropriation bill. Because the Congress in its judgment dared to differ by about 2½ percent from the Bureau of the Budget's dictate on projects which help the development of the Nation's water resources, the President was persuaded for the 144th time to disapprove a bill passed by both Houses.

Mr. Speaker, I am disappointed and saddened that this House did not reaffirm its passage of H.R. 7509 by overriding the President's ill-advised veto and asserting the power and the prestige of the National Legislature as an equal and coordinate branch of our Federal Government. I am alarmed that Congress by its failure to stand up to the Executive is more and more relegating itself into a subordinate position.

The President has flouted the judgment of sound, conservative members of the Public Works Appropriation Subcommittees in the House and the Senate who, after mature consideration decided that 67 additional projects totaling about $51.5 million are needed in the Nation's overall water resources program.

To provide for these new works the President's budget requests were trimmed over $20 million and an extra $30 million was added. I agree with the judgment of my able and distinguished colleagues, our venerable CLARENCE CANNON, of LOUIS C. RABAUT, MICHAEL KIRWAN, and BEN JENSEN, just to name a few members of the House Subcommittee on Public Works Appropriations that as a dynamic, growing country we cannot afford to stand dead still while our water resources deteriorate or are dissipated.

Frankly, Mr. Speaker, I am worried what the future of St. Paul and South St. Paul, Minn., holds in view of the successful but ruthless and shortsighted administration policy of no new construction starts. This year money is budgeted for the advance planning of a badly needed flood control project of the Mississippi River which runs through St. Paul and South St. Paul. If flood control improvements had been in existence 10 years ago, the affected area would have been spared flood damage of $2,788,000 in 1951 and $4,650,000 in 1952—the sum of which exceeds even the present estimated cost of the project. Some of the important commercial developments involved in this 5,400-acre area include steel fabrication, paint, fertilizer, meat processing, and box manufacturing plants; petroleum, coal, and grain storage facilities; river terminals, steam generating plants; railroad repair shops; stockyards; and an airfield. In addition there are sewage treatment plants for the Twin City area, main lines of nine major railway systems and a complex of Federal and State highways.

But important as this area has been to the commercial and industrial life of the Gateway to the Northwest, its greatest development awaits the flood control improvements which will make it possible to begin a vast and exciting urban renewal program to stimulate the economic growth of our district. I, for one, therefore resent any implication that such a project is useless, or "pork barrel."

Before the planning stage is completed, the people affected by the St. Paul-South St. Paul flood control project will expect the administration to abandon altogether the policy of economic mummification that has too long dangerously hampered the development of the Nation's resources, human and natural, when we alone stand as a bulwark for the free world.

Founder of Labor Day in May 1882 Explains the Meaning and Significance of Labor Day

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 25, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of an article which appeared on August 29, 1959, in the AFL–CIO News, Washington, D.C., at page 7 thereof.

In view of the fact that next Monday, September 7, 1959, is a nationally observed holiday, it would appear that the contents of this article by Peter J. McGuire is not only interesting but is important information and is timely:

FOUNDER EXPLAINS LABOR DAY MEANING

(By Peter J. McGuire)

(Peter J. McGuire first proposed a labor holiday before the New York Central Labor Council in May 1882. Twelve years later it became a legal holiday by act of Congress. Several years later McGuire wrote the following article on the meaning of Labor Day:)

On this day the hosts of labor shout their Hosannahs. From a thousand groves and hillsides, by rippling brooks and gurgling streams, comes the glad acclaim.

No festival of martial glory or warrior's renown is this; no pageant pomp of warlike conquest, no glory of fratricidal strife attend this day.

It is dedicated to peace, civilization, and the triumphs of industry. It is a demonstration of fraternity and the harbinger of a better age—a more chivalrous time, when labor shall be best honored and well rewarded.

Pagan feasts and Christian observances have come down to us through the long ages. But it was reserved for this century, and for the American people, to give birth to Labor Day. In this they honor the toilers of the earth, and pay homage to those who from rude nature have delved and carved all the comfort and grandeur we behold.

More than all, the thought, the conception, yea the very inspiration of this holiday came from men in the ranks of the working people—men active in uplifting their fellows, and leading them to better conditions. It came from a little group in New York City, the Central Labor Union, which had just been formed, and which in later years attained widespread influence.

On May 8, 1882, the writer made the proposition. He urged the propriety of setting aside 1 day in the year to be designated as "Labor Day," and to be established as a general holiday for the laboring classes. He advised the day should first be celebrated by a street parade, which would publicly show the strength and esprit de corps of the trade and labor organizations. Next the parade should be followed by a picnic or festival in some grove, and the proceeds of the same be divided on this semicooperative plan, viz:

Each union or organization should get as many tickets as it desired to sell; the more sold the greater would be the benefits to the society selling them. Each society should be allowed to keep all the money realized by sale of tickets through its members. In the end, each of the bodies participating should contribute to the expenses in proportion to its membership.

It was further argued Labor Day should be observed as 1 festal day in the year for public tribute to the genius of American industry. There were other worthy holidays representative of the religious, civil and military spirit. But none representative of the industrial spirit—the great vital force of every nation. He suggested the first Monday in September of every year for such a holiday, as it would come at the most pleasant season of the year, nearly midway between the Fourth of July and Thanksgiving, and would fill a wide gap in the chronology of legal holidays.

The first Labor Day parade and festival of the Central Labor Union of New York City on September 5, 1882, was simply an imposing success. From that day on, it became a fixed institution in the United States, observed today in every city of the land. The plan was next endorsed by the annual convention of the American Federation of Labor and the general assembly of the Knights of Labor. It spread rapidly from city to city, and from town to town. City councils and State legislatures took it up, and made it a legal holiday, until finally on June 28, 1894, it became a national holiday by act of Congress.

There was a time, and it is not many years ago, when the trade union and the labor movement of America were too insignificant for Presidents, Governors, mayors, city councilmen or public men to consider, much less honor. Trade unions were of no consequence; trade unionists were harmless fanatics. Now they are of more weight, more influential, more powerful. No longer can they be sneered down or cajoled; they must be met, they must be recognized.

Hon. J. Bayard Clark

EXTENSION OF REMARKS
OF
HON. ALTON LENNON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. LENNON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include editorials from the Fayetteville Observer, the Wilmington Morning Star, and the Robesonian, North Carolina, daily newspapers, regarding the life and accomplishments of a former Member of this House, the late Honorable J. Bayard Clark.

The editorials follow:

[From the Fayetteville (N.C.) Observer, Aug. 28, 1959]

J. BAYARD CLARK: WE LOSE A WISE FRIEND

Former Congressman J. Bayard Clark, who died in Fayetteville Wednesday, was a gentleman of discriminating intelligence, who for 20 consecutive years had used a profound capacity for constructive work in the interest of his district, his State, and his Nation.

If we were called on to characterize him by a single word, that word would have to be "intelligence."

That intelligence was applied to a versatile life which included farming, teaching, practicing law and serving as the president of a bank, but in its most important application it was to serving the Seventh North Carolina District in the U.S. House of Representatives for 10 consecutive terms from 1928 to 1948.

To this intelligence he added the two virtues of diligence and integrity, both personal and public.

As a freshman Congressman in his first term under a Republican administration Bayard Clark saw a bubble burst. He saw the economy of the United States plunged from a frenzied financial inflation to the deadening desperate depths of the great depression.

The great depression ruined many Americans and unhorsed the Republican Party, so in his third term Bayard Clark was a member of the Democratic majority, coping with Franklin D. Roosevelt and the New Deal, cocky, bouncy, experimentative, and along its leading edges, polluted with dangerous radicalism.

One of the greatest achievements of Bayard Clark's career was to serve with a handful of other conservatives as a legislative balance wheel for the great experiment in keeping the wheels of government from running wild. They read the fine print in the bills, they considered the end result of new departures, they sounded the voice of caution, they kept the Roosevelt revolution on the tracks of reason, saved the States from being totally engulfed in the new federalism.

But when the militant authorization dictatorship of Adolph Hitler found the United States fighting a war for survival, Bayard Clark was among those who sensed that some of the luxuries of liberty had to be sacrificed temporarily in the interest of victory. He backed the hand of the President's efforts to create a war machine which would be efficient in depth because its leadership had authority to act without undue debate.

As a member of the important Rules Committee of the House, Bayard Clark played an important role in the design of legislation aimed at victory.

Three years after that victory, Bayard Clark laid aside his congressional toga and retired, an undefeated champion, to resume private life among his friends and neighbors.

As a Congressman, Bayard Clark was more of a worker than a speaker. He was the antithesis of such figures as Bilbo, Huey Long, and Joe McCarthy. He was not a headline seeker. His weapon was reason rather than words. He continually demonstrated that he would rather be right than popular.

Though a polished speaker, he studiously avoided hyperbole and bombast. His aim was to inform his audience, to make them think rather than to applaud.

But his fellow North Carolinians in 10 successive elections gave him the pleasant applause of the soft rustling of votes falling into the ballot boxes.

His campaign speeches were not vindictive, nor concerned especially with personalities, as much as with the explanation of issues. With him on the hustings, courtesy was a long suit.

And he was proud of his agricultural heritage, never let the voters forget that his hands knew the feel of plowshares and that his eyes were familiar with the contours of the southern end of a northbound mule.

The voters loved him for that and for his straightforward, unspectacular service to them and to America. They loved him because he did something about the price of tobacco, about the development of a river, about the improvement of a great harbor. And they loved him in droves.

Bayard Clark will live long in the affections of his friends in Fayetteville and his constituents of the Seventh District as a gentleman, a scholar, and as a working representative of the people.

[From the Wilmington (N.C.) Morning Star, Aug. 28, 1959]

J. BAYARD CLARK, A MAN OF SERVICE

The 22 years J. Bayard Clark represented the Seventh North Carolina District in Congress were marked by able and honorable service to his district, State, and Nation.

The admiration he enjoyed from his constituents in the seven counties and his contemporaries on Capitol Hill was based on respect for his integrity and his conscientious devotion to duty. His political philosophy might well be termed conservative-progressive. He was not a liberal spender. Yet, when a sound proposition merited Federal assistance, he invariably cast his vote for it.

Many Wilmingtonians will remember when Mr. Clark came here, at their request, and publicly proposed the establishment of Wilmington College. At that time there was a veterans' education program. Farsighted citizens felt it could be made the basis for a college. So, Mr. CLARK gave sparkle and new appeal to the idea with the result that it was soon adopted. The community always should be grateful for his assistance on this project.

Always a friend of the farmer, Mr. Clark was a supporter of all measures for the protection of the tobacco producer. Leaf control and price stabilization received his constant advocacy. He will always be counted among those leaders who brought security and economic betterment to the tobacco farmer.

After his well-earned retirement from the House in 1948, Mr. Clark continued to be an influence for the good of the party he

served so long and well. His counsel was sought by all interested in various and numerous civic activities in the Seventh District.

Mr. Clark's numerous constructive achievements will be remembered in the Seventh District. And, in his death in Fayetteville, his many friends and acquaintances will mourn a Christian gentleman who gave so many years of his life in behalf of his fellow men.

[From the Robesonian, Aug. 31, 1959]

DURABLE CONGRESSMAN

For more than 20 years, J. Bayard Clark represented the Seventh North Carolina District in Congress. Those years included some of the most hectic of modern times, in the economic depression of the early 1930's. It was a period of so many changes, in and out of Government, that a show of stability was reassuring.

Mr. Clark was a man who pursued the even tenor of his ways in good times and bad. He spoke so seldom on the floor of the House that his colleagues paid attention whenever he did speak. He worked quietly and effectively. He kept out of political trouble most of the time, by anticipating it and dealing with it in advance, before it became fully developed.

When a conflict of interest arose among his constituents, Representative Clark helped to work out the differences. During his long tenure of office, there was little division in the district. His ties were closest with his home county, Bladen, and his adopted county, Cumberland. Yet he was regarded as Robeson's Congressman in the fullest sense, except for birth of residence, and apparently the attitude in the rest of the district was much the same.

Representative Clark could show the gravest concern over problems that another man might have treated lightly. For example, when it was proposed that a low-head dam be constructed across Lumber River here for the benefit of Carolina Power & Light Co., fishermen raised the question how it would affect their sport. It was not much of a dam—under water part of the time—and the powerplant was a big asset to the county. But Mr. Clark called a hearing in Lumberton, and fishermen, along with power company representatives and other interested parties, had their say. The fishermen found out that similar dams elsewhere, along with discharge of warm water into rivers, had improved fishing. The Congressman could have passed judgment in the matter on the basis of information he already had. Instead, he let the fishermen argue the subject with experts at the hearing, and they went away looking forward to the action they had opposed.

After more than 20 years' service in Washington, Representative Clark anounced he would not be a candidate for office again. He retired according to plan. Most of his career had seemed to go the same way—as he planned it. If he had setbacks and surprises at times, there was little outward evidence of them. Sometimes a heckler in an audience would become annoying. Mr. Clark would go on speaking. Before he got through, he would tell some joke that answered the heckler effectively, working it into his speech as though it had been there all the time.

Mr. Clark was less spectacular than some of his colleagues in Congress. He seldom made national headlines. His voting record was largely the same as that of the Democratic administration. In a period of drastic economic and governmental upheaval, the people of his district looked for someone to see them through. He filled that need. In Congress, as in the district, he was relied upon in the virtual certainty that he would be there next time.

In its own way, Mr. Clark's record as a Congressman was highly successful. To a large extent, he did what he set out to do. If it was unspectacular, it was because he planned it that way, ascertaining what the people of his district wanted and serving them dependably.

The Military Function

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mrs. GREEN of Oregon. Mr. Speaker, on July 9 of this year Brig. Gen. Hugh B. Hester, U.S. Army, retired, had a letter printed in the Wall Street Journal. This letter addresses itself to the question of the proper role of the military in our civilian society. Coming as it does, from a man who has had a distinguished career in the military service, I think it deserves special attention. Under leave to extend my remarks in the RECORD, I include the letter, as follows:

THE MILITARY FUNCTION

EDITOR, THE WALL STREET JOURNAL:

In commenting upon your most interesting editorial, "The Obsolescent General" (June 30), I would like to add that few indeed, if any, who are familiar with the abilities of Generals Taylor and Gavin would question their competence in the special field of military tactics and trategy. But is obsolescence the question (a term General Taylor placed upon himself), or is it a question of misinterpretation or misconception of the function or role of the military class in a democratic society?

Is it a proper function of any active military leader to presume to determine that "America must be prepared to fight 'limited' wars as well as allout thermo-nuclear conflicts" (William Henry Chamberlin's column, same date)? Presumably it is or was the function of the President and Congress to determine the kind, the time and place of war, if any, the United States was to fight. Likewise until recently it was the function of the President with the advice and consent of the U.S. Senate, and through the agency of the State Department, to develop and determine foreign policy for the United States.

Throughout most of my 34 years of regular Army service (1917–51) it was the function of the Secretary of War with the aid of his top military advisers to inform the President and Congress of the capabilities of the Army Establishment at a given time and to inform each what additional forces, if any, would be necessary to support a proposed or given policy of the Federal Government. It most certainly was not the function of anyone in the Army to tell the policy-making bodies of the Government that it was necessary to set up forces to fight any particular kind of war.

The assumption of this policy-making power by the U.S. military is something very recent and, I believe, most dangerous to our democratic society unless promptly brought under effective control. A free society and the garrison state are as opposite as the poles. The military must be limited to carrying out orders, not entrusted with the responsibility of making policies for the security of the Nation. They are utterly unprepared to do this.

Within the past few years the military leaders of this Nation—and I must add with the encouragement and support of powerful civilian forces—have accumulated powers quite similar to the great German General Staff before both World Wars. If we really and truly want to become what we allegedly fight, let's do so, but let's not compound the mistake by claiming we are doing so in order to preserve the free society. I know of no better or quicker way of destroying our freedom and probably the human species.

HUGH B. HESTER,
Brigadier General, U.S. Army, Retired.
PHILADELPHIA, PA.

It Can't Happen Where?

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. HIESTAND. Mr. Speaker, many of us have discussed devaluation of the currency and its resulting tragedy to 170 million people. We have cited instance after instance where disaster ensued.

Now we have another in that far away but very large new nation of Indonesia.

The Washington Star, August 29, had a thought-provoking editorial which I herewith insert:

Djakarta, the capital of Indonesia, is a city of approximately 3 million residents. A mixture of modern and primitive, it is in normal times a busy and bustling metropolis—the major center of commerce and banking for the republic of 85 million persons. As a government city, it may have some resemblance to Washington. As a business and banking capital, it may have even closer resemblance to New York.

On a recent day, however, the normal bustle of Djakarta was stilled. All of its banks and most of its shops were closed. So-called security forces were patroling the streets and guarding the locked entrances to the stock exchange, the banking houses and the larger business establishments. Military police were checking automobiles leaving the city.

Why? It was because Indonesia for months past has been drifting steadily and inexorably into what its own editorialists refer to as a "financial mess." It had become a victim, in the traditional sense that has prevailed in other countries before it, of inflation. And without advance warning, at the close of an earlier and normal business day, the government had announced drastic steps which it hoped—and probably no more than hoped—would arrest this progress toward complete fiscal disaster. It was the government that ordered the banks closed and foreign-exchange transactions suspended. It "froze" 90 percent of each bank account above a certain deposit figure—not only those held in individual names but those of business establishments with payrolls and costs to meet. It set an arbitrary new rate at which the rupiah would be exchangeable into foreign currency—when it would be exchangeable again at all. And in one appalling stroke it decreed that all bank notes of 500 and 1,000 rupiah face value henceforth would be worth only 10 percent of these specified face values.

It was implied, at least, that these steps would strike hardest at "profiteers" or in any case at those who had so much money that they would not suffer unduly by losing 90 percent of some of it or getting along

indefinitely without most of it. It was interesting, though, that nongovernmental commentators estimated that 80 percent of the adult population would be "immediately and personally affected." Even the leading Communist newspaper expressed concern that many more working people than estimated by the government would be hurt by this severe treatment for a severe ailment.

This may, perhaps, be the only way left to combat inflation in Indonesia—and it may work, though at deep cost to many. It does not, however, encourage support for the head-in-the-sand prattle that inflation is only a scare word employed by political "reactionaries" who advocate prudence and responsibility in a government's policies of fiscal mamagement.

The Public Works Veto: A Hollow Victory

EXTENSION OF REMARKS
OF
HON. DENVER D. HARGIS
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. HARGIS. Mr. Speaker, the only proposed new start on a water resources project in southeast Kansas—a $400,000 allocation for Elk City Dam on the Elk River—got the ax when the public works appropriations bill went to conference. So it cannot be said that I had any ax of my own to grind when I cast what turned out to be a futile vote yesterday in favor of overriding the President's shortsighted, dictatorial, and totally unjustified veto of this bill.

I am unable to muster much sorrow for the few backsliding Democrats who failed to rally to this noblest of causes. But my heart goes out, in deep and sincere sympathy, to the poor Republican Members who fought long and hard to get badly needed water projects in their own districts into this year's bill—and then were compelled, by party pressure and the implacable Eisenhower will, to smash their own handiwork and betray the people they represent.

If this can be construed as another victory for the administration, it is a hollow victory indeed—and a victory won at the expense of legitimate progress in a vital area of the national welfare.

I have always believed that Congressmen who came from areas of water shortage or flooding were the best judges of the needs of that area, and when any such Congressman proved his case to the Public Works Committee, and who had the Engineers' survey accepting his request and showing its need, and the Public Works Committee then refers the project as essential to the Appropriations Committee, and the Appropriations Committee then approves such appropriations; this I had always thought was good evidence that our country's needs were proven. But it seems that one who has probably never seen the area, and knows nothing of the hardship and needs of the people, must be the final judge. The President stopped this progress merely because he says eventual total cost of 67 projects would have been $800 million over an indeterminate period of years, and yet in the next breath he will ask many times this sum for other countries, each year.

It was also my personal conviction that assuring a continuing program of improved domestic water resources was far more important than pouring unlimited funds into our lavish, wasteful, hopelessly mismanaged foreign aid program. This idea of mine remains unchanged, and is shared by a good many of my constituents. I eagerly await the day when it takes hold on so widespread a scale that something will have to be done about it—and I do not believe that day is far off.

Meanwhile, we are faced, presumably, with the necessity of accepting a veto-proof, progress-proof, and extensively watered-down water resources program for fiscal 1960.

There are a great many people in this country who have endured, as have my fellow citizens in southeast Kansas, water shortages that can only be met by Federal reservoir construction, and sudden water surpluses in the form of devestating floods that can only be stopped by federally constructed reservoirs—either too much or too little, but never any equitable balance.

These people are fed to the teeth with delays. The Republican-controlled press is finding it increasingly difficult to sell them on the idea that Ike and the Budget Bureau can do no wrong—and that an idle, undeveloped damsite—authorized for construction that may even get started within their lifetime, if they live to ripe old ages—is a damsite better than no damsite at all. But the papers keep plugging away, and I am sure their tone and attitude will undergo no radical change. Fortunately, their readers are bright enough to see through the thick fog of propaganda—and fed up enough to do something about it, comes next November.

Anyway, the chambers of commerce who flood congressional offices with pleas that the administration's big economy drive be supported at all costs, are now getting their wish. These are the same organizations, of course, who annually send delegations to Washington to plead for an immediate start on water projects affecting the future of their area. I am anxious to see how they reconcile one plea with the other, on the basis of this latest veto..

I can only hope that in the event the other Kansas new starts, on Council Grove and Wilson Reservoirs, get bypassed this year—which seems highly likely at the moment—I will not receive the usual batch of indignant letters, telegrams, and telephone calls asking, "Where were you when all this was going on?"

My answer will be that I was right there on the House floor, doing my best to see that this country gets the water projects it so desperately needs—budgeted or not.

Truckers Urged To Curtail Travel Over Labor Day Weekend

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Hazleton (Pa.) Plain Speaker of August 31, 1959, which includes a statement by Gov. David L. Lawrence of Pennsylvania regarding safety on the highways during the upcoming Labor Day weekend:

TRUCKERS ARE URGED TO CURTAIL TRAVEL OVER LABOR DAY WEEKEND

The Pennsylvania Motor Truck Association today urged truck operators to curtail all truck movements during the forthcoming Labor Day weekend.

The request suggested that only emergency shipments or the transportation of perishable commodities be scheduled.

Truckdrivers who must be on the road during the 72-hour holiday were reminded to extend every courtesy to other highway users. They were additionally cautioned that many passenger car drivers will be traveling on strange roads and the professional driver should be alert for opportunities to help when needed.

It was noted that traffic will be unusually heavy because of returning summer vacationists. Families returning from tours and outings in time for September 8 school openings was also cited as a reason for increased traffic congestion.

The PMTA regularly asks truck operators to reduce operations during periods of peak travel as one phase of its continuing award-winning program to promote courtesy and safety on Pennsylvania highways.

Meanwhile, Gov. David L. Lawrence today urged Pennsylvanians to drive with particular care during the Labor Day holiday weekend.

"If Pennsylvania's motorists are to enjoy a safe holiday—and I hope they do—everyone must drive lawfully and carefully, since traffic accidents are basically the result of human error," he said.

"There are volumes of statistics to prove that accidents don't happen—they are caused.

"People are killed or injured because of drunken driving, excessive speed, fatigue.

"These are some of the more serious causes but it does not matter whether the driving error was large or small, since either could result in equal disaster.

"Twenty-nine persons died on Pennsylvania's streets and highways during last year's Labor Day holiday. Many more were hurt.

"The attitude of most drivers, unfortunately, is that it is the fellow in the other car who becomes involved in accidents.

"The truth is that every one of us has at one time or another been guilty of committing a driving error which very well could have ended in misfortune.

"Whenever you are behind the wheel, remember the fifth commandment: Thou shalt not kill.

"Nearly all of us would shudder at the thought of destroying a fellow human being with a revolver, knife, or poison; too often

we forget an automobile improperly handled is a lethal weapon.

"Life is too valuable to sacrifice it as cheaply as we did last Labor Day weekend when 29 died.

"If you are taking a trip during the holiday, please remember your destination is only halfway home. You still have to return home safely before your holiday trip is complete. Be a safe driver in a safe car. Be sure your holiday trip is a round trip."

Voteless Americans

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mrs. GREEN of Oregon. Mr. Speaker, the House is once more going through the familiar procedure of attempting to get a District home rule bill to the floor for a vote. The people of the Nation clearly favor home rule for their Capital City. The people of the Capital City obviously favor representation to go along with the taxation they already enjoy. The traditions of the Nation make the desirability of home rule self-evident. The arguments for home rule and the reasons for the opposition to it have been neatly summed up in a fine editorial appearing in the Portland Oregonian on August 3. Under unanimous consent I include this editorial in the RECORD:

VOTELESS AMERICANS

The long, frustrating struggle for home rule for the District of Columbia, which has common boundaries with the city of Washington, again has reached a critical stage in the House of Representatives. Home rule leaders are circulating a discharge petition to get a bill out of the grasp of the District Committee, in which a subcommittee controlled by southern Democrats is adamantly opposed to Washington self-government.

The Senate adopted a home rule bill July 15, for the fifth time in the past decade. This year it was a bill by Senator WAYNE L. MORSE, Democrat, of Oregon. It would give the District the right to elect a mayor, a legislative council of nine members and a nonvoting delegate to the House of Representatives.

But the House has not even been permitted to vote on a home rule bill in the past decade. Since 1950, the white population of the District has dropped from 64 percent to 47 percent, and the Negro population has increased from 36 percent to 53 percent. The southerners who dominate the House District Committee and the Rules Committee have bottled up each Senate bill and all House bills on the subject. They are not about to risk election of Negroes to city government, thus to establish a precedent unpopular in the South.

There are other causes of opposition to home rule for the Nation's Capital, however. Of the 69 square miles of the District, 53 percent is tax exempt (43 percent federally owned, much of the rest owned by foreign governments for embassies, etc.). Of the total personal income of the District, 32 percent is paid by the U.S. Government. Some opponents fear higher taxes, since the Congress contributes a recent average of 12 percent to municipal costs.

For 70 years, Washington had a good measure of self-rule. Then, after exposure of scandalous inefficiency and fiscal mismanagement in municipal affairs, Congress took over. For the past 81 years, Washington has been administered by four committees of Congress and three commissioners appointed by the President, one of whom is by tradition an Army engineer.

Besides burdening Congress with the minutiae of city government and depriving the people of a voice in their own affairs, this system has proved to be awkward. The House and Senate District Committees do not always see eye to eye. And the House and Senate Appropriations Committees may not agree with either, or each other. Despite this, Washington has had good government in recent years.

The most stubborn opposition to self-government is aroused by the racial issue. And this conflict between what Americans say and how they live hurts the Nation's prestige abroad. Washington integrated its schools with a minimum of friction after the Supreme Court's ruling. But Congress refuses white and colored alike a vote if they live in Washington, except in the single instance of electing delegates to national conventions.

Since Congress has adopted only one bill withdrawn from a stubborn committee since 1910, the move to thaw the self-government bill may get nowhere. The petition, however, has spurred the House District Committee to hold hearings. If a bill could be moved to the floor, it would have an excellent chance of passage. Congress should find a way to get around the southern roadblock and restore these minimum civil rights of Americans living in the Nation's Capital.

Tolls on Waterborne Commerce or Vessels

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. WILSON. Mr. Speaker, the City Council of the City of San Diego in the 30th Congressional District of California, has consistently followed the policy of opposing the establishment of any policies by the Federal Government leading to the levying or collection of tolls on waterborne commerce or vessels for the use of harbors, channels, or waterways within the territorial boundaries of any State, except tolls imposed pursuant to a treaty or agreement with another country.

Mr. Speaker, I respectfully call your attention to the following resolution adopted by the city council of San Diego, Calif.:

RESOLUTION 156572

Be it resolved by the Council of the City of San Diego, as follows:

"That the enactment of legislation or the establishment of any policies by the Federal Government leading to the levying or collection of tolls on waterborne commerce or vessels for the use of harbors, channels, or waterways within the territorial boundaries of any State, except tolls imposed pursuant to a treaty or agreement with another country, is hereby opposed.

PHILLIP ACKER,
City Clerk.
ELFA F. HAMEL,
Deputy.

Old Glory Raised Over Fairless Hills, Pa., by Pennsylvania Supreme Court Justice Michael A. Musmanno

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Hazleton (Pa.) Plain Speaker of August 31, 1959, reporting the role played by Justice Michael A. Musmanno of the Pennsylvania Supreme Court in raising the American Flag over Fairless Hills, Pa., for the first time in that community's history. Justice Musmanno is to be highly commended for his patriotic activities in this and in many other matters:

RAISE FLAG AT FAIRLESS HILLS

FAIRLESS HILLS, PA.—Justice Michael A. Musmanno and the Veterans of Foreign Wars raised Old Glory over the Fairless Hills Post Office today and the justice said Francis Scott Key could have been no happier.

Key wrote the "The Star-Spangled Banner."

For Justice Musmanno, a member of the State supreme court, it was the culmination of a weeks-long fight to have the flag flown from the postoffice all the time.

Both the justice and VFW, of which he is a State officer, asserted along about midsummer that they were appalled at so little flagflying in this 6-year-old community.

They were told that deed restrictions and other physical difficulties forbade the erection of permanent flagpoles in the huge housing development. Television aerials and radio antennae also are banned, all this, the developers explained, in an effort to keep the landscape attractive.

Justice Musmanno and fellow-members of the VFW brought a flag to Fairless Hills. The justice climbed a ladder and for a few moments held the Stars and Stripes over the post office.

This gesture and the justice's comments brought sharp rejoinders from the postmaster, Mrs. Catharine Wright.

She said the building used as a post office is rented and therefore subject to the same deed restrictions as any private citizen's property. Then, tartly, she suggested that Justice Musmanno devote himself to the supreme court, and let her run the post office.

She termed the flagraising theatrical and an unwarranted reflection upon herself as a Government representative and upon the patriotism of the people generally. She added that there could be no question about that patriotism.

Mrs. Wright was not on hand for today's ceremonies. In her stead was her assistant, Harry Shelley.

Said the justice:

"Although Mrs. Wright is not here I want to express my congratulations and thanks to her, even though she threw a few verbal rollingpins at me, and I perhaps dropped a few chiding feathers on her. I know her heart was right.

"I am particularly happy that the Veterans of Foreign Wars has been successful in our campaign to have the flag properly honored in Fairless Hill."

Trim in his VFW uniform, the Justice was flanked by four other officers of the organ-

ization: Willis Bosch, commander of the Bucks County council; Gilbert Herman, eighth district commander; Walter Holzer, commander of the Levittown Post; and Edward Boehmer, commander of the Falls Township Post.

About 100 people gathered to watch what the Justice called a sweet and memorable ritual.

Origin and Functioning of the U.S. Sugar Act

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. INOUYE. Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the RECORD a speech presented by Mr. Slator M. Miller, vice president of the Hawaiian Sugar Planters' Association, entitled "The Origin and Functioning of the U.S. Sugar Act."

The maintenance of a good and healthy sugar industry is important, not only to the people of the State of Hawaii, but to all the people of the United States.

I feel certain that the information contained in this speech will be of great interest to the Members of this Congress. It follows:

THE ORIGIN AND FUNCTIONING OF THE U.S. SUGAR ACT

Ladies and gentlemen, it is my pleasure to talk with you this morning about a successful Government agricultural program, covered by the Sugar Act of 1948, as amended. This is a good law. It confers as many benefits upon the buyers of the commodity as it does on the producers. In fact there are many who feel the consumers have had the best of it, but we shall not argue the point here. This is a law of our country which guarantees a major market within its boundaries for producers in foreign areas. Not only that, but one which guarantees these foreign producers a share in the continued growth of the U.S. market as well. I know of no other country in which such a guarantee prevails.

I am sure we are all aware of the serious difficulties usually encountered in trying to legislate farm programs, no matter where. The problem is not limited to the United States where huge surplus supplies of basic crops overshadow and dominate the market. Many other countries have had their farm problems and continue to wrestle with them today.

HISTORICAL REVIEW

So it may be of interest to you gentlemen whose combined efforts provide the technology, the know-how, to raise the sugarcane of the world, to inquire into the roots of this program, to see how there developed a practical formula of control which has remained but little changed in basic concept since the Jones-Costigan Act, the predecessor of today's law, was enacted by the Congress a quarter of a century ago.

In order to understand this we must go back, briefly, over the years to the time of the founding of the United States of America, for it was in 1789, shortly after this country gained its independence, that the Government imposed the first tariff on raw sugar in order to raise revenue. I might say that in speaking of tariffs I shall refer to raw sugar unless I specify otherwise. At that time, and through most of the next century, import duties and domestic excise taxes were the major sources of Government receipts. The sugar tariff for revenue yielded close to 20 percent of all import duties. This duty remained on sugar continuously until 1890, holding at about 2½ cents a pound during most of the period but ranging from 1 to 3½ cents a pound.

In 1890, the U.S. Treasury had a surplus and the need to maintain a sugar tariff to produce revenue was no longer pressing. The duty on sugar, then 2¼ cents per pound, was repealed, and since this removed tariff protection from the domestic producers a compensating bounty of 2 cents per pound to these producers was established. These actions had a particular effect in two of the then substantial producing areas—Hawaii and Cuba. In the case of Cuba production was markedly stimulated when the removal of the tariff further opened the American market. On the other hand, Hawaii was hurt badly by the discontinuance of the sugar duty since, by treaty, the Hawaiian producers had enjoyed tariff protection along with domestic producers but were not now eligible for the domestic bounty.

Four years later, in 1894, the tariff was again levied on sugar, the bounty system discontinued. At this time a different economic reasoning prevailed. The new tariff was imposed not to produce revenue but to protect the burgeoning domestic industry and, incidentally, to restore Hawaii to a preferred position in the American market. The protective tariff system remained in effect until the year 1934 when the present quota system came into being with the passage of the Jones-Costigan Act.

Let us pause now to take a backward look at the then state of the sugar industry. In doing so it is well to remember that with the Cuban Reciprocity Treaty becoming effective December 27, 1903, the fortunes of the sugar industries of Cuba and the United States became closely entwined. You will recall that under reciprocity the tariff on all imports from Cuba became and still is 20 percent less than the regular tariff rates applied on imports from other countries. Under this impetus the Cuban sugar industry expanded rapidly, largely with American capital. The preferential tariff favoring imports from Cuba also influenced a marked change in our sources of foreign sugar. In 1900 slightly less than half of our sugar from foreign lands came from Cuba but by 1913 virtually all our imported sugar was from that country.

The tariff preference afforded Cuba and the tariff protection afforded the domestic industry during these years was small in comparison to the assistance given by many countries to their sugar industries. High tariffs, import controls, exchange controls, internal taxes, and State monopolies kept sugar prices in many foreign countries at such a high level that per capita consumption was only a small fraction of that in the United States. In general this condition prevails today.

Both the domestic and Cuban sugar industries had difficulties through most of the 1920's. Also, toward the close of that decade a world depression in sugar became serious. Rapid increase in production in certain countries and disruption of normal distribution in most countries was the rule, due in part to tremendous advances in sugar technology. It is interesting to note that it was during this period that the International Society of Sugar Cane Technologists was founded. When the world depression in sugar became serious in the late 1920's, domestic producers again turned to the Congress asking for help in the traditional manner, i.e., to raise tariffs still higher to offset world price reductions. As a result, under the Smoot-Hawley Tariff Act the duty on Cuban sugar was raised to 2 cents a pound and the duty on other foreign sugar was raised to 2½ cents. But the world price kept falling until by May 1932 the world price of raw sugar dropped to less than 1 cent a pound. The U.S. price had followed the world price downward until it reached the depression low of less than 3 cents a pound, which was the 2-cent duty on Cuban sugar plus the world price an the freight to Cuba. It became obvious that the tariff had ceased to be an effective remedy for domestic sugar ills. In addition, there was ample evidence that our 2-cent tariff on Cuban sugar was causing severe suffering to the Cuban people and its increase, or even continuance, would bring further hardship. Already, economic ruin and revolution was the order of the day. Something new and radical had to be done.

The U.S. Tariff Commission made a careful appraisal of the situation and reported on the failure of the tariff to solve the sugar problem. The Commission went further. The Chairman, in a letter to the President of the United States, dated April 11, 1933, pointed out that the price had declined to disaster levels for both United States and Cuban producers; that both the domestic industry and that of Cuba required price relief; that prices should be raised by limiting, through a quota system, the supply of sugar offered for sale in this country; and, that if some type of quota system were instituted by this country, the duty on Cuban sugar might be reduced. It is important to bear in mind the importance to Cuba of this recommendation since it would provide a means through increased returns from sugar to rehabilitate its economy and stabilize its government.

A year passed before the basic suggestions of the Tariff Commission could be put into effect. It was a year marked by numerous conferences by representatives of the sugar industry and government officials to develop a marketing agreement for sugar. After several vain attempts a Stabilization Agreement was reached, but the Secretary of Agriculture concluded the plan was unworkable. Even though the Stabilization Agreement did not go into effect, its formulation paved the way to the later enactment of the Jones-Costigan Act, which became law on May 9, 1934, embodying the same principles included in the Sugar Act that is in effect today.

The development of the abortive Stabilization Agreement had on the plus side a most constructive and important result—one that has had added significance as sugar legislation has come before the Congress from time to time in subsequent years. That is, for the first time it demonstrated that the entire domestic sugar industry could work together to compromise varying interests and points of view and reach agreement on basic principles. At the hearings before the Committee on Agriculture, of the U.S. House of Representatives, when it was giving consideration to sugar legislation in 1947, the official spokesman for the entire domestic sugar producing and refining industry said:

"You will appreciate, I know, that the joint endorsement and the common approval of all five competitive groups, taken together with the support and endorsement of this bill recorded here this morning * * * is not less than a legislative miracle."

THE U.S. SUGAR PROGRAM

Several acts have succeeded the original Jones-Costigan Act with a number of changes of major or minor degree but without substantial basic change.

The national sugar policy is clearly spelled out in the preamble of the act. In plain language, the act's chief purposes are:

1. To maintain and protect the welfare of the domestic sugar industry;

2. To assure consumers in the United States an adequate supply of sugar at reasonable prices;

3. To promote the export trade of the United States.

The attainment of these objectives involves: (1) the determination of U.S. total sugar requirements; (2) the establishment of quotas to the various domestic and foreign sugar supplying areas representing their share of the U.S. market; and (3) payments, known as "conditional payments," to domestic producers of sugar beets and sugarcane grown for the production of sugar, provided such producers comply with certain labor, wage, price, and marketing requirements prescribed by law. Furthermore, the law imposes a manufacturers' tax on sugar so the program is not a burden on the general taxpayer.

To those of you from foreign areas I should, perhaps, explain that domestic sugar is that produced in the continental United States, Hawaii, Puerto Rico, and the Virgin Islands. Domestic sugar output provides about 55 percent of the Nation's total requirements. Hence, in order to assure adequate supplies to consumers at fair and reasonable prices, sugar must be imported from foreign areas. How these imports are controlled through quotas will be developed later.

ESTIMATE OF SUGAR REQUIREMENTS

The fundamental requirement to the proper administration of the Sugar Act is the determination each year of the Nation's total sugar requirements. From this determination of estimated sugar requirements stems a system of marketing quotas and the sum of all these quotas equals the "estimate of consumption" as officially announced by the Secretary of Agriculture. The act requires that in establishing the estimate of consumption the Secretary have as his objective making available on the American sugar market sufficient sugar to meet the Nation's needs at prices which are reasonable to the consumer and that will provide a fair return to producers. The law requires the initial determination for any calendar year to be announced in December of the preceding year. The Secretary may, and frequently does, change the estimate from time to time within the year when, in his opinion, conditions warrant such change. The increase in U.S. population, of itself, brings about an annual growth in sugar consumption of about 150,000 tons.

To recapitulate: The size of the consumption estimate (1) determines the total of all sugar quotas, domestic and foreign (thereby influencing foreign trade); (2) governs the amount of sugar that may be made available to consumers; (3) by governing the size of the domestic area quotas it directly influences domestic production; (4) influences the price of sugar because of its effect on supply.

Since I have noted an influence on sugar price, I hasten to say that the Sugar Act is not a price-fixing law. The Secretary has no authority under the law to fix sugar prices. But, because he does have the power and the duty to regulate the Nation's total sugar supply and because it is axiomatic that supply in relation to demand is a price determinate, the Secretary can exert a substantial influence on the price in the marketplace. This is because a phenomenon of American life is the near-static yearly per capita consumption of sugar, about 100 pounds, which does not vary as between depression or prosperity. Due to this steady demand the market is sensitive to changes in supply.

We can see, then, that should the estimate of sugar requirements be set unduly low the supply would be limited, the price might move to an excessively high figure, and the interests of consumers could be prejudiced; on the other hand, should the estimate be unduly high the result would most likely be a depressed market, and the interests of the producer would be jeopardized. It is thus obvious that the Secretary cannot casually make his estimates of sugar requirements as a magician pulls a rabbit out of a hat. As a matter of fact, the Congress recognized the need for great care in determining the estimate and provided a guide to the Secretary by setting forth in the act certain factors which the Secretary must consider in arriving at his initial determination. Briefly, these factors are:

1. He must use as a basis the quantity of direct-consumption sugar distributed for consumption during the year ending the preceding October 31.

2. He is required to make allowances for deficiencies or surpluses of inventories, and for changes in consumption because of changes in population and demand conditions, and the level and trend of consumer purchasing power.

3. He must consider the relationship between the price which he expects will result from his determination and the general cost of living in the United States in comparison with the relationship between the price of sugar and the general cost of living during 1947–49.

(The law spcifies sources for certain statistics used in these requirements.)

Although the law does not require it, the Secretary holds a public hearing each year, usually in November, to obtain the views of interested parties as to the proper application and weight of the statutory factors I have enumerated.

From this you can see that serious and extensive study and evaluation of many complex factors precedes the determination of an estimate of consumption. This is proper because the size of this figure has an influence on all other actions involved in the administration of the Sugar Act.

QUOTAS

After the Secretary has made his determination of sugar requirements, each domestic producing area and each foreign country supplying this country with sugar is assigned a quota representing its share of the market. Separate quotas are established for each of the following domestic producing areas—domestic beet, Mainland cane, Hawaii, Puerto Rico, and the Virgin Islands. Since the estimate of consumption is expressed in short tons, raw value, quotas are likewise expressed in these terms. Quotas are calculated strictly in compliance with a formula spelled out in the law. This formula is rather complicated and is couched in legal phraseology so I shall not attempt to give it to you in full detail, but we can outline the general pattern.

Historically, in the years just preceding the first Sugar Act, about 55 percent of our total sugar supplies came from domestic sources and the remaining 45 percent from foreign countries, but principally from Cuba. The Sugar Acts in effect from 1934 through 1947 provided for quotas at about this same proportion. During, and immediately following, World War II all restrictions on production of sugar were lifted. In 1947 controls were again imposed. Congress that year passed the Sugar Act of 1948 and in doing so took note of the great expansion of sugar production in Cuba during the war period and, to help her make an orderly and gradual adjustment downward from these high wartime production levels, provided for fixed quotas for the domestic producing areas and gave all the annual market increase to foreign countries—with over 98 percent of this yearly increase going to Cuba. This was done as a temporary measure originally planned for 5 years but in fact it was not until 1956 that future market growth was again divided between domestic and foreign suppliers at the historic ratio of 55 percent domestic and 45 percent foreign. This is the situation today.

The Philippines is an exception. By law and by the terms of the U.S.-Philippine Trade Agreement the Philippine quota is fixed; it amounts to 952,000 tons of sugar, commercial weight; this, by regulation, has been converted to 980,000 tons, raw value.

Should it appear that any supplying area will not be able to market its full quota during the calendar year, the expected deficit is allocated among other areas in a manner prescribed by the law.

I think I should here mention that the Sugar Acts have always provided that only a very limited quantity of refined sugar may be brought to the continental United States under the quotas, not only of foreign countries, but of the offshore domestic areas as well. The limitation was the result of one of the many compromises which went into the formulation of the first Sugar Act and its successors. There have been some slight adjustments in the permissive imports but the current act freezes the percentage relationship between refined and raw quotas in Hawaii, Puerto Rico, and the Philippines to that which prevailed in 1955.

MARKETING ALLOTMENTS

One important function of the sugar program is to promote orderly marketing. This, in turn, requires effective control over area quotas to be sure they are not exceeded. It is a fairly simple matter to police sugar importation from foreign lands. The Sugar Division of the Department of Agriculture, working through the U.S. Custom Service, has set up adequate procedures for this. It is a more complex matter in domestic producing areas, particularly when supplies in any area are more than adequate to fill that area's quota.

If the Secretary believes that the pressure of supplies in a certain domestic area or areas is likely to cause disorderly marketing, he must allot the quota fairly among the marketers. For the purpose of making allotments, a domestic marketer is the first seller of sugar. In the beet area this is the beet processor; in the cane areas it is the sugarcane processor making raw sugar only, or the processor of sugarcane who advances his processing to the point of producing direct consumption sugar. It should be noted that a marketing allotment does not guarantee that a company can sell a given amount of sugar. On the contrary, it merely places a ceiling on the amount the company is permitted to sell in a year. Each company must compete with others in the marketplace, and, believe me, this competition can be, and usualy is, severe.

In establishing marketing allotments, the Secretary is required by law to take into consideration each company's (1) production of sugar from proportionate-share acreage, (2) past marketings, and (3) ability to market. The Secretary can exercise wide administrative latitude in measuring and weighing these factors. The law cautions that "allotments shall be made in such manner and in such amounts as to provide a fair, efficient, and equitable distribution of such quota. * * *" The law also provides for public hearings to permit the affected companies to present their individual points of view with respect to the statutory factors before the allotments are established.

To ensure compliance with marketing quotas a severe penalty may be imposed for marketing of more sugar than permitted under the official allocation. This is a fine equal to three times the market value of the excess sugar marketed.

PROPORTIONATE SHARES

The next step under the program as it applies to domestic areas, is the setting up of practical controls over production, just as the establishment of marketing allotments

controls the marketing of sugar. In order to accomplish this there must be an orderly division of the market among individual farms. In dividing the market among farms, however, the Secretary is dealing with a different total quantity of sugar than when determining quotas and marketing allotments. He must allow for enough sugar to provide a normal carryover as well as the amount of sugar represented by the quota. Each farm's allotment, known as its proportionate share, may be expressed in acres, tons of sugarcane or beets, or in tons of sugar which can be normally produced from cane or beets. In areas where proportionate shares are expressed in acres proportionate shares are known as acreage allotments.

The purpose of assigning specific shares to farms in a particular area is to adjust crop output to the area's quota, and a reasonable carryover, and to assure that farm will share in this adjustment equitably. In determining the proportionate share for a farm the Secretary takes into account the past production on a farm—usually referred to in sugar circles as "past history"—and ability to produce. The act requires the Secretary to protect, to the extent practicable, the interests of new, and small, producers and producers who are tenants and sharecroppers.

It is obvious that the establishment and administration of proportionate shares is complicated, tedious, and expensive. Hence in actual practice, proportionate shares are not made restrictive unless production in an area has exceeded the total of quota and reasonable carryover and where marketing allotments have failed to bring about a balance between production and allowable area marketings. For example, in the domestic areas today there are restrictive proportionate shares effective in the beet area only.

Even when restrictive proportionate shares are in effect producers are not required to stay within their assigned share. But the law provides a powerful incentive to do so in the form of conditional payments, without which the producer suffers a substantial loss of income.

CONDITIONAL PAYMENTS AND EXCISE TAX

Since these payments are an important part of the sugar program we shall take a moment to explain them.

The principal way in which the domestic industry derives benefits from the sugar program is through the stabilization of raw and refined sugar prices at reasonably profitable levels. However, the Congress provided for a system of grower payments as a mechanism to assure compliance with quota and carryover needs and to effect a certain redistribution of income within the domestic sugar industry. Although conditional payments are made out of the general funds of the U.S. Treasury, the law provides for the imposition of an excise tax on sugar which provides funds for the Treasury which more than offset the total of all conditional payments plus the costs incurred by the Department of Agriculture in administering the act. In fact, the Treasury receives each year from the sugar tax revenues some $15 million more than it pays out.

The excise tax is collected on domestically produced sugar as well as on imported sugar. It is in effect a manufacturer's tax and is colected from the processor, or refiner, of direct consumption sugar at the rate of one-half cent a pound, raw value. A compensating tax at the same rate is imposed on all direct consumption sugar imported into the continental limits of the United States.

As the name implies, a grower, or a processor who is also a grower, must meet certain conditions, or requirements, before becoming eligible for payments. The grower must (1) deliver beets or sugarcane grown only on his allotted number of acres; (2) he must pay his fieldworkers at least the minimum wages prescribed for his farm, or farming area, by the Secretary of Agriculture; (3) he must meet certain standards pertaining to working conditions he provides for his employees; and, (4) he must not employ any child labor. If the producer (grower) is also a processor of sugarcane, or sugar beets, and he fails to pay for sugarcane or beets purchased from another grower in accordance with rates established by the Secretary as being a fair price, the producer will lose his conditional payment.

Conditional payments are based on a calculation of the amount of sugar produced from the crop of sugarcane, or sugar beets, of a producer, be he an individual grower or a processor-grower. The payments range downward from 80 cents per hundred pounds of sugar produced to 30 cents per hundred pounds. The payment varies inversely according to the size of the individual's sugar crop. This gives a decided advantage to the small producer. The 80-cent rate applies to production up to 350 tons at which point the reduction in rate of payment becomes effective in varying steps until a production of 30,000 tons is reached. From that point the 30-cent rate applies. Because of the large size of Hawaiian plantations (only about 10 percent of the total sugar being produced by small growers), the average payment to Hawaiian producers is the lowest of all domestic areas. In 1958, the average rate was but 46 cents per 100 pounds. At the opposite extreme is the beet area where, because of a preponderance of small farms, the average rate of payment approaches the maximum rate of 80 cents.

Contrary to the belief of many persons that the tax on sugar is added to the price of sugar to the consumer, the true situation is explained in a statement made by the Secretary of Agriculture on March 15, 1937, as follows:

"One is likely to assume that the excise taxes increase prices under all conditions; but an excise tax on sugar, within certain limits, under a quota system is one of the exceptions."

To recapitulate, we see that the tax-quota-payment system is a self-financing arrangement under which the tax is taken out of the normal gross proceeds of the sale of sugar, and principally reduces the income of the grower, or raw producer, who then, upon compliance with certain conditions, receives the remainder of his normal proceeds in the form of the conditional compliance payment.

ADMINISTRATION OF THE SUGAR ACT

In order to properly fulfill the many responsibilities incumbent upon him in administering the provisions of the Sugar Act, the Secretary of Agriculture has established a Sugar Division within his Department.

The Sugar Division has a director and a deputy director, and it is divided into a number of branches, as follows:

1. Quota and Allotment Branch.
2. Conditional Payments Branch.
3. Wage, Price, and Commodity Programs Branch: (a) Wage and price section; (b) commodity programs staff.
4. Program Analysis Branch: (a) Operational analysis staff; (b) cost studies section.

In addition, the director has an international sugar agreement staff and an administrative management group responsible directly to him. Then, for purposes of direct liaison with producers in the various areas, and for the administration of acreage control and conditional payment phases of the sugar program there are field offices in the principal producing areas. These are State or county agricultural and conservation offices and are concerned with many farm programs of which sugar is but one.

The success of the sugar program largely stands or falls on the character of its administration. Happily, there has been a high proficiency of administration under directors of integrity, understanding, and dedication to the public welfare.

SUMMATION

In closing I shall briefly review the principal factors of the U.S. sugar program. We have seen that this program stems from an act of Congress; that it is designed to shield the consumer from unreasonably high prices and to assure an adequate supply at all times; that the producers' interests are to be fairly protected; and that foreign trade be fostered by allotting foreign producers a share in the American market.

We have noted the major steps in making the act effective, i.e., the determination of an annual estimate of consumption; the assignment of area quotas; the allotment of marketing quotas and proportionate shares, and the making of conditional payments. We have noted the collection of an excise tax on direct consumption sugar which, in total, amounts to a sum more than adequate to finance the program.

I can think of no better words to end my talk than those the chairman of the Committee on Agriculture, Mr. HAROLD COOLEY, used on the floor of the House on July 30, 1955, in the course of debate on an extension of the Sugar Act of 1948, as amended. He said:

"The program has operated so well, so successfully, and so smoothly, that the average housewife is not even aware of the fact that we have a sugar program. But we have it. It has operated well, and under the program prices have been stabilized through the years. We have avoided great fluctuation in prices even in war."

Gentlemen, it has been a great pleasure to have the privilege of talking to you this morning on a subject so important to the continuation of a healthy sugar industry.

Deliberately Expanding Cold War

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by Mr. David Lawrence which appeared in the Washington Evening Star of Thursday, August 20, 1959.

DELIBERATELY EXPANDING COLD WAR—SOVIET DOUBLECROSS OF EISENHOWER SEEN IN RED INVASION OF LAOS AND LADAK

(By David Lawrence)

Evidence is accumulating that Nikita Khrushchev was doublecrossing President Eisenhower all the time that the Chief Executive was discussing with him, through diplomatic channels, the possibility of inviting the Soviet Premier to visit the United States as a means of relieving international tensions.

For the critical situation that has arisen in Laos is the direct result of the Soviet government's decision during the last few weeks to intensify the cold war in the southeast Asian peninsula.

Also the Chinese Communists, who act only after colaboration between Peiping and Moscow, have begun an invasion of Ladak—one of the states which is an integral part

of the territory of India. It is on the border of Tibet.

This is an odd way to try to relieve tensions. In fact, there is every indication that, so far as the Moscow government is concerned, there has been a stepping up of the tempo of the cold war in Asia. Thus, the Red Chinese are making hostile moves in the direction of Nepal—an independent republic—which lies on the border between India and Tibet. Latest maps from Peiping not only show Nepal as a part of Red China but they include within Communist jurisdiction the northern State of Ladak in India itself.

This brazen aggression has attracted the attention of free governments throughout the world but not that of the free peoples, so many of whom are busily engaged now in discussions of how Nikita Khrushchev should be entertained on his visit to the United States.

The Soviet government, of course, has been sending out propaganda denying its maneuvers in Laos and other areas. Indeed, the Moscow foreign office makes the amazing claim now that the United States has violated the neutrality of Laos by setting up military bases there. Yet officials of the Soviet Union are well aware that the United States has no bases or any organized military missions in that country.

The fighting in the little Buddhist Kingdom of Laos has been carried on by an estimated 2,000 Red guerrillas who are attacking Government troops at outpost points. The invading forces come across the border from Communist North Vietnam and are regularly supplied from there and from Red China. Significantly, the Moscow official organ, Izvestia, has served notice that hostilities "are apt to grow into protracted bloodletting and they may spread beyond Laos, engulfing a whole line of Southeast Asia countries."

All this began happening just after Nikita Khrushchev conducted personal conversations recently with Ho Chi Minh, the Communist Premier of North Vietnam.

Both the Lao Provinces which now have been invaded from North Vietnam were held by the Communist forces before the 1954 truce conference at Geneva, which this writer covered at the time. It was not until 3 years later that the Communists actually turned over control of the disputed Provinces. Now it looks as if the Reds want to take them back.

Many people may have forgotten the 1954 conference that ended the bloody war in Indochina, in which the French made such big sacrifices to defend their protectorate. They finally agreed to release their former colonies from any jurisdiction by the French Government. But solemn agreements were entered into then by the Communists, which now have been broken. The resumption of the war in Indochina is on a par with the repeated violations of the Korean armistice by the Communists.

Laos is striving to get the United Nations to take some action, or at least to make a thorough investigation of the fighting.

State Department officials are embarrassed. They hesitate to come out in the open and accuse Khrushchev of bad faith, because everything is supposed to be sweetness and light these days in relation to the Soviet Union since the Soviet Premier is coming here as an official guest. But no such compunction seems to affect the Soviet Premier, who, as the man in governmental authority, has issued the instructions to stir up war in the Provinces of Laos and northern India.

The tiny Government of Laos has been making excellent progress toward setting up a democracy. Free elections are scheduled to be held. A new Premier had forced Communists out of the Cabinet. The economy had begun to improve as American advice and financial aid were given. Consequently, the Government was gaining new followers as trained army teams provided health and sanitation facilities, rural schools, and new roads.

These measures were bringing about a stable situation in Laos. The policy was to be one of official neutrality as between the East and the West, but it has been obvious that the people of Laos have been leaning toward the West. This, of course, is what irks Khrushchev, who now has given orders to aggravate the situation so it will involve the spending of more money by the Lao Government to protect itself. The new war is designed, of course, to bring the Communists back into the Cabinet preparatory to a takeover of the country from within by the Reds.

All this is happening at a time when many Americans aren't reading much about Laos but are worrying about how to show Khrushchev a good time in the United States. Sooner or later, the free governments of the world must express themselves against such aggression, either through the United Nations or individually. For this is a deliberate enlargement of the cold war.

Two Eugene Girls on a Pilgrimage to the United Nations

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. PORTER. Mr. Speaker, Marna Baldinger and Mary Jo Delyea, high school students from my hometown, Eugene, Oreg., recently made a pilgrimage to the United Nations. Their trip was part of the annual "U.N. Pilgrimage for Youth" sponsored by the Odd Fellows Lodge and Rebekahs.

The girls had a strenuous and interesting tour. I wish more people, young and old, could have this opportunity to look at the United Nations so closely.

If the U.N. does solve the problems of the world, it will be because people like Marna and Mary Jo give it the support it must have.

Under unanimous consent I am including the text of a feature story by Pepper Allen about the pilgrimage, which appeared in the Eugene Register-Guard, August 26, 1959:

TWO EUGENE GIRLS ON A PILGRIMAGE TO THE UNITED NATIONS

(By Pepper Allen)

Walking through the doors of the United Nations headquarters in New York City is "like walking through the door of the future," according to one Eugene teenager, Marna Baldinger. Above the door is inscribed "Peace, Brotherhood, Justice, and Truth," she said.

Marna and Mary Jo Delyea, also a Eugene High School student, recently returned from participating in the annual "U.N. Pilgrimage for Youth," sponsored by the Odd Fellows Lodge and Rebekahs. Mary Jo was an official delegate, and Marna, who placed second in local competition, was able to go when a vacancy occurred.

Their parents, Mr. and Mrs. W. S. Baldinger and Mr. and Mrs. Frank Delyea, now are hearing accounts of the bus trip to the eastern city, which took the girls through Canada to many historical and scenic points in New England, and to the U.N.

WORK FOR PEACE

The girls were especially impressed with the work done by the U.N.'s specialized agencies—"not actually a part of the U.N., but working with them," Mary Jo said.

"They seemed to me to be doing the most work for world peace," she continued, and emphasized the importance of feeding hungry peoples and increasing material welfare of underdeveloped nations.

Most of the world's poor, according to Marna, "are more interested in four sandwiches than four freedoms." She feels that people must be comfortable in order to be interested in peace."

During the girls' 6-day stay in New York City they heard talks by the heads of the 12 specialized agencies and made tours of U.N. facilities. At the U.N., they attended meetings of the Trusteeship Council.

"It was 'dog-eat-dog' at the council," commented Marna.

VISIT EMBASSIES

Both girls were able to visit various foreign embassies during their New York stay. Marna and her group went to the Russian Embassy, and were met by the first secretary, B. Buron.

"We asked pointed questions," she laughed, but the secretary was friendly and commented on the Communist philosophy and on religion.

He said they felt that socialism was the next step higher than capitalism, she reported, and also explained that religion and communism are not compatible.

Mary Jo, a little wistfully, said that she visited only delegations from "peaceful nations," Brazil and Norway.

A trip to the Russian exhibition in New York City was an additional thrill for both girls—

"It was really fantastic," one of them commented, somewhat sarcastically. "It made Russia look good—by showing fur coats, expensive clothes—" The people at the exhibition were friendly, they said.

FUTURE CAREERS

A performance, "The Music Man" was another highlight of their New York visit, as was a speaking contest for members of the group in which Marna won second place in her division.

To qualify for the trip, the girls wrote essays on "Why I Would Like to See the U.N. in Action" and gave speeches on "Can the U.N. Solve the Problems of the World."

Elimination contests on the city and county levels narrowed Oregon's delegation to 18. "We had more participants than any other State," Marna said with pride.

This fall, Mary Jo, a senior at North Eugene High School, will be student body secretary. She is in Latin Club, and plans to continue her interest in world affairs, with plans for a future career in the Foreign Service or on the United Nations staff.

Marna, who with her traveling parents, has lived in Japan and Mexico and will be going to India with them, also has hopes of becoming part of the U.N. staff. She will be a senior at South Eugene High School, where she is active in French Club and International Relations League.

First of all, however, the girls are catching up on their sleep—one slept 17 hours straight when she finally reached home.

The Gasoline Tax Issue

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. LEVERING. Mr. Speaker, as the record shows, I voted against the 1 cent per gallon increase in gasoline. I voted in this manner after the most careful study of all the facts and factors surrounding the highway program, its financing, and the manner in which we must finance additional construction in the future. I wholeheartedly agree that Congress must act to continue the highway program and, I favor the proposed legislation by Senator ALBERT GORE, of Tennessee, to take 1 percent from all other appropriations for Federal agencies and to allocate to the highway construction program the money thus saved.

Senator GORE, who was one of the leaders in the fight for the Federal highway program in 1955, has made two excellent speeches in recent days relating to the reasons why he opposes an additional hike in the gasoline tax for motorists. I wish to associate myself with his views, for I believe that he has used logical reasoning in his statement of the facts about the highway construction program and its financing.

Under leave to revise and extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I am inserting the two speeches Senator GORE made—one on August 24, and one on August 31. The speeches are as follows:

THE HIGHWAY CONSTRUCTION PROGRAM

(Speech of Hon. ALBERT GORE, of Tennessee, in the Senate of the United States, Monday, August 24, 1959)

Mr. GORE. Mr. President, in February 1955, the President of the United States submitted to the Congress a report which dramatically called to the attention of the country the inadequacy and dangerous condition of our highways. This report, prepared by a Commission headed by Gen. Lucius D. Clay, pointed out that one-seventh of all Americans owned their livelihood either directly or indirectly to the highway and highway transportation industries. Particular emphasis was given to the tremendous loss, both economic and in terms of human life and suffering, which was being experienced daily because our highway construction program had not kept pace with expanding needs.

Highway building had been necessarily slowed by the priority demands of a wartime economy. The President recommended that in order to alleviate a critical problem the Federal Government should assume major responsibility for the construction of a new system of interstate and national defense highways, interconnecting our major metropolitan areas. The President gave particular emphasis to the importance of the new system of highways to national defense.

The proposal received intense consideration by the committees of the Congress for almost 2 complete sessions. There evolved the Federal Highway Act of 1956, of which it was my privilege to be coauthor. This act provided that the Federal Government should pay 90 percent of the cost of constructing this new System of Defense and Interstate Highways with a construction schedule calling for completion of the system by 1972 to design standards adequate to meet estimated traffic needs of 1975. It provided, also, for corresponding improvement of primary, secondary, and urban highways to a corresponding state of adequacy.

Construction progress is now well underway. The State highway departments and the highway construction industry have responded to the challenge. We are now, however, in a critical situation in which, unless appropriate action is taken by the Congress, construction will stop altogether on the vital Interstate and Defense System or, at best, be so slowed down and stretched out as to make impossible completion of the system on schedule as specified by the act of 1956.

A halt in construction of the Interstate System will be disastrous. State highway departments have geared their operations to the authorized level. Engineering staffs recruited with great difficulty and expense, would have to be disbanded only to be recruited again at great loss in money and time, if and when the program is resumed. The highway construction industry, having increased its capacity at the request of Congress, will be severely injured. The entire economy will receive a jolt from which it will not be easy to recover. Substantial increases in unemployment will be inevitable.

Meanwhile, if the program is halted, the gap between highways in being and those required will rapidly increase. Our highways will continue to get worse instead of better, and more people, instead of fewer, will be killed on our inadequate highways. Carnage on the highways and economic loss will go unchecked. Unless we take action to provide better highways, the situation will become much worse. Every year that passes sees the need for better highways become more acute. We cannot afford further delay. Even at the rate of progress authorized in the 1956 act we will barely hold our own between the need for highway improvement and the deterioration of the present system of highways.

The act of 1956 created the highway trust fund, earmarking the revenues from certain highway user taxes for transfer to that fund to be used to defray the Federal Government's portion of the cost. From the beginning, it was recognized that in the early years of the program revenues in the fund would be insufficient to meet annual expenditures. To meet this anticipated problem it was provided that when deficits occurred the trust fund would borrow from the general fund, with the borrowed sums to be repaid in later years when revenues were expected to exceed expenditures for highway improvements. Prior to final congressional action, however, restrictive language was written into the bill which was designed to limit annual apportionments to the States to such amounts as would be available in the trust fund with which to pay the bills when they came due. As a result of this restrictive language, the crisis which we now face was, from the effective date of the act, inevitable. This restrictive language has come to be known as the Byrd amendment; though in fact, I am informed it was advanced by the former Secretary of the Treasury, Mr. George Humphrey.

All responsible people agree that the Congress must act to prevent a collapse of the highway program. If we are to act properly, however, we must do so on the basis of a clear understanding of the problem.

To begin with, the highway trust fund will be out of money by October 1, 1959—unless this Congress acts the highway trust fund will be bankrupt by the time Representatives and Senators reach their home States.

The States will present during this fiscal year vouchers for reimbursement totaling an estimated $493 million for which funds will not be available for payment. Normally this deficit would be made up by borrowing from the general fund as provided in the Highway Revenue Act. However, the Department of Commerce Appropriation Act recently passed by the Congress limits appropriations to such amounts as "may be available in and derived from the highway trust fund." This amount is expected to be $493 million less than required. Unless we take action, the Federal Government will be forced to default in its obligations to the States. This default will occur in October, next October, October 1959, prior to the reconvening of Congress in January.

Moreover, no apportionments of interstate funds whatever can be made for fiscal year 1961. These apportionments should have been made last month. Unless the States receive this obligational authority they will be compelled to terminate even the planning of additional projects. If the Federal Government defaults on its obligations to the States, the States then will be forced to default in payment of their obligations pursuant to contracts performed and completed, unless they can raise the funds from their own resources.

Already many States have announced that no additional contracts can be awarded. Invitations to bid on contracts which have already been advertised are being withdrawn. In short, we face a complete stoppage of the construction of the new System of National Defense and Interstate Highways which the President declared necessary for national security and which the Congress proclaimed as necessary for national security and to promote a growing economy and safety on the highways.

The problem has two parts which, though related, are separate:

First, we must provide funds to the States in 1960 to meet the obligations that the States have incurred by contract pursuant to Federal commitments in the Highway Acts of 1956 and 1958. Without congressional action, then, the States will be forced into default, or budgetary stringencies, on obligations falling due this fiscal year, and this situation, let me repeat, will occur very soon, unless the Congress acts. Solution of this phase of the problem will have a bearing upon the 1960 budget.

Secondly, we must take action to permit continued apportionments to the States to avert complete stoppage of the interstate program. Authorization of apportionments for fiscal 1961 must be made this year to allow time for proper planning, advertising of contracts, and award of contracts. Such authorization, however, can have no impact whatever on the 1960 budget because under the law the funds could not actually be disbursed until fiscal 1961. Actually, for the most part, fiscal 1961 apportionments would not be disbursed until 1962.

So, Mr. President, solution of this problem which, as I have said, has two parts, will have an effect on the 1960 budget with respect to obligations falling due within 1960, which arise from apportionments already made; but action to permit apportionments for 1961 will not have an effect upon the 1960 budget. Actually for the most part fiscal 1961 apportionments would not be disbursed until fiscal 1962.

Before proceeding to discuss possible solutions, I should like to dispel certain myths about the program and the cause of our present dilemma.

In the first place, the present crisis has not been caused by an increase of construction costs over estimates. On the contrary, contracts are being awarded generally well within or below estimates.

Only today the Bureau of Roads made an announcement that highway construction

costs during the April-June quarter dropped by more than 2½ percent.

In the second place, this crisis was not caused by the Highway Act of 1958. As a matter of fact, the Congress was confronted with this same problem last year. The act of 1958 met this problem and averted a slowdown of the program at that time. While that act may properly be said to have postponed the crisis, it cannot be said to have caused it. The delay in resolving the problem and the acceleration provided in the 1958 act have combined to make the problem more acute today.

I think Congress must enact legislation to meet Federal obligations to the States and to permit continued interstate and defense highway apportionments on schedule.

There is no magic way to build highways without money. The only real source of funds for the Federal Government is by way of taxation. This is not to say, however, that there is only one type of tax or only one class of citizens and taxpayers upon whom to levy it.

The administration insists that the only solution to the problem is to impose a further increase in the gasoline tax. This proposal is labeled a pay-as-you-go plan. The implication is plain that users of our highways have not been paying their fair share of taxes and that they should be compelled to do so or else accept responsibility for stoppage of the highway program. Any such implication is highly inaccurate and downright misleading.

In the first place, the theory that highway users should pay the entire cost of the program by direct taxes levied upon them cannot be supported. Good highways benefit everyone and every segment of our economy. We do not levy a special tax on teachers and the parents of students to pay for schools because we realize that education not only benefits everyone but is a responsibility of the general public. The same rule applies, or should apply, I insist, to highways.

But even if we accept the thesis that highway users should pay the entire cost of highways, the administration position, as well as its implications, is unjustified. Highway users are already paying direct excise taxes far in excess of the amount needed for the highway programs. In addition, of course, the users of our highways pay income taxes and all other taxes, as do all of the people.

What are the facts, Mr. President, about highway user taxes?

In fiscal 1958 highway users paid in direct Federal excise taxes $3.493 billion. Of this amount, only $2.026 billion was transferred to the highway trust fund. In other words, of each highway user dollar collected, 58 cents went for highways while 42 cents went for other purposes, to be diverted from use on highways. On the basis of information now available, approximately the same ratio will be applicable, under the budget, to 1959 collections. I ask unanimous consent to insert at this point in the RECORD a table showing actual collections of highway user taxes in fiscal 1958 and indicating the amount of each transferred to the trust fund or kept in the general fund.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Highway user excise taxes, disposition—Actual collections, 1958

[Millions of dollars]

	Gasoline	Diesel	Lubricating oil	Auto	Truck and bus	Parts and accessories	Tires	Tread rubber, tubes, truck use	Total
Trust fund	1,558	50	.....	.....	111	.....	244	63	2,026
General fund	.....	.....	35	1,170	95	167	.....	.....	1,467

Mr. GORE. Throughout the years highway users have paid larger sums in taxes than were spent for highways. In 1934 the Congress passed the so-called Hayden-Cartwright Act. This act, which is still in effect, provides that any State which diverts to nonhighway uses a larger percentage of highway-user taxes than was diverted at the time the act was passed shall forfeit its right to Federal-aid highway funds. Thus, we encourage the States, by threat of withholding Federal funds, to use all their revenue from highway taxes for highway purposes. Yet the Federal Government does not follow that example. Indeed, it is now proposed that we levy still additional taxes upon the users of our highways, even though they are now paying more than $1.5 billion a year in excess of the amount actually used for highways. I am advised that for the current fiscal year the sum diverted to uses other than construction of highways will be approximately $1,600 million.

Some appear to have forgotten that highway-user taxes were substantially increased by the act of 1956. For the information of the Senate, I list here the taxes that were increased and the amount of the increase in each case:

Gasoline, from 2 to 3 cents per gallon.

Diesel fuel, from 2 to 3 cents per gallon.

Automobile tires, from 5 to 8 cents per pound.

Tread rubber, 3 cents per pound—a new tax.

Trucks, buses, and trailers, from 8 to 10 percent for 1957 and from 5 to 10 percent from 1958 to 1972.

Truck-use tax, $1.50 per thousand pounds—a new tax.

Also in 1956, although not in the same act, Congress extended an additional 3-percent excise tax on automobiles which otherwise would have expired. This tax has been extended annually since then. This 3-percent extension, which is also an increase in highway-user taxes, has brought in an additional $1,006 billion in the last 3 fiscal years.

All told, Mr. President, highway-user-tax increases since 1956 have brought into the Treasury $3.177 billion. Total expenditures from the highway trust fund for the interstate program through fiscal 1959 amount to $2.358 billion. Thus, the revenues from tax increases alone amount to more than total interstate highway expenditures since the act of 1956 was enacted.

It seems to me that we should keep these figures in mind when considering the possibility of imposing yet an additional increase in the gasoline tax. I ask unanimous consent to insert in the RECORD a table showing revenues received from highway-user-tax increases in the last 3 fiscal years.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Revenues collected from increases in highway user taxes imposed by Highway Act of 1956

[In millions of dollars]

	1957	1958	1959
Gasoline, 1 cent	432	519	535
Diesel, 1 cent	10	17	17
Tires, 3 cents	81	92	93
Tread rubber, 3 cents	11	13	14
Trucks, buses, and trailers, 2 percent (1957) and 5 percent (1958–72)	34	103	107
Truck use	26	33	34
Total	594	777	800
Auto excise, 3 percent	343	351	312
Total (including auto excise)	937	1,128	1,112
Total additional revenues for fiscal years 1957–59 (not including auto excise)	.....	.....	2,171
Auto excise	.....	.....	1,006
Grand total	.....	.....	3,177

Mr. GORE. Highway users accepted these new levies without undue protest. They did, however, seek some assurance that the question of equitable distribution of the burden of the cost of highways be subjected to study. Accordingly, section 209(b)(2) of the 1956 act declares it to be the policy of the Congress that "if it hereafter appears that the distribution of the tax burden among the various classes of persons using the Federal-aid highways, or otherwise deriving benefits from such highways, is not equitable," the Congress shall enact legislation in order to bring about such equitable distribution.

The distinguished Presiding Officer of the Senate at the moment was a member of the Public Works Committee when that provision of the law was enacted, thus giving to highway users assurance that if, after careful study, it was determined that they were paying more than an equitable and fair share of the burden of highway costs, the Congress would rectify the mistake.

Section 210 of the same act directed the Secretary of Commerce to make a study and to provide the Congress with information to enable it to determine what taxes should be levied and in what amounts "in order to assure, insofar as practicable, an equitable distribution of the tax burden among the various classes of persons using the Federal-aid highways or otherwise deriving benefits from such highways."

The Secretary of Commerce was directed to submit his final report no later than March 1, 1959. Subsequently, at the administration's request, the date of submission of the report was extended to March 1, 1961.

The new taxes levied by the act of 1956 have brought into the Treasury substantial revenues. During fiscal years 1957, 1958, and 1959, receipts from these increases alone have, as I have said, totaled $3.177 billion, more, I repeat, than has been used for interstate highway improvements since 1956.

Mr. President, we assured the highway users that the question of equitable distribution of the burden of the cost of highway construction would be restudied. The administration requested that submission of the study called for by the law be delayed from 1959 until 1961. If I had known at the time the request was submitted that there was a plan to ask that taxes be further increased on every gallon of gasoline, I would have opposed the extension. I think we should have such a study before we levy more Federal sales taxes on every gallon of gasoline every person puts in his car or his truck.

Yet without even establishing that the additional levies imposed in 1956 are equitable and fair, it is now proposed to increase the gasoline tax once again, while we wait another 2 years for the study to be completed.

Mr. President, a further increase in the gas tax at this time, at the very least, is not in accord with assurances given by the Congress to the highway users in 1956. The facts speak for themselves. A gasoline tax increase is grossly inequitable and completely unfair.

I should like to read at this time two paragraphs from an article appearing in the New York Times of yesterday:

"Today the tax on gasoline is at a higher rate than that on any other essential product; even that on many luxury items. If the Federal tax of an additional cent a gallon goes into effect on September 1, as provided in a bill approved recently by the House Ways and Means Committee, the gasoline levy will exceed 10 cents a gallon and will just about equal the refinery price of the product."

On what other commodity essential to our economic life do we have a 50-percent tax? At retail levels, every time a man drives up to a filling station in my State and has his tank filled or partially filled, one-third of what he pays is taxes. I repeat that a further increase in this tax is unjustifiable. I continue to read from the article:

"Some economists are wondering how much tax an essential product can stand before there is an adverse effect on the Nation's economy. With business expanding and wage rates moving upward, it is held that the general economy can sustain the present or a higher level without much difficulty. But if a recession should develop, it is feared the high gasoline tax would aggravate it."

The Ways and Means Committee of the other body, after long study and labor, has apparently approved an increase of 1 cent per gallon in the gasoline tax for fiscal 1960 and 1961. For the reasons I have already given, such an increase is without justification. Moreover, the plan proposed by the Ways and Means Committee is inadequate to meet existing needs. It falls short in the following respects:

First. For the remainder of fiscal year 1960 a 1-cent increase in the gas tax would bring in approximately $380 million. This would fall short by more than $100 million of providing enough funds to reimburse the States the amounts which will be owed. Figures released by the Ways and Means Committee indicate that as of January 1, 1960, under its proposal, the trust fuhd will still have a deficit of $309 million, and will still be in arrears by $107 million at the end of the fiscal year. On January 1, 1961, the deficit will be $351 million, and the deficit will not be eliminated until July 1, 1961. I cannot believe, Mr. President, that our preoccupation with a balanced budget will let us go so far as to undertake to balance it by simply not paying to the several States the amounts owed to them by the Federal Government. I cannot believe that the Federal Government will default on its commitments to the States. Yet this is what will happen unless additional funds are made available to the trust fund and appropriated for expenditure by the Bureau of Public Roads.

Second. The Ways and Means Committee proposal would permit the apportionment of $1.8 billion this year for fiscal 1961 and only $2 billion next year for fiscal year 1962. The 1956 act prescribes an annual level of apportionment of $2.2 billion. These apportionments were based upon the cost estimates submitted in the Clay report. Under more realistic estimates later submitted by the Secretary of Commerce, an annual level of apportionment of $2.5 billion will be required to complete the system by 1975. Even at this rate, there will be a 3-year stretchout of the program. With annual apportionments no higher than those which would be permitted by the Ways and Means Committee proposal, this brandnew system of National Defense and Interstate Highways would not be completed until long after 1975. The highways would be obsolete before they were even built.

This proposal destroys the integrity of the Interstate Highway and Defense System as a unified, integrated system of national highways, interconnecting all the principal metropolitan centers, to be completed on schedule and adequate to the needs of 1975.

In any event, a further appropriation act will be required this year if the States are to receive full payment, because the maximum amount appropriated in the bill already passed is insufficient to meet the estimated requirement for funds. Unless such an appropriation bill is passed, we shall have broken faith with the States.

Mr. President, the Congress must come to grips with this problem. In 1955 the President recommended that the National System of Interstate and Defense Highways be built within 10 years. At best this will now be almost doubled. eW cannot allow a further stretchout. We cannot accept the proposal of the Committee on Ways and Means of the other body.

I am willing to meet head-on the question of raising additional revenue if the facts require it. This is admittedly difficult to accomplish in the Senate which cannot initiate revenue raising proposals except by way of amendment. There are many areas in our tax structure, however, from which additional revenue might be obtained far more equitably than by extracting yet another pound of flesh from highway users who are already paying sums substantially in excess of the cost of highways.

Earlier this year the Senate adopted an amendment to a tax bill which would have repealed the tax favoritism granted to dividend income by the Revenue Act of 1954. Had we been able to retain this amendment in conference, it would have increased revenue by $335 million in fiscal 1960—almost as much as would be obtained from a 1-cent increase in the gasoline tax. The administration, despite its pleas for additional revenue, was opposed to this amendment, and so were the conferees from the other body.

Mr. President, we have an obligation to implement the interstate highway program which both the President and the Congress have called essential to the national welfare. Pending submission of the study now being undertaken by the administration, and as long as highway user taxes are diverted to other purposes, a further increase in the gasoline tax is unjustified. We can and we should make available an additional portion of these revenues so that the program can go forward.

Why should discrimination be practiced on highway improvement? Why should all other programs, all other expenditures throughout our country and around the world, continue—be the budget balanced or unbalanced—yet stop dead still our vital interstate and defense highway improvements unless an additional Federal sales tax is levied on each gallon of gasoline? I reject this injustice, this total lack of reason.

Funds can be provided for continuation of the highway program in any one of three ways, or a combination of the three.

First. A direct appropriation from the general fund to the highway trust fund or dedication of a sufficient amount of revenue from existing highway user taxes to the trust fund, together with the repeal of the so-called Byrd amendment. To the extent that the amounts thus appropriated exceeded the amounts by which Congress has reduced the Presidential budget estimates, a budget deficit would result, assuming the accuracy of the budget estimates of revenue. The administration opposes this method.

Second. The levying of additional taxes with the revenue dedicated to the trust fund. The administration favors this course and has proposed that an additional Federal sales tax of 1½ cents be levied on each gallon of gasoline. Congress has declined to approve this recommendation. I think it will continue to decline such approval. I am vigorously opposed to this proposal, as are many others, for reasons already stated.

Third. Congress can make a further reduction in other expenditures by enacting a rescission of appropriations heretofore made by an amount sufficient to permit highway improvement within the total budget estimates. I propose this course as a solution. I introduce a bill to rescind 1 percent of all fiscal 1960 appropriation bills with discretion vested in the President to except fixed statutory requirements such as veteran pensions and other obligations made mandatory by statute, which are spelled out in the bill. My bill would dedicate to the highway trust fund such portion of the revenue from excise taxes on automobiles as may equal the total amount of such recision. It provides for a continuation of our highway improvement programs within the 1960 budget estimates.

This will afford the Senate a clear choice of reducing other expenditures or increasing gasoline taxes. When the highway bill reaches the Committee on Finance I shall offer this bill as an amendment thereto.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 2588) to amend the Highway Revenue Act of 1956 so as to transfer to the highway trust fund a portion of the receipts from the excise tax on passenger automobiles collected during the 1960 fiscal years; to rescind 1 percent of certain appropriations made for the 1960 fiscal year; and for other purposes, introduced by Mr. GORE, was received, read twice by its title, and referred to the Committee on Finance.

REMARKS OF SENATOR ALBERT GORE ON THE FLOOR OF THE U.S. SENATE, AUGUST 31, 1959

Mr. GORE. Mr. President, with the passage of each day, the need for congressional action to avert a collapse of our program to build a National System of Interstate and Defense Highways becomes more acute. There is general agreement that action to insure continued construction must, and will, be taken. The question is whether we shall make continuation of this vital program conditional upon a further increase in the Federal sales tax on gasoline.

Mr. President, the power of Congress to levy taxes is one which must be used wisely. In determining what kind of a tax shall be imposed, consideration must be given, not only to the need for revenue, but also to the question of whether the proposal is fair and would result in an equitable sharing of the overall tax burden.

I have already pointed out to the Senate that highway users, in addition to paying all types of taxes levied upon taxpayers generally, are paying direct excise taxes in an amount substantially in excess of the cost of highway construction, a program of which they are one, but by no means the sole, beneficiary. Yet it is now proposed to impose upon them a still greater burden.

Gasoline is an essential commodity. Almost everyone must use it in one way or another to earn his livelihood. The burden of this tax falls equally upon all with no regard whatever to ability to pay. It is a regressive tax in every sense of the word. The wage earner pays at the same rate as does the top corporation executive.

With all the loopholes and areas of tax favoritism which remain uncorrected, I cannot believe that this Congress, after due

deliberation, will determine that the highway user is the one class of taxpayer upon whom an additional levy may equitably and fairly be imposed.

Already gasoline is the most heavily taxed essential commodity. In many States the Federal and State sales taxes combined are approximately equal to the cost of the fuel at the refinery. Indeed, there are few luxuries which bear a tax proportionately as heavy as this essential commodity.

It is said that this additional levy is to be imposed only for a temporary period of 1 or 2 years, to meet an emergency. I would remind my colleagues that the history of taxation is replete with examples of temporary taxes which have become permanent fixtures. Just this year the Congress once again extended the corporate and excise tax rates. The excise taxes imposed on transportation and communications as wartime measures during World War II are still partially with us.

Should this Congress increase the gasoline tax for a definitely prescribed period, the same arguments will be made in the future for its extension that are now made in support of its adoption.

Some appear to contend, Mr. President, that we must increase the gasoline tax because there is no other fiscally responsible way to continue the highway program. The fact is, however, that there is another course of action which will permit the program to go forward without increasing overall appropriations from the general fund of the Treasury.

I have proposed that appropriations for fiscal 1960 be reduced by 1 percent, with the amounts derived from this recission transferred to the Highway Trust Fund to provide funds to pay the States the money the Federal Government is obligated to pay them. I emphasize, Mr. President, that the maximum amount by which any program would be reduced is 1 percent of the amount appropriated. In those instances in which the full amounts appropriated are required by law to be paid, the reduction would not apply, and the President is given the discretion to make this determination in instances other than those enumerated in my bill. I do not believe it can reasonably be asserted that a reduction of 1 percent would be disastrous to any of the many programs for which we annually appropriate funds.

To those who believe that the Congress should act to reduce expenditures, my proposal should appear indeed modest. Yet the amount of the reduction would be adequate to eliminate the 1960 deficit in the highway trust fund.

In addition to the sums already earmarked for the highway trust fund, highway users will pay into the general fund this year $1.6 billion derived from direct taxes imposed upon them. In addition, Mr. President, as I have said, they contribute otherwise to the general fund in the same proportion as do taxpayers generally. I see no valid reason why the highway program, which benefits the entire economy, should be made a stepchild with further progress contingent upon the levy of a penalty tax upon the highway user.

Mr. Coad on the Spot

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. McCORMACK. Mr. Speaker, in the Christian Century of September 2, 1959, appears a splendid editorial relating to my friend and colleague, the gentleman from Iowa [Mr. COAD], written by Dr. Harold E. Fey, editor of the Christian Century. It is very evident that Dr. Fey applied very skill that he has acquired in the 20 years in the newspaper business to bring to his readers this story about our distinguished colleague [Mr. COAD]. Dr. Fey received a D.D. degree from Chicago Theological Seminary, an A.B. degree from Cotner College, and a B.D. degree from Yale Divinity School.

Dr. Fey joined the Christian Century staff in 1940, and has been field editor, managing editor, and now editor. This background, as evidenced by this editorial, has given Dr. Fey a deep insight for probing into the realities of the important issues of the day.

The gentleman from Iowa [Mr. COAD] has made an outstanding record for himself in Congress. The people of his district are justified in feeling proud of the public service that he renders, of his great ability, his vision, his fine and noble outlook on life and his strong moral convictions. The gentleman from Iowa [Mr. COAD] is highly respected by all of his colleagues. He particularly enjoys the confidence, respect and friendship of Speaker Rayburn and myself. The speaker and I frequently call upon him for advice and also to handle important matters for us.

In my remarks I am pleased to include the article relating to the gentleman from Iowa [Mr. COAD] and written by Dr. Fey:

MR. COAD ON THE SPOT

(By Harold E. Fey)

WASHINGTON, D.C.—What does a conscious Member of Congress go through when he becomes the focus of mighty forces pressing toward a decision on an issue of great social importance? In particular, what do Christian faith and fellowship mean to a Representative when he has to vote on labor reform? For answers to these questions I went to Washington, saw the House of Representatives take its fateful vote on labor reform August 13, and talked with MERWIN COAD, the young Democrat who is one of three clergymen in Congress. At 34 he is now serving his second term as Representative of Iowa's Sixth District.

Mr. COAD said that no domestic issue in years has created as much excitement, pressure from lobbyists, and searching of heart on the part of Congressmen as has labor reform. Contributing to stir the issue to white heat, he observed, were the McClellan rackets committee hearings; the television appeals of Robert Kennedy, McClellan committee counsel, and of President Eisenhower, in behalf of the Landrum-Griffin "strong" bill; the actions of James Hoffa in resisting corrective legislation; and the lobbying of the National Association of Manufacturers and of the U.S. Chamber of Commerce. When the House approached a decision, one Member arose, was recognized by the Chair and charged that Postmaster General Summerfield was in the Capitol using the powerful sanction of patronage in support of the administration position.

I

In his crowded office in the Old House Office Building, I asked MERWIN COAD what all this meant to a Representative from a 15-county, largely rural district in northern Iowa. He answered that it presented him with the most difficult decision he had had to make since he came to Washington in 1957. Congressmen were calling the Landrum-Griffin bill a congressional retirement bill, and it might be that for him. COAD had won by 198 votes in 1956 when he was the first Democratic Representative to be elected from Iowa since 1940. In 1958 he had been returned by 15,000—a larger majority than any other Iowa candidate received—and three other Democrats had been elected. But this young graduate of Texas Christian University, who is regarded by Speaker SAM RAYBURN as having the qualities by which he will rise to a high point of leadership in the House if he continues there, laid his political future on the line in the action he took on the labor bill.

Sitting in the periodical press gallery when the House recorded the highest vote its membership had ever given on any issue (430 out of a possible 436), I saw MERWIN COAD demonstrate his courage. He arose and appealed to the crowded House to defeat the Landrum-Griffin bill and then in the first test voted with the minority of 201 against a majority of 229. To see what that might do to his career, I went to his office and examined the file of around 1,000 letters he had received. "People are really stirred up when they write that many letters," Mr. COAD said. Most of the leters reflected the Kennedy and Eisenhower appeals for "strong" legislation. Some specified Landrum-Griffin. One group of 60 letters from a single town were identical or nearly identical in their demand for a strong bill. Many of them had apparently been typed on the same machine, but they were written on the letterheads of different small businesses and were personally signed. Other letters showed more individuality. Not much mail came from farmers. I saw only one letter from a clergyman.

It did not surprise Mr. COAD that evidences of church influence or interest were scarce. "Ministers and laymen of local churches are generally not in touch with public issues," he said. "They seem to fear politics. Ministers follow; they do not lead. If the church were doing its job, civil rights would not be the serious national issue it is. When the civil rights question was up, I did not hear a word from one church or church organization in defense of civil rights. In the pastorate a man can duck a hot public issue; in Congress he has to face it and commit his future to what he thinks is right."

Labor reform was not a factor in Mr. COAD's first election campaign, but it became an issue in 1957 and he started studying and talking about it. He noted that the big labor organizations did not try to refute the McClellan committee revelations and did not deny the need for corrective legislation. But he also noted that certain interests were intent on attaching to necessary reform proposals some measures which promised to punish all labor. He voted for the Elliott bill because its basic purpose was reform; he opposed Landrum-Griffin because it added punitive measures to reform. The bill passed, said Mr. COAD, "because an unholy alliance of southern Democrats and northern Republicans made a bargain. The southerners supported a punitive labor bill in return for the northerners' letting up on their pressure for stronger civil rights. A political debt has been created which trades off one human right to avoid granting another."

II

"The Landrum-Griffin bill burns down the barn to get rid of the rats," said Mr. COAD. "It is a 'get Hoffa' bill which will probably fail of its purpose but will harm honest labor in some of its provisions. In 6 months or a year, if Hoffa is still on a rampage, nobody will defend this bill. Its provisions making State law prevail ignore the fact that 8 States have no such laws and the other 42 differ from each other. It adds to the burden of the National Labor Relations

Board when that body is already so overloaded that it is years behind in its decisions."

After Landrum-Griffin had passed, Mr. COAD joined briefly in a maneuver designed to substitute the Elliott bill. When this failed he voted for Landrum-Griffin, to make sure that some legislation went to the conference committee with the Senate. His purpose was not, as some newspapers charged, to make a last-minute jump on the bandwagon.

"I voted for this labor reform bill (in its final form) on August 14 in spite of the fact that I felt it was not fair to the union member who works for a living," he says. "The reason it was not a fair bill was that two different bills were thrown into one. One part of the bill which was passed did in fact set up labor reform law. This portion of the bill will give to the union member a more democratic process in his union affairs and will help to protect the welfare and other moneys that he has invested in his union. This was the legislation that all of America wanted desperately and this was the legislation that I wanted to give my people. But the second part of this bill penalizes the laboring man who works for a living, for while the first part gives him democratic rights within his union, the second part takes away his union's rights at the bargaining table. However, in the final analysis, I thought it better that this bill be passed, so that the conferees between the Senate and House could work out a bill which I hope will be truly a labor reform bill but will not penalize the American worker."

Mr. COAD plans to report his vote in his regular newsletter, which he sends to 86 papers (including 5 dailies) in his district and to several radio stations in Fort Dodge and surrounding towns. Labor is organized in his district only on the daily papers and among packinghouse workers and automobile workers. No local of the Teamsters Union is found in his district.

III

Fortune smiled on Mr. COAD the day following the labor bill vote. He had worked hard to secure an $800,000 appropriation to bring a public power transmission line into his district. On that day his proposal was enacted, to the great satisfaction of the farmers, small businessmen, cooperative association leaders and others who will benefit from it. COAD has actively worked to get bills enacted into law which help small businessmen to get credit, which remove limitations on the amount of outside income an individual may earn while receiving social security, which increase income-tax exemptions, and which help maintain farm prices. With the help of the famous Dr. James Van Allen of the University of Iowa, he worked up and introduced a bill establishing a House Committee on Outer Space. Shortly afterward a similar bill was introduced which passed, and its introducer was made chairman of the committee; COAD is not even a member. Instead, he sought and got a place on the powerful committee on agriculture. He is the first Iowa Democrat to hold that post since the 1890's, when it was held by a Greenbacker.

Recently Mr. COAD got an appropriation for the World Refugee Year included in the Mutual Security Act of 1959; for this he received a letter of commendation from the National Council of Churches. He was one of nine U.S. delegates to the June 1959 NATO conference in London and agreed with its action to recommend more economic and less military aid to underdeveloped countries. This was his first trip to Europe. He thinks the public is too critical of congressional travel abroad and insists that travel in other lands should be useful to legislators in checking on expenditures abroad and on implementation of foreign policy decisions.

IV

At lunch in the House restaurant I asked MERWIN COAD whether his status as a minister was a help or a hindrance to his work as a Congressman. On balance, he said, it is an asset. He thinks his clerical status helped him carry the appropriation for the World Refugee Year, and probably helps him get votes from Catholics, perhaps even more than from Protestants. He said his dual role brings him many invitations to speak to church groups in and around Washington, but it is not much help in Iowa, especially in his own denomination, the Disciples of Christ. Now that he does not have to depend on a church for support, he added, he enjoys giving volunteer service in small churches and in other situations where he can be of help. One of his associates told me that Mr. COAD sometimes goes long distances at his own expense to meet a small and poor group where his services can be of use.

Labor reform has put Mr. COAD "on the spot," as it has many others in Washington—with what results the 1960 election will show. But this legislator went to Washington precisely because he believes that a Christian should seek out responsibility. Instead of shrinking from laying his future on the line, he works very hard to prepare himself to meet head-on the difficult decisions Americans must make. When the showdown comes, he votes his convictions. While he is often disappointed by ecclesiastics and ecclesiasticism, he is a firm believer in the church and identifies himself with its mission. He speaks with deep appreciation of the Friends Committee on National Legislation and of the legislative seminars which bring churchmen to Washington in increasing numbers.

Mr. COAD's main reliance for survival and service in politics is not on the church (nor should it be); it is rather on his ability to render worthy service to the people of his district and to the country and the world. Through a complicated system of reporting and through personal visits, he gives an honest and complete account to his entire constituency of what he has done. He has been told that he is too frank, but he believes the people have a right to know and an obligation to use their information. He is betting his career on the faith that intelligence, conscientiousness and truthfulness belong in politics. And that faith puts the people of Iowa's Sixth District on the spot.

Journey Toward Mankind

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. HALPERN. Mr. Speaker, my district in Queens is privileged to have as a resident, an outstanding educator, lawyer, and world leader in the fight for human dignity and rights. I refer to Henry Edward Schultz, of Flushing, N.Y., a member of the New York City Board of Higher Education, and national chairman of the Anti-Defamation League of B'nai B'rith.

Recently Mr. Schultz delivered a stimulating and stirring address, entitled "Journey Toward Mankind." The occasion was the B'nai B'rith Triennial Convention in Jerusalem on May 26.

Taking his text from Archibald MacLeish, Mr. Schultz eloquently supported his assertion that America constitutes a journey toward mankind. It is a pilgrimage which we have undertaken since our earliest days as a nation, to infuse life and meaning into the belief that all men are created equal. Step by step he spelled out the great strides forward which America has fashioned on behalf of human dignity in all aspects of its society.

Law and the governmental authority are changing customs and practices that are a denial of democratic living.

He stated:

The law is succeeding, because the vast majority of the people are ready, willing and often eager to accept these changes.

True—

He admitted—

there are also marked resistances. It is not easy to change the prejudiced or to convince them to give up special privilege.

But, he pointed out, the magnificent reality about America is that we are working at the problem of removing the prejudices of the people, fully aware that it is a lengthy and toilsome process, but one that promises incalculable ultimate reward.

Mr. Schultz's address is so rich in understanding and so meaningful for the times that I believe that it should be brought to the attention of all Members of Congress. I include excerpts from it in the Appendix at the conclusion of my remarks:

THE IDEA

One of America's great poets, Archibald MacLeish, spoke at the Anti-Defamation League's 40th anniversary observance. The time was 1953, a moment in history when America stood in danger of sacrificing individual liberty to our common fear and distrust of Soviet Russia.

In the tense atmosphere of that highly charged time, he saw the American dream undiminished, but imperiled. He saw America as a journey toward mankind—a journey towards a realization of the hopes of men, a journey wherein men may find fulfillment for their lives.

In America, he said, the end of the journey was man and the belief was a belief not only in the dignity of man, not only in the worth of man, but the human possibility of man.

And, in turn, the dream was the dream of manhood, of brotherhood in freedom, of freedom for each man.

He spoke of America as an idea, even as his Puritan forebears had looked upon the America which they first settled as the New Israel. For to them the name Israel was an idea—the self-same idea of freedom wherein a life—a man—may be fulfilled.

The idea of America is a universal idea, even as the ideas of Judaism are universal ideas. There is therefore a certain logic to history that in our time Jews—both as Jews and as men—are finding their greatest fulfillment in the New Israel that is America and the old-new Israel that is this ancient soil on which we stand today.

If we narrow this discussion for the moment to the problem of anti-Semitism, which is a major concern of the Anti-Defamation League, I think it will become instantly clear that for Jews today, the United States and Israel represent two radically different, but happily successful, solutions to that problem.

Yet, the two solutions have one thing in common—and it is the reason for their suc-

cess: they were both made possible by a clean breakaway from the European sources, institutions and layers upon layers of anti-Semitism which, through the centuries, have brought our people so much misery, tragedy and bloodshed.

• • • • •

STEPS IN THE JOURNEY

To understand why these two solutions were successful and why certain others failed, it would be helpful to take a brief glance backward into the nineteenth century when Jewry lived through a psychic experience as shattering as any in all Jewish history.

Indeed, all of Europe was shaken by the movements which we collectively call the liberal revolution. The French Revolution, the upsurges of 1848, the whole burgeoning of democratic ideas and processes which stirred nation after nation, indeed, the American Revolution itself, were part of this historic development.

Europe at this point climbed out of the feudal and medieval society in which Jews were pariahs and Jewish communities islands of isolation cut off from the mainstream of the life around them. • • •. The results were spectacular. And the physical walls of the ghetto came tumbling down.

But the liberal revolution was largely governmental. Such institutions as the aristocracy, the church, and the military; even the universities, resisted its influence. Europe's stratified society barred Jews as it always had.

Thus, Jews found a little political freedom, but precious little else. Equality of opportunity in most areas of human endeavor remained closed to them.

• • • • •

Even today in Europe, anti-Semitism continues to be used for political purposes. Thus, in Germany, anti-Semitism is wielded as a weapon by every Nazi or neo-Nazi remnant seeking to shake the new order. In France, the political scene has its anti-Semitic overtones, and in Russia and Eastern Europe, anti-Semitism is used blatantly whenever it serves the political purposes of the Communist masters.

One of the earliest observers of the developing liberal revolution was a wise and distinguished American statesman and philosopher. Having viewed the European scene as our Ambassador in Paris, Benjamin Franklin in 1787 told his own countrymen:

"To get the bad customs of a country changed • • • it is first necessary to remove the prejudices of the people • • • and this is not the work of a day."

DIFFERENT SOLUTIONS

The solutions which Jews embraced and which failed, either partially or completely, are those which did not give full weight to this dictum. Those who embraced the emancipation from ghetto status to national citizenship without reservation—and believed it represented the millennium—soon discovered that the liberal revolution's changing of the bad customs did not have its concomitant program of removing the prejudices of the people. That Jews flourished under the new dispensation is a matter of historic record. But it is equally true that the opportunities offered the emancipated were circumscribed by the persistent prejudices of the people, and accompanied by the threat of annihilation by modern, political anti-Semitism.

• • • • •

In the final analysis Europe did only half its job; it offered political rights with one hand and took away human rights with the other; it offered its house to Jews of the ghetto, but could not cleanse its people of anti-Semitic prejudice. As a result, the ultimate solutions had to be found in a clean breakaway from the ingrained European sources of anti-Semitism.

Yet, the solution of Israel and the solution of America wold not have been possible without that smaller degree of success which was achieved in Europe by the emancipation. Despite the frustrations, there were the fulfillments and the release of tremendous energies that enabled Jews, as individuals, to take their place in Western democratic civilization.

This made possible the stream of emigration to the United States and a full realization of the ideals of the emancipation on the one hand. On the other, it made possible the success of the Zionist movement in the establishment of the State of Israel—the ultimate goal of the nationalist expression of Jewish life.

• • • • •

THE AMERICAN EXPERIENCE

The breakaway from the European pattern is quite as clean for American Jews as for Israelis and of somewhat longer duration, though of a different character. In the United States, the people begin with acceptance of the fact that Jews are endowed with all the rights, privileges, opportunities, and obligations that are the common heritage of all American citizens. Thus, we can and do proceed on the assumption that the acts or attitudes of bigotry and anti-Semitism we encounter violate the basic philosophy of our American society. We are at no time ready to make peace with these manifestations or to concede bitterly that they are ineradicable as European Jewry did.

There never was a revolutionary effort needed to obtain equal rights for American Jews, neither has there been any counter-revolutionary movement with anti-Semitism as a basic political tenet. Nor have we historic institutions so encrusted with anti-Semitism that they, by their very nature, exclude Jews and repudiate equal rights for Jews.

• • • • •

While English political ideas were the chief influence in the Revolution, historians have pointed out that Hebraic thought was an important leaven in the rise and growth of American civilization. Hebraic influence was most clearly evident in New England where the Bible-steeped Puritans provided the psychological and intellectual climate for the Revolution. James Truslow Adams goes so far as to say that the Puritans "in spirit • • • may be considered as Jews and not Christians." He found that their idea of God, their interpretation of law, their social attitudes were governed by their absorption in the Old Testament. The constitutions of the Plymouth Colony of Massachusetts Bay, Connecticut, and New Haven leaned heavily on the Hebrew Scriptures.

Rufus Learsi, in his history of "The Jews in America," has a dramatic passage showing the strength of this influence:

"In the Hebrew Scriptures, the apostles of rebellion found precedent and inspiration, and the pulpits of the land, where public opinion was molded, resounded with their revolutionary summonses. The exodus from Egypt was the classic example of liberation from tyranny: The colonies of America should also make their exodus. The 10 tribes of Israel defied the arrogant son of Solomon and established their own government; the Thirteen Colonies should do likewise. The Hebrew prophets denounced kings and potentates, and God-fearing Americans may do the same. Even the call engraved on the Liberty Bell: 'Proclaim liberty throughout the land unto all the inhabitants thereof' was found in • • • Leviticus. Revolutionary doctrine became crystallized in the slogan 'Rebellion to tyrants is obedience to God.' Indeed, those were the words which Franklin, Jefferson, and John Adams proposed for the seal of the United States: They were to be inscribed around a picture of the children of Israel crossing the Red Sea. • • •

"Not less potent was the influence of the Hebrew Scriptures in determining the basic political system of the new society that emerged from the war of independence. To discredit the monarchy, preachers like the bold and brilliant Jonathan Mayhew of Boston held up the warning of the prophet Samuel against royalty. Samuel Langdon, the president of Harvard, considered the Jewish Government a perfect republic, and Ezra Stiles, the president of Yale, found in the American Government the fulfillment of Biblical prophecy. In his classic work, 'History of the Rise and Influence of the Spirit of Rationalism in Europe,' the eminent 19th century historian, William Edward Lecky, declares that 'the Hebraic mortar cemented the foundations of American democracy,' and the statesman, diplomat, and scholar, Oscar S. Straus, in his 'Origin of the Republican Form of Government in the United States,' concludes that 'in the spirit and essence of our Constitution, the influence of the Hebrew Commonwealth was paramount.'"

In the fact of these facts, one can begin to understand why anti-Semitism in the United States has no historical roots in depth as in European lands; why, instead, it is erratic, emotional, and opportunistic. True, anti-Semitism does affect some of our social organisms, and some prejudicial attitudes have been carried over from European backgrounds, or from bigoted religious training, or developed by ingroups seeking to maintain social or economic advantage. But these are irritants in the body politic, which we and all right thinking Americans seek to treat and to heal. For what makes America different—and it is different—is the fact that we work at the problem of removing the prejudices of the people and we know that it is not the work of a day.

THE OTHER SIDE

It is in this light that one must consider developments and reports of prejudice in the United States today.

Know that when a bomb was tossed at an Atlanta synagogue by a frustrated bigot, millions of Americans were as outraged as you and that the State of Georgia tried five men for the crime. To millions of Americans—and to the President of the United States—it was not the fact that a Jewish temple was bombed, it was a house of worship, a building dedicated to God, that was mourned. Jewish or Christian, it was a House of God.

Know that when we report on a hotel resort that discriminates against Jews, that this is the exception and that the reaction of the American public is such as to hold it up to shame.

Know that when we report on discrimination in employment that State after State is passing laws to make this impossible, and that there is a constant cleanup job being done in industry after industry.

Know, too, that a constant and broad program of education is being carried out by the Anti-Defamation League in conjunction with many other organizations, schools, and institutions—with millions of Americans of all creeds and political persuasions—designed to eradicate prejudice, to improve human relations, and to foster democratic ideas and processes.

It is this which prompts me to echo the word of Archibald MacLeish that for Jews, as for all men, America is a journey toward mankind.

It is a pilgrimage undertaken by the entire Nation, and we are much further ahead than our detractors and our political opponents would have the world believe. Indeed, our capacity for self-criticism, our unabashed wrangling over our failures and our shortcomings, play into the hands of those who, in international affairs, want to hurt us, or

want to misunderstand us, or want to make political capital of our problems.

There is no answer we can give the world to the question raised about Little Rock, except to say that there would have been no Little Rock, if there had not been a Supreme Court decision to correct the remaining inequities in educational opportunities for Negroes. There would have been no Supreme Court decision, if most of the Nation—including millions in the South—did not believe that equal justice and equal rights for Negroes and other minorities were not a just and proper fulfillment of the American commitment to democracy.

Before any nation can solve its problems of human rights and of relationships between varying ethnic, racial, or religious groups within its borders, there must be two prior solutions—a political solution and an economic one. In the United States these two solutions have been achieved as in no other land.

The political solution came with the very founding of the Republic. The commitment was then made to all people that equality of rights and of opportunities was theirs without exception. It was a brave commitment, considering the practices of the other nations of the world at the time. It was a brave commitment to make in the face of the fact that the economic structure of a very sizable region of our land was built upon a slave society.

The problem of slavery which hung over the Nation for 90 years was dissolved by a Civil War—a bloody, fratricidal war fought at an unbelievable cost in lives and suffering—because we could not let that commitment of the Founding Fathers go unredeemed. In the 90-odd years since, we have been struggling to heal the hurts of that war and to clear away the debris of that slave society. What the world is witnessing today is the last of that cleanup operation.

The United States has gone further in its economic solution than perhaps any other nation through its high standard of living and its high economic productivity. Among nations which have not enough food or shelter to sustain their people, such human rights as voting privileges, educational opportunities, or the right to ride in front of the bus are of little interest. But these are issues for Negroes in America, and rightly so, because America has long passed the point for all its people where mere survival is a daily problem.

THE MEANING OF HUMAN RIGHTS

When speaking of human rights in the United States, therefore, we speak on a different level than when we talk of human rights in Soviet Russia or Red China where the most fundamental civil rights are unknown, where the peoples' most elementary privileges are suppressed, where not even a beginning has been made toward a political solution that would give some meaning to the phrase "human rights."

When speaking of human rights in the United States, we talk on a different level than when we speak of them in those underdeveloped parts of the world where nations struggle for economic survival for enough food for the people, for the most elementary medical needs—where there has been no approach as yet to an economic solution.

The most disadvantaged Negro in the United States starts out in this matter of human rights on a higher plane than is ever dreamed of by those who live under conditions of communism or suffer the deprivations of the economically underdeveloped areas of Asia and Africa.

Having said these things, I do not hesitate to talk of the grave problems that face us in the United States in the matter of race relations. We are in the midst of a profound legal and judicial revolution that is nailing down once and for all, the practices as well as the promises of equality in human rights for all of our citizens, regardless of color and creed. This revolution has been proceeding on all levels of government—rulings of the Supreme Court, executive orders of the Federal Government, legislation by the Congress, legislation by State governments, ordinances by municipalities.

Step by step, law and the governmental authority are changing customs and practices that are a denial of democratic living. The law is succeeding, because the vast majority of the people are ready, willing and often eager to accept these changes.

True, there are also marked resistances. It is not easy to change the prejudiced or to convince them to give up special privileges. And so the world hears of the outrageous resistances—the acts af violence, the shouts of discord, the last-ditch stands against change.

THE GOOD NEWS

Bad news always travels fast and far, helped along in this instance by the suspicion and hatred that is being fanned by those seeking to make political capital of our troubles. The good news is oft interred by the same unfriendly propaganda. And we Americans have done poorly indeed in countering these efforts.

What is our record? Look at the advances in this revolution by law. The U.S. Supreme Court during the past decade has struck down the "separate but equal" doctrine in a series of cases of which the most important and the most widely known is the school decision of 1954, implemented by a second decision in 1955, and since then by a series of lower courts decisions which have served to clear the road to school desegregation. In addition, there have been decisions outlawing desegregation in higher education, in the use of public recreational facilities, in interstate and intrastate travel facilities, and in the enforcement of restrictive covenants in housing. Most recently, the Supreme Court struck down an effort by the State of Alabama to interfere with the right of Negroes to maintain voluntary organizations for the protection of their interests.

* * * * *

In 1957, however, the logjam in the Congress was broken and for the first time in 82 years—the first time since the Reconstruction Period that follow the Civil War—the Congress of the United States passed a major civil rights law. This law was the culmination of at least 15 years of unremitting efforts by liberal groups in the country. * * *

The 1957 law will not bring the millenium in America, but it is an important step forward, and even today in Congress, there are new efforts for further legislation that will build on the foundation laid down by the act of 1957.

Then there is the progress which has been made through State and local legislation. Much of the everyday life of the American is ruled not by Federal law, but by State regulation. Thus, there are now 16 States which have effective laws on their books against discrimination in employment. * * * These 16 have nearly half the entire population of the country within their borders.

Twenty-two States have enacted laws against discrimination in public accommodations and within this past legislative period, the State of Colorado took the pioneer step of outlawing all forms of discrimination in housing, whether public or private. There are at least seven other States which forbid housing discrimination in structures built with some form of government subsidy.

These various forms of legislation, while primarily designed to improve race relations—that is, the relationship of non-white to white in the American society—are also of importance to the Jewish community. Laws against discrimination in employment, housing and public accommodation help to destroy the island of bias that still exist against Jews. Their enactment adds to the capacity for Jewish growth in the American community.

Such is the nature of the good news for human rights which comes out of the American scene. It is dramatic news when one can watch the effect of these events upon the lives of individual human beings within our Nation, and the gradual but very real change in the social structure of our communities. Increasingly, even the most depressed among our population are finding their paths made easier in their journey toward mankind.

Perhaps the most dramatic incident that has illuminated the progress in human relations in the United States is the admission of the territory of Hawaii as the 50th State in our Union. If ever there was evidence that with diligence, race prejudice can be converted into racial understanding, it is the relationship of the people of the United States to the former territory of Hawaii. If ever there was evidence that many races could learn to live together in amity in a democratic community, it lies in the people of our new State.

Fifty years ago, many in the United States talked of the "yellow peril." Up until recently, we had an Oriental Exclusion Act in our immigration law. (Unhappily our present immigration laws are still based on the principle of national origin.) Only 14 years ago, we fought in a war with Japan. Yet in the year 1959, we have admitted into the Union a State with an oriental majority—the only State whose people are not drawn primarily from European stock. Of the total population of about 600,000, 38 percent are Japanese and only 20 percent are white. Among the white are not only Americans, but Norwegians, Germans, Russians, Poles, Portuguese, and among all these, 250 Jewish families. There are Hawaiians, Filipinos, Chinese, Puerto Ricans, Koreans. They live in amity and they live happily and prosperously. And now they live, not as wards but as full-fledged citizens of the United States.

In the American journey toward mankind of which the poet spoke, this is a major step on the road.

NEVER SO CLOSE

That road, the pathway to the future, carries the dreams, hopes and aspirations of many generations of men. Never before, in spite of the human agonies of the 20th century, have we seemed closer to the fulfillment of this age-old dream.

In the realization of this dream, these two great congregations of Jews, American and Israeli, play significant roles—in the contribution they have already made and will continue to make in the advancement of mankind's freedom.

When the ultimate goal is reached—when justice and equality of opportunity, when freedom and brotherhood, when the love of man for his brother is the rule of the day—all of us in B'nai B'rith will have reason to be proud of the part we and our Anti-Defamation League have played in this long and noble struggle.

The Largest Group

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. HIESTAND. Mr. Speaker, Members of Congress have been feeling pres-

sures from many large groups. Sometimes I feel that the largest group of all, the common rank-and-file taxpaying citizen, has too little said in his behalf.

The Los Angeles Times of August 25 printed a letter to the editor, "Independence," which in my judgment expresses very well the feeling of the greatest group of them all. The letter follows:

In all this whoop-te-do of contrived issues in newspapers and on radio and television about minority groups, there is one minority group upon which the politican looks with scorn and the agitator cannot reach.

I refer, of course, to the citizen who wants no handout, no favoring legislation at the expense of others, who would refuse the ministrations of welfare agencies, who has no ax to grind in city councils, who even believes that some Members of Congress are willing to put the Nation's good above reelection.

God bless and keep him; he is one of a dwindling group, but he will die trying in his quiet way to bring sanity to a world of weird giveaways.

THOMAS H. ROBINSON.

Two Residents of 17th Congressional District of New York Confirmed as Alternate Representatives of the United States to the United Nations General Assembly

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. LINDSAY. Mr. Speaker, I note with great pleasure and, as representative of the 17th Congressional District of New York, with great pride, the nomination and confirmation of two distinguished residents of that district as alternate representatives of the United States to the United Nations General Assembly. The first of these, Mrs. Oswald B. Lord, has a most impressive record of good works, much of which concerns international organizations and affairs. Mrs. Lord has been an alternate U.S. representative to the 8th, 9th, 10th, 11th, 12th and 13th sesesions of the General Assembly. She is the U.S. representative on the United Nations Commission of Human Rights. She has been particularly effective in her work on behalf of the United Nations Children's Fund—UNICEF—for whom she has made extensive tours and studies. Her nomination as alternate representative to the 14th session of the General Assembly is well-deserved, and another in her collection of high honors.

The second, Harold Riegelman, has distinguished himself as a practicing attorney since he was admitted to the bar in New York in 1916. He, too, has achieved much in public service: he has served as special attorney general of New York State, and as special counsel to the U.S. Treasury; in 1953 he was acting postmaster of New York City; and in the same year represented the Republican Party as candidate for mayor of the city of New York. He has, as well, served with great valor in the U.S. Armed Forces, and holds the rank of colonel in the U.S. Army Reserves. For all these reasons, he, too, is highly qualified and deserving of this new distinction.

I am proud to count both of these fine citizens among my constituents and personal friends.

What Makes Good Pilots?

EXTENSION OF REMARKS
OF
HON. J. L. PILCHER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PILCHER. Mr. Speaker, under leave to extend my remarks, I wish to include the following article reprinted from the August 1959, issue of Armed Forces Management:

WHAT MAKES GOOD PILOTS?

The following questions were sent to both BuAer and the Aeronautical Training Society. We believe the answers here give both sides of an old argument fully and fairly:

1. The late-1955 Heller report, result of a $40,000 Navy-sponsored study by a private firm, said Navy could save nearly $7 million a year by contracting for primary flight training rather than doing the teaching itself at Pensacola. Was this accurate then, and does it still hold true?

2. Although Navy did not adopt the major recommendation of the report, it said the expense was justified through improved management practices and resulting economies. Can you cite some of these?

3. Air Force contends the contractor system, which Army also uses, produces better pilots. Navy says their system does. Is there anyway of settling this argument, particularly in peacetime?

4. ATS claims the low turnover rate of instructors at contract schools means better teachers than military men frequently replaced at the end of 1 year. Can the Navy disprove this?

5. ATS says absence of extra-curricular military duties plus greater job specialization mean manpower needs are cut. Can't the Navy change the jobs of military instructors to accomplish the same ends?

6. ATS says contract school system broadens the base of the Nation's military strength. Is this true? If not, why not?

7. Why can't a satisfactory military atmosphere be maintained at contract schools?

8. Heller says it would probably take 5 years to develop a reasonably satisfactory Navy contract school system. Even assuming it would want to adopt the idea, can Navy afford that step backwards?

9. Adopting the idea would involve, says Heller, moving Navy training out of Pensacola. Is this justifiable? Or advisable? Is it advisable, contract school or not, as the Heller report implies?

10. In this hassle, the Navy has been accused of letting tradition dictate to intelligence. What would be your answer?

THE NAVY VIEWPOINT

1. No. The figure was not accurate then, nor it is so today.

2. The Heller report has served a useful purpose in the area of management practices and has more than paid for itself in resulting economies. Significant economies have cut the original cost differential between military and contract flight training about 50 percent by:

(a) Moving primary flight training from NAAS Whiting to NAAS Saufley.

(b) Changing personnel rotation policies.

(c) Elimination excessive flight time permitted students to complete the primary phase.

(d) Improved methods of scheduling and maintaining aircraft.

(e) Improved use of military and civilian personnel.

Continuing effort and cost analysis are being made throughout flight training to effect economies without reducing quality.

3. No.

4. The tour of duty for military personnel assigned as flight instructors for primary flight training has been increased to 33 months.

5. No. The organizational complexities of the military system preclude the simplified management approach available to the civilian contractor.

6. No. A large majority of the civilian instructors are ex-military officers, fliers who are subject to recall in the event of mobilization, with the result that the ability of the contract system to expand during a national emergency would be curtailed significantly.

7. Civilian contract flight instructors are not dedicated to the military way of life. The Navy feels that its student aviators should be instilled in a proper naval atmosphere as early as possible, in keeping with Navy philosophy that a naval aviator is first a naval officer and secondly a pilot.

8. It is questionable that it would take the Navy five years to establish a reasonably satisfactory primary contract school operation, particularly if advantage were taken of the Air Force experience and know-how gained over the past eight years. Therefore, the Navy would not be taking so much of a step backwards from the standpoint of time required for implementation as it would in terms of flexibility. The Navy considers that its training activities must be responsive to its needs, and that the rigidity inherent in a contract type of operation would be costly and detrimental to Navy training objectives.

Drastic adjustment to the present Navy basic (the phase after primary) syllabus would be needed due to the difference between the lengths of the Navy primary flight syllabus (38 hours) and the contract primary flight syllabus (130–140 hours). The military aspects of basic flight training such as formation flying, gunnery, field carrier landings, carrier landings and so on would have to be removed and inserted later in the course. This is not simply a matter of switching the syllabus, because the earlier in the course such items are introduced, the less expensive they are.

9. The Heller report indicated that none of the existent Navy training bases in the Pensacola complex would be suitable for contract operations. Therefore, adoption of the contract concept would in effect move Navy training out of Pensacola, and that well-established complex would be reduced primarily to an administrative role with the flying activity dispersed. Present construction in the Pensacola complex will provide adequate facilities for anticipated requirements, including basic jet training, and as the new facilities become available, obsolete bases will be phased out.

Adoption of contract flight training would negate the planned usage of these facilities, with the result that most of them would have to be closed at considerable expense. Contract school or not, the Navy has a considerable investment in the Pensacola area, and it would be most uneconomical to move Navy training elsewhere.

10. There is no question that tradition plays an important role and guiding influence in creating esprit de corps, loyalty,

courage, and leadership in the Navy. Our Navy has a tradition of which it can justly be proud. However, the Navy is not so tradition-blind that it can't adjust to changing conditions.

The primary objective of our flight training course is to train young men to be naval officers who can fly. It is relatively easy to teach a lad to fly. But to make an officer out of him, particularly a naval officer, is something else again. We believe our system does these things better than a contract flight training system could possibly do.

THE ATS POSITION

1. The figure quoted in the Navy-sponsored study by Robert Heller & Associates, of possible savings of $6,924,000 yearly was as accurate as possible. Since the Heller study, the Navy has changed its program considerably, so it is doubtful the exact figure would apply today.

2. We agree that the Heller report served a useful purpose—but not in the way Navy says. The study brought widespread attention to specific advantages of contract training. The Navy's failure to adopt major recommendations of the report it sponsored—that is, to undertake contract training in the primary stage—would indicate that Navy did not attain the fullest benefit possible. On the other hand, the Navy did make changes, many of which appeared to cover up the more obvious deficiencies of their system as against contract training.

3. Heller & Associates were retained by the Navy to compare the Navy system of primary training with the Air Force system. The Heller report concluded that students at contract schools are more enthusiastic than Navy students over the advantages of the service as a career. Also, it stated: "On balance, it seems clear that contract instructors generally are more proficient technically and better qualified than their Navy counterparts."

4. The contract schools' great advantage is the fact that instructors are on permanent jobs with minimum turnover. This is reflected in the Heller report, which notes: "Generally, instructors at the contract schools visited are older, more mature, better satisfied with their assignments, and more proficient in the art of communicating their knowledge to students than are the instructors at Whiting Field." In the service, many feel that the training duty tour is dull and routine as against other flying assignments.

5. The manpower saving of contract training affords the Air Force and Army great economy in primary training. USAF once compared operation of a military-operated primary training school with a contract school. The military staff comprised some 2,100 officers and airmen, while the contract school could accomplish the same mission with about 700 personnel. This emphasizes how manpower needs and costs are cut by contract training.

6. Contract schools do broaden the base of our overall military strength, according to the Heller report, by providing "a way to use effectively men who could not instruct if they were in uniform and thus to release combat-qualified pilots to billets where there mobilization readiness could be maintained and improved." Most contract school flight instructors are disqualified either by age or ability for combat flying. Yet they are a reserve of trained flight instructors accomplishing a vital mission for the military services.

7. There is a satisfactory military atmosphere at all contract schools. Military indoctrination, as in the Navy, is the responsibility of the service. USAF contract schools are each commanded by a small military staff which provides just the right amount of military way of life.

8. The Navy could establish contract training in a matter of months, accomplishing such instruction more efficiently and economically than it ever has before. It would be just a matter of deciding to do it. The Navy primary flight syllabus of 38 hours does not include the more advanced-type flight training given in the Air Force primary course of 130–140 hours. In other words, the Navy, in reducing what it calls primary training to 38 hours, has tried to make it appear that teaching a Navy man to fly an airplane is in no way similar to teaching an Air Force man to fly.

9. The Heller report recommended that "primary pilot training in the Pensacola complex should be discontinued," adding that the facilities either be closed down or made available for other duty. We feel that there is a need to reevaluate the existing Navy training bases in the Pensacola complex. If none is suitable for a contract operation, consideration should be given to establishing separate contract schools or integrating Navy primary training with that of the Air Force.

10. We've always felt the Navy has used "tradition," if that's the right word, as a poor excuse in its criticism of contract training. The Navy emphasizes a need for "a proper naval atmosphere"; that "it takes a Navy pilot to train a Navy pilot"; and the Navy philosophy that "a naval aviator is first a naval officer and second a pilot." The Navy tradition is great and respected. Yet the Navy in using such statements regarding contract flight training seems to belittle the need for superior flight training at this initial stage. It tends to look upon the primary flight training phase as a course for officer training, leadership, and so on. We know these are necessities, but the actual flight instruction (and cost) should be kept in mind.

Walter R. Lee

SPEECH
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. WILLIAMS. Mr. Speaker, for a third of a century my life long friend and neighbor, Walter Lee, has rendered devoted public service to his fellow man. As an elected official of Hinds County, he served the people of Mississippi, and as an aid to the House of Representatives, he served the people of all the States.

Walter Lee has contributed much to the important work of the House of Representatives. Although overburdened with multiple duties, he nevertheless always found time to give courteous attention to the problems of Members and their staffs. I can personally attest to his efficiency, devotion to duty, and integrity. He has been of invaluable assistance to the district I represent.

Walter Lee will be missed here. His friendliness, wit, and human qualities will leave a void that will not be easily or quickly filled.

There is consolation for me in the fact that the Congress' loss will result in a net gain for my congressional district and the State of Mississippi. He is returning to his home in Jackson. There he will have time for old friends and civic activities. With his charming wife, Helen, and his grand-daughter, Walter can continue his service to man in a less complex atmosphere. Surrounded by mementos of a life given to public service, he will enjoy a less frenzied existence. Such will be richly deserved.

Fortunately, I will be able to visit with Walter Lee in the future—more often than other Members—because his home is only a few miles from mine. Therefore, I will continue to have the benefit of his wise counsel.

My sincere good wishes go with him in his future undertakings.

The $11 Billion Increase in the Cost of the Highway Program in 3 Years Is Due in Part to the Inordinate Emphasis on Speed

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. McDOWELL. Mr. Speaker, part of the increasing cost of the federally assisted highway program, which has increased by $11 billion in 3 years, from $25 billion to $36 billion, is due to the inordinate emphasis on speed, according to officials of the congressionally chartered National Trust for Historic Preservation.

Mrs. Helen Duprey Bullock, historian of this great organization, has declared that—

Part of the fabulous and increasing cost of this program is owing to the inordinate emphasis on speed. Routes are not infrequently selected and plotted from the air with an appalling lack of consideration of the human values involved.

I include here the text of Mrs. Bullock's letter, and an article by Grady Clay, staff writer, the Louisville (Ky.) Courier-Journal:

NATIONAL TRUST FOR
HISTORIC PRESERVATION,
Washington, D.C., July 27, 1959.

Hon. HARRIS B. McDOWELL, Jr.,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN McDOWELL: In the absence of Mr. Howland, I wish to write to thank you on his behalf for inserting his article from the New York Times in the CONGRESSIONAL RECORD.

We are grateful for bill H.R. 7215 which you have introduced, as the destruction ensuing upon the Federal-aid highway program, and to some extent the urban renewal program, is being forcibly brought to our attention every day. There is an excellent article in Landscape Architecture which I enclose for your information. I hope that it, too, can be placed in the RECORD as it states so forcibly the way routes are chosen, and the helplessness of those who find themselves in the way.

I have been dealing with a retired minister and his wife who invested their life savings in buying and restoring a 1724 Dutch stone house in Athens, N.Y.; who have been shunted from one agency to another with a dozen excuses for not shifting the highway location to avoid ruining this property.

Part of the fabulous and increasing cost of this program is owing to the inordinate

emphasis on speed. Routes are not infrequently selected and plotted from the air with an appalling lack of consideration of human values involved. A number of short-sighted officials have given up parklands as "free" that can never be replaced. I do hope that the Congress that made possible this program will be able to apply the brakes as the situation is critical.

Sincerely yours,

Mrs. HELEN DUPREY BULLOCK,
Historian.

NEW HIGHWAYS: NO. 1 ENEMY?—THE TIGER IS THROUGH THE GATE

(By Grady Clay)

More than a year ago, I was prompted to observe that the new Federal highway program was "today's tiger at the gate—a tremendous concentration of energy busting loose in all direction"—capable of wrecking our cities and countryside unless held in check.

Today, some 16 months later, we see hundreds of millions of dollars' worth of new highways, bridges, interchanges, and other geometric whirligigs under construction. And there is no doubt: the tiger is through the gate.

Back in 1955, the President's Advisory Committee on a national highway program observed that the expansion of highways had already begun a revolution in our living habits. Since that day, we have watched this revolution get underway. We who must live with its fruits, the bitter with the sweet; we who had pinned our hopes on this, the greatest construction program in American history, are filled with both admiration and dismay—admiration for the great skill at organization of materials, money, men, and machinery which makes this job possible, and dismay at the single-mindedness which seems so prevalent, at the inordinate speed, and at many of the results.

We hope it won't be as bad as it looks, but we fear it will. We have no monopoly on wisdom, and yet a great deal of skepticism about the omniscience of those in charge of the program.

BEST OF ALL POSSIBLE WORLDS?

The optimists among us believe this new revolution is producing the best of all possible worlds. The pessimists among us look around, and are afraid the optimists are right.

My purpose is to emphasize that highway planning and community planning are not necessarily the same thing; that paving an interstate highway does not produce a transportation system; that we must live with the monsters we create; and that the purpose of a highway system is to help create a better civilization. This is a tool—and not an end in itself.

We cannot achieve a better civilization by such simple expedients as learning to speak the other fellow's language. For one thing, this would mean that all the rest of us would have to learn to talk like engineers. At the moment, they seem to have been elevated into positions of power where they can tell us what they want, rather than how to get what we want.

Although a great many millions of non-engineers have a vital stake in highways, the reaction of some of this group to the rest of us and our suggestions reminds me of the old Kentucky mountaineer who hadn't kissed his wife in 7 years. But he shot the first man who tried it.

OVER WHATEVER STANDS IN ITS WAY

My impression is that the men in control of the highway program are interested in the program, rather than in people; in concrete, and not in communities; in traffic movement—over whatever stands in its way. They have got more public money to spend than any nonatomic profession ever had in peacetime. They're convinced that they act in the national interest, in the public interest, and in behalf of the national defense. Occasionally, this conviction is coupled with a self-righteousness which has to be encountered to be believed.

Not long ago I saw a 7-mile interstate expressway placed on a city map at the request of an anonymous official at a nearby Army post—a man never identified in public debate, never quoted except indirectly. But he was alleged to have said this was "necessary for defense." And his word was enough.

Any time an anonymous Army official can designate a $10 to $20 million expressway through a crowded city, he's doing just fine by himself. He needs no help from us.

Even more recently I have watched the town trustees of a small suburban city wake up in dismay to find that a new loop highway had—without their knowledge or consent—been scheduled to cut their community in two. When they finally raised Cain about it, they were reassured by the State that "this is just preliminary; nothing has happened yet."

"YOU AIN'T BEEN HURT YET"

Which reminds me of the fellow who hollered "Don't shoot!" at the man pointing a gun at him. Whereupon the other man demanded: "What you hollering about? You ain't been hurt—yet."

As a reporter, I have writen a number of stories about urban redevelopment, and about highway planning. Nowhere in public life today have I encountered such failure to recognize the need for comprehensive local planning as in this Federal Highway Act. It does not require that interstate or federally aided highways be located as part of a comprehensive community plan. Nor does it require communities to develop a workable program for an overall transportation system.

Many local towns are too poor to plan. Many others claim they can't afford it. Others simply neglect it. Whatever the reasons, I believe the State and Federal Governments have an obligation to this Nation's urban communities to help them work out their own comprehensive plans into which the new highways will fit.

CULT OF OFFICIAL SECRECY

Meanwhile, the cult of secrecy which blights the official life of Washington has been extended out over the highways. Secrecy, combined with the smoke screen of official gobbledygook, makes it mighty difficult for the average citizen to find out what's happening to him.

Not long ago I sat in a conference at which the noted public relations consultant, Edward L. Bernays, recounted his troubles. His firm had been hired by a city which did not want a new expressway laid across its middle like a Chinese wall. Mr. Bernays said:

"It was most difficult to get at the facts about procedure * * * to pin down the responsibilities. It took us 3 weeks to isolate the interrelationships between the national and State people. * * * The national and State engineers were working closely together, which formed an 'entente,' making it difficult to get the public interest. It was difficult to get a decision whether it was worth going underground, versus the elevated highway. As a result, the city has had to develop its own pressure-group techniques."

While such cities are forced to develop pressure-group tactics to keep from being split up, what can smaller citizens' groups do?

I have recently watched a strenuous local controversy in which the opponents of a proposed interstate highway through three city parks have been assured that "the route is not pinned down yet" and that "any protests at this time are premature." Yet when they tried to suggest rerouting another portion, on which public hearings already had been held, they were told that no changes could be made "because of the State's investment in engineering studies and efforts."

In other words, if the public hearing hasn't yet been held, you're premature. And after the public hearing, you're too late.

Meanwhile, those of us who believe that open space is necessary for tomorrow's city, who wish to preserve America's green and lovely city parks and playgrounds, are disturbed over the reckless pursuit of free open space by the highway planners.

PARKS: SITTING DUCKS FOR HIGHWAY MEN

Every big city park is a sitting duck for the highway men, and for the local officials anxious to cut down their right-of-way costs.

Any attack on city park lands has the sanction of the American Association of State Highway Officials in its official bible—the "Policy on Arterial Highways in Urban Areas," published in 1957. On page 91 of this book is a map. It's entitled: "Location opportunities for arterial highways."

And what do they consider a location opportunity? The one and only park in the entire city. Their recommended route cuts through not just a little corner of the park, not just across one end of the park, but right smack down the entire length of the park.

If this hasn't happened in your town yet, I can only suggest it's because the highway men haven't been reading their bible lately.

But all too often, I suspect, the highway locators and park grabbers are aided and abetted by stingy, penny-pinching local officials who are anxious to cut down their right-of-way costs by either giving away or selling park land at ridiculous prices.

What about public hearings? I cannot speak of the thousands of hearings I have not seen, but from some personal observation I am forced to conclude that the public hearing is a carefully staged performance designed to show the audience why the route officially agreed upon in private cannot be changed. As one of the British motor magazines recently described it, these are affairs where "at worst, aggrieved persons may hear very sound reasons why things cannot be altered."

The burden of proof is placed on the private citizen who often is poorly informed and easily buffaloed by technical mumbo jumbo. At one public hearing I recently covered, a representative of the State highway department opened the tape-recorded portion of the hearing by making this statement:

"The question is whether you believe a good road will help this country. That's the question in an economic-impact hearing. Is a good road needed in your county? I'd like to get a statement from anyone present concerning the need for good roads in this county."

BE THANKFUL OR BE QUIET

In other words, don't make any fuss about the route we've already picked. Just be thankful. And if not, be quiet.

At this point, somebody always asks: "But what about the land speculators? We can't release plans for that highway. Those speculators will rush out ahead of us and grab up the land."

Let me quote the answer given by the editor of Right of Way magazine, the voice of the American Right-Of-Way Association:

"A State which has a sound right-of-way acquisition program, predicated upon complete, accurate appraisals, and sound skilled negotiations, and which releases to the public all available data, has nothing to fear from the so-called speculators. For speculators flourish only where there is concealment of information, and where right-of-way departments are unskilled, uncertain, and subject to the whims of politics."

CHECKLIST FOR HIGHWAY PLANNERS

In closing, may I submit that—

1. A greater share of highway planning should be entrusted to local officials and local citizen groups—to the people who will have to live alongside these highways, to the school officials whose districts may be chopped up, to the lovers of city parks who know that quiet, peace, and beauty are possible only at the price of constant vigilance.

The Federal Highway Act, it seems to me, needs amendment to require much more preliminary consultation with local interest groups as well as local officials. And where there are no local plans—a condition prevalent in thousands of communities—the act should provide money to help create such plans.

2. Highway planning is no place for secrecy, and no place for secret preparation of a single, inviolable, unchangeable approved solution.

3. There is room, and there should be time, for alternate routes to be studied in much detail. Too much of this route-picking is being done by map reconnaissance, and not by human beings who get out on their own hindlegs and walk the routes. I suggest that, by the time of the public hearings, the State and Federal highway people should have made adequate comparisons of acreages, dwellings to be demolished, mileages, and rough cost estimates for more than one route, especially where controversial areas are involved. Then we shall begin to have intelligent, well-informed public debate, with plenty of information available to all parties. Also, I hope to see the development of dependable cost-benefit studies, with consideration given for damage done by taking park land, splitting school districts, spilling noise into quiet residential districts, and the damage done to property values outside the right-of-way by noise and vibration.

4. I hope somebody is developing a better method of locating interchanges than sticking one's finger on the map where the new centerline crosses a big right-angle road and saying "We'll take this one."

It is around these interchanges that the competition for choice shopping-center sites is the hottest. Here is where the speculators congregate. Here is where the zoning lawsuits flourish; here is where the experts testify. Here is where ancient farms and deep woodlands suddenly become worth millions; here is where the unearned increment in land value accumulates, much of it sucked away from old commercial strips and neighborhood stores, or siphoned away from land elsewhere. I hope we can develop some way to recapture, for the general welfare, more of this unearned increment which will inevitably pile up around these interchanges.

There are few geographic areas outside the central business district in which an entire metropolitan area has a bigger stake than in the one or two square miles around the big new interchanges.

What happens in the thousand or so acres near the interchange is a real test of our ability to solve metropolitan problems. Here begin the opportunities for designing satellite towns, for encouraging development of specified suburban communities.

5. We should be developing the idea of highway service areas which has come from Prof. J. Marshall Miller at Columbia University. Such areas, preplanned and part of an interchange regional plan, would include motels, restaurants, service stations, stores, and all the services that the weekend and cross-country traveler could need.

6. It is high time to stop looking at highways as merely permanent devices for moving traffic, and begin designing them as multipurpose projects for achieving the widest range of social, economic, and cultural goals. We should be thinking of rights of way a thousand or so feet wide in appropriate places—rights of way which include borrow pits designed from the beginning to become recreation lakes or retention basins for storm waters; rights of way which may follow the edges of property lines rather than the absolutely straight, traditional beeline, providing space for tree nurseries, wildlife refuges, recreation areas, viewpoints. I suggest that we broaden our sights to look on the rights of way as a means of carrying the full range of utilities, including monorail and mass transit wherever appropriate.

The designers of America's new highways must realize what's happened to their public. This public is more visual-minded than any in our history. Its members are conscious of the passing scene, whether it be a barren desert decorated with all the excrescences which the billboard industry can build before local zoning goes into effect; or a lovely bluegrass countryside with its gleaming white fences and long sweeping hedgerows that delineate the open countryside about to be sliced by a dead-ahead, ramroad-straight new highway.

Today's public, whether behind the wheel of a car, or subjected to the second-class citizenship to which we relegate all pedestrians, want a nation that is beautiful as well as efficient; it wants to see the landscape enhanced and not destroyed, beautified and not subjected to the straight-line thinking which will produce a new kind of railroad trackage through the townscape.

The peopel have already put sufficient pressure on their Congress to pass the stiffest law in history regulating billboards; they already have begun to support aesthetic zoning in many jurisdictions; they will, I trust, be quick to protest any new highway which does not contribute its share of beauty and urbanity to the modern townscape. It it to this public that the new highway system should be dedicated.

In Honor of Walter Lee

EXTENSION OF REMARKS
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. CAHILL. Mr. Speaker, I regret that I was not on the floor of the House when the distinguished chairman of the House Subcommittee on Claims of the Judiciary Committee, Mr. LANE, addressed this House in a very factual yet heart-warming tribute of Walter Lee.

I join my distinguished friend from Massachusetts and the other distinguished members of the subcommittee in praising Mr. Lee upon his completion of 21 years of loyal and efficient service to the House Judiciary Committee.

Since I am a freshman in the House, Mr. Lee's aid to me was of immeasurable help in guiding me through the early procedures of the committee work. I found him at all times considerate, patient, genial, and friendly. I know from my experience on the committee of the great contributions he has made to the success of this committee. I know from having talked to him that he shall miss his association with the House committee and the members, but I know, too, the memories he takes with him will be pleasant ones and will grow more pleasant as the years go by.

I wish for Walter Lee many years of happiness with his friends back in Mississippi and trust that he will enjoy to the fullest the retirement he has so richly earned and deserves.

Cross Country With the On-to-Oregon Cavalcade—XiV; End of the Trail

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. PORTER. Mr. Speaker, the On-to-Oregon Cavalcade left Independence, Mo., April 19. Ahead were some 2,000 miles before the 20th century pioneers reached the Independence at the end of the trail in Oregon.

I am happy to report that the trip was not only successful but educational and at least one of its members will be ready to go again in A.D. 2059.

He is Rudy Roudebaugh of Drain, Oreg., driver of that city's wagon in the caravan. Rudy kept a diary each day of his trip. It has been my privilege to insert the diary in the Appendix of the RECORD from time to time. This is the final chapter from Rudy's diary. It covers the last days from August 10 to August 15 when the cavalcade received a tremendous ovation in Independence, Oreg.

In these last few days, Rudy describes the thrill of floating down the Columbia River to Portland and then those last few days. His final diary words are:

This is the biggest parade we've been in [in Independence, Oreg.] and the largest crowd of people. We're about to melt from the heat. I hope everyone has enjoyed these articles. At times I didn't know if I'd ever be able to get them out, but always seemed to manage.

See you at the next Covered Wagon Trek—in 2059.

The final chapter of the diary follows:

[From the Drain (Oreg.) Enterprise, Aug. 20, 1959]

TOURS THE DALLES DAM, DRIVES MULES LAST TIME AT INDEPENDENCE PARADE

(By Rudy Roudebaugh, ex-driver of Drain covered wagon)

August 10 (Monday), 8 a.m.: We're all loaded on the barge. The water truck and kitchen unit came first, then they loaded the wagons with a tractor and last of all the horses and mules. 8:30: Here we go on the barge *Aberdeen* and tug *Francis*. 9:50: We're facing a 40-mile-an-hour gale coming up the Columbia Gorge; Washington on the port side and Oregon on the starboard. We passed a place on the Washington side and a big welcome sign is out for us.

1:40: Bridge of the Gods. Sure is beautiful scenery around here, nice and green. 12:58: Entering Bonneville locks. Seems like the water will never go down the 60 feet. 1:30: We are now leaving the locks. This will be an all-day trip. We'll sleep here and have our breakfast. Ki is on cook shift today and tomorrow. When we left the locks there were two small boats ready to enter. 3:13: We have small boats following us just like the cars did on the highway.

We sure have a beautiful view of Mount Hood, it's behind us now. 3:32: We have docked at Fort Camas and Washougal, Wash. This is the first time the wagon train has ever hit Washington. We are invited to Camas by the chamber of commerce for a chicken dinner. While we were there we met W. B. McAllester from Washougal. He is an old timer from Drain. We were each given a pendettos scarf and a big package of paper goods.

4:32: We are underway. 5:15: Passing Government Island. 5:52: Going under the Vancouver bridge. 6:17: Entered the Willamette river. It sure has a beautiful view of Mount Rainier. We are being escorted by the Coast Guard. 6:50: Went under St. John's bridge; it didn't have to be raised. 7:22: Went under the Broadway bridge. It seemed we were going under a bridge every 5 minutes after this. Steel, Burnside, Morrison, Hawthorne, all had to be opened for us. 7:48: Docked at Zidell for tonight.

August 11, 4:40: Underway going under Ross Island bridge. Janell slept on the lounge of the tug and Ki and I slept on the barge in our wagon last night. 5:21: Docked at Willamette Park, unloaded our wagons and stock and harnessed and was ready to go at 6:16. 6:21: Rolling out on the road again. In Multnomah County. 6:31: Hit highway 43. To give you some idea how we left Portland: We went on Terry Ferry road, which is hilly. They are sanding it right ahead of us. Doc and Jan are sure full of pep today (river travel must agree with them). Now we are on Southwest Third Avenue, turning on Southwest Hume Street, now on Fourth Avenue and on Southwest Terwilliger Boulevard. We are going up Highway 99, now southwest on Bertha Boulevard, now on Southwest Beaverton. 7:30: Going into Glencullen, a small suburb. 7:48: Entered Washington County, also going into Raleigh Hills where the Washington County sheriff's posse joined us. 8:24: Arrived at Beaverton, population 4,200, where we were presented a basket of gifts.

Ki is on cook shift today. 9:06: Going through Huber and Olaha. 9:25: Entering Tobias, and 6 minutes later Reedsville. 10:52: Arrived at Washington County fairgrounds at Hillsboro. David Cooper and family Nelson Sawyers of Roseburg were wagon-train visitors.

August 12, 6:20: All hooked up. We went uptown for breakfast at Times Cafe by the chamber of commerce. We are waiting for Tex and Roy. Last night we had a surprise. Ray Bogan stopped to see us on his way home from Portland. We were each given a gift from the Cub Scouts. They played Indians and raided us last night. We were given a barbecue chicken dinner by the people of Hillsboro. There were 18,000 people visiting the wagons last night. I don't believe I mentioned this before: A buddy of mine when we were in the Coast Guard looked me up at the Dalles, and entertained us. Walter Lowblad is a repairman at the gates of the Dalles Dam. He took me 185 feet down to the bottom of the dam. This was one of my most important sightseeing tours of the 4-month wagon trip.

We are being escorted again by the Washington County Sheriffs Posse. 6:34: We're on our way. Hillsboro has been a wonderful place to camp for the night. We all received a beautiful rose plant from the Hillsboro nursery. Janell, Ki and I received a piece of jewel making us members of the Oregon Wagon Train of 1859. 7:30: Crossing Jacksonbottom slough. 7:36: Crossing the Tualatin River. 8:42: Christensen Creek. 9:48: Going over the McFee Creek. 9:37: Going through Scholls.

Diane Archibal of Drain visited Janell Sunday. 10:16: We are now going by Mt. Side farm (quite a place). It seems around here they are in the nut business. It's rolling country. 10:20: Stopped to water. 10:46: We are rolling again. 10:50: I stopped and made sandwiches on the tailgate of our wagon. Also entered Yamhill County. 12:48: Just came down a long slick hill. Our poor mules have done nothing but slide all day. 1:08: Newberg, population 4,000. 1:28: Crossing Chehalem Creek. (That hill we went down was the Chehalem hill.) 1:50 Entering Dundee, population 310. We will camp at Dundee public school.

While we docked in Portland some people told us John Ward was there and would meet us. Camp and lunch is ready.

August 13, 5:55: All ready to roll. 6:05: Here we go. The State police weighed our mules this morning (2,360 pounds). Mules and wagons together weighed 4,875 pounds. Last night we had a ham dinner given us by the Ladies Club of Dundee. This morning the firemen served us breakfast. 7:26: Crossed the Yamhill River. 9:14: Passed the Eola Village. 10:04: Hit highway 99. 10:14: Entering Amity, population 650. Through here it looks like they grow mostly small grain. Back at Dundee it's a nut country. In fact, it's the nut capital of the world. We have just been met my some horsemen to lead us to camp. 10:27: Entering Amity City Park to make camp. The last three camping places we have been furnished grain and hay. The valley women club made dinner and served us. Then all day we had a hostess to look after us, Mr. and Mrs. Herald Lehonan.

August 14, 5:58: Our last morning on the road we are leaving two minutes early (wonders will never cease). We have one of the biggest crowds ever to see us off. They said there was about 15,000 people here last night. Dick and Edna Erickson came this afternoon to stay with us and also bring us home. Ova Patchen and Mr. and Mrs. Koenig and family, Jerry Whipple and children, Bruce Williams and family all came to see us today.

6:05: Crossing Ash swale. 6:44: Entering Polk County, our last county to go through in the wagons. 8:59: Going over Baskett Slough. It is cloudy, cool morning. 9:16: Coming into Rickreall. 9:23: Rickerall Creek. 9:26: Stopped at Polk County fairgrounds for the 5th Cavalry just came in to spend the weekend with us and escort us to Independence. 10:20: We are on our way again. 11:16: Monmouth Riding Club just met us. 11:21: The people of Monmouth have brought us out some lunch. 11:44: Entering Monmouth, population 2,344. 12:10: We have finally got to the end of the Trail—Independence, population 2,050.

It sure seems hot today. Guess what. We got to the city limits and they led us out on a side road and we have gone 3 miles trying to get to our campsite which is only 1 mile from Independence. This is a real deal right out through field. Up ahead I see our camp. This evening we had a lot of relatives visiting us. We had shower privileges at the Henry Hill school.

August 15, 5: Up and had breakfast. I sure wish we could have slept in. This is going to be a long day. Ki and I have to finish moving out of our wagon. Her brother, Bill Weaver, took a load home for us last night. Ki's brother, Ralph, is here so he will haul the last of our belongings home for us. 8: All hooked up and leaving our campsite to take the wagons over to the parade assembly area. 9:32: Arrived at the grounds. It looks like a long, hot wait. Many of our friends were out at the assembly area to visit us. 11:10: The parade has finally started. 12:15: We are now pulling out of the assembly area and the first of the parade has already been broken up and on its way back to the assembly area.

This is the biggest parade we've been in and the largest crowd of people. We're about to melt from the heat. 1:22: Well, we finally made it. We are at Henry Hill school. One more meeting to attend and we can start for home.

I hope everyone has enjoyed these articles. At times I didn't know if I'd ever be able to get them out, but always seemed to manage.

See you at the next Covered Wagon Trek—in 2059.

The Cost of Socialized Medicine

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 12, 1959

Mr. COLLIER. Mr. Speaker, it is a foregone conclusion that Congress will next year wrestle with a bill to provide medical benefits under the social security program. Bringing a bill of this nature before the House of Representatives during a national election year has rather positive political implications, which only the most naive candidate for public office can deny.

At any rate, I submit herewith an editorial from the Chicago Tribune entitled "The Cost of Free Medicine" which affords considerable food for thought, particularly for Members of Congress who might be inclined to view the issue in the light of the elections of November 1960, rather than the cold reality of the experience Great Britain has faced since the inception of its Government-sponsored medical program:

THE COST OF FREE MEDICINE

The latest tab for socialized medicine in Britain shows that taxes intended specifically to cover the national health service bill defrayed only 24 percent of the cost. The remaining 76 percent must be met by general taxes collected by the Government.

In the 10 years since socialized medicine was inaugurated, costs have risen by one-third, and in the last year hit a record of $1¾ billion.

We hope that these facts will not be lost upon Congress, where a Democratic group led by Representative FORAND, of Rhode Island, is pushing for an extension of social security so that medical care and hospitalization would be provided by the Government to elderly people drawing benefit checks. That this would be another step toward socializing medicine is obvious enough. That it would also embody a cost which eventually would be staggering should be equally plain, although the conclusion is disputed by FORAND and those of like mind.

The British experience demonstrates that the initial estimate of cost was far too low, and that the taxes to cover the supposedly free service were correspondingly inadequate. But, once the taxes were fixed, the prospective beneficiaries had a vested interest in keeping the price cheap on what they expected to get. Inevitably deficits accumulated and were passed on to the treasury.

Representative FORAND contends that the additional charge for his socialized medicine would be "only" an additional one-quarter of 1 percent added to present social security taxes falling both on employer and employee. Those who oppose this departure say that it would either break the social security fund or lead to increases in the tax which would soon be insupportable.

The steadily rising membership in voluntary medical insurance plans suggests that the Forand bill is primarily another scheme to corral the votes of a growing segment of the population. We trust that both Congress and the public will consider it in that light and will have the honesty to recognize that only fools expect something for nothing.

Appendix

Law Enforcement Officers Deserve Better Public Support

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the Tennessee Law Enforcement Officers Association at Knoxville on August 28, 1959.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to back here in Knoxville this evening and to discuss a subject of utmost concern to you as law enforcement officers, to me as a legislator, and to all Americans as responsible citizens.

Crime is a cancer that destroys the minds and the souls of its practitioners and extorts severe penalties from all of us.

Approximately 3 million crimes will be committed in the United States this year. In order to meet this menace about $22 billion will be spent by local and Federal law enforcement agents. That's more than half the amount that this Nation will spend this year for our national defense. It is 140 times the amount that has been asked by the administration to implement the National Education Defense Act. For every dollar that is contributed to our churches 10 will be spent to combat crime. From a tax standpoint $22 billion cost every citizen $128.

These startling financial figures do not represent the greatest expense that crime inflicts. Most serious of all is the loss in human resources, the corruption of our youth, the weakening of our moral fiber.

When we are locked in a global struggle that threatens our ideals and ideas we cannot afford to see our future strength sapped by the corruption of our youth. I am sure you are well aware of our juvenile delinquency problem and the central part it plays in the whole crime movement. During 1959 more than 1 million young people will get in trouble with the police. More than 50 percent of all those arrested for crime against property will be youths under 21 years of age. The rate of juvenile arrests is growing 2½ times faster than the rate of population growth in this age classification.

Crime does not pay—although a few hoodlums make temporary financial profits. But crime certainly does cost.

Organizations such as yours lead the counterattack against this national menace. The first line of defense against the criminal is the man with the badge who walks the beat or cruises in a patrol car; the sheriffs and officers and policemen who face the gunman, the burglar, and the mugger and at times give their lives in defense of law and order.

ENFORCEMENT OFFICERS DESERVE SUPPORT

You are doing a determinal and courageous job, and your ranks are filled with able, dedicated men. But you can't do it all by yourselves. Your efforts are the central ones, but they must derive added strength from other sources. An effective anticrime campaign is one in which America's law-enforcement officers represent the link between local civic activity and national coordination. You must have the support and interest of the individual citizens which you are protecting. And your efforts would be greatly enhanced by an exchange of ideas and information between various law enforcement agencies through a national crime commission.

Let's briefly consider these two anticrime elements.

During the hearings before the Senate Crime Investigating Committee in 1950–51, of which I was chairman, we found that the American public was dangerously uninformed and apathetic about the pervasive presence of crime. We met many policemen during our investigations—men who told us of the difficulties they have in enforcing the law because of a lack of support from the law-abiding citizens of their community; men who told us how pressure to obtain special consideration or favors breaks down the whole system of law enforcement.

The ugly facts that splashed across the television set of the Nation served to arouse the American people and rid them of their apathy about the crime problem. The hearings stirred a good deal of anticrime activity in the form of volunteer citizens groups, new crime commissions, tightening of State laws, and congressional legislation.

NEED OF CONSTANT PUBLIC INTEREST

But unfortunately much of this activity, particularly the concern of local citizens, has been sporadic and needs dramatic stimulants. An honest and courageous police officer is priceless even as the children and adults he protects. There may be an occasional bad apple, but the vast majority of our law enforcement population represents America's most dedicated men and women. It is the responsibility of all our citizens to see that our anticrime leaders receive adequate salaries and work in conditions unimpaired by dissension or patronage.

Our law enforcement officers need to be better paid, and they need to have more adequate security when they retire or when they are disabled. Unless we can provide these incentives it is going to be hard to maintain the high caliber of people entrusted with the enforcement of our laws. I think there is a duty on the part of the Federal, State, and local governments in this connecttion. A great many State and local violations are also violations of Federal statutes. Local law enforcement officers very frequently assist in the enforcement of Federal statutes as well as State laws. Many times they may be killed or disabled while doing so. So I think it is proper that the Federal Government join State and local communities in a program of seeing that our law enforcement officers have better protection.

With this in mind I have filed a bill that will extend the provision of the Federal Employees Compensattion Act to cover State and local law enforcement officers when they are killed or injured while enforcing any Federal law. The bill provides for payment to the extent of one-third of the amount set forth in the Federal Employees Compensation Act. It is contemplated that the State and local governments would make similar provisions if they have not already done so. I believe that a joint undertaking would help us retain good men and women in the law enforcement service. I believe it is equitable from the viewpoint of the Federal Government. The bill that I have introduced is as follows:

A bill to extend the provisions of the Federal Employees' Compensation Act to State and local law enforcement officers who are killed or injured while, or as a direct result of, enforcing any Federal law

"Whereas it is in the public interest to coordinate the efforts of the Federal, State, and local law enforcement agencies in order to improve the enforcement of laws; and

"Whereas many activities which constitute violations of State laws also constitute violations of Federal laws; and

"Whereas State and local law enforcement officers frequently assist in the enforcement of Federal criminal statutes; and

"Whereas State and local law enforcement officers and their families frequently are not adequately protected in the event any such officer is killed or injured and disabled while engaged in the enforcement of laws; and

"Whereas it is the policy of the Congress that the Federal Government contribute toward the provision of a more adequate measure of protection for State and local law enforcement officers and their families in cases where any such officer is killed or injured and disabled while engaged in enforcing any Federal law: Therefore

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a), except as otherwise provided by section 2, the provisions of the Federal Employees' Compensation Act, as amended, shall apply in the case of any State law enforcement officer (as defined in subsection (b)) who is killed or injured while engaged in, or as a direct result of having engaged in, the enforcement of any Federal law in like manner as if such law enforcement officer were an "employee" as defined in section 40(b) of such Act.

"(b) For the purposes of this Act, the term 'State law enforcement officer' means any sheriff, deputy sheriff, policeman, constable, town marshal, or other officer or employee of any State or political subdivision thereof who is authorized to apprehend and arrest criminals and who is charged with the duty of suppressing criminal activity, apprehending criminals and persons suspected of crimes, preserving the peace, and protecting life and property.

"SEC. 2. The amount of any compensation payable under the Federal Employees' Compensation Act by reason of the provisions of this Act shall be equal to one-third of the amount which would be payable if the individual to whom or on whose account such compensation is payable were an 'employee' as defined in section 40(b) of the Federal Employees' Compensation Act, as amended."

While crime is largely a local problem there is much that can be done nationally to assist our law-enforcement agents. Since our investigations in 1950–51 Congress has passed many bills dealing with various types of criminal activity. This legislation, while beneficial, generally can deal only with specific types and certain manifestations of crime. It cannot strike mortal blows at the

broad evil that only occasionally hits the headlines, but usually is carried on quietly down the street.

NATIONAL CRIME COMMISSION

Toward this end, I am planning to introduce again in the Senate a bill to establish a National Crime Commission. This Commission, similar to the once I've proposed in past sessions of Congress, would act as a clearinghouse for the various Federal agencies and anticrime organizations spread throughout the country. It would not interfere with the fine work of the FBI but would supplement it.

It would study the manner and extent to which organized crime uses the facilities of interstate commerce, and evaluate the adequacy of Federal laws dealing with this problem. The Commission would submit recommendations based on its findings, coordinate the activities of various law-enforcement agencies, and expedite exchange of information between such groups.

I believe such an organization would provide elements that are often missing from our anticrime movements: unity and permanence. The unity would be supplied by the organizations' coordination of anticrime efforts and cross-ventilation of ideas and techniques. The permanence would come from its continuing presence as a source of information and a sponsor of new programs.

Local encouragement and national cooperation—these are the elements that have been largely absent in past campaigns against crime. In the past 8 years there have been significant improvements along these lines. Present crime rates show clearly that there is much more to be done.

Washington-Baltimore Adequacy of Service Case

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. FRIEDEL. Mr. Speaker, in the past I have had occasion to comment on the delayed justice of the CAB and to criticize the Board's dilatory handling of the Washington-Baltimore Adequacy of Service Investigation, docket No. 8148.

In this connection Mr. Louis J. Hector, member of the Civil Aeronautics Board, gave a speech on August 25, 1959, before the American Bar Association convention in Miami. The subject of this speech was the Civil Aeronautics Board's slowness and inefficiency in processing administrative cases. His conclusion was:

Gentlemen, I think most of us agree that this kind of thing can't go on much longer. If a private business tried to conduct its affairs this way it would go broke. If we tried to make our foreign policy or plan our national defense this way, we would still be a third-rate power. And if we keep on trying to plan our national transportation system this way, we will wake up in a national emergency one day and find that it won't do the job. Clearly these procedures must be overhauled.

Mr. Hector's remedy for this delay is both complicated and drastic. He admits his solution requires radical surgery and it is clearly a long-range program.

But what about the intervening time before some major institutional reform can be worked out? Are the people of this country to be subjected to the delays that the people of Baltimore have been experiencing?

What we need is improvement now, not years hence. I believe that the CAB can improve its efficiency almost immediately.

For example, it is well known that the main missions of the CAB are, first, to handle route matters to provide air service to the public; second, to handle rate cases to insure the financial stability of the airlines while preventing overcharging of the public; third, to enforce the law and punish violators of the Federal Aviation Act; and fourth, to discharge their safety functions.

The 1960 budget estimate of the CAB which was submitted to the House Subcommittee on Independent Offices Appropriations is an astonishing document. The CAB estimate asks for $7,500,000 for all activities for 1960 and proposes the following allocation:

Activity and percent of total budget

Route activities	15.0
Rate activities	10.0
Enforcement	4.4
Safety activities	17.0
Total	46.4

Even with the addition of executive direction—5.5 percent—it is plain that the CAB is allocating only half of its budget to support the main activities Congress has empowered them to perform.

To make matters worse the CAB workload in route cases is forecast by them to increase from 190 in 1958 to 260 in 1960, or by 37 percent. The CAB backlog has been getting worse, for example in 1952 there was a backlog of 604 cases while by the end of 1957 it had risen to 1,031.

Why does not the CAB allocate more of its appropriation into its primary activities? The Senate appropriations report on the independent offices bill states—

The Board's budget presentation indicates a desire to delve into many peripheral activities not closely related to the main purpose of the Board's work which would, if Congress were to permit, lead to the further dilution of Board energies from its more important duties.

I heartily concur with this statement and no better example of a peripheral activity is the carrier relations division of the Board.

The CAB has allocated more of its budget to carrier relations than it has allocated to its Compliance Section which is responsible for the enforcement of the law. This would not be so bad if the law were being adequately enforced but the chief of enforcement admitted during the committee hearings:

We have over 50 formal cases pending before the Board, many of them yet to be heard by hearing examiners. (Senate hearings, Subcommittee on Appropriations for Independent Offices, p. 78.)

For example, on May 8, 1957 the CAB Office of Compliance filed a complaint against a large air freight forwarder for violating five Federal laws including falsification of documents and unfair competition and requested revocation of the forwarder's certificate. Two years and 4 months later, on September 9 of this year, the Board will hold a hearing and in the meantime the unlawful conduct continues and will continue until the final processing of the case a year or more from now. This situation cannot be allowed to continue.

What does this carrier relations section do which entitles it to more of the budget than is devoted to enforcing the law? Its biggest volume of business is agreements filed pursuant to section 412 of the Federal Aviation Act. It handled 1,500 matters in 1958 and is forecast to handle 1,865 in 1960. I have personally studied the lists of agreements and while occasionally there is an important or complicated problem the overwhelming majority are routine agreements between airlines concerning ticket space, baggage handling, sanitation facilities and the like.

The interlocking relations work is forecast to decrease and the other work—forwarders, 6(b) permits, and charter exemptions—simply cannot be compared in importance to law enforcement, route and rate cases and safety.

Mr. Hector should be commended for his interest in reform and improvement but he should focus on the immediate possibilities for reform such as a wiser expenditure of appropriated money.

American Legion, Louisiana Department, Supports the Cold War GI Bill on Education and Training

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. YARBOROUGH. Mr. President, the current tense situation in world affairs requires this Nation to maintain itself as a power for peace, and the tenseness emphasizes the fact that American service personnel have been and may be at any time shipped to any part of the world where they are needed.

We all know of the times when this cold war has turned hot.

It was to help Americans who take years from their lives to serve their country—often encountering the dangers of wartime—to recoup some lost opportunities that the cold war GI bill was written.

The Department of Louisiana of the American Legion, meeting in their 41st annual convention at Baton Rogue on July 23–26, 1959, passed a resolution urging continuation of education and training programs for veterans. I commend the Legion for its farsightedness. I ask unanimous consent that this resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION NO. 1: URGING CONTINUATION OF EDUCATION AND TRAINING PROGRAM FOR VETERANS

Whereas the Congress of the United States, expressing the will of the citizenry by the enactment of the Servicemen's Readjustment Act of 1944 (Public Law 346, 78th Cong.), recognized the justice, equity and the general value of a sound education and training program for the veterans of our country; and

Whereas the legislation enacted to provide such education and training benefits was for the purpose of restoring lost educational opportunities to those men and women who served in the Armed Forces of our country and has accomplished this purpose and has been an immeasurable factor in contributing to the economic security of our veterans and their families, as well as to the security of the Nation as a result of the increase in the general educational level and professional and technical skills of the veterans; and

Whereas the increased earning power of veterans directly attributable to the program is resulting in payment of increased income taxes which will more than repay the total cost of the program; and

Whereas notwithstanding the continuing involuntary military service program, Public Law 7, 84th Congress, denies entitlement to education and training benefits to all veterans who first entered service after January 31, 1955, which is grossly inequitable: now, therefore, be it

Resolved, That the American Legion, Department of Louisiana, in annual convention in Baton Rouge, La., July 23–26, 1959, strongly urges a continuation of an education and training program similar to that provided by Public Law 550, 82d Congress, to all veterans of our country who serve in any period in which involuntary military service is authorized, and urges the Congress to enact appropriate legislation to accomplish; and be it further

Resolved, That copies of this resolution be transmitted to the House Veterans' Affairs Committee, the Senate Committee on Labor and Public Welfare, all Members of the Louisiana congressional delegation, and to the American Vocational Association.

Nehru Is Proud of India's Progress in Last 12 Years

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 24, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by Paul Simon, State representative from Troy, Ill., after an interview with Prime Minister Jawaharlal Nehru in India. The article appeared in the Chicago Daily News on August 13, 1959:

NEHRU IS PROUD OF INDIA'S PROGRESS IN LAST 12 YEARS—LOW INCOME, RELIGIOUS SPLITS AMONG TOUGHEST PROBLEMS

(By Paul Simon)

On the eve of India's 12th anniversary of independence, which is Saturday, I spent an hour and a half with Prime Minister Jawaharlal Nehru in his official residence.

Our coversation covered a wide variety of subjects including the forthcoming Eisenhower-Khrushchev talks and I came away much impressed by the man who is the leader of the world's largest democracy—population 360 million.

In many respects India is like the shoes Nehru was wearing. They were a pair of new, black shoes which squeaked a little but looked as if they would serve him a long time. India's democracy is new and has its squeaks but it looks as if it is capable of serving them well for some time.

The man who has served as the leader of India's Government for all of these 12 years was vigorous in his conversation, particularly when he warmed to a subject like U.S. arms aid to Pakistan, which he strongly opposes.

In his frank reaction to questions and in his obvious pleasure in a give-and-take situation, he reminded me of Israel's Prime Minister David Ben-Gurion. The difference is that Ben-Gurion's language marches; Nehru's dances.

He is 69, but does not look it. He clutched a small, pink pillow at his side as he spoke except when he smoked a cigarette ("I've cut down to six a day," he said with considerable pride.)

He faces many problems but he faces them with the confidence of a man who has licked many problems.

Among the problems confronting him are a per capita Indian average income of $54 per year, 14 official languages which make communication difficult, a religiously divided people, and territory bordering Communist China and the Soviet Union as well as hostile Pakistan.

On the positive side, democracy has survived a bloody few months following independence, the low standard of living has been raised by about 10 percent, India is starting industrial growth in a solid way (including five big steel mills), and an increased agricultural potential is beginning to be tapped.

I asked him what his country's greatest accomplishment has been during the last 12 years.

"Emotional integration," he replied.

India was a land of many kingdoms of a feudal nature and now the people have an awareness of belonging to the nation. Land reform has virtually eliminated the former large land operations.

As to the Eisenhower-Khrushchev talks, he is not optimistic that there will be any specific accomplishments but feels that the idea of having talks is good. "It may reduce the steel wall of suspicion which exists between your two countries," he stated.

He is also pleased at the prospect of President Eisenhower visiting India, as the President indicated he might do after he retires.

But Nehru would not be unhappy if Mr. Eisenhower would do this while he is still President.

Among other things Nehru said:

Sooner or later the United States should at least vote for the admission of Red China into the United Nations. Official recognition is a separate issue.

The Government in China is going to stay and the United States might as well face the fact. If Red China had been a member of the United Nations prior to the Korean war it is possible that war could have been avoided.

He hinted that he might favor an independent Formosa. (This is a slight change in position for him.)

He is doing his best to maintain friendly relations with Red China but is having his difficulties. He is determined not to leave future generations with a strong feeling of animosity between India and China. But this is not easy. A Chinese map has been published showing part of India within China's border.

In the State of Kerala, where the Communist government was recently removed, he is cautiously hopeful that the non-Communist forces will combine to defeat the Communists in election there.

U.S. assistance has been most helpful, particularly in meeting the emergency hunger situation.

Relations between India and the United States have improved during the last 2 years. The United States has shown a greater understanding of some of the problems India faces.

Relations with Pakistan are little improved. The greatest irritant between India and the United States is arms aid to Pakistan. India understands American motives, but still cannot look favorably on the United States arming an unfriendly neighbor.

Convention of the International Parliamentary Union

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. WILEY. Mr. President, on September 1, 1959, an editorial entitled "Less Ice, More Light," was published in the Christian Science Monitor.

The editorial contains information about the meeting which was held in Warsaw, which I was supposed to attend, but which I could not attend due to some things it was necessary to attend to on the floor of the Senate.

The editorial states, in part:

An American Congressman, speaking in Polish, recalled the Nazi invasion of Poland just 20 years ago and said Stalin's deal with Hitler made it possible, with the Soviets seizing eastern Poland shortly after. A member of the Netherlands Parliament objected to calling countries behind the Iron Curtain the "Socialist community," and minced no words about the suppression of Hungary. Other speakers, from Austria and Australia, spoke out about "bloody oppression" in Tibet.

As I said, this occurred in Warsaw.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESS ICE, MORE LIGHT

Something happened in Warsaw last week which deserves more attention in connection with the current cold war thaw. In the Polish Parliament building 400 officials from 50 nations heard Communist regimes and acts bluntly denounced.

An American Congressman speaking in Polish, recalled the Nazi invasion of Poland just 20 years ago and said Stalin's deal with Hitler made it possible, with the Soviet seizing eastern Poland shortly after. A member of the Netherlands Parliament objected to calling countries behind the Iron Curtain the "Socialist community" and minced no words about the suppression of Hungary. Other speakers, from Austria and Australia, spoke out about bloody oppression in Tibet.

The occasion was a convention of the International Parliamentary Union and the speakers were talking unofficially. Yet they are elected members of their own nations'

legislatures and the union meeting provided a sounding board of world reputation—and behind the curtain—for their anti-Communist remarks.

It is quite possible that this incident brought as much light to non-Communist as to Communist peoples. For many Western folk have oversimplified concepts of life behind the curtain. Many will be surprised that any such freedom of speech can be exercised there. Recognition that their knowledge is incomplete can be the prelude to better-informed, more reliable thinking.

Here is one of the great potential benefits of a cold war thaw—better understanding on both sides. We are not using better understanding necessarily in the sense of closer agreement, but of more accurate knowledge. Such knowledge may strengthen an agreement to disagree insofar as national policies are concerned. But if so the relationship will not again be on such a doctrainaire, dehumanized basis as the cold war "freeze."

For Americans particularly the new melting period holds some danger of swinging from extreme animosity to unthoughtful softness. The better understanding afforded by greater freedom of contacts and information could well lead to a fuller appreciation of people in Communist countries. But it shouldn't lead to hasty assumptions that the Red regimes controlling them are genuinely benevolent or devoted to freedom—a degree of freedom that would unseat them. And their interest in peace is visibly one sided.

If aware of those dangers the free peoples should welcome any thawing. For in general the less ice the more light, and liberty has nothing to fear from light. Free peoples will be stronger where testing their systems pragmatically against competitors. Any movement away from stark military confrontation toward contests in the realm of ideas and information should be all in their favor.

It is no accident that an interparliamentary union meeting should display free speech—even behind the curtain. For Red regimes are under pressure to pretend that they have real parliaments and other free institutions. We should never underestimate the subversive power of freedom.

The Veto

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. HORAN. Mr. Speaker, under leave granted me to extend my own remarks in the Appendix of the RECORD, I am pleased to include an editorial from the Spokane Spokesman-Review in its August 30 issue.

This publication is considered one of the truly sound and conservative newspapers of the Nation. Their viewpoint therefore is of particular interest.

PUBLIC WORKS VETO WAS NOT JUSTIFIED

It would not be surprising to see Congress challenge successfully this week the Presidential veto of the public works appropriations bill for the current fiscal year.

President Eisenhower and his budget advisers had their reasons for this veto. But in the timing of this message and in the explanations given, he has seriously discounted some political and economic realities that now jeopardize his position on the domestic front—at the very time he needs sustained congressional support on the more overpowering international issues that may soon be coming to a critical climax.

Briefly, the risks which Mr. Eisenhower has taken on this public works bill veto are not worth the cost that may now be extracted by a Congress in control of the opposition party.

Unlike many if not most of the bills which have been given an Eisenhower veto, this measure has a wide basis of popular support. Its final terms were determined only after extensive give-and-take in the House of Representatives, in the Senate, and finally in the joint conference committee.

The significant votes on this bill—82 to 9 in the Senate and 380 to 20 in the House—are indicative of wide congressional support and of the fact that the leaders of both Houses may have little difficulty in securing the two-thirds majorities required in order to override the President's veto.

To be sure, there are numerous Congressmen alert to the inflationary and budgetary dangers inherent in the granting of initial planning or construction funds for projects which had not secured a preliminary clearance by the reviewing officers in the Bureau of the Budget. The President rightfully points out the implied long-term commitments that Congress would be making in providing money for these new starts now.

Yet the President's position in this case is vulnerable, both economically and politically.

He has just approved a multibillion dollar bill which includes pensions for the widows of veterans who have had no service-connected disabilities. This bill imposes new and costly obligations upon the Nation's taxpayers for the next generation—and it might well jeopardize the ability of the Government to provide properly for deserving veterans injured in the line of duty.

The President's position is also economically and politically vulnerable on the public works bill veto because of White House requests for more and seemingly indeterminate foreign aid. Many of these foreign aid projects never come under the same careful scrutiny required by budgetary and appropriation processes of our own domestic river development projects.

The truly unfortunate aspect of this veto will be the incentive it may give many Congressmen to override other vetoes which could be more easily justified and sustained.

Should the veto be sustained, Congress will have to get going on another public works appropriation bill—a rather irksome task at this stage of the drive toward adjournment. Yet the possibility of the President getting a more satisfactory bill is remote.

The major going projects will, of course, be provided for, in any event. But the liabilities of the present veto are likely to hurt the Eisenhower administration and the Republican Party for some time to come.

This was neither the platform nor the occasion for the President—now so earnestly occupied abroad—to stand up and be counted on this domestic public works issue. The price yet to be paid in congressional rancor will be excessive for the risks now incurred.

Great Lakes Foreign Trade Is Booming

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway this year marked—as we all appreciate—one of the greatest achievements of its kind in our history.

Following the opening of the seaway, I have been delighted to note a great many reports illustrating that the increased volume of trade through the waterway will live up to the expectations which we—as sponsors of the seaway legislation—envisioned in the approval of Public Law 83-358.

Recently, the Green Bay Press-Gazette carried an article entitled "Great Lakes Foreign Trade Is Booming." Overall, the article delineates the sharp increase in the number of ships traversing the seaway and moving to and from the ports of the Great Lakes. The ports revealing stepped-up traffic include Milwaukee, Duluth-Superior, Green Bay, Detroit, Cleveland, Buffalo, Chicago, Toledo, and others.

We recognize, of course, that encouragement of the maximum traffic through the seaway is significant; not only in terms of its economic impact on our own economy, but also in enabling the seaway—through tolls—to pay off its cost of construction.

That is why I believe the amendments to S. 1748, pending before the Senate—that would divert traffic away from the seaway—would seriously threaten the flow of traffic, adversely affecting the economy, as well as the American taxpayers' investment in the St. Lawrence Waterway.

In view of the new opportunities created by the completion of the St. Lawrence project, I believe it is therefore particularly important that we encourage—rather than discourage—traffic through the route. The adoption of the amendment to S. 1748, I believe, is unjustified, unwarranted, and most certainly would be uneconomical for the American taxpayer.

Illustrative of the way in which trade is booming on the Great Lakes as a result of the seaway, I ask unanimous consent to have the article from the Green Bay Press-Gazette printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay Press-Gazette, Sept. 1, 1959]

GREAT LAKES FOREIGN TRADE IS BOOMING—MOST PORTS RECORD SHARP INCREASES IN SHIPS, CARGOES

Foreign trade is booming on the Great Lakes in the first season of the St. Lawrence Seaway.

Most ports on America's new fourth seacoast have recorded sharp increases in the number of ship arrivals, a United Press survey showed today.

The vessels are much larger, too, than before the long, tortuous passageway between mid-American and the Atlantic Ocean was reamed out in a joint construction project by the United States and Canada.

They're disgorging greater tonnages of imports and taking on larger cargoes of exports.

GRAIN EXPORTS UP

Grain exports are up sharply.

In the first 3 months of the shipping season, Duluth international seaport loaded 42,754,000 bushels of grain into ships destined for overseas ports.

That is 1 million bushels more than the total anticipated by the Agricultural Depart-

ment for all ports on the St. Lawrence Seaway for the entire 1959 season.

Chicago shipped out more than 27 million bushels of grain from the opening day of the season to August 13, compared with 13 million bushels in the same period last year.

Port authorities in Chicago estimate that gross tonnage of all foreign cargo—exports and imports—is running about 40 percent higher than 1958, the previous record year.

At Toledo, Ohio, both imports and general cargo exports are running three times greater than last year. Grain exports from Toledo have far outstripped those of a year ago.

U.S. customs figures showed 257 foreign ship arrivals at Cleveland through July 31, compared with 182 by the same date in 1958.

DETROIT SEES BOOM

At Detroit, Carlos Toro, secretary of the board of commerce's port and seaway committee, predicted that overseas tonnage for 1959 would total 300,000, compared with 88,000 tons last year.

One note of pessimism was sounded. It came from Joseph Chartrand, traffic manager of the Chicago Board of Trade, who complained of discriminatory action by eastern railroads in cutting rates on grain shipped to North Atlantic ports.

Chartrand said that under a rate cut put into effect June 18 by the New York Central and Pennsylvania Railroads, the roads charge one-half cent less per hundredweight to carry grain 952 miles from Columbus, Ind., to Boston than they charge to haul it 222 miles from Columbus to Chicago.

"If we don't get relief against this discriminatory treatment next year, we'll be crucified," Chartrand said.

Here is the shipping business picture around the Lakes:

Milwaukee: Imports through June 30 totaled 7,086 net tons, compared with 1,210 tons during the same period in the peak year of 1956; exports 2,479 net tons, compared with 2,094 tons for same period of 1956. Individual vessel sailings for the first 6 months of year up from 71 in 1956 to 106 this year.

Duluth-Superior: Ship arrivals up to July 1 totaled 1,210, compared with 610 during same period of 1958. Port officials said tonnage data was available only on grain exports.

Cleveland: Oversea tonnage handled in May and June was 36,406 tons, nearly half as much as the total of 79,121 tons handled during all of 1958. Principal imports included steel, autos, liquors, wines, cheese, olives and talc. Exports included farm and road equipment, auto parts, lubricants, resin, latex and electrical equipment.

Buffalo: A spokesman for the Niagara Frontier Port Authority said 1959 foreign trade is running about five times higher than the average for the last 4 years. Imports up to August 1 total 52,875 tons. Export tonnages were not available. Imports were topped by 25,261 tons of steel, 17,626 tons of molasses and 8,492 tons of fluorspar. The port also unloaded foreign cars, scotch whisky, glass, wines, beer, and hardwoods.

Chicago: Maxim Cohen, head of the Chicago regional port authority, and collector of customs Frank Poeska, estimated that import and export tonnage was running about 40 percent above 1958, the best previous year. William J. Barry, assistant port director, said 1959 trade might amount to 500,000 tons, compared to 250,000 tons last year. The port counted 247 arrivals up to August 1, compared with 175 in a like period last year, and marine authorities said the ships are running two to three times larger than those that visited the city in before-seaway years.

Toledo: Grain exports via the seaway through July 31 totaled 980,290 bushels of wheat, 3,388,360 bushels of corn and 2,416,649 bushels of soybeans. In all of 1958 the port shipped 1,219,164 bushels of wheat, 447,610 bushels of corn, and 1,487 bushels of beans. Sixty-four grain boats have departed; by the same time last year only 21 had left the port. Toledo expects well over 200 oversea vessels by the end of the season. Last year it welcomed 156.

Detroit: Imports are up sharply this year, but there has been little increase in exports. The number of ocean ships arriving in the Motor City is running about the same as in previous years. Officials predict further increases in shipping tonnage when connecting channels are dredged deep enough to permit all deep-draft vessels now transiting the seaway to proceed as far as Detroit.

Green Bay: A report last month of Howard Kalupske, deputy collector of customs, said that, as of June 30, 9,294 more tons of cargo which moved through the seaway had been handled in Green Bay than during the same period in 1958.

A total of 22,934 tons was handled in Green Bay compared with a total of 13,640 tons for the same period last year. Twenty-two ships loaded 15,311 tons in Green Bay for movement through the seaway compared with 15 ships carrying exports of 11,892 tons last year. Imports totaling 7,623 tons arrived on 22 ships compared with 1,748 tons during the same period of 1958.

Khrushchev

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following is a radio broadcast by Mr. Allston Calhoun who is waging a great fight against communism:

AMERICANISM PREFERRED—KHRUSHCHEV'S COMMUNISM CEMENTS POWER, MOLESTING CHILDREN BY DISEASED CRIMINALS

Script of radio show Americanism Preferred, delivered by Allston Calhoun over radio stations in the Southeast, August 29, 30, and 31, and September 1, 1959

Hello, folks, this is your workingman's friend speaking with you on Americanism Preferred.

In a telegram to National Review, America-first fact and opinion magazine, Senator William F. Knowland said, and I quote, "The invitation to Khrushchev to visit the United States will have a devastating adverse effect upon the captive people behind the Communist Iron Curtain. It is a victory for Soviet diplomacy which has angled for such an invitation for the past several years. Khrushchev is still the butcher of Budapest. Three years does not outlaw murder of an individual or of a nation."

Thus, Senator Knowland expresses the shock and the disgust of every right-thinking American at this invitation coming from our White House in Washington, wherein the present occupant of the White House, Mr. Eisenhower, will throw open the welcoming doors of that hallowed institution and receive therein as an honored guest one of the most murderous criminals of all time and of whom Senator Knowland tells only an infinitesimal part of the story describing him as the "butcher of Budapest."

But before we tell you more of the butcher, whom Mr. Eisenhower is welcoming to our White House, let us go into the nature of the invitation which brings Killer Khrushchev to our Capital City in Washington, where, it is said, he will follow the parade of American presidents up Pennsylvania Avenue, but this time a Pennsylvania Avenue shockingly decorated with the hammer and sickle of the Communist flag.

Boiling all the evidence down, your "Working Man's Friend" has found that this invitation to Killer Khrushchev, so shocking to all right-thinking Americans is almost exclusively the work of Mr. Eisenhower, himself, and without the prior sanction, or even the knowledge, of the representatives of the people in the upper and lower Houses of our Congress, now assembled in session in Washington.

We find, also, that this shocking invitation was not issued even with the general knowledge of Mr. Eisenhower's Cabinet and executive department of our Government. Even Vice President NIXON, who recently did such a wonderful job in appealing direct to the downtrodden Russian people, with the way he stood up against Khrushchev while opening the American Fair in Moscow, is said not to have known of the coming invitation to Khrushchev before he visited Moscow and crossed up Killer Khrushchev in a verbal exchange at the opening ceremonies.

Certainly Vice President NIXON could not have stood up against Khrushchev so heartily had he known that his boss man back in Washington was, even then, extending to Killer Khrushchev the invitation which would open the gates of America's Capital City and the doors of her White House to this head of the world criminal Communist movement, who is known to have achieved his own position of power in world communism literally, and I quote, "over piles of dead bodies," and these bodies being those of his own people, at that.

Also, one might say that the body of the late Secretary of State, John Foster Dulles, who certainly would have opposed such a shocking and untoward act on the part of the White House, is hardly cold in his grave before Mr. Eisenhower takes upon himself to bring joy and great satisfaction to the hearts of all American Communists and subversives with his invitation to their world leader to be a guest in the house long hallowed by such men as Washington, Jefferson, Lincoln, Theodore Roosevelt and others of our truly America-first Presidents who thought first of America and who had the gumption to act in accordance therewith.

Certainly, there is more truth than poetry, even though the poetry may be of a dubious nature at that, in the Killer Khrushchev's threat to America, "We will bury you." In this, the Killer is only speaking along the line he knows best, from long experience. He gained this experience in subjugating his own people more firmly under the Communist yoke in Russia, where he was long the chief killer under the murderous Communist tyrant before him, Josef Stalin. According to Eugene Lyons, writing in the Reader's Digest, "Khrushchev achieved his present status by the unlimited use of brute force. This has been his speciality for years. He reached the Kremlin pinnacle in the only way the Soviet pyramid of power can be scaled, over piles of corpses. He was Stalin's genius for intrigue, blackmail, and murder, and under his exterior is a man utterly ruthless and unscrupulous, a tyrant cut from Stalinist cloth to the Stalinist pattern."

Quoting further, direct from Mr. Lyons' report in Reader's Digest pertaining to Khrushchev's rise to power under Stalin:

"Khrushchev remained Moscow boss for about 5 years, and there is no indication that he ever was squeamish. These were the incalculably tragic years of full-blown terror. As the dictator's (Stalin's) chief henchman in the very center of the regime, Khrushchev was necessarily neck-deep in blood. Ten million people were crammed into hideous

slave-labor camps, tens of thousands were shot by the secret police—crimes which Khrushchev himself was destined to acknowledge in 1956.

"His murderous zeal and energetic sycophancy paid off in increased power. In August 1937, Khrushchev, accompanied by Molotov and Yezhov, swooped down on Kiev with orders to clean up the Ukraine. Before they were through, all members of the Ukrainian Supreme Soviet had died in the cellars of the Kiev and Moscow secret police. Only two of the 102 members of the 'republic's' central committee of the party escaped arrest.

"A bloodcurdling example of the Khrushchev-Serov terror came to light accidentally during World War II, in the Ukrainian town of Vinnitsa. There, in the purge years, near the local NKVD headquarters, a high board fence had been built to enclose an orchard and part of the Park of Culture and Rest. Armed sentries guarded it day and night. People were too terrified to ask questions; many thought that some kind of secret experiment was being conducted there.

"Later it was brought to light why the Reds had been guarding this orchard near the NKVD headquarters. Ninety-five mass graves were discovered inside the fence containing nearly 10,000 corpses. The victims were fully dressed, their hands bound behind their backs, bullet holes in the nape of their necks. From the fact that their mouths were full of earth, experts in such matters were able to confirm that many of the men and women were still alive gasping for breath when they were hurled into the graves.

"From documents, letters, snapshots and other things on the bodies, it was possible to identify many of the victims who had been rounded up in the 1937–39 terror. Photographs of mounds of the half-decayed bodies and the burial pits are available. Ukrainian emigres have suggested that the next time the smiling Khrushchev is invited via television into free peoples' homes, these photographs be shown by way of silent commentary."

In this, Mr. Lyons was speaking about Khrushchev's invitation to speak over certain American television networks on the part of the same liberals who are now overjoyed at Mr. Eisenhower's invitation to Khrushchev to be the honored guest in our White House.

But if these true accounts on Mr. Eisenhower's White House invitee shock you, just hold on to your seats a minute, for we have more to tell you about Mr. Khrushchev and his regime which is far more shocking than this. Quoting an item entitled, "Coexistence With the Hangman, Russia's Noose Awaits the Naive," and giving data from no less an authority than the House Un-American Activities Committee (American Mercury, August 1959):

"All of Khrushchev's smiles and Mikoyan's camaraderie cannot blot out the crimes of their regime against free peoples who have stood in the way of Russian imperialism. The record is damning.

"Documented instances of these political crimes were recorded in the startling report on 'Communist Aggression' issued by the House Committee on Un-American Activities in 1954."

Here are some horrifying excerpts from the testimony which was presented to the committee by important witnesses. On the subjugation of Rumania by the Communists and as a result of the fateful decisions at Yalta, the deposed King Michael of Rumania testified:

"They arrested as many people as they could: Old people, grownups, and children. The children were placed in various prison cells where they were molested or assaulted all night by special gangs of ill and infected people. The next morning these children were sent back to their parents with a piece of paper around their necks explaining that they had been assaulted by a syphilitic some time during the night, and that would happen in the future if these demonstrations (against communism) continued."

So long, folks. Criminal communism under Khrushchev subjugates a people and forces them to remain under the yoke of the worst criminal menace that has yet beset this world. Thus, Mr. Khrushchev comes to Washington.

The Lake Michigan Water Diversion Bill

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. WILEY. Mr. President, there was published in last night's Washington Evening Star an editorial in respect to the action the Senate took regarding the diversion of water from Lake Michigan, entitled, "A 'Must' Requirement." It is a very good editorial, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

Mr. President, there was also published a very short editorial in the Washington Post and Times Herald of this morning, in which it said, in part:

The Senate showed a good deal of statesmanship by sending the Great Lakes water diversion bill to its Foreign Relations Committee for study of its impact on United States-Canadian relations.

I ask unanimous consent that this editorial also be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Sept. 3, 1959]

A "MUST" REQUIREMENT

The Senate apparently has shelved, at least for this session, a House-approved bill which would permit the city of Chicago to divert an increased flow of water from Lake Michigan into the city's sewage disposal system. And the Senate debate produced one overriding reason why the measure should not be enacted at all without most careful consideration at the foreign relations level.

The reason is expressed briefly, but in diplomatically forceful language, in the note signed by Canadian Ambassador Heeney and submitted to our State Department on August 21. The text has been made part of the record of debate in the Senate, and contains these two sentences: "In the view of my Government, any additional diversion of water out of the Great Lakes watershed would be inconsistent with existing agreements and arrangements which together constitute an agreed regime with respect to these waters. The proposed unilateral derogation from the existing regime therefore occasions serious concern in Canada."

The bill was reported to the Senate floor by the Committee on Public Works, without reference to the Committee on Foreign Relations. It was handled in the same way in the House. There was much testimony in both House and Senate committee hearings on the aspects of sanitation, navigation, waterpower development and other technical questions pertaining to the proposal. Even this testimony was divided and floor debate has been similarly split over these technical issues. It would be difficult, if not impossible, for a layman to reach an authoritative conclusion on the rights and wrongs of these arguments alone.

It is not difficult, however, to understand the grave implications of the Canadian objection. Although Lake Michigan is entirely within U.S. boundaries, it is part of the great water complex shared by the two nations. Any operation affecting these waters is of proper interest, and perhaps great importance, to both nations. On this basis, the problem is clearly one of international relations—and, in this case, one in which this country should not set a precedent which may come back to plague us.

[From the Washington Post and Times Herald, Sept. 4, 1959]

SALUTARY SETBACK

The Senate showed a good deal of statesmanship by sending the Great Lakes water diversion bill to its Foreign Relations Committee for study of its impact on United States-Canadian relations. The extended debate conclusively showed that objections to the bill went beyond the protests of States bordering the Great Lakes against any lowering of the water level for the benefit of Chicago. More serious were the emphatic protests from Canada to the effect that passage of the bill would amount to a breach of the treaty arrangements between the two countries. The United States simply cannot afford to flout the interests and treaty rights of its good neighbors in this fashion. We hope the bill will not emerge from Foreign Relations until the Great Lakes cases in the Supreme Court have been decided and agreement has been reached with Canada on whatever diversion may then seem to be justified.

Mr. WILEY. I thank the distinguished Presiding Officer, my junior colleague from Wisconsin [Mr. PROXMIRE]. I will say to the Presiding Officer, I received a very nice telegram today from the attorney general of our State complimenting him.

Not Balancing the Budget

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. ROBISON. Mr. Speaker, all partisanship aside, it is my sincere belief that many of us who voted yesterday to sustain the Presidential veto of the Public Works Appropriation bill did so with full awareness of the long-range budgetary problems faced by America as so cogently spelled out in the following editorial from today's New York Times which I hereby include under leave to extend my remarks:

NOT BALANCING THE BUDGET

The concept of the flexible, or compensated Federal budget—as contrasted with that of a budget balanced annually, regardless of the state of the national economy—is undoubtedly with us to stay. The fact remains, however, that the warnings of those political skeptics who opposed its adoption or accepted it with very grave reservations have already been justified by events.

It would be easy to get general agreement on the program to be adopted in rainy days, but what about those sunshiny days in which Congress and the public would, in theory, be expected to restore the damage done to the Government's financial position, and take the necessary steps in the area of debt management and monetary policy to resist the potential inflation engendered by the artificial stimulants so freely employed in the immediately preceding period to combat the recession in economic activity? Would we be prepared to accept with necessary courage the policies of comparative austerity indicated in such a period that alone could justify the basic concept of the compensatory budget?

The answer to this question is, on the basis of the record, clearly in the negative. News developments of this week bearing on the state of the Government's finances bear striking evidence to the fact. In the year ended June 30, reflecting the impact of the 1957–58 recession, the Treasury was called upon to finance a deficit of $12 billion, the largest in the Nation's peacetime history.

With the recession ended and recovery well underway, the President has urged a balancing of the Federal budget as a first and basic step to putting the Nation's finances in order and protecting the dollar against the inflation implicit in a return to boom conditions in the economy. Reports from Washington are in agreement that, despite the establishment of new high levels of production and employment since that time, it is doubtful that a balance of expenditure and receipt can be achieved in fiscal 1960, and the substantial budget surplus the administration had envisioned for 1961 is even more questionable.

The contraction of 1957–58 is now not expected to produce anything better by 1961 than a balanced budget at best. This reflects not only the reluctance of Congress to withdraw the stimulants to the economy it was prepared to administer with such alacrity when business activity was contracting; it also reflects a new and frightening development in budgetary practice. This is the recent rapid rise of the program type of project that continues and even increases automatically in future years.

This built-in spending was pointed up by the President in his recent veto (sustained yesterday) of the public works bill. The unbudgeted proposals included in prospective measures would amount to only about $50 million in fiscal 1960, but the ultimate cost would be in the neighborhood of $800 million. This brings into sharp focus how Congress, by action one year, builds increase in the budget for future years. It illustrates how effective control of Federal spending can be lost.

A Record School Enrollment This Year Emphasizes the Need for Classrooms and Teachers—Columnists and Papers Carry Facts

---

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, September 4, 1959

Mr. YARBOROUGH. Mr. President, for the 15th consecutive year, school enrollment in this Nation has gone up. Robert C. Cook, president of the Population Reference Bureau, has warned that our Nation's schools—particularly those in cities and suburban areas should plan now for "an astonishing increase" in the number of pupils in the next 20 years.

If the birth rate of 1955–57 continues, by 1980 there will be a 92-percent rise in college age students, 80 percent more pupils of high school age, and a jump of 64 percent in elementary school age children.

These statistics present a challenge to our Nation—an opportunity for this country to show the best it is made of. Instead, the administration, while paying a halfway lipservice to education's needs, slouches stubbornly along the line of "no new starts," looking backward and repeating its pledge of allegiance:

I pledge allegiance to no new starts,
And to the Republicans, for whom it stands.
Our Nation, standing completely still,
With higher interest and fatter takes for all special interests.

In view of the strides being made in education in other countries, principally some Communist-controlled nations which threaten our democratic way of life, the old adage "He who hesitates is lost" is given new and emphasized meaning.

And by vetoing the housing bill, with its provisions for classroom construction; opposing the cold war GI bill, which would help veterans improve their education and training; and fighting to dilute the student loan provisions of the National Defense Education Act, the administration is doing more than just hesitating.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Helen Thomas of UPI, from the Lubbock (Tex.) Avalanche-Journal for Sunday, August 30, 1959, entitled "Record School Enrollment To Bring Annual Problems," and an article by Bascom N. Timmons, from the Amarillo (Tex.) News-Globe for Sunday, August 30, 1959, entitled "For Texas Schools—Tidal Wave of Students Due."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Lubbock (Tex.) Avalanche-Journal, Aug. 30, 1959]

RECORD SCHOOL ENROLLMENT TO BRING ANNUAL PROBLEMS

(By Helen Thomas)

WASHINGTON.—The Nation's schools and colleges will bulge at the seams again this fall with a record enrollment of 46,480,000, the Office of Education reported today.

But the number of teachers and classrooms—the perennial problems—will again fall short of carrying the extra load.

This is the 15th year in a row that enrollment has taken a jump, officials said. It represents an increase of 1,940,000 students over the 44,540,000 enrolled during the 1958–59 school year.

Education Commissioner Lawrence G. Derthrick predicted an enrollment of 33,460,000 in grades running from the kindergarten through the 8th. He said students for high schools from the 9th through the 12th grades will total 9,240,000. These figures compare with an elementary school enrollment of 32,010,000 and high school load of 8,940,000 last year.

Colleges and universities expect as enrollment of 3,780,000 compared to 3,590,000 last year.

Derthrick warned in a statement that the situation and its attendant problems are likely to continue for many years. Four years from now, he said, the school age population—pupils 5 through 17 years of age—will probably go as high as 48,800,000, or 13 percent more than present enrollment.

He estimated that 1,563,000 teachers will be needed in both public and nonpublic schools in the coming year—185,000 more than are presently qualified to teach.

UNDETERMINED NUMBER

Derthrick said that part of the teacher shortage will be met by former instructors coming back to the classroom but the number cannot be determined.

"The deficit of teachers will mean in many communities overlarge classes, or the employment of teachers without adequate training or both," he said. "In many instances, it will also mean curtailing the number of subjects offered."

Last year elementary and high schools were 182,000 teachers short of the total need.

Derthrick said a turnover rate of 10.9 percent—representing the number who leave the profession each year—adds to the problem.

He pointed out that one out of every four persons in the United States is now attending school, from kindergarten through college. Last October the Education Office figured there were 89.2 percent of boys and girls 14 through 17 years of age enrolled in high schools and colleges.

The office estimated the classroom shortage will run from 130,000 to 140,000 in the new school year.

[From the Amarillo News-Globe, Aug. 30, 1959]

FOR TEXAS SCHOOLS—TIDAL WAVE OF STUDENTS DUE

(By Bascom N. Timmons)

WASHINGTON, August 29.—School age population of Texas will jump more than 15 percent in the next 4 years, the U.S. Office of Education predicted today.

Lawrence Derthick, Commissioner of Education, also predicted that the number of school and college pupils in Texas and in the Nation as a whole would reach an alltime high next year.

It is expected the nationwide enrollment in 1959–60 will climb to 46,480,000. This is an increase of 1,940,000 over the 44,540,000 enrollment for 1958–59 school year.

In Texas it is estimated that 2,553,000 will enter primary and secondary schools for the fall term about to begin.

Texas, which has 5.89 percent of U.S. total enrollment, ranks fourth in the Nation. It is outranked by the States of New York, California, and Pennsylvania, with 8.34, 8.10, and 5.99 percents respectively.

By 1963, 2,941,000 pupils are expected to be enrolled in Texas.

Swelling enrollments and attendant problems throughout the Nation are likely to continue for many years, Commissioner Derthick warned. Four years from now, he said, the pupils from ages 5 through 17 may go as high as 48.8 million, or 13 percent more than at present.

For the 1958 fall term, Texas had an enrollment of 1,956,000. During the same period 74,621 teachers employed by the State board of education were teaching in 70,876 classrooms. Texas was surpassed only by New York and California, with 111,234 teachers for 106,400 classrooms in New York and 104,600 teachers for 98,000 classrooms in California.

Colleges and universities in the Nation expect a total enrollment of 3,780,000 as compared with 3,590,000 last year. These figures are for students seeking bachelor's, master's, and doctor's degrees.

Texas had 175,854 enrolled in colleges and universities for the 1958 fall term. An estimated figure for the 1959 term is not available.

Those studying for advanced degrees in Texas during the 1957–58 school year numbered 3,721 for master's and 263 for doctorate degrees.

The greatest need in education continues to be for qualified teachers, according to the Office of Education. The present teacher turnover rate is 10.9 percent of teachers who leave the profession each year.

Congressman Mitchell Designated To Receive AMVETS Congressional Award

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. TEAGUE of Texas. Mr. Speaker, it is with pleasure that I advise the House of Representatives that our colleague, the Honorable ERWIN MITCHELL, Seventh District of Georgia, has been designated to receive AMVETS annual congressional award.

ERWIN MITCHELL is a member of the House Veterans' Affairs Committee and has rendered outstanding service to the committee and to the veterans of our country since his assignment to the committee immediately following his election. ERWIN MITCHELL heads the special legal subcommittee of the Veterans' Affairs Committee and has done an outstanding job on the assignments which he has received as subcommittee chairman.

Speaking for the members of my committee, I wish to express appreciation to AMVETS for the recognition of the outstanding service rendered by our colleague, ERWIN MITCHELL.

The text of the statement issued by AMVETS in announcing the award to Congressman MITCHELL is as follows:

The Honorable ERWIN MITCHELL, Congressman, a member of the House Veterans' Affairs Committee and chairman of the special legal subcommittee, has made a major contribution to the success of AMVETS legislative program for 1959.

Congressman MITCHELL authored legislation and headed the subcommittee which secured enactment of legislation to establish better control over the estates and guardianship accounts of incompetent veterans. Congressman MITCHELL's subcommittee developed legislation to revise the forfeiture law. It was the purpose of this legislation to eliminate unfairness and injustice which had developed in the existing program. The guardianship and forfeiture laws fulfill AMVETS resolutions of long standing.

Congressman MITCHELL, as a member of the Hospital Subcommittee of the Veterans' Affairs Committee, has made an outstanding contribution to the Veterans' Administration hospital and medical program. Through Congressman MITCHELL's efforts 400 unused beds in the Veterans' Administration Hospital at Dublin, Ga., were reactivated after being vacant for many years. Congressman MITCHELL played a leading role in obtaining for the Veterans' Administration $15 million additional funds to be used in repair of Veterans' Administration hospitals.

The Congress has passed H.R. 7650, the non-service-connected pension bill. Congressman MITCHELL was one of the leading forces in securing enactment of this legislation and in doing so rendered invaluable aid to AMVETS in achieving one of the foremost objectives of AMVETS—the equalization of widows pension benefits.

Congressman MITCHELL has sponsored many bills supported by AMVETS. He has sponsored legislation to lengthen the presumptive period for multiple sclerosis and Hansen's disease. These bills are now law. He has sponsored a bill to raise the income limit as it pertains to widow's pension during the year of death of the widow's husband. This provision has passed the Congress and fulfills a long sought after objective of AMVETS. The direct home loan program supported by Congressman MITCHELL has been signed into law making $100 million available for loans to veterans buying homes in small towns and rural areas.

Congressman MITCHELL's strong and sympathetic interest in veterans' legislation and his work as a subcommittee chairman has resulted in much beneficial legislation for veterans and their dependents. AMVETS takes recognition of Congressman MITCHELL's outstanding accomplishments by naming him to receive AMVETS annual congressional award.

What's in Labor Reform Bill and How Will It Work?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. AYRES. Mr. Speaker, Mr. Dickson Preston has been diligently covering the labor hearings for the past few months. I believe his analysis of the Landrum-Griffin bill which in principle was agreed on by the conferees will be of interest to all, as follows:

[From the Washington Daily News, Sept. 3, 1959]

WHAT'S IN LABOR REFORM BILL AND HOW WILL IT WORK?

(By Dickson Preston)

The public—rather than either labor or management—appears to be the real winner in the labor reform bill now assured of being enacted into law.

Neither union leaders nor the National Association of Manufacturers are particularly happy with the measure which House-Senate conferees have wrought out of 13 days of trying to reconcile differences between the Landrum-Griffin and Kennedy-Ervin bills.

But very few Members of Congress are going to vote against it—for the simple reason that they recognize the public demanded some changes this year in labor law.

The compromise bill won't "kill" labor unions, as AFL–CIO President George Meany charges the Landrum-Griffin measure was intended to do. Nor will it make it easy for racketeers to continue to prey on workers and small employers, as Senate Racket Committee hearings have shown has been a common practice.

SPELLED OUT

What it will do is spelled out in the following questions and answers based on discussions with Senators JOHN F. KENNEDY, Democrat of Massachusetts, and BARRY GOLDWATER, Republican of Arizona, and Representatives PHILLIP LANDRUM, Democrat of Georgia, and ROBERT GRIFFIN, Republican of Michigan, principal authors of the original bills.

Question. Who won in the conference between House and Senate?

Answer. Nobody—except the public. Messrs. KENNEDY, GOLDWATER, LANDRUM, and GRIFFIN all agree that the compromise bill is superior in some respects to their original proposals. The final bill has more Landrum-Griffin in it than anything else—but it has been modified in at least 13 respects from the House-passed bill.

Question. In what ways is the public, rather than either union leaders or management, benefited?

Answer. Numerous provisions (on which there was no dispute) make it tough for racketeers to operate in the labor field. Both union leaders and employers are required to make financial reports. Union members have a bill of rights—with criminal penalties for violations. Honest union elections are assured. "Sweetheart" contracts for the benefit of certain employers are outlawed. So are "hot cargo" deals under which some unions and employers have combined to force high-priced goods on the public.

Question. Are any basic union rights destroyed?

Answer. Senator KENNEDY says they are not, and most labor attorneys agree. Assistant General Counsel Tom Harris of the AFL–CIO helped write final wording of the compromise bill. Attorneys for most other major unions, excepting James R. Hoffa's Teamsters Union, participated in final discussions.

Question. Does the bill penalize the building trades, such as carpenters, plumbers, bricklayers, and electricians?

Answer. They still have the right to sign contracts in which employers agree not to deal with any nonunion subcontractors on a construction job. Language was written in to protect an estimated 300,000 of such contracts throughout the country. They also are granted the right to sign agreements before a job is started requiring every worker to join a union within 7 days.

Question. Then why was the building-trades problem considered such a hot issue?

Answer. The building trades unions also want the right to picket a general contractor on any job in which subcontractors with whom they have a dispute are involved. They claim this would merely put them on a parity with an industrial union which under present law can strike a plant when any of its members are involved in a dispute. Both House and Senate have agreed to consider this problem as soon as Congress convenes next January.

Question. Will the new law restore the sweatshop in the garment trades?

Answer. It specifically exempts the garment industry from restrictions on secondary boycotts or picketing by unions. For example, a dressmaker can be picketed if he farms out sewing jobs to fly-by-night operators who pay low wages. His products also can be boycotted as unfair.

Question. Can unions still tell the public about companies with which they have disputes?

Answer. Yes. They can advertise via newspapers, radio, and other media even to the extent of educating the public that a store with which they have no primary dispute is selling unfair goods. They can no longer, however, set up a picket line which gives the impression that they have a dispute with a store merely because it sells nonunion products.

Question. How about union organizing? Can this continue?

Answer. There's no question it will be more difficult under the new law. Unions can set up picket lines at nonunion plants. But if the picket line has the effect of stopping deliveries or barring employees, a bargaining election must be applied for within 30 days.

If the union loses the election, it cannot resume picketing for a year.

Question. What if a union loses an election or otherwise is frozen out because of unfair practice by the employer?

Answer. It's up to the General Counsel of the National Labor Relations Board. If he thinks the unfair charge is justified, he is instructed not to seek a court injunction to halt the picketing. If he thinks otherwise, he goes ahead with injunction proceedings under the Taft-Hartley Act. Final decision on the unfair charge is up to the NLRB and the courts.

Question. How about all the disputes involving small businesses which the Supreme Court has classed in the so-called no man's land?

Answer. They now can be decided in State courts or by State agencies. But the NLRB cannot narrow down the cases it now is willing to hear. And regional NLRB directors are given broader authority to decide such cases.

Administered and Monopoly Egg Pricing Threat to Producer and Consumer

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, in the September issue of Farm Journal is an article which I believe will be of interest not only to farm folks but to our big city cousins. It deals with the question of monopoly pricing in the egg business.

I would wholeheartedly recommend to the House Committee on Agriculture a study of this system of egg marketing.

Mr. Speaker, imagine the feeling of the egg producer who sees the market for his product manipulated in this fashion; and how about the consumer's attitude?

As the concluding sentence of the article says: "It's plain that what farmers really need is a new way to price eggs."

The egg pricing story follows:

THE MEN WHO SET YOUR EGG PRICES

(By Claude W. Gifford)

(Most powerful man in an antiquated marketing system is Gordon Urner or nephew Frank. Each morning one roams through the jungle of egg firms near the waterfront, watches a 5-minute flurry of Exchange trading, then picks a price that's used the country over to pay for farmers' eggs.)

This is hard to believe, but a handful of traders—who operate in a few crusty old buildings near the New York waterfront—pretty much set the price that you get for eggs.

And these men get "the word" from one man—either bespectacled, courtly Gordon Urner, or nephew Frank. Each day, one of them prowls the wholesale center and Mercantile Exchange and names the egg price.

Throw in the Chicago egg market—which has even more glaring shortcomings—and the two markets play the tune that egg producers dance to almost everywhere in the country, except in the far West.

It's incredible, but true. I've just been to New York to watch the process. Care to go along on a world tour?

The people we'll meet are mainly wholesale "middlemen," brokers and speculators who deal in eggs on the Exchange and in the wholesale center.

These firms receive eggs trucked in from nearby and from as far away as Mississippi and Minnesota. They usually pay for these eggs on the basis of "New York prices" on the day of arrival. The eggs then go to jobbers who in turn distribute to hotels, restaurants, small stores, and the like.

They provide very few eggs to the biggest outlets of all—the chain stores.

The crumbling wholesale market center—where these people operate—is a jungle of little offices and partly cooled "egg holding floors." These are tunneled into dilapidated buildings that are jammed into a half dozen short blocks. This is what the trade calls the "street." It's the kind of a place where you wouldn't want to be caught at night, for it's only a baseball throw from the tough docks that line the Hudson River.

"Thirty years ago, this was a bustling center handling big trainloads of eggs that arrived from the West," relates David Meierfeld, egg dealer at 11 Jay Street. "Most of the eggs for the huge New York City population came through this center—and it took nearly 200 big wholesalers to handle the job.

"Then the chainstores started to bypass us and buy out in the country. Their trucks roll from the henhouse right to the store. Today there aren't more than 10 big receivers surviving in this entire wholesale center."

Add just two more things, and you've got the picture of this antiquated marketing setup that still wields tremendous power: The Mercantile Exchange in the heart of the "street"; and the private, 102-year-old Urner-Barry price-reporting service that issues the daily word on egg prices.

I called on John Clagett, executive director of the exchange. He pointed out that members have been trading eggs on the board since 1872. The 400 members also trade in butter, potato futures, and, oddly enough, platinum.

"This is a cash, spot market for eggs," Clagett explains. "It brings together all the forces of the Nation's egg market. Eggs sold on the board are graded, delivered, and paid for by 2 p.m of the same day."

Clagett says that a bid on the exchange—even if there are no takers (which often happens)—will set prices, since an unfilled bid shows that somebody is willing to pay that price.

"It's almost 10:30 a.m. now, opening time for the egg board," Clagett said. "It's open for 15 minutes of trading a day. Let's go down and see it."

We walked onto the exchange floor and found a dozen egg traders idly chatting in front of high blackboards that list 12 different grades and types of eggs—ranging from Nearby Fancy Heavy Whites to Pullets and Peewees.

A bell rang at 10:30 to open trading. I expected to see a commotion. Instead, the traders continued to exchange greetings, pleasantries, and trade talk, as if nothing had happened. And, frankly, nothing had.

Ten minutes later, at 10:40, a trader finally shouted a bid to a board boy standing at the blackboard; he rapidly scribbled down a 41-cent bid for two 25-case units of Nearby Extra Fancy Heavy Whites. Nothing happened. The trader upped the bid to 42 cents. Somebody shouted that he'd sell him the 50 cases.

The same bidder came back with a 41½-cent bid for another 50 cases; then a 42-cent bid. He got no takers this time. I noticed that there were only two other bids—and no takers—on the other 11 grades and types of eggs. Then the bell rang again—it was 10:45 and trading was ended.

I was told that it was normal for traders to use only 5 of the 15 minutes allotted daily, as had just happened.

Only 50 cases had been sold on an admittedly slow day. Was this, I wondered bringing together all the forces of the Nation's egg market, as Clagett had claimed?

But wait, something else was happening. The traders were now gathering around the Urner-Barry blackboard at the side of the exchange floor to see what the official prices would be. In a few minutes, Frank Urner posted the prices: one flat price for each grade, including 41 cents for the Nearby Extra Fancy Heavy Whites. This, despite the 42-cent exchange transaction and the unfilled bids of 41½ and 42 cents, which somebody was willing to pay, as Clagett had pointed out.

The price that Urner-Barry picked became the New York price, accepted as gospel by the traders, who hurried back to their places of business to use these prices as the basis for paying for the farmers' eggs they handled that day.

Traders in other cities across the country did the same as the wire service flashed the prices across the Nation.

"Even most of the chainstores use Urner-Barry New York quotations as the basis of their prices to farmers," says Dr. Alfred Van Wagenen of the Northeastern Poultry Producers Council.

Again next day I went back to watch exchange dealings. This time 33 bids were made on 7 of the 12 grades; 5 deals were completed in 2 grades. In each of the seven grades where bids were offered or deals made, Gordon Urner quoted an official price 1 to 2 cents under the exchange.

"How come?" I asked Gorden Urner.

"We've been in this business 102 years," he replied, "and we've learned that the egg trade wants one flat price—not a range of several cents for the same grade (such as the USDA reports). The single price saves time and trouble in making deals. Over the years, we've supplied the price, and the trade has accepted it."

"But how do you arrive at one flat price that's used almost the country over?" I questioned.

"We watch the supply and demand daily; we have instant contact with Chicago and Boston. Each morning we go down the street and size up the egg movement here in New York by talking with several wholesale firms. Finally, we go to the exchange and watch the trading. Then, based on our judgment and years of experience, we settle on a price."

"But," I persisted, "why do you quote prices ½ to 2 cents lower than sales or bids on the exchange, such as I've just seen?"

"We do our best to prevent unnecessary daily price variation—that's part of our function. We don't like to be thought of as price regulators," said Urner, "but you can't get away from some of that."

What's wrong with this system? Ask those who know most about it and they'll point out that:

1. New York conditions are not typical of the national egg market.

The wholesale center handles only a piddling amount of the national egg supply. Firms are influenced almost solely by their own supplies related to their small share of the New York City market.

It's estimated that one large chainstore in New York handles more eggs than the entire wholesale center.

A couple of extra truckloads of eggs on the New York "street" can throw the market in a tizzy. Because of the high market costs, less than 1 percent of the eggs received are shipped out again to other cities to clear local supplies.

"Supply and demand out in producing areas may not change, but New York prices do," charges USDA egg market chief, H. A. Rust.

2. Urner-Barry's quoted prices don't necessarily show what's happening in New York,

even. Almost always there's a premium paid over the "quoted price"; sometimes there's a discount. But this information is not fully and clearly reported—nor understood by buyers and farmers around the country.

The eggs that a farmer sells to a country buyer by grade—or which are packed in cartons or delivered—are different from the bulk eggs that are used to set base prices in New York.

3. Exchange trading is exceedingly thin, artificial, inadequate.

Members don't rely on the exchange to buy or sell their supplies. Partly because of exchange fees and redtape, it's cheaper and easier to buy and sell on the street. They go to the exchange primarily to test the market and to protect their own margins.

A market this thin can easily be pushed up or down on any one day. "It's highly susceptible to manipulation with a few cases of eggs when it's an extreme market going up or down," says L. C. Giffen, USDA market reporter. "Often exchange trading runs opposite to what I find on the street."

Prices in New York change about once every 2 trading days.

4. The system puts too much power in one man's hands.

"Nobody is that good," says Henry Broad, one of the market's biggest receivers. "But still I base my entire operation on Urner-Barry prices, for lack of anything better."

Actually, Urner-Barry picks up little information from the street on prices, since most of the firms are using the price that Urner-Barry selected.

Even worse, the Chicago Mercantile Exchange price is reported by a private service that usually isn't even present. It calls an exchange employee who relates what happened.

"The nub of the trouble is that the central egg markets are dying," says USDA's egg price specialist, Norris T. Pritchard. "Yet the trade clings to central market prices by long habit—actually let's them set prices by default."

What can be done about it? Here are three suggestions that you hear:

Get egg co-ops and private handlers to aggressively price their own eggs and cut down on price gyrations.

In the Los Angeles area, large egg producers and farm groups negotiate for prices. The contracts are tied to retail store prices. Instead of fluctuating once every 2 days, prices change on the average of only once every 2 weeks. And the margins between farm and customer are among the smallest in the country.

The Poultry Producers of Central California—a farm co-op—has brought similar stability to the San Francisco area; as has the Washington Cooperative in the Pacific Northwest.

Other groups could follow this lead—but even nationwide co-ops couldn't hope to alter seasonal or yearly price fluctuations.

Improve the Government market reporting system.

The USDA is working on this now—but needs support. It wants to get more complete information on egg movements from country points, prices that retail stores pay, the volume moving at different prices and a "national picture."

Broaden exchange trading.

Seats now cost $4,000 in New York, and the rules, in effect, restrict trading to eggs that are already on the market.

But the Northeast egg co-ops have taken a bold step: They've formed an association that wholesales in New York and buys and sells on the exchange. "The trade will agree that we've stabilized prices on this market—and this has helped poultrymen everywhere," says Manager Wyn Geghan.

It's plain that what farmers really need is a new way to price eggs.

Imports

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. DORN of South Carolina. Mr. Speaker, the following article is of tremendous interest to the workers of our country and should be of more interest to the Congress:

OUR TRADE GAP DWINDLES—WHY IT MAY SOON BE UNFAVORABLE

(By Leslie Gould)

Exports of U.S. goods are declining while imports from abroad are rising.

This is the second year of declining exports, but the fifth year of rising imports.

The gap between the two—that is the favorable balance the United States has so long enjoyed is narrowing. This year's favorable balance will be less than a billion, compared to nearly $8 billion in 1957—2 years ago.

Actually, if all factors are taken into consideration—such as the foreign giveaway and aid programs, military help and spending by tourists—the favorable balance may turn out to be unfavorable. That is a subject for a later column.

GROWING DISADVANTAGES

The drop in American exports and the increase in imports reflects these developments:

1. Loss of American technical advantages in production.

2. Restoration of foreign industry, much of it with the latest machinery and paid for largely by American taxpayers.

3. The passing of the war and postwar sellers market. The buyer is now the boss.

The United States has had several advantages—up until now.

HAD PRODUCTION AND MONEY

It was the arsenal of the Western world, including the Communists, in World War II.

When the war ended, it was the only industrial country that could supply the products and the billions in financial aid for rebuilding the economies of the war-ravaged nations, including Russia. Also for the two former enemies—Japan and West Germany.

Prior to the war, the United States had had the advantage of more modern and efficient plants, which more than offset the higher wages and shorter working hours the American workers enjoyed.

This last advantage has been lost. Foreign plants are as efficient and in most instances where there have been entire new installations more efficient.

WAGE DIFFERENCE NOT ENOUGH

Productivity of American workers has not increased enough in the years since the war to hold the prewar production advantage. In an increasing number of products, foreign manufacturers can absorb transportation and successfully compete in the American domestic market. Steel is one. Textiles another. In foreign markets American firms are being priced out.

The low foreign wages in contrast to the higher American wages make the difference, for this is no longer offset by the one-time more efficient American plant. The Japanese, the Germans, the Italians—to name three—have equal or more modern plant and machinery.

In the steel industry, the American worker gets 3½ times what his British counterpart is paid, more than four times what the German worker is paid, and more than seven times what his Japanese counterpart gets.

In the highly competitive electrical equipment industry, American pay scales are nearly three times those of the British, more than four times the German, and eight times the Japanese.

TEN TIMES JAPANESE COST

In textiles, American labor gets a little less than 3 times its British counterpart, nearly 4 times the German, and more than 10 times the Japanese.

In the automotive industry, American pay scales are two and a half times those of the British, more than four times the German, and eight times the Japanese.

In shipyards the American pay is more than three times that of the British, and more than four times that of the German. It is also many times that of the Dutch and many, many times that of the Japanese.

In manufacturing in general, American pay is 2½ times that of the British, 4 times the German, and 10 times the Japanese.

BASED ON HIGH WAGE SCALE

The United States is faced with a critical problem, and there is no comfort in the fact that the wage-price spiral is a worldwide trend.

U.S. prosperity is based on a high wage scale and it cannot be reduced to foreign levels for the $15 to $16 billion exports or $15 billion imports—combined these are only about 6 percent of the gross national product. The exports figure—3 percent of gross national product—is, however, an important percentage. It accounts for a lot of jobs, just as the imports account for the loss of a lot of jobs.

The answer is greater productivity—more efficiency—something David MacDonald—head fo the Steelworkers Union—will have to consider as he wines and dines almost nightly in New York's plushiest restaurants.

Visit by Mr. Khrushchev

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. BOGGS. Mr. Speaker, in light of events occurring in many places throughout the world, it might very well be in order for our Government to consider withdrawing or delaying the invitation extended to Mr. Khrushchev to visit the United States or at the minimum to make our position known in no uncertain terms about these aggressive events.

Russia's ally, Communist China, is at this very moment carrying on open and bold aggression against India, against Laos, and a reign of terror is said to exist in Tibet where the entire middle class is being liquidated.

All of these aggressive actions by Moscow's partner, Red China, have been stepped up since Mr. Eisenhower invited Mr. Khrushchev to our country.

Why we should now honor the leader of world communism in light of these events is difficult for me to understand. I have recently returned from one of the satellite countries, Poland. There, the hope for freedom still burns brightly and there, I found misgivings of what might happen as a result of this visit.

Mr. Khrushchev has made his intentions perfectly clear. He has said that our grandchildren will live under communism. He is a dedicated leader of world communism. If anyone has any doubts about him, certainly those doubts should have been resolved when he crushed the revolt in Hungary with blood and iron in 1956.

There is no need to recount the long record of deceit of the Soviet Union dating back to our recognition of Russia in 1933. Promises made then were violated. Promises made in World War II were violated. The Yalta Agreement was violated. Agreements made at the meeting at the Summit in Geneva in 1955 were violated. Korea is still fresh in the minds of most Americans. Millions of people live without freedom because of the violation of these pledges. The recent meeting in Geneva ended in complete failure because of the Russian refusal to bargain and Berlin continues to be threatened.

Frankly, Mr. Speaker, I am worried. I am worried about specious arguments being heard for so-called peaceful coexistence and the subsequent clamor which might very well occur for disarmament in our country. Twenty years ago, the bloodiest war in history started when Stalin and Hitler entered into a cynical pact to divide Poland.

The threat of Russian communism is greater today than it has ever been. I am as much concerned, Mr. Speaker, with preserving the peace as is any American. The way to do that is through maintaining the ideals of American democracy, through firm not soft diplomacy.

I am glad that many Americans are visiting Russia. There they see statism in action and certainly none of them can come home without saying, thank God I am an American. I am glad too, that Russians are able to visit the United States. I wish that literally millions of them could come here and see our country. If they did, they would realize that we have a true people's democracy. And I am certain, Mr. Speaker, that the Iron Curtain would cease to exist, so would communism.

But we cannot assure liberty or assure world peace by making concessions to a government that has never been trustworthy.

I am glad to see the spontaneous movements which are organizing in our country in connection with the forthcoming visit of Mr. Khrushchev. I am happy to associate myself with those who advocate special religious observances on the day of the arrival of Mr. Khrushchev, and I disagree completely with those who would honor him by inviting him to address our Congress.

I don't know whether or not Congress will be in session. Should it be, I would object in every conceivable way to an invitation going to Mr. Khrushchev.

None of the arguments advanced for his visit here, namely, that it will further negotiations for peace; that the visit would add to his knowledge of the United States and show him the strength of our country as well as give him real insight into how our people live and how our Government functions; none of these arguments could possibly apply in favor of an invitation to address Congress.

An invitation to address Congress is an extension of honor. It is a mark of distinction; it is principally ceremonial. To extend it to this man would, in my opinion, be an affront to our free parliamentary traditions extending to the first days of our great Republic.

The impressions throughout the world of the leaders of this great democratic body receiving in ceremonial applause the leader of world communsim would indeed be hard to dispel, particularly among the uncommitted peoples of the world.

So for my own part, Mr. Speaker, I shall object in every way that I possibly can to such an invitation being extended to him.

In my opinion, the greatest tragedy which could happen to our Nation would be for us to be taken in by this man. I hope that we will maintain firm, dedicated diplomacy in our own country. I am glad that President Eisenhower is travelling through Europe, reassuring our allies of our firm support and particularly assuring them that we will not weaken in our dedication to NATO and the alliance of free nations.

Luther Burbank Monument

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. PHILBIN. Mr. Speaker, on Saturday last, I was privileged to participate in the simple, but impressive, exercises marking the dedication of the Luther Burbank monument at Fort Devens.

The exercises took place in that portion of Fort Devens which was once part of the town of Lancaster, where Luther Burbank was born and where he spent the early years of his life. The site of his home was cleared by Army officials at Fort Devens and planted with sugar maples and flowers. A 4-foot obelisk, which was unveiled Saturday, marks the site of the Burbank homestead. The obelisk is inset with a plaque commemorating the site, which will be open to the public for picnicking with the permission of the provost marshal at Fort Devens.

Under leave to extend my remarks in the RECORD, I include the text of my address at the dedication ceremonies.

The material follows:

REMARKS OF CONGRESSMAN PHILIP J. PHILBIN AT DEDICATION OF LUTHER BURBANK MEMORIAL, LANCASTER, AUGUST 29, 1959

It is an honor and a happy privilege for me to join you today in paying appropriate tribute to the great Luther Burbank.

Thanks to the wisdom and patriotism of distinguished officials of the town of Lancaster and the incomparably splendid and outstanding leader of our military forces of the Army, General Wooten, we are proud to come here today to this hallowed spot to dedicate this beautiful, lasting memorial to one of history's great geniuses who first saw the light of day here where we gather.

I cannot give too much credit today to Lancaster town officials and leaders, Mr. Burgoyne and the board of selectmen, Rev. John M. O'Brien, Mr. Griswold, Chief Ryder, and to General Wooten and Colonel Rutledge and others interested in this fine project, because without their devoted interest, work, and cooperation, today's commemoration would not have been possible.

It is all the more creditable, desirable, and praiseworthy that we should establish this memorial because in a nation and a world which more and more tends to frown upon tradition and the virtues and glorious achievements of the past as an inspiration and fitting accompaniment to present and future accomplishments, it is all the more appropriate and helpful that we should add this historic shrine raised in honor of the great Burbank to the many of which Lancaster may boast.

My good and distinguished friends, Mrs. Esther B. MacDonald, town clerk of Lancaster, and Mrs. Marion Safford, gifted historian of the town, in their diligence and kindness have on other occasions furnished me with comprehensive biographical information on the life of Luther Burbank which I was happy and proud to use in speeches on the floor of the House of Representatives, first on his 100th birthday and again at the time of the Lancaster tricentennial celebration.

Luther Burbank was born in Lancaster March 7, 1849, the son of Samuel Walton Burbank and Olive Ross Burbank, the 13th child in the family. His father was a prosperous farmer and a maker of brick and pottery.

From his mother, Luther apparently inherited his love of nature, particularly his love of flowers.

He attended the Pine Grove School, a typical New England school in the north part of Lancaster.

When he was 15 years of age he entered Lancaster Academy where he studied for four winters, all the while making good use of the excellent library which, even at such an early date, the progressive and educational-minded people of Lancaster had provided to inculcate and encourage learning in the community.

From his work on the farm Luther early gained a practical knowledge of the life, characteristics and growth of plants.

Sometime after his father's death he purchased a 17-acre farm in Lunenburg where he took up the business of market gardening. It was here that this great genius first produced in quantity his first new plant creation—the Burbank potato.

According to Mrs. Safford he was a quiet, reticent youth who frequently was seen walking along the streets of the Town with his hands folded behind his back, apparently in deep thought and in a contemplative mood.

He bred this new species of potato from seed which he found in his garden and sold his crop of seed potatoes to a marketing firm in Boston.

In 1875 when he was about 26 years of age, he sold his farm and went to California where his three older brothers resided, taking with him the capital from the sale of the farm and a small quantity of his newly created potatoes.

His subsequent experiments and creations cover a very wide range and produced revolutionary changes in plant life and methods of cultivation in orchard, garden, field and forest.

Burbank discovered new ways of choosing and caring for seeds, preparing the soil, planting, disease and pest prevention.

He created many new species of berries, fruits, vegetables, and flowers, amazing and unbelievable to botanists and horticulturists.

He improved the size and quality of many species. He utilized grafting to promote startling changes in garden, orchard, and forest.

I could not begin to enumerate his remarkable accomplishments here, but they were epochal, monumental and of lasting value to mankind. Luther Burbank will always be remembered as one of our greatest scientists and one of our greatest Americans.

It is interesting to note that the house where Luther Burbank was born, right here on this very site that we are commemorating today, a large New England style brick home with a wooden ell was razed by the Government when it took over this section of the town to extend Fort Devens during World War II.

Another great American benefactor, Mr. Henry Ford, had purchased the ell of the house some years before and removed it to Dearborn, Mich.

Luther Burbank was born on the second floor in a small room of this ell. Some years ago I talked about Luther Burbank with two of his old schoolmates who long resided in our district, the brothers Fred W. and Luther Bateman, both very prominent and highly respected citizens.

Mr. Fred Bateman who knew Burbank intimately and well, was a famed, successful civil engineer, who even when he was over 90 years of age continued to work daily at his profession. These good men were of the opinion that in his early years Burbank showed great genius and was a painstaking, resourceful experimenter.

The American people, indeed the people of the world have received lasting benefits from the brilliant research and miraculous achievements of Luther Burbank and we are indeed honored today to pay this additional heartfelt tribute to his memory, and express our renewed appreciation for his magnificent work in behalf of science and humanity.

Luther Burbank was the product of this proud, rugged, Lancaster environment, of hardworking people and he unquestionably derived much of his skill and genius from the frugal, industrious habits, willingness to perform hard work and tenacious purpose from his rugged New England forbears and from the favorable, encouraging climate of this distinguished and progressive town of Lancaster.

It was here that he had his humble beginning, got his early training and drew deep inspiration.

It was here that the hand of destiny first placed upon his brow the diadem of genius and greatness.

It was here amidst the eternal, green hills, fertile valleys, and beautiful countryside of old New England where American liberty was nurtured and where its spirit still animates the hearts and minds of the people, that Luther Burbank's brilliant work found its source and its stimulus.

It is for us and succeeding generations to keep in mind and to perpetuate the great spiritual values which are represented in and responsible for the illustrious career of Burbank and his service to humanity—his profound belief in the Almighty, his reverence for free institutions and his faith in himself which led him to lasting fame and, more than that, enabled him to contribute so mightily to the welfare and happiness of people of every race, color and creed the world over.

Among Burbank's most beautiful creations was the Shasta daisy which the people and the schoolchildren of Lancaster and of his adopted home in California believe should become the national flower of our country.

It is fitting on this occasion that we should make reference to this beautiful flower because of all his creations it perhaps best exemplifies the hardy, inconquerable spirit of the great Luther Burbank. May we of this troubled time draw courage and inspiration from the homely virtues and patriotism of Luther Burbank. May his fine example and brilliant achievements long continue to inspire and guide us in the perpetuation of freedom, justice, and peace.

This is probably the last occasion upon which our distinguished friend, General Wooten, will be officially with us. He has been promoted to a much higher post of responsibility in our great Army and, in time, because of his great talents, ability and high purpose he will undoubtedly go right to the very top of his proud calling.

We are all greatly indebted to this great American soldier, not only for his peerless service at Fort Devens, but also for his warm friendship, the interest he has taken in our community affairs, the effective cooperation which he has always given us.

Though we all rejoice in his promotion, we are very sorry to have him leave this district where he has made so many friends and where he is so highly esteemed and beloved. We hope he will return often to see us.

In behalf of our district, our people and myself I wish to express to him today our sincere and deep gratitude for his many contributions, congratulations upon his advancement and very best wishes to him and his family for many more happy, constructive years in the service of our great Nation.

May the memory and achievements of Luther Burbank long continue to inspire our people and to nurture and develop more great men from our midst to serve wholeheartedly and unselfishly in the tasks and the cause of peace.

Poison in Your Water—No. 164

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Austin (Minn.) Herald of October 15, 1958, entitled "Stop That Pollution":

STOP THAT POLLUTION

Foes of pollution of the Nation's lakes and streams are fighting doggedly, and tonight's tricounty, which is open to the public at the Cedar Valley Conservation Club, may be the starting point of a great program for Mower, Freeborn, and Steele Counties.

All over the country, additional recruits in the fight are being rallied to the cause, and concrete results are showing at some points.

To show how widespread and how devastating pollution has become, even the vast expanses of the Great Lakes are in need of a cleanup and eight States are joining in an Izaak Walton League move for effective model water laws.

As this country and Canada enjoy a wave of enthusiasm over the increased lake traffic that the St. Lawrence Seaway will bring, the warning comes that adequate restrictions must be enacted to prohibit dumping of oily wastes and other refuse into the lakes.

Pure water is a priceless possession, which can and will be lost in many places unless corrective measures are taken soon.

Cappers Farmer Magazine Prods Congress on Farm Legislation

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, the September issue of the Cappers Farmer makes some potent and prodding observations regarding the action of the Congress to date on the question of coming to grips with the question of getting the farmers "parity of income in a marketplace considerably less than free."

Mr. Speaker, I do not agree with Capper's Farmer that only three men have tried to solve this problem. Many Members have tried and are working very hard on this dilemma, including myself.

I do agree with them that we must pass good legislation in this field and "put the responsibility for failure squarely on the President and his Secretary of Agriculture," if the President vetoes the bill.

I firmly believe, Mr. Speaker, that the folks who elected me to Congres wanted me to help write a farm bill. I sincerely hope the 86th Congress will yet prove it can write a good farm bill.

The editorial follows:

CONGRESS FLUNKED IN FARM LEGISLATION

Congress has failed once more to face up to its responsibility to agriculture. The promised drive for a practical, workable farm program never got under way. Fires lit by the mandate of last year's election fizzled.

By its inaction, Congress has left farmers on the public hot seat, subject to an ever-increasing barrage of criticism and ridicule.

Congress has done nothing to set up effective reduction and control of surpluses. It made only a halfhearted attempt to get wheatgrowers off the hook. The price-support program, so widely criticized by the Secretary of Agriculture and the urban press, remains basically unchanged.

By its failure to act, Congress has tossed farmers into the political arena of next year's presidential election. Again the whole farm issue must be dragged through a political campaign.

Inaction means that the farm mess will be permitted to drift for another year—with the tacit blessing of Congress. Possibility is increased that the price-support program may fall of its own weight with nothing built to replace it. Washington lawmakers may in fact have played right into the hands of those who want to end all farm programs.

Capper's Farmer gives credit to the stalwarts who tried. Time and again such earnest men as Senators GEORGE AIKEN of Vermont and FRANK CARLSON of Kansas and Representative FRED MARSHALL of Minnesota pled for unity and action on an improved farm program. But their efforts did not prevail against stubbornness, indifference, and partisan politics.

Admittedly, there are great difficulties in the way of writing new basic farm legislation. Disunity of farm organizations and noncooperation of the Secretary of Agriculture are roadblocks in any real progress toward a modernized farm program. But it is the responsibility of Congress to com-

promise group differences in writing acceptable laws.

Excuse that a good farm bill would have been vetoed falls flat. A veto would have put the responsibility for failure squarely on the President and his Secretary of Agriculture.

Capper's Farmer agrees with Grange Master Herschel Newsom who said at a recent congressional hearing:

"I have about lost patience with the attitude that we must pass only legislation that the President will sign. We should develop a farm program that will be good for the country. After all, we will have a new President one of these days. Even though it takes 2 years or more to put a program into effect, at least we should get on the right track."

The real issue here—which Congress is reluctant to face—is the role Government is to play in agriculture. Is Government to be an active partner or a passive bystander?

Capper's Farmer believes there's little choice. In the interest of a healthy agriculture, the public welfare, and national security, we believe our Government must work in partnership with farmers; must help farmers find a way to get parity of income in a marketplace considerably less than free.

We believe that the present outdated, unworkable program must go. But we believe, too, that as bad as it is, it would be serious business to scrap it without first replacing it with one farmers and the public can live with.

The folks we send to Congress have to come to grips with this issue. Capper's Farmer beseeches them to face up to it now with bipartisan statesmanship. Surely, if we can lay aside partisan politics to unite on foreign policy, we can face up to responsibility on this critical domestic issue.

THE EDITORS.

The Modern Army

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 26, 1959

Mr. FULTON. Mr. Speaker, August 3 through 5, 1959, was the annual meeting of the Association of the United States Army which was held at the Sheraton Park Hotel in Washington, D.C.

One of our distinguished military men who attended this meeting was my good friend Maj. Gen. Anthony J. Drexel Biddle, Adjutant General of the Pennsylvania National Guard and president of the Association of the United States Army.

Under leave to extend my remarks in the RECORD, I am including an excellent article by General Biddle about this group and some comments by the distinguished Secretary of the Army, Mr. Wilber M. Brucker, the Chief of Staff of the Army, Gen. Lyman Lemnitzer, the Vice Chief of Staff, Gen. George Decker, and the Commanding General, U.S. Continental Army Command, Gen. Bruce C. Clarke on the modern army:

THIS IS AUSA

(By Maj. Gen. A. J. Drexel Biddle, Pennsylvania National Guard; president, Association of the United States Army)

Civic leaders, reservists, and Active Army members meeting to discuss current problems of national defense; engineers, industrialists, and Army authorities gathering in a symposium to consider guided missiles; an ROTC company receiving a briefing from an Army General Staff officer visiting their campus; a film service bringing to industry and business groups movies on recent Army research and development advances; sustaining members receiving publications, news memoranda, and organizational charts, to keep them fully informed on Army activities; a defense information service answering questions of business firms; a national professional military magazine going out to thousands of civilian readers—all these and many more comprise the activities of the Association of the United States Army. They come to a climaxing focal point in an annual meeting such as that just concluded in August in Washington, D.C., where thousands of visitors saw industrial exhibits, heard speakers of national repute, took part in panel discussions led by top-level civilian and military authorities.

Theme of the meeting was "What Is a Modern Army?" Speakers included Gen. Lyman L. Lemnitzer, Chief of Staff; Gen. George H. Decker, Vice Chief of Staff; Gen. Bruce C. Clarke, Commanding General, U.S. Continental Army Command; Lt. Gen. Arthur G. Trudeau, Chief of Army Research and Development; Lt. Gen. Lewis B. Hershey, retired, Director of Selective Service; the Honorable John J. Sparkman, U.S. Senator from Alabama; the Honorable Courtney Johnson, Assistant Secretary of the Army for Logistics; and the Honorable Wilber M. Brucker, Secretary of the Army, discussing "This Is a Modern Army."

National news media covered the meetings, and thus helped keep millions of readers, listeners and viewers better informed of the magnitude and intricacy, as well as the significance, of the problems confronting the Army in its quest for modernity—problems that affect the American public, its general welfare and its very safety.

The annual meeting is the climax of activities that continue throughout the year—activities which perform for the Army many things that individual members have found it extremely difficult to do for and by themselves. These activities have grown in size, scope and importance as the association has increased its membership and extended its sphere of interest since its founding less than 10 years ago. Actually the association did not reach its present potential until 1956 when the first annual meeting set the pattern for future activities and growth.

The association is an independent, nonpolitical, educational organization incorporated under the laws of the District of Columbia. Although its predecessors go back to the 1880's, the association as such came into being in 1950 when the U.S. Infantry Association and the U.S. Field Artillery Association were merged. Not until 1955, however, when the U.S. Antiaircraft Association joined forces, did present activities become possible.

Today the association membership is approaching the 60,000 mark. Its nationwide sustaining membership program brings industry and the Army together for constructive interchange of views. It gets down to the very grassroots of community life through its regional chapter program, to give the average American a clearer understanding of the Army's problems and a better appreciation of its accomplishments. Its ROTC company program is designed to foster a mutual interest between the Army and the academic community. At present, there are 112 regional chapters and 58 ROTC companies.

Throughout the year, the association conducts industrial symposiums. Currently 64 major industrial firms are participating in the sustaining membership program, to improve communication and coordination between the Department of the Army and the Nation's industrial establishments. During recent years the association has sponsored symposiums on guided missiles, Army aviation, communications, electronics, and battlefield mobility at various installations. In panel discussions, Army experts in the fields of research and development, requirements and doctrine, meet with prominent industrial leaders to discuss Army problems.

Further, as part of the sustaining membership program, the association provides members with the latest unclassified doctrine on Army weapons, equipment, organization, and military concepts and techniques. It also provides a film service and various Department of the Army publications, news memoranda, and organizational and functional charts. An information service provides answers to hundreds of specific inquiries annually. Each member also regularly receives Army, the association's magazine.

At the community level, AUSA chapters work closely with civic organizations. They sponsor visits to Army installations, arrange for presentation of films, demonstrations, and speakers, cultivate good working relationships with news media. In addition, the chapters encourage young men to look to the Army as the desirable service in which to serve, as the backbone of the Nation's defenses. Outstanding young men are urged to seek entrance to the U.S. Military Academy.

Through its active ROTC program, the 58 existing companies of AUSA pursue a varied program which augments their military skills, adds to their general Army background, and disseminates information about the Army's role in the Nation's defense. Members are encouraged to associate with fellow cadets from other educational institutions and with active military personnel, thereby increasing their devotion to the Army and its aims.

Every cadet in an AUSA company holds membership in the association and receives Army magazine. Currently AUSA is bringing its regional chapters into the ROTC program by making available speakers, facilities, and other assistance, thus bringing cadets into close fellowship with mature, experienced individuals who believe in the aims and objectives of both the Army and of AUSA.

Under an association-sponsored awards program, AUSA's ROTC medal is awarded to about 375 cadets annually, in colleges and essentially military schools. The medal is given to the Army ROTC cadet who is in the top 10 percent in ROTC grades and the top 25 percent in general academic grades, who has done the most for the military department or the Army. The same medal, with certain modifications, is awarded to a limited number of Army service school students, under criteria established by the school commandants.

Other national awards include two President's medals awarded each year, a chapter scroll, and certificates of appreciation and of achievement. Many chapters have their own awards programs.

Contributing significantly to the association's efforts to make the Army's story better known is Army, the monthly magazine. This highly regarded military journal keeps the military profession alert to innovations and changes in tactics, weapons, doctrines, and policy, and at the same time keeps civilian groups informed on Army problems. Editorially the magazine backs up positions taken by the association in support of the Army, and demonstrates the Army's proud record of achievement throughout the Nation's history. Editors, reporters, commentators, and leading Government officials recognize its effective role in delineating problems of national security in the nuclear age.

The association draws on the experience, talent, and balanced judgment of its outstanding members in many fields of endeavor. All these abilities in turn are available in support of the Army. Governing body of the organization is an 11-man council of trustees, of which Mr. W. F. Rockwell, chairman of the board of the Rockwell Standard Corp., is chairman. Well-versed in Army matters, Mr. Rockwell served as a colonel in the Army during World War II. The association also receives advice and assistance of a 50-man advisory board of directors. The national headquarters staff presently numbers 28, and is increasing as the association undertakes additional activities.

That the scope of AUSA activities is increasing is attested by the fact that some 600 persons attended the first annual meeting—and last year more than 2,700 were registered. More than 200 members of the press and broadcasting industries covered the meetings. At the August meeting this year, more than 3,000 were registered.

AUSA supports the Army on many fronts. Notable instances include: active support of legislation favoring increased pay scales as proposed in the Cordiner report; support of the Department of Defense reorganization plan with reservations; a resolution recommending that the successful missile team assembled in the U.S. Army Ordnance Missile Command be kept intact, a resolution calling for suitable memorialization of the Army's birthplace; and various other proposals.

While these are noteworthy examples of dynamic AUSA action in backing up the Army's concerns, it must be emphasized that the Association at all times retains its independent status, and that the Army makes no attempt to dictate to it. Only in this way can AUSA maintain a well-deserved reputation for integrity and independence.

All of the day-to-day activities of the Association in behalf of the Army and its members come to a climax at the annual meeting. This meeting has grown continually in prestige and influence in many areas until it is considered a "must attend" affair not only by the military profession but by influential leaders in industry, government, education, and the professions.

In organized efforts ranging from local to national levels, AUSA thus helps the Army perform its vital missions in national defense. AUSA will continue to work actively and encourage the support of all those who believe in the Army's historical and present-day role in preserving the Nation's security. The Association of the United States Army stands ready to serve, whenever and wherever the need arises, and welcomes to membership all those who wish to participate in its efforts.

This Is a Modern Army

(By the Honorable Wilber M. Brucker, Secretary of the Army)

The Army today has one attribute which ranks in importance far above any new weapon, item of equipment, or concept—and that is the new, restless, and revolutionary mental outlook among its officers and men—an outlook which is constantly searching for something better and always looking for something more suitable to the requirements of the age.

After all, a modern army is one which is equipped to perform its functions in a modern world, and one which stays modern. In my opinion, the greatest single asset we have today is this new attitude and habit of thinking which is ready to cast away any outmoded ideas while seeking with a high degree of originality and imagination to stay ahead in an age when technological advancements occur with breathtaking speed.

Implicit in this kind of thinking is the realization that we must not lose sight of today's task—that we must be ready at all times to fight with what we have, that we dare not let our present battlefield capabilities decline while dreaming up new ideas for the future.

The relative proportion and makeup of land, sea, and air forces in the U.S. military structure is a dynamic thing and is of course constantly reevaluated with changing technology and a changing threat. To say that U.S. military power is today adequate to meet threats to U.S. security does not mean that this same structure will be adequate 3 years from today. The U.S. monopoly in atomic weapons ended some time ago, and the shift has been toward parity, a condition of mutual equilibrium arising from a roughly equal capability for reciprocal devastation. Even during that period when the United States had a monopoly on atomic weapons, Soviet leaders showed a willingness to accept grave risks. Today we face increasing boldness.

In this era of balance of terror the United States' ability for massive retaliation must be accompanied by the balanced ability to deter limited war—the piecemeal aggression which, if not curtailed, could seriously threaten our national security. When each side can make total nuclear war unprofitable for the other, the decision will tend to be reached on the basis of military capabilities for limited war. Hence, land forces have become increasingly important.

The modern equipment on display at this meeting demonstrates the Army's use of machines to help do the job. But the Army knows that there is no substitute for the heart, the nerve, the muscle, and the brain of men. Similarly, in the tough competition of power politics, while all forms of military power are essential, there can be no substitute for adequate land power, as the United States has learned time and time again. The inexorable logic of our times makes the Army more important today than it was yesterday, and more important 3 years from today than it is today.

Our air defense deployments are our first line of battle, an integral part of our fighting capability. They constitute a shield fashioned to fit the requirements of our world position, the precise threat we face, and our mission to prevent war if possible, or to win it quickly if it should be thrust upon us. Without these defenses the United States would have only a one-strike strategic force.

In the years since World War II, this Nation has been kept rudely alerted by repeated Communist pronouncements and activities which revealed their intentions to reduce all nations of the world to a state of vassalage. This common peril has acted upon us like war, bringing us closer together in the realization that we are in the front lines of a new and perilous episode in our history which may last for years to come. In the midst of these common trials and pressures, many improvements have been made and a new confidence has been born. With confidence comes achievement; with achievement comes renewed pride; and with pride comes the feeling of unity which will give us the one army we seek.

Why We Need a Modern Army

(By Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army)

Present trends indicate clearly the direction which the development of long-range, strategic weapons is taking. In the coming ICBM era, we can anticipate a day, not too many years away, when our missile retaliatory resources can and must be made so numerous and relatively invulnerable that no missile or other attack upon them, even by surprise, could possibly eradicate them all. This means that our response to the attacker would be absolutely devastating to him—so clearly so that it would be senseless for him to attack in the first place.

When that time arrives, it could bring about, in a curious way, what some have characterized as the equivalent of strategic nuclear disarmament. We shall always want, as a vital component of our military power, the invulnerable missile deterrent needed to maintain this situation. With this in being, the situation will then mean, realistically, that the other components of our power will play the vital role in coping with the tactics and strategy of communism short of the threat of general nuclear war.

These considerations are of vital importance today. In any meaningful planning, we have to take into account, from the beginning, the long leadtime from concept to actual fruition. This requirement for leadtime is obvious in the field of hardware. The requirement for leadtime is even greater in developing the capability to carry out a changed doctrine or strategy. It is greater, because many additional factors are involved. Therefore, we must be keenly aware that basic decisions made this year—decisions on national strategy or decisions on the budget—will inexorably establish the parameters of our actual capabilities 5 and more years from now to meet the then existent threat.

Modern military operations are not restricted to any particular element. The Army must fight as a part of a team which includes forces of the other U.S. armed services, and those of our allies. We are all well aware that land warfare is not conducted solely on the surface of the land. It includes the conduct of operations in the air above the land and in the waters contiguous thereto. In order to carry out its responsibilities with the effectiveness to permit its fellow team members to realize their own full potentials, the Army must be as modern in its functional area as the U.S. Navy, Marines, and Air Force are in theirs.

I want to emphasize that a modern Army requires the capability to fight successfully in either nuclear or nonnuclear conflict. This does not mean, in any sense, that the Army conceives of its role in modern war as being an unimaginative repetition of the methods of the past. What it does mean is that a modern army must have a fully adequate nuclear capability to meet and defeat an enemy with nuclear weapons. At the same time, however, a modern Army's nonnuclear capability must be great enough that it need not feel compelled to use nuclear weapons as the only alternative to failure.

Our Army is modern in many vital respects. It is modern in its outlook and its thinking. It is modern in its knowledge, in its tactics, and in its organization. It is looking always to the future, and striving with all its energy to be ready for that future.

This is an effort which requires thought and devotion and persistence. It requires that concepts not only be envisioned but that they be promptly translated into existing reality. The Army does not balk at the requirement, because it knows that no matter how perfect a blueprint may be, no blueprint by itself ever took a hill, won a battle, or fired a single round.

How We Use a Modern Army

(By Gen. George H. Decker, Vice Chief of Staff, U.S. Army)

In its role as an element of the deterrent force the Army must perform many tasks. It must provide forces overseas in critical strategic areas. It must maintain mobile, combat-ready forces in strategic reserve in the United States capable of rapid reinforcement of threatened areas overseas. It must

provide forces required for the defense of the United States and Canada against air attack. It must maintain a base for rapid mobilization, including strong, ready civilian component forces. The Army also has the very important function of equipping and training the armies of our allies in some 42 countries around the world. This, in turn, enhances the aggregate deterrent strength of the free world to the extent of some 200 divisions or equivalents.

The salient problem of the commander of the future—as I see it—will be to find and destroy enemy forces, while rapidly maneuvering or disposing his own troops so as to offer as little as possible in the way of a profitable target since it seems reasonably certain that once atomic weapons are introduced to the battlefield a target found will be a target destroyed.

If you will accept this premise then it would seem that the profile of a modern Army should be based on these considerations. First, it should be equipped so that it is able to locate and destroy enemy targets promptly with either conventional or atomic firepower as appropriate. Next, it should have tactical ground and air mobility to enable it quickly to concentrate at a decisive point or to disperse equally rapidly. Third, it should have the communications necessary to enable the commander to control widely dispersed and rapidly maneuvering formations. Fourth, its logistical system must be capable of delivering and maintaining all of the many items required on the modern battlefield without offering a lucrative target to the enemy. And finally, it must be capable of moving in to the enemy's homeland, restoring order and controlling the civilian population.

ONE MODERN ARMY

(By Gen. Bruce C. Clarke, commanding general, U.S. Continental Army Command)

In battle there has never been anything but one Army. No victory in American military history has ever been won by a single arm, service or component of the Army. Victory in the field has always been the product of the combined efforts of Regulars, guardsmen, reservists and Army civilians with all arms and services working as a combined arms team.

Modern technology has sliced wafer thin our protective cushion of time and space. No longer do broad oceans and powerful allies grant us years to mobilize and train our forces. No longer do we have months to activate units and perfect teamwork within the Army after war begins. No longer do we have time to erase conflicting attitudes and complete the welding process before commitment to battle.

Selected divisions and supporting units of the National Guard and U.S. Army Reserve are earmarked and must be trained and ready for mobilization immediately following M-day. These forces are essential: To replace without delay those Active Army forces moved abroad at the outset of hostilities. To provide additional divisions—beyond those of the Active Army. To fulfill our NATO commitments. To man our air defense forces. To enlarge our training establishments.

Combat knows no distinction whatsoever between combat-ready units or individuals of the Active Army, the National Guard or the Army Reserve. Granted there is a difference in the degree of combat readiness appropriate to a Reserve unit and an Active Army unit. But never has the difference been so small.

From the very outset of a shooting war—general or localized—all components and all arms and services will be involved. The unity of spirit and teamwork in performance so essential to combat readiness must exist throughout the Army before the first shot is fired. Today our Reserve components are an integral part of our deterrent to aggression.

Michigan Talent Boon to Israel

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD a guest editorial appearing in the Detroit (Mich.) Free Press of Saturday, August 1, 1959, by the distinguished editor and publisher of the Detroit Jewish News, Mr. Philip Slomovitz, who has just returned from a visit to Israel. That article shows how richly the people of Detroit and Michigan have contributed to the growth of the new independent Republic of Israel in the Middle East. Citizens of Michigan and of the United States are proud of their contribution toward the growth of this sister republic of ours in the Middle East. The article follows:

IN MEDICINE BUSINESS: MICHIGAN TALENT BOON TO ISRAEL

(By Philip Slomovitz)

JERUSALEM.—Leaders in varied scientific fields in Michigan have begun to play important roles in Israel's development.

Experts in ophthalmology, dentistry, veterinarianism and atomic sciences in Detroit and Ann Arbor have responded to calls to act in advisory capacities in their related fields by Israelis.

Detroiters already have joined major industrial enterprises in the Jewish State. Prominent leaders in the Detroit food industry, including John and Nathan Lurie, Tom and Al Borman and a number of others already have successfully established the first supermarket in the Middle East—in Tel Aviv. They are planning 12 more supermarkets.

A number of Detroit merchants and industrialists, including Israel Davidson, Max Osnos, Joseph Holtzman, Alfred May, Edward Levy, Leon Kay and many others, are the sponsors of a million-dollar Rock Products Corp. project.

A major gift to Israel was the visit in Jerusalem, at the Hebrew University, of the distinguished Detroit ophthalmologist, Dr. Saul Sugar, who lectured on diseases of the eye and on the progress made for the curing of eye diseases.

For many years, one of the chief problems of the Middle East has been the widespread scourage of trachoma. It has nearly been eradicated in the Palestinian area, primarily due to the efforts of the medical staffs of Hadassah, the American Women's Zionist Organization.

Another prominent Detroiter, Dr. Herbert Bloom, who had the distinction of being called in by the late Henry Ford for dental care, made notable contributions toward the advancement of the new dental department at the Hebrew University. Dr. Bloom lectured on dental problems in the newly created College of Dentistry in behalf of which a score of Detroit dentists have gathered funds and have contributed instruments.

This month, three distinguished Michigan scientists will assist Israel in vital fields.

Prof. Henry Gomberg of the University of Michigan, director of the Phoenix project at Ann Arbor, will be the guest of the Technion, the Israel Institute of Technology in Haifa, to assist in the establishment of the atomic science building.

The Technion is recognized as the leading engineering college in the entire Middle East. Dr. Gomberg has taken a deep interest in its activities and has been called in to act as consultant in matters involving atomic science.

Currently in Israel to address the graduates of the College of Dentistry of the Hebrew University-Hadassah Medical Center is Dr. Leon Herschfus. Dr. Herschfus is chief of the department of dental surgery at Mount Carmel Hospital in Detroit.

Dutch born, having come to the United States in 1941 as a refugee from nazism, he was graduated from the University of Michigan dental school in 1945. He has specialized and written extensively on oral surgery.

Especially vital for Israel's animal husbandry is veterinary medicine, and another Michigan resident, Dr. Allan Marks, of 8232 Hendrie, Huntington Woods, has just visited the Jewish state and has given considerable help to the veterinarians there.

He participated in a number of symposia at the Veterinary Institute at Beth Dagon, where, Dr. Marks reported afterward, vaccines and test materials are produced and the most modern methods are pursued to prevent contagious diseases among the country's cattle, whose protection is jealously and zealously watched in this small but rapidly progressing country.

"Red" Blaik, Army's Illustrious Former Coach, Brings a New Freshness to Football Reporting and Recognizes Validity of Brains and Leadership in the Game by Establishing a Worthwhile Foundation

---

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. HÉBERT. Mr. Speaker, it was with deep regret that those of us who had admired the contribution of "Red" Blaik to modern football as coach of Army's "Black Knights of the Hudson" learned of his resignation early this year.

It is now with much pleasure that we learn that "Red" Blaik's talents have not been lost entirely to the world of football.

I am directing the attention of the House to the announcement that Colonel Blaik has consented to write on the subject closest to his heart—football.

With the permission of the House I am including in these remarks the first article written by Colonel Blaik for the Associated Press which tells the full story.

I have no apologies to make for my position that our service academies, Army, Navy, and Air Force, should be represented on the gridiron and in other fields of sports with the strongest talent available. I have done everything I could to assist each Academy in this endeavor and I will continue to lend my cooperation because no American should be satisfied with anything less than the best for our service academies.

I have long advocated participation of the service academies in bowl games and feel some satisfaction in the small

part which I have been privileged to play in bringing about participation in such bowl games. Such participation has stimulated interest of the nation's youth in our military service and the consequent benefits resulting to the Navy and Air Force has been beyond accurate measurement.

It is to be regretted that the Army has failed to take advantage of the chance to participate in any bowl game although the opportunity has been theirs. I sincerely hope that this shortsighted policy will soon be adjusted. Refusal of the Army to participate in a bowl game has even been in defiance of a policy adopted by its own board of visitors in 1954 and also contrary to the desires of its own coaches and players.

I am further concerned over reports coming to me that the Army is going to further limit its football program, placing it on and Ivy League status. This would indeed be a tragedy. "Red" Blaik brought the Army's teams to hitherto unscaled heights and thrilled a grateful American public with brilliant teams befitting the U.S. Military Academy. Now to tear down what Blaik has built after he has departed would be inconceivable. The American people deserve better treatment from the U.S. military authorities. The leadership developed on the football is not only reflected by the Army but by all schools participating in the game.

As Members of Congress we should do everything to preserve the great athletic tradition of the service academies and accept no less on the athletic field than we have come to expect in the field of education. The two go hand in hand. We should alert ourselves against any change in policy which would make West Point second and inferior to other like institutions in the Nation.

When the Navy participated in the Sugar Bowl and later in the Cotton Bowl it brought honor and glory to all hands in the Navy.

When the Air Force Academy defied the prophets and fought its way into the Cotton Bowl last year it captured the hearts and imagination of the American people and added prestige to the youngest of our services.

All this and more was denied the Army because it turned deaf ears to bowl invitations.

Today the Army, of the three services, is fighting for its life and its existence in the field of survival among the services.

Unless the Army's attitude in the athletic arena is changed it will find itself standing on the side of the road looking at the procession, led by the Navy and Air Force, go by.

But back to "Red" Blaik and his future activity in the football world. Read this opening article and statement of policy and intent and I am sure you will find in it the freshness to which I have referred and an excellent contribution to a better understanding and fuller recognition of the fact that football players are intelligent and students as well as athletes:

BLAIK HOPES TO HELP FOOTBALL BY WRITING

(By Col. Earl H. (Red) Blaik, former Army football coach)

When I retired from coaching last January 13, after 25 years—18 at West Point and 7 at Dartmouth—I said it was unthinkable to overstay a career. But it would be just as inconceivable for me to sever completely my connections with the greatest of American games, which has been inseparable from most of my 61 years. That is why I was pleased and challenged when the Associated Press invited me to write two articles a week for the newspapers of the country.

While one is coaching, he is necessarily preoccupied with the football problems of one school. Although he is aware that the college game, like any human operation of which the dollar sign is part, is not without its weaknesses and requires continuing revaluation and modification. The individual coach is in a position to contribute relatively little, much as he would like to do more.

In this invitation, I see an opportunity to try to help college football, not in any one school or area or within one peripherized philosophy, but in a broad, objective manner to help all colleges everywhere. College football today, while not without some abuses, has reached a plateau of excellence in its general conduct, unmatched in any era of the past. This emphatically bespeaks the love of and concern for the game by all its levels of administrators everywhere, and they deserve, therefore, every measure of encouragement and help. I hope to contribute in this way.

WON'T DUCK CONTROVERSY

My articles will very frequently be of a controversial and critical nature. But I assure you the controversy will be real, not fabricated, and that the criticism will always be constructive. It never will be directed at an individual but at something I feel stands correction and improvement. I repeat, I am concerned with what is good for all the colleges, remembering that what is good and practical in one area is not always so in another.

The articles I am preparing to appear between now and Friday, September 18, the eve of the first major Saturday of play, will appraise the strength of teams and players in various sections, but they also will treat of changes of trends, good and bad, affecting the game both on and off the field. Each Friday, beginning September 18, I will analyze where I believe the strength lies in the big game of the next day, yet more often than not I plan to include in the analysis a controversial or behind-the-scenes factor that has a relation to it.

Once the season is underway on Saturday, September 19, the articles appearing in the Tuesday papers will deal with colorful and dramatic highlights, backgrounds and, again, trends and controversies developing on the college scene, either nationally or from a sectional point of view that has some impact nationally.

Whatever financial remuneration I receive for these articles will be used to help college football. I am establishing eight fellowships for postgraduate work. They will be awarded to those eight boys, one from each of the National Collegiate Athletic Association districts, who have been adjudged as best meeting the following four qualifications:

They must be seniors. They must be leaders in academics as well as football. They must exert a fine influence on their campuses. They must be stanch in their devotion to the welfare of amateur sports.

The fellowships will be administered by the National Football Foundations Awards Committee, headed by Vincent Draddy. The foundation committee will be assisted by an awards committee from each of the eight NCAA districts, each nominating a candidate from its district.

These fellowships should help project what I believe to be a fact about college football, yet one seldom emphasized: That championship performance and superior scholarship are entirely compatible.

The American Commitment

EXTENSION OF REMARKS

OF

HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. ANDERSON of Montana. Mr. Speaker, the eyes of the Orient and, indeed, of the Middle East and Africa are watching to see whether we support Laos as that nation is justified in expecting. The administration made a tragic blunder in encouraging the Hungarian revolt and then failing utterly to support it. We have encouraged the SEATO countries to resist communism, and certainly implicit in this encouragement is a commitment to render all needed support in such time of need as now prevails in Laos.

A more complete account of this commitment is contained in an article by Joseph Alsop, New York Herald Tribune columnist, now in Laos, which appeared in this morning's Washington Post. It follows:

THE AMERICAN COMMITMENT

(By Joseph Alsop)

VIENTIANE, LAOS.—Judging by President Eisenhower's words and action, the President himself has not yet entirely grasped the key fact here. Yet the key fact remains that the Eisenhower administration has morally and politically committed the United States to guard Laos against the kind of Communist aggression that has now been attempted.

This American commitment has now become immensely, perhaps even desperately, important. Hence, its obscure but undisputed story is worth recording.

The story begins with the situation created in this little country by the partition of Indochina in 1954, which the American Government joined in sponsoring. Briefly, the Geneva partition agreement left Laos effectively divided. The King's sovereignty over the whole country was recognized. But the local Communist forces were left in firm control of the two northern provinces, Phong Saly and Samneua.

The International Control Commission set up at Geneva was charged with this problem. The allegedly impartial Indian chairman of the control commission consistently took a pro-Communist line. Thus, the commission finally persuaded King Sisavang Vong to name a mixed government headed by the non-Communist Prince Souvanna Phouma, but including his brother, the Communist leader, Prince Souvanna Vong.

During all this period, the whole weight of American influence was thrown against the plan for a mixed government. As predicted by the Americans, the Souvanna Phouma-Souvanna Vong government came perilously close to giving the Communists full control of Laos. After the elections in the

summer a year ago, the result was a really major political crisis.

The American moral and political commitment was made during this crisis. In brief, the King and the other Lao leaders had to decide at once whether to make an all-out effort to save their country. Yet the installation of a strong anti-Communist government would quite obviously tend to provoke reprisals and even intervention by the much stronger neighboring Communist government of North Vietnam. There the Communists in Laos had their real base.

The Lao leaders emphasized the risk to the Americans. For example, before taking his young Lao party into the new government, the present foreign minister, Khamphan Panya, went to the American Embassy here. He pointed out the enormous danger of a new course for Laos, and he asked for a formal American guarantee of Laos' territorial integrity.

Crown Prince Savang made the same point and asked for the same guarantee when the present Assistant Secretary of State for Far Eastern Affairs, J. Graham Parsons, visited the country at this critical moment. The American answer was always the same. We promised Laos full support, and we asserted that the Southeast Asia Treaty Organization would guarantee Laos against aggression.

In other words, just what is now happening was clearly forecast to the American Government before the strongly anti-Communist government of Prime Minister Phoui Sananikone was even formed. In full awareness of the danger, with all sorts of reassurances to the Lao, the American Government did everything possible to bring the Sananikone government into being. This in itself constituted a solid American commitment.

The commitment was then greatly deepened when American influence was also used to encourage the anti-Communist campaign rapidly launched by Prime Minister Sauanikone. The leading Communists were placed under arrest. In the provinces, the more flagrant terrorists were summarily executed. The Communist-controlled units in the army were disarmed (but one of them got away and is now prominent in the fighting). The remaining machinery of Communist control in Phong Saly and Samneua was firmly dismantled.

All these actions, so strongly tending to provoke a forceful Communist reaction, were taken with explicit American approval. Meanwhile, further warnings of the coming Communist reaction were by no means lacking.

In January, the first probe occurred, when the North Vietnamese Communists seized the small frontier district of Khapai. From January onward, the Hanoi radio telegraphed the coming punch by thundering threats of grave consequences of the Sanaulkone policy.

The Embassy here foresaw and indicated trouble ahead. At least one independent observer, the able Australian newspaperman, Dennis Warner, even predicted the present aggression in some detail. Yet the Americans were not deferred from pressing for appointment of an American training mission for the Lao Army.

This step has now been singled out by the Communists as the specific pretext for their attack on Laos.

In sum, Laos has been attacked because Laos took American advice. It was good advice. Yet a great country which insistently presses such advice on a small country must always assume responsibility for the consequences. The President almost seemed to reject that responsibility in his tepid press conference before going abroad. If he finally does so, the blow to the American and free world position in Asia will be completely irreparable.

The Forand Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. FORAND. Mr. Speaker, support for my bill, H.R. 4700, to provide insurance against the cost of hospital, nursing home, and surgical services is increasing every day.

Under leave to extend my remarks I offer for the RECORD a statement by the Railway Labor Executives' Association endorsing H.R. 4700. It follows:

STATEMENT OF RAILWAY LABOR EXECUTIVES' ASSOCIATION SUBMITTED TO WAYS AND MEANS COMMITTEE IN THE HOUSE OF REPRESENTATIVES IN SUPPORT OF THE FORAND BILL, H.R. 4700, 86TH CONGRESS

My name is G. E. Leighty and I submit this statement as chairman of Railway Labor Executives' Association. I am also president of the Order of Railroad Telegraphers, one of the organizations affiliated with Railway Labor Executives' Association.

Railway Labor Executives' Association is an association composed of the chief executives of all the standard railway labor organizations. Together these organizations represent virtually all the railway employees in the country. The organizations affiliated with Railway Labor Executives' Association are the following:

American Railway Supervisors' Association.
American Train Dispatchers' Association.
Brotherhood of Locomotive Engineers.
Brotherhood of Locomotive Firemen and Enginemen.
Brotherhood of Maintenance of Way Employees.
Brotherhood of Railroad Signalmen.
Brotherhood of Railroad Trainmen.
Brotherhood of Railway Carmen of America.
Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.
Brotherhood of Sleeping Car Porters.
Hotel & Restaurant Employees and Bartenders International Union.
International Association of Machinists.
International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers.
International Brotherhood of Electrical Workers.
International Brotherhood of Firemen and Oilers.
International Organization Masters, Mates and Pilots of America.
National Marine Engineers' Beneficial Association.
Order of Railway Conductors and Brakemen.
Railroad Yardmasters of America.
Railway Employees' Department, AFL–CIO.
Sheet Metal Workers' International Association.
Switchmen's Union of North America.
The Order of Railroad Telegraphers.

As the committee well knows, railroad employees are covered with respect to their age and disability retirement and survivor benefits under the Railroad Retirement Act and are not covered by the old age, survivors, and disability insurance system set up under the Social Security Act. Consequently, railroad employees are not directly affected by H.R. 4700 in its present form.

Under these circumstances the question may well be asked as to what interest railroad employees have in the bill and this question should be answered at the outset. Our interest stems from a variety of sources:

1. Although we are primarily concerned with conditions directly affecting the employees we represent, as participants in the American labor movement we have an interest in the welfare of all American workers. Standards of living and of well being do not isolate themselves by industries, and such standards when accepted or established for a substantial segment of the working population tend to become measures of the standards to be applied in other segments.

2. All but two of the organizations affiliated with Railway Labor Executives' Association are also affiliated with the AFL–CIO. The AFL–CIO is vigorously supporting H.R. 4700 and we feel that the committee should know that our association joins in that support.

3. Many of the organizations affiliated with Railway Labor Executives' Association represent to varying degrees employees in other industries who are covered by the OASDI system and who are directly affected by H.R. 4700. In some of our organizations this is true of the great preponderance of the membership.

4. The organizations affiliated with Railway Labor Executives' Association and who represent nonoperating employees (nearly three-fourths of all railroad employees) have for some years been wrestling with the problem of making hospital, surgical, and medical insurance available to retired employees. We believe that our experience in this respect will be helpful to the committee in evaluating the various possible approaches to the problem.

5. As the ensuing discussion will show, the experience referred to in the preceding paragraph shows that we have not yet succeeded in finding an adequate solution to our problem. We are not prepared at this time to state what we would regard as the best ultimate solution attainable, but we would not wish to exclude the possibility of seeking participation of railroad employees in the system proposed by H.R. 4700 if that bill is given favorable consideration by the Congress.

We have examined the testimony presented to the committee on behalf of the AFL–CIO by Mr. Nelson H. Cruikshank and we feel that that testimony thoroughly, conscientiously, and objectively explores the issues involved and points most convincingly to the proper resolution of those issues. No purpose would be served in repeating or paraphrasing that discussion. We concur in it and believe that it demonstrates beyond question that H.R. 4700 is a sound bill and should be enacted.

In 1954 the organizations representing nonoperating railroad employees negotiated through collective bargaining a nationwide plan for providing hospital, surgical, and medical protection for active employees. Under this plan, on roads where hospital associations were in existence the existing arrangements were adapted to provide the negotiated protection. With respect to the nonhospital association railroads a single national insurance policy was negotiated to provide specified benefits at specified premiums. Under this policy the Travelers Insurance Co. was the primary insurer and reinsured varying percentages of the risk with other qualifying companies desiring to participate.

Initially this plan was applicable only to the protection of employees on a 50–50 contributory basis and separate arrangements had to be made to make insurance for dependents available on a voluntary basis at the expense of the employee. Subsequently,

however, renegotiations have provided for the employee and dependents benefits to be on a noncontributory basis and the dependents benefits for hospital association roads and nonhospital association roads are now all included in the one insurance policy.

The arrangements above summarized deal exclusively with active employees and their dependents. We have at least so far not been able, through collective bargaining, to negotiate for the continuation of any degree of employee or dependent protection after the retirement of the employee. This presented a most serious problem. Prior to the negotiation of the collective bargaining plan many railroad employees participated in individual or group insurance or benefit plans with varying arrangements for continuation or conversion after retirement. In many instances such protection ceased to be available after the plan covering active employees went into effect. Even if the protection continued to be available an employee who wanted to protect his continuation or conversion privileges upon retirement would generally find it necessary to continue to carry the protection as an active employee, thus incurring the expense of unnecessary duplicate coverage while in active service.

To meet this situation as best we could, the organizations negotiated a separate group policy providing benefits available on a voluntary individual premium payment basis for retired and furloughed employees and their dependents (and initially also for dependents of active employees prior to their coverage in the collectively bargained plan). The opportunity was thus made available to all employees covered by the collectively bargained plan while in active service to continue protection upon retirement, on a reduced benefit basis and at their own expense. Where hospital associations are in operation retired employees are generally permitted under varying arrangements to continue protection for themselves, though their dependents are generally not covered. In instances where retired employees on hospital association roads do not have continued hospital association protection available they are eligible upon retirement to be covered by the Travelers policy for both employee and dependents benefits and all employees on such roads are eligible to be covered for dependents benefits.

In working out and administering this plan we have had excellent cooperation from the insurer; administration costs and retentions have been kept to a minimum, thus making the greatest possible proportion of premiums available for benefit payments; and every effort has been made to strike a reasonable balance between benefits and costs so as to provide as nearly adequate benefits as could be obtained at premium rates that retired employees might be expected to be able to afford. The plan is, so far as I know, the largest group plan for retired employees in the country. With all of these favorable circumstances, this plan may well be regarded as representing the best arrangements now attainable for retired employees who are severed for insurances purposes upon retirement from the group comprising active employees.

Nevertheless, our experience indicates that the best attainable under these circumstances is not enough. There is much to be said for the proposition that retired employees should continue for insurance purposes to be a part of the group in which they participated during active service and that employers should continue to carry responsibility for the protection of the entire group. Perhaps such a solution if sufficiently generally adopted and if group insurance based on employment becomes sufficiently universal might be considered preferable to the assumption of responsibility by the Government. In our own thinking we have not excluded that possibility so far as railroad employees are concerned.

It is clear from our experience that the adverse circumstances inherent in the type of arrangement we now have make it impossible to achieve really satisfactory results by this approach. The administrative costs involved in handling individual applications, checking eligibility for participation and receiving and properly crediting monthly premium payments necessarily absorbs a disproportionate share of the premium. Individual choice as to participation results in coverage of a disproportionately small segment of the group eligible to participate and must involve a considerable degree of adverse selection.

The present premium rates under our policy for retired employees are $4.48 per month for employee benefits only, $4.60 per month for dependents only, and $9.08 per month for employee and dependents benefits. The benefits include hospital room and board charges up to $8 per day but not to exceed $480 for each period of disability. Hospital extras are covered to a maximum of $80 for each period of disability and an ambulance charge up to $25 is allowed. Surgical expenses are covered under a schedule with $150 maximum. We believe that it is readily apparent from an examination of these premium rates and benefit limitations that some better method of providing hospital, surgical and medical benefits for retired employees must be found.

It has been estimated that during the approximately 4½ years that our plans have been in effect probably about 130,000 nonoperating employees have retired and that about 119,000 of these are still living. About 40 percent of our employment is on hospital association roads and employees retiring from service on those roads would, as above indicated, generally continue hospital association protection with respect to employee benefits and would be eligible to participate in the Travelers plan only for dependents benefit insurance. It may thus be calculated 60 percent of the 119,000 surviving retired employees or 70,400 have been eligible for insurance for employee benefits. As of June this year 17,753 were actually participating for employee benefits; 15,520 had dependents benefit insurance but this latter figure would include employees from hospital association roads eligible for dependents benefit insurance only and must therefore be related to the 119,000 figure rather than to the 70,400.

It cannot be assumed, of course, that the difference between the 70,400 who have been eligible and the 17,753 participating for employee benefits are without any hospital, surgical or medical insurance. Some, we have no way of knowing how many, undoubtedly carry other forms of protection by reason of continuation or conversion of other insurance carried while in active service or policies that have been taken out upon or during retirement or various other possible types of protection. The figures do indicate, however, that the degree of participation in relation to the size of the total group is too low to achieve results that can be regarded as a real solution to the problem. Perhaps there is a very high degree of adverse selection. Perhaps the nonparticpating eligibles do not feel that their income is sufficient to afford any insurance payments and that they must therefore run the risk of incurring uninsured expenses and hope that this does not happen. Or perhaps they consider the benefits available relative to the premium rates inadequate to give them their money's worth. Whatever the reason, it is apparent that intensive efforts under favorable circumstances have not succeeded in developing adequate hospital, surgical, and medical insurance for retired employees by this method.

We have given and are continuing to give most serious study to this situation and are determined to find a more satisfactory solution. Whether this should lie in the direction of efforts to continue retired employees in the group comprising active employees or in the direction of seeking participation in the plan contemplated by H.R. 4700 we are unable to state at this time. We bring our experience to the attention of the committee because we think it may be enlightening in the committee's consideration of the general problem and because we want the committee to know what our particular problem is.

Intaxication

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. Donald E. Wood which appeared recently in an issue of Automatic Machining magazine. Mr. Wood is one of a large group of American citizens who believe that our Federal Government should live within its income and I heartily agree with him in this respect. Spending beyond our means, in my opinion, is definitely not the answer to our problem:

INTAXICATION

(By Donald E. Wood)

The worker who asks for a general pay raise, or the firm which willingly grants it, is taking the lazy way out of a complicated situation. Added pay may temporarily salve the symptoms; it cannot cure the high cost of supporting all forms of government, the real disease which eats at the heart of our standard of living.

The average American spends the first 2 hours of each day earning money withheld as Federal or State income tax, money he never sees. He works an additional hour or so to pay county and city taxes, gas taxes, excise taxes, and the intangible tax involved in the price of every item he buys.

This problem, basically, cannot be solved by pouring more dollars into the top of the paycheck. The real situation is that all of us spend so much time working to pay taxes, we have too few hours left in which to earn our living. In other words, we find ourselves unwittingly "deep in the heart of taxes."

Taxes create inflation. Inflation, in turn, is forcing some of our domestic manufacturers to look longingly at the advantages of establishing foreign branches. Faced with competition from imported products, it is understandable that these firms must fight fire with fire. But while foreign branches may help the profit picture of the firm, it can only do so at the expense of the American worker whose job has gone abroad.

The trouble with blanket pay hikes is that only a tiny trickle of the added money ever becomes buying power for the recipient; the bulk goes to pay higher taxes, or in the form of added cost for purchased items. And while the worker benefits little, the firm is placed in an even tighter position competitively.

It is traditional in America that we will not become aroused until a crisis is at hand. That day may be nearer than we think. It is time our legislators be informed by all of us that nonessential spending, no matter how desirable, is not what we need. It is time we told our elected officials that governments, like each of us, should check the bank balance before signing for any but essential purchases.

We need wage increases based on ability and merit rather than as blanket policies. We need to help our firms in their competitive struggle, and still uphold our high standard of living.

We can do this. We will do this, when we want—or need—to badly enough.

The Jimmy McHugh Night at the Hollywood Bowl

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. JACKSON. Mr. Speaker, on September 5, the American entertainment industry will pay a most exciting tribute to one of its most distinguished, prolific and famous contributors on the occasion of his 35th anniversary as an internationally known songwriter. Mr. Jimmy McHugh will be honored by a presentation entitled "The Jimmy McHugh Night at the Hollywood Bowl," which will climax the season of that music mecca. I think that this anniversary is an occasion of international significance which certainly is deserving of the attention of my colleagues and of the entire American people.

Jimmy McHugh is best known, perhaps, as the composer of "Sunny Side of the Street," "I Can't Give You Anything But Love," and several hundred other "standards," as the classical examples of popular music are known.

Were these great songs his sole contribution to American cultural and social life, Mr. McHugh certainly would qualify as one of our most worthy and productive citizens. However, amazingly enough, this is only one phase of the magnificent work Mr. McHugh has performed and is performing for our society. He has also given generously and unstintingly of his time and personal resources to worthy civic, charity, and athletic causes.

Since it is his music, however, for which Mr. McHugh is best known, let me review briefly a few of his contributions which led a noted observer of the musical world to speak of Mr. McHugh as the Stephen Foster of his time. The titles of Mr. McHugh's songs alone immediately imply his position as the foremost creator of present day popular music. In addition to those McHugh songs already mentioned, "Don't Blame It on Me," "A Most Unusual Day," "I Feel a Song Coming On," "When My Sugar Walks Down the Street," "I'm in the Mood for Love," and many others have become a part of our American heritage.

Should any of my colleagues or, for that matter, anyone in the United States think back, I know he will find several Jimmy McHugh songs which are associated vividly with an important phase of his life. One of the greatest functions of the popular songwriter is to capture and express poetically and musically the emotions which we all encounter, and Mr. McHugh has become a master of this craft. His songs seem to underline our most private emotions and treasured experiences as though he had peered into us and written them personally for each of us.

As I am a music lover but not a qualified music critic, I would like to quote Dr. John Frederick Kilpatrick, music critic of the Dallas Times Herald and professor of music at Southern Methodist University:

> It is like talking to the man who invented doorknobs, the chef who created ham and eggs; it's like meeting up with the fellow who first thought of shoe laces, to be introduced to Jimmy McHugh. Like Stephen Collins Foster, Jimmy for so long has been incorporated in the weave of America that it is hard to realize that his songs were made by a living man and are not some sort of standard equipment that just comes with life.

It was Dr. Kilpatrick who referred to Stephen Foster as "the Jimmy McHugh of his time." Most Americans, certainly most members of the musical world, will give Dr. Kilpatrick's sentiments hearty seconds. Like Stephen Foster, Jimmy McHugh and his work have been a part of the fabric of our experience for the best part of our lives and, in the case of many Americans, for all of our lives. It was as early as 35 years ago that he composed such song hits as "When My Sugar Walks Down the Street" and "I Can't Believe That You're in Love With Me."

The Jimmy McHugh story is the American story. Like most of our great citizens, Mr. McHugh worked his way up from inauspicious beginnings. His first job was office boy at the Boston Opera House. His friendship with such operatic luminaries as Caruso, Puccini and Geraldine Farrar accounts for the fact that Jimmy McHugh songs never are written down to his public but rather live up to the qualities Puccini and Caruso might have expected of their young friend.

His career then followed the trail from piano player in a publishing company to composer of small shows in Harlem to his ultimate glory as one of the famous names of music. An idea of the scope of his work comes from the fact that he has written music for 45 motion pictures and 16 Broadway musicals, at one time having 4 hits on Broadway at the same time.

Another aspect of his importance in the entertainment world is his constant vigilance in discovering and promoting promising talent. Duke Ellington, Phil Harris, and the late Carmen Miranda are only a few of the famous personalities Jimmy McHugh helped uncover and develop.

Another phase of Jimmy McHugh's life which merits the attention of Congress and of the people of the United States is that gentleman's great patriotism and his work on behalf of his country. I know we all remember one of his great inspirational musical contributions to American morale during the Second World War—"Comin' In on a Wing and a Prayer."

In 1944 Secretary of the Treasury Henry Morgenthau commissioned Mr. McHugh to write the seventh war bond drive song, resulting in "Buy, Buy, Buy a Bond." It was eminently successful. Again in 1945, upon Government request, Mr. McHugh and his partner, Harold Adamson, supplied the theme song of the eighth war bond drive, "We Have Got To Buy Another Bond." The millions of dollars for which these songs accounted are inestimable.

In addition, the patriotic Mr. McHugh singlehandedly produced a bond rally "aquacade" at the Beverly Hills Hotel in 1945, and in one night's performance he sold $28 million worth of bonds. This was, and I believe still is, the largest single sale ever recorded.

Untold thousands of former soldiers can thank Mr. McHugh for their lives, saved by material purchased with the money he raised.

More tangible recognition came in February of 1947, when former President Harry S. Truman presented him with a Presidential citation in Washington for his contribution of war songs and his contribution to war bond sales. The composer's patriotism has remained untiring and unceasing. In February of 1953, Mr. McHugh was commissioned by President Eisenhower, Comdr. Harold B. Miller and Admiral Halsey to write the official "Crusade for Freedom" song for Radio Free Europe and Radio Free Asia. The resulting song, entitled "Crusade for Freedom," has been acknowledged by the members of those organizations as an important instrument in reaching the minds and hearts of the peoples of captive and neutral nations. It is still the official song of these organizations.

In that same year, Mr. McHugh and Mr. Adamson also wrote the official community chest song, "Give Every Child a Chance."

The creative and patriotic works of Jimmy McHugh, extraordinary as they are, do not overshadow his personal efforts on behalf of numerous charities.

One aspect of this extension of Mr. McHugh's activities is his effort to help promote recreational activity halls for teen-age boys and girls throughout the Nation. Mr. McHugh was honored for this several years ago by a testimonial dinner given by Georgetown University.

In 1951, Mr. McHugh organized the Jimmy McHugh Polio Foundation, the express purpose of which was to raise funds to buy and donate the miracle respirator created by Dr. Albert C. Bower. Since that time his group has presented approximately three dozen such expensive respirators.

In 1955 a single charity function sponsored by the Jimmy McHugh Polio Foundation raised $90,000 to purchase 15 such respirators.

The Polio Foundation was changed to Jimmy McHugh Charities, Inc., a few years ago, which move has permitted Mr. McHugh to devote his time and talents to raising funds for an ever wider field of charitable and worthy causes.

That Mr. McHugh would have any reserve time or energy for other activities is amazing, but it is true. His participation in the civic life of his present hometown, Beverly Hills, Calif., is indi-

cated by the fact that he is known as the honorary mayor of that community. For nearly 15 years he has been on the board of directors of the chamber of commerce of that municipality, serving as president of that organization for a time.

The people of Los Angeles are further indebted to him for his many contributions to the Los Angeles County Museum of masterpieces from his famous collection of paintings.

His astounding energy and compulsion toward public service have brought him into the athletic life of the American people as well. He is one of the country's leading sponsors of amateur swimming. In recognition of his tremendous help in this field, the Amateur Athletic Union of America—AAU—has made him a lifetime member and, as well, he was an honorary official of the 1948 Olympiad in London.

One of the outstanding athletic events of the past decade was the 1949 national men's outdoor swimming meet. It was Mr. McHugh's effort which brought the Japanese swimming team to America to compete in that event, and it was at this meet that Japan's Furuhashi shattered 29 world records in one event.

Mr. McHugh's interests and the impact of his personality extend to many other fields but I would like to conclude with one which has great importance to the United States at this time of international unrest, a time of all too frequent cultural misunderstanding between nations, even on the part of leaders. In view of this condition, the fact that Mr. McHugh for over three decades has been one of our most vigorous ambassadors of international good will, has tremendous importance. The extent to which Mr. McHugh's songs have reached into the lives of people in other countries and stimulated consciousness of American culture is indicated by one anecdote from the glamorous and productive life of this great musician. The event occurred several years ago when Mr. McHugh was called upon to participate in a command performance before Queen Elizabeth II of England and the royal family. Following the performance, Mr. McHugh was presented to the Queen. With a gracious smile, the Queen of England acknowledged Mr. McHugh's bow and said:

Mr. McHugh, you seemed to have written all of my favorite songs and, not only that, I sing them also.

Convention of the Ukrainian American Youth Association

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. RODINO. Mr. Speaker, I would like to take this opportunity to greet the Ukrainian American Youth Association which is about to hold a convention marking the 10th year of the existence of this great organization. Some 8,000 delegates will shortly meet simultaneously at Spring Glen, N.Y., and in Detroit, Mich. They deserve our good wishes, our encouragement, and our applause. It is events such as these which lend inspiration to the whole movement and which give them the courage to continue their dedication to freedom and independence.

To descendants of the people of the Ukraine the battle against Russian imperialism is no new event. They have struggled against Russian tyranny for 300 years. Indeed, their forthcoming convention heralds the 300th anniversary of the triumphant victory of the Ukrainian Army against the Russians at Konotop, and the 250th anniversary of their tragic defeat by the Russian Army at Poltava. The Ukrainian-American knows perhaps better than any of us the threat and the danger of Russian aggression, because they have fought it when it bore the flag of the Czar, and continue to fight it when it carries the flag of the hammer and sickle. Their persistent spirit and dedication to the cause of freedom should serve as an inspiration to all of us.

I want to especially congratulate those members of my district who will be among those attending this fine and praiseworthy convention. They make up an important segment of the Ukrainian Youth Association. Their voices will be strong in the forthcoming proceedings.

I deeply regret my inability to attend and participate in this event, as I have on numerous occasions in the past. I will be with them in spirit, as I think all of us will be, and I wish them success and fulfillment in their great endeavors.

Khrushchev's Upcoming Visit to Iowa Has History

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. John C. Sciranka, American-Slovak journalist, of Passaic, N.J., which appeared in the Voice of the People column of the Paterson (N.J.) News of Saturday, August 29, 1959:

KHRUSHCHEV'S VISIT TO IOWA HAS HISTORY

EDITOR, EVENING NEWS.

DEAR SIR: Many Americans may wonder why Nikita Khrushchev will visit the State of Iowa and omit other larger States. There is a valid reason for that. One dates back to famine in Russia in 1889, which was followed by a drought in 1890 and 1891. Some 30 million people were affected by this drought, which had blighted nearly 1 million square miles of the best agricultural soil.

Clara Barton, founder of the American Red Cross, read how the Russian peasants were burning their thatched roofs for fuel and exchanged their clothing for bread. Typhus, smallpox and diphtheria raged in different parts of the country.

She contacted James G. Blaine in Washington, D.C., and Alexander Gregor, Russian chargé d'affaires and learned that Russia would welcome aid from America. Farmers of Iowa wholeheartedly supported this campaign and in a short time 225 carloads of Iowa corn, wheat, rye, bacon, corned goods and medical supplies were shipped to Russia. Iowa corn spread good will and supported 700,000 persons for a month.

Dr. Julian B. Hubbell, who aided Clara Barton in her humanitarian work, was originally from Iowa. He spoke Russian and other languages and traveled with her to many distressed areas.

Dr. Hubbell attended the sixth International Conference of Red Cross Associations in Rome, when he was summoned to go to Riga to help distribute food from America among the starving Russians in 82 centers. Count Alexis Dobrinsky, marshal of the nobility of St. Petersburg, now Leningrad, ordered 320 freight cars to convey the free cargo from Riga to any point desired. Some traveled to the foot of the Ural Mountains. Russian and American colors hung at the hotel where Dr. Hubbell stayed and American sheet music was displayed in shop windows of Russian cities. Dr. Hubbell visited Count Dobrinsky's family, who had a large sugar mill in Moscow. He also visited Count Leo N. Tolstoy, the great novelist and humanitarian in Jasnaja Poljana, where he met Dr. Dushan Makovicky, a Slovak, personal physician of the great Tolstoy. They ground Iowa corn near the Volga River, which reminded Dr. Hubbell of our Mississippi.

This is one of the reasons why Russians are always grateful to the people of the State of Iowa, which also has many Czech (Bohemian) prosperous farmers. It was in Cedar Rapids, Iowa, where the famous Czech composer, Antonin Dvorak, composed some of his greatest music while in America.

The Slovaks too have something to be proud of because it was in Grinnell College, Iowa, where Dr. Edward A. Steiner, well-known American educator of Slovak origin, gave a start to Harry Hopkins, son of a harness maker and later adviser to President Franklin D. Roosevelt, who also visited Russia during World War II and contributed immensely to save the Russian people from famine with generous American aid.

Although I am not in sympathy with Nikita Khrushchev's visit to this country, nevertheless I am bringing these historical facts to acquaint the American public that really and truly Russian people received aid from good old America on several occasions in their most trying days.

Khrushchev should also visit the State of North Dakota, which had its ties with Russian wheat. But this is a different story, which belongs to the story of wheat and our pioneers in North Dakota.

JOHN C. SCIRANKA,
American-Slovak Journalist.

Clayton E. Freeman

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. WALLHAUSER. Mr. Speaker, another important life has come to a close and I would like to take this opportunity to pay tribute to his memory.

Clayton E. Freeman of Glen Ridge, N.J., has by his interest in community

affairs and projects for the common good, left an impact that will long be remembered by those of us who survive him.

The editorial that appeared in the Newark (N.J.) Evening News of September 2, 1959, indicates the esteem and affection in which this fine gentleman was held:

CLAYTON E. FREEMAN

Clayton E. Freeman of Glen Ridge, dead at 86, was a successful businessman who regarded active and unselfish participation in political affairs as an obligation of citizenship. An amateur in politics, an important influence in the clean government movement in Essex County, he rose to be Republican State chairman and later served with distinction as the director of the Essex County Board of Freeholders.

The sincerity and dedication which marked his public career was perhaps best demonstrated by his efforts in behalf of his home community, which rated him the first citizen of Essex County. He personified integrity and deserved the respect in which he was held and the many honors that were paid him.

Ill-Considered Threat

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news report that I have sent to my constituents in the 11th Congressional District of Michigan:

Much has been written and said during the last few weeks about labor reform legislation, especially the Landrum-Griffin bill. I have received hundreds of letters, telegrams, and post cards on this subject from all parts of the Nation. None of these contained a threatening tenor, except for the form letter I have received from James B. Carey, president of the International Union of Electrical, Radio and Machine Workers. So that my constituents may be informed in this matter, I am including a copy of his letter and setting out my reply to him. His threatening communication is a reflection on the citizens of the United States and an un-American attempt to intimidate the Congress of the United States.

AUGUST 18, 1959.

DEAR CONGRESSMAN: Only you know, in the privacy of your own conscience, whether you carefully considered the possible consequences of the Landrum-Griffin bill when you voted for it on August 13, 1959. If you did, and realized that it is a punitive, repressive measure intended to weaken all labor unions and thereby all working men and women, you have much to answer for. If you did not, and merely yielded to the pressures of the chamber of commerce and the National Association of Manufacturers, your guilt is perhaps even greater.

You should realize now, if you did not during the heat of battle, that this vindictive assault on the labor movement will, in the long run, prove to your constituents that you are less interested in individual rights and democracy than in property rights and the concentration of power in the hands of big business.

You may believe that you are safe in such action because organized labor is relatively weak in your district, and cannot call you to account for the damage you have sought to do to it. You may be right—at the moment.

We wish to assure you, however, that we shall do all in our power to prove to the working men and women in your district that you have cast your lot against them and they should therefore take appropriate action at the ballot box.

Very truly yours,

JAMES B. CAREY, *President.*

AUGUST 21, 1959.

DEAR MR. CAREY: I have received your form letter of August 18 endeavoring to intimidate me because of my favorable vote on August 12, 1959, in support of the Landrum-Griffin bill, which also was supported by President Eisenhower as well as by 303 of my colleagues out of the total membership of 426 in the House of Representatives.

It is interesting to note that you have described this legislation as "a punitive and repressive measure." This phrase characterizes the tenor of your letter. In my judgment your action constitutes a grave and intemperate misuse of the money of the rank and file of labor union members. By your ill-considered threat you are exposing the labor boss practice of the denial of the basic rights and democratic processes of your union members. A threat from you is no more terrifying to me than would be a threat from Mr. Hoffa, although I believe even he would be inclined to use better judgment than you have demonstrated.

By your act you have caused me to realize more than ever that I was correct in voting for the Landrum-Griffin bill. I am sure my voting record has proven to my constituency that I am interested in individual rights and democracy more than in the concentration of power in the hands of big business, regardless of whether that big business be the management boss or the labor boss.

The people of the 11th Congressional District of Michigan will not yield to the unthinking dudgeon of any labor leader when they are exercising the right to mark their ballot in secret for the candidates of their choice. Similarly, I would not, and did not yield to any pressures from the National Association of Manufacturers and the chamber of commerce, as you allege, when I cast my vote for the Landrum-Griffin bill.

I have always supported legislation that would protect the rights of labor union members and would rid the unions of the practices of corruption, breach of trust, gangsterism, violence, and abuses of power. The political hoodlumism that you imply will be brought to bear against me does not dismay me, and I am sure it will not be persuasive with the thinking people of my congressional district.

In order that my constituency may be aware of your activities I am sending a copy of your letter and my reply to all individuals on my mailing list. I respect the intelligence of the people whom I have the honor to represent, and know that they too will realize more than ever the real need for the enactment of the provisions of the Landrum-Griffin bill.

Yours truly,

VICTOR A. KNOX,
Member of Congress.

Airlines

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. ROGERS of Florida. Mr. Speaker, I would like to insert in the RECORD an editorial by Mr. Jack W. Gore, editor of the Fort Lauderdale News, one of south Florida's foremost newspapers. I feel that this editorial will be of interest to all the Members concerned with this problem:

IN AIR BUSINESS, LIKE MARITIME INDUSTRY, WHY IS IT WE NEVER LEARN TILL TOO LATE?

(By Jack W. Gore)

Are American airlines flying international routes being given the same sort of deal that has reduced the American merchant marine to second-class status?

This is a question that is of considerable import and concern today as we move into an era when jet aircraft will make it possible for millions of Americans to enjoy travel opportunities never open to them before.

Few people understand the whys and the wherefores of international air travel. When they want to go some place overseas they are more concerned about getting where they want to go quickly, safely, and economically than they are in the competitive situation that is rapidly causing American flag carriers to take a back seat to foreign competitors.

A glance at what is happening in the rich Latin American air travel market provides ample proof of how badly American carriers are being hurt by the refusal of U.S. authorities to give our own airlines an opportunity to compete with foreign carriers on equal terms.

Not too many years ago an American carrier, Pan American World Airways, was the dominant carrier in Latin American skies. It had pioneered the development of Latin American air routes and on most of these routes its planes provided the only quick and dependable air transportation.

But some 10 years ago the situation began to change.

Country after country in Latin America began to develop and subsidize its own airlines primarily for operation in the international field.

These other countries had no difficulty in getting the permission of U.S. authorities to operate flights to and from cities on the U.S. mainland. Since this permission was a diplomatic matter, these foreign airlines took their appeals to the State Department rather than to this Nation's Civil Aeronautics Board which controls all domestic airline matters. And since the State Department has been eager to provide other nations with an opportunity to serve American cities, in recent years there has been a virtual rash of foreign carriers into the American market.

Today, for instance, there are almost 60 airlines competing for business in the Latin American field. The competition is so bitter that during 1958 Pan American's Latin American Division showed a drop of more than $3,300,000 in passenger revenue.

This drastic drop in revenue didn't hurt only the airline. Forced by the loss of business to foreign carriers to cut back some of its operations, Pan American had to lay off some 207 mechanics and other technical and supervisory personnel.

Why can't Pan American meet this foreign competition? There are several basic reasons. First off, the American carrier pays wages to its pilots, copilots, stewardesses and other personnel far in excess of the rates paid by most of the foreign carriers.

Secondly, many of the foreign carriers are subsidized by their governments and thus, they don't have to worry about operating losses.

Thirdly, many of these foreign carriers don't belong to the International Air Transport Association and thus they can disregard the standard business practices, fare schedules and operating regulations which IATA members must conform to. Some 13 of the airlines currently flying Latin American routes are now offering cutrate fares which no American carrier could possibly

match and still stay in business. As an indication of the kind of competition the American carriers are up against, the standard round-trip fare between Miami and Lima, Peru, is $473.40. Yet three non-IATA airlines are selling the same round-trip ticket for $250, $260, and $280 respectively.

Finally, and most importantly, American carriers are restricted by our own governmental regulations to routes which give them little opportunity to compete effectively against all their new competition. Jamaica, for instance, has become a popular vacation spot for people flying out of New York with 82 percent of all traffic flying to Jamaica generated in that city. But all service between New York and Jamaica is provided by British and Colombian carriers with no U.S. flag airline permitted to fly the route.

What's happening to our American airlines today in the international field is much the same thing that has reduced our merchant marine to only a shadow of what it used to be. Back in 1956 a U.S. Senate subcommittee which took a look into the matter of aviation competition sounded this warning:

"It would be no contribution to the welfare of the free world, and certainly not to the welfare of the people of the United States, if America's international air transport system were to follow the deplorable downward path of the U.S. flag maritime industry."

That warning was, as we said, sounded back in 1956. Since then the competitive position of American airlines has grown incomparably worse but Washington officialdom still continues to be unconcerned.

It is regrettable that in a day and age when tremendous new travel opportunities are opening up for the American people, our own airlines are slowly being forced to take a back seat to their foreign competition. One would think we would have learned something from what happened to our maritime industry but sometimes, it seems, we never learn anything until it is too late.

Reciprocal Treatment for Tariff Concessions

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, I submit that orderly foreign commerce conducted on a basis of reciprocity and mutual trust is a goal worth striving for, and I would suggest to the State Department that one way to achieve this worthy objective would be for the United States to insist on reciprocal treatment for every tariff concession granted by our negotiators.

Perhaps we have a right to hope that the State Department will recognize the merits of this policy in time for the next big tariff bargaining festival to be held under the auspices of the General Agreement on Tariffs and Trade in 1961.

The adoption of such a policy, however, would mark a sharp departure from our present practice of tariff giveaways, a procedure to which our diplomats have clung through thick and thin for a quarter of a century. Time after time they have successfully resisted the efforts of embattled American producers and jobholders to encourage real reciprocity in our international commerce.

Another instance of this one-sided give-and-take—we give and they take—came to light this week in the pages of two different newspapers.

The New York Times, long-time advocate of freer trade, reported the tremendous boom in the transitor radio industry in Japan. Exports this year will be more than doubled over 1958, the Times disclosed, and no less than 60 percent of the 4 million transitor sets to be shipped abroad by the Japanese will land in the United States.

Japan's next biggest customer will receive 10 percent of total exports, or about one-sixth as many as are crowded into the U.S. market.

That is half of the story. The other half appears on the pages of the Journal of Commerce, another booster of freer trade. There we learn that the United States plans to talk once again with the Japanese about their discrimination against goods from the dollar area.

The press report goes on to list those products from the dollar area that are denied automatic import license approval. The 10 items on the list include lard, cattle, hides, beef tallow, soy beans, pig iron, and steel, and copper scrap.

Besides that, says the news story, the Japanese discriminate against automobiles made in the United States in favor of small cars manufactured in Europe.

This, of course, illustrates only a single instance of bogus reciprocity in our foreign trade. There are numerous others everywhere we look. The British Prime Minister, in a televised conversation with the President of the United States, appealed for more lenient treatment of British woolen imports, implying to millions of viewers that the United States had quite a way to go to match Britain's liberal trade outlook.

The Prime Minister did not say "ease up on our woolens and we will ease up on your automobiles or electrical equipment." He did not suggest "give our woolen manufacturers a break and we will liberalize our token import plan." In short, he did not say "give us something and we will give you something in return." Not at all. He simply said, politely, "give us something."

Australia offers another case study of bogus reciprocity in action.

In 2 years, 1956 to 1958, the Australians increased their shipments of mutton to the American market by thirtyfold—from a trifle more than 300,000 pounds to more than 14 million pounds. And in the first 6 months of 1959 these imports jumped to 23 million pounds.

Two years ago Australia sent us less than 6 million pounds of beef and veal. Last year these shipments reached 17 million pounds, and in the first half of 1959, they rose to a staggering 83 million pounds.

But what is happening in Australia's domestic market? One development of certain interest to American industry is the appeal of Australian producers of internal combustion engines for a protective tariff.

Engines and engine parts, it seems, are the only parts of motor vehicles which are not now favored by import duties. Australian producers are anxious to remedy this alleged defect. They want a 42½ percent tariff on imported engines and engine parts—but that would apply only to the United States and other countries outside of the Commonwealth preferential tariff system. Nations inside the Commonwealth family would only have to pay a 35 percent tariff to place their engines in the Australian market.

No one knows better than those who recognize its false implications what an effective word "reciprocal" really is. It is rich in meaning; it raises powerful images of faith and trust and mutual responsibility; it is the Golden Rule at work in international relations.

And, sad to say, it represents a picture of foreign trade as illusory, as misleading, as unfair to American industry and labor, as if the entire issue had been distorted and sentimentalized and glamorized in a Hollywood scenario.

Our Government is now making preparations to take part in the next multilateral tariff conference to be sponsored by GATT.

By preparing to take part, I mean specifically that the Government is scanning American industry for products on which to offer new tariff concessions. Experts in the State Department, the Commerce Department, the Agriculture Department, the Tariff Commission, and other agencies are working to put together our country's official bargaining list—some choose to call it, on the basis of painful past experience, the sacrificial offering list.

Nevertheless, this is a highly appropriate time to urge those who are responsible for these negotiations, as well as for the preparatory research that is already underway, to spend some time reexamining this question of reciprocity.

A bargaining list is one thing; what our negotiators do with it when they sit down with representatives of other nations is something else. As long as we have committeed ourselves to the disadvantages of multilateral negotiation, let us try to make the best of it. Let our negotiators insist on payment in kind; for one thing, let us stop extending outright tariff reductions in return for somebody else's promise that they will not raise their tariffs on our products.

In my opinion, this practice of granting tariff concessions in return for the other fellow's agreement to stand pat is tantamount to saying, "We will give you something if you promise not to take something away from us that we already have." It is like giving away your car in order to persuade the other fellow not to raise the price of the house he is going to sell you.

Yet, this is exactly what we have done in previous negotiations. Perhaps we have learned our lesson. For the sake of our American economy, I most certainly hope so.

Miracle on Capitol Hill

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. YOUNGER. Mr. Speaker, the fact that the Washington Post and Times Herald has put its stamp of approval on the conference report of the Landrum-Griffin labor reform bill certainly places a liberal tinge on this piece of legislation, because surely no one who has read the editorials of this newspaper over a period of time could possibly classify the editorial policy as conservative. The following editorial was published in the September 4, 1959, issue:

MIRACLE ON CAPITOL HILL

The acid test of the Labor Reform Act of 1959, now apparently close to enactment, will come in its application. No one can be certain at this time precisely what the effect of its numerous, complicated, and varied provisions will be. But in terms of objectives, Congress has done remarkably well. Indeed, if the conference bill which was approved by the Senate yesterday had been laid before Congress last January most observers would have said that only a miracle could bring about its enactment.

In many instances the conferees took the best of both the Kennedy-Ervin bill passed by the Senate and the Landrum-Griffin bill passed by the House, and in a few cases it borrowed from other bills for improvement of the final product. An example is the compromise on the no man's land in which labor-management relationships have been beyond the reach of any government. In deference to the House, State agencies will be allowed to handle cases that the National Labor Relations Board does not take. In deference to the Senate, the NLRB will continue to exercise all the jurisdiction it now has, and the acceptance of a provision from the House Labor Committee bill will enable the Board to handle many more cases by decentralizing its supervision over elections.

The conferees threw out one of the worst provisions of the Landrum-Griffin bill—that forbidding organizational picketing unless the union could prove that it had the support of 30 percent of the employees. But it applied some other severe restraints to organizational picketing, and these may prove the least defensible part of the bill. A union may picket for organizational purposes for a reasonable period of not more than 30 days without calling for a representation election. But the employer, nonunion employees, or a rival union may call for an election at any time after the picketing begins; the Board will have to hold an election forthwith, and if the picketing union should be defeated it could not resume its organizational picketing operations for a year. In practice this may place an overly severe handicap on labor organization efforts. It is important to note, however, that unions are left free to picket for the purpose of informing the public about labor conditions, so long as they do not cut off service deliveries to the picketed plant.

The ban on secondary boycotts was substantially tightened, as it should have been, with a proviso protecting agreements in the garment industry against piecework by nonunion subcontractors and a similar arrangement for unions in the construction industry. Prehire agreements in the building trades were legalized. Another notable achievement was the elimination of the ill-advised provision intended to authorize suits against unions indulging in organizational picketing.

When this generally moderate disposition of the most controversial issues in labor legislation is added to the constructive provisions designed to compel unions to manage their finances honestly, to respect the rights of their members, and to employ democratic procedures, the bill is an achievement of the first order. It would, of course, be a mistake to view the bill as a weapon to get James R. Hoffa; instead, the measure is a broad reform effort aimed at abuses which go far beyond the Teamsters. No doubt some of its voluminous provisions will have to be modified as time goes on, but we surmise that most of it will ultimately meet with approval by union members as well as the public. Labor-management-Government relations at last appear to have reached a state of maturity.

Budgetary Gymnastics

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. GEORGE. Mr. Speaker, the no-new-start policy on flood-control and water-conservation projects was inaugurated by the old guard Republican administration in order to base a campaign issue on a balanced budget.

The veto of the public works appropriation bill was part of this plan. Since the Republican Party took over the White House, many bills have been vetoed and each one has been sustained by the Congress. It is quite evident that no measure could have become law over the President's objection. It is still more evident that during the fiscal year ending June 30, 1959, the budget deficit which exceeded $12 billion should be laid directly at the door of the White House, inasmuch as the President could not be compelled by the Congress to accept any law or any program not desired by the Republican administration.

The waste and extravagance, some of which has been uncovered by congressional committees in various branches of the executive department, can by no possible stretch of the imagination be blamed on the Congress.

In order to create a campaign issue, the Republican administration has branded the Democrats in Congress as being "spenders." From the history of the last 6 years, there is no doubt but that had any legislation been disapproved by the President it would not have become law, and only those measures, including supplemental appropriation bills urgently requested by the President, were enacted. Therefore, the deficit of nearly $13 billion can be attributed only to the executive department, which has demonstrated quite clearly to the American people, that it has been wasteful and extravagant. The party in power and the executive officials who belong to that party cannot escape having the term "wasters" applied to them.

Many Members of Congress, because of promises and pressure from the White House, voted to sustain the President's veto against their better judgment. These men were callous in their disregard for the health and economic welfare of the citizens of their districts and States. The sole result of the no-new-start policy is in itself wasteful, because the Army engineers cannot consistently and properly do their job without having new projects on which to begin work before other projects have been completed. In addition, without new starts, the terrific loss suffered by devastating floods may occur and reoccur in many areas throughout the country before the flood-control program is completed.

Further, the economic development of many cities is stifled because of lack of water which cannot be supplied without the erection of huge reservoirs.

One of the leading and probably the strongest of Republican newspapers in the State of Kansas, Mr. Speaker, the Iola Register, recently carried an editorial which recognized the fallacy of the no-new-start program.

Mr. Speaker, I include this editorial as a part of my remarks:

WORKS BILL VETO

Eisenhower's veto of the billion-dollar public works bill upon the score that it includes too many "new starts" on various projects hits right where it hurts.

Every State in the Union has its own pet measures in this catchall bill. Included are everything from huge harbors projects to tiny dams on the Neosho River. Hardly a congressional district in the Nation is lacking some finger in the pie.

Thus many a Congressman and many a newspaper editor now finds himself in an uncomfortable position. He has supported everything else Ike has done to hold down spending and has applauded his other vetoes of spending bills. Can he logically complain now that his own tender toes are stepped on?

Are all of us for economy only so long as it applies to the other fellow?

Well, I can't say that I am surprised at the veto. It is solidly in line with the all-out and thoroughly consistent fight Ike has been making all this term against inflation and overspending in any field.

And he does, of course, have a good point in the fact that while the new starts in this bill involve a relatively few million dollars this first year, they will involve billions before they are completed and will raise the yearly spending rate several hundred millions in just 3 or 4 years.

But there are at least two good questions to be asked in return:

1. Ike asked no new starts last year and this year because the rest of the budget couldn't stand it. Would he ask the same next year and the next? Would there ever be a new start if we waited for the rest of the budget to get in better shape?

2. Couldn't there very well be instances in which it is just as meritorious and just as urgent to start a new project as to complete an old one? Are those of us who have waited 25 years to get the first scratch of work done on the Neosho any less deserving of flood protection than those who got a better break and started their projects 5 years ago?

This could well turn out to be the time when Ike gets a veto overridden for the first time.

Congress is eager to close up shop for a while. House and Senate committees spent weeks and weeks sifting through projects to come out with what they felt was not too much above the President's recommendation—$30 million to be exact.

The idea of starting all over again to whittle the items down to a point that Ike would accept will be utterly repellent. So they will try for an overide first. And it may go over.

If it does, Ike will be happy because he still will have made his point and stuck by his non-inflationary guns. Congress will be happy because their constituents will still each get their little helpings of pork.

And several milion citizens will be happy as they see their pet projects get just a little closer to reality.

Could it be that this is what Ike had in mind all along?

Settlement of Bethlehem Steel Co. Dispute With Shipbuilding Workers Is Vital to Our Country's Defense

EXTENSION OF REMARKS
OF
HON. DANIEL B. BREWSTER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. BREWSTER. Mr. Speaker, my esteemed colleague, the gentleman from Massachusetts [Mr. BURKE] has done the Members of the House of Representatives and the public a signal service by forcefully calling to our attention the present stalemate in contract negotiations between the Bethlehem Steel Co. and the Industrial Union of Marine and Shipbuilding Workers of America, AFL–CIO.

It has been pointed out that the Bethlehem Steel Co. operates 8 shipyards along the Atlantic coast employing some 17,000 men who represent the core of shipbuilding know-how in the eastern United States. One of these yards is located in my district at Sparrows Point, Md., and I, personally, know many of the men employed there who have devoted their entire lives to the shipbuilding industry. The Industrial Union of Marine and Shipbuilding Workers of America, AFL–CIO, is one of the country's most highly respected unions. Its members have proved time and again that they are willing to place our country's strength and well-being above their own economic interest.

The union's contract with Bethlehem Steel expired on July 31, 1959. Prior to that time the union's representatives had begun efforts to negotiate a new collective bargaining agreement with the company. The company has presented the union with demands that the union simply could not accept. Principal among these demands is the threatened elimination of the seniority rights of many highly skilled craftsmen.

I believe that the shipyard workers have given strong evidence of their desire to bargain in good faith. They have proposed that the expired agreement be extended for a brief period in order that negotiations could continue. This offer was refused by the company. The union then offered to submit both the company's demands and the union's proposals to arbitration. This offer was also rejected by the company. The union members have further shown their good faith by continuing on the job despite the fact they do not have a contract.

This is particularly significant because in many of its yards Bethlehem shipbuilding is engaged in vitally important work for the U.S. Navy. At this time Bethlehem shipyards are building the nuclear missile carrier *Long Beach* and the nuclear frigate *Bainbridge*. At the same time one of its yards is converting the missile firing cruiser *Springfield*. We simply cannot afford to lose any more ground in our efforts to match and surpass the growing Soviet military machine.

I call upon both labor and management to join in full and open collective bargaining in keeping with our established tradition of fair play. It has been suggested that the House Armed Services Committee's subcommittee on defense activities conduct an immediate factfinding investigation. There is ample precedent for this step because the same subcommittee investigated a similar situation in 1954. The previous investigation produced favorable results and should the present situation continue, I, as a member of the Armed Services Committee, will support the request for committee action.

I am further concerned by this situation because recently two of our Atlantic coast shipbuilding concerns lost sizable contracts to California shipbuilders. These contracts were lost because of an unfair and artificial 6 percent advantage given California firms by an archaic section of the National Maritime Act. I have introduced H.R. 8176, which will repeal this unfair clause. If the east coast firms are to compete successfully with other areas, with or without this unfair advantage presently enjoyed by some, we must have fair and stable labor-management relations.

We must also consider the absolute necessity of maintaining our pool of highly skilled and experienced shipyard workers. The collective know-how of these men is vital to our national security. The dissipation and eventual loss of these special skills could have a far-reaching effect on our country's ability to produce today's nuclear vessels.

Walter Lee

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. ROGERS of Florida. Mr. Speaker, it was with deep regret that we learned of the upcoming retirement of Walter Lee, of the Judiciary Committee staff, as we feel the Capitol will lose the services of one of its most able and dedicated aides.

By his friendly and sympathetic handling of every request, Walter Lee has established a guide of service for many to follow. He has always been most helpful to everyone who has found the need for information and advice from the Judiciary Committee.

I am sure that Walter will enjoy some time for rest and leisure, well earned by his many years of fine service here at the House of Representatives, but we will all miss his prompt and helpful assistance which has often been taken for granted because of his consistent efforts to give his full attention to every case and request to him.

American Legion Supports White Fleet

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. EDMONDSON. Mr. Speaker, support continues to mount for the proposal to establish a Great White Fleet of mercy ships to carry American surplus foods, medical aid, and supplies to disaster and distress areas throughout the world. This bold new concept for peace, which is the idea of an Oklahoma naval officer, Comdr. Frank A. Manson who is now stationed in London, has received overwhelming endorsement from thousands of people and many and varied organizations in the United States. I also have received in my office letters from persons in other countries commenting favorably on this Manson plan.

Another strong and powerful voice in the United States which recently has endorsed this plan is the American Legion, which at its national convention assembled at Minneapolis, Minn., August 24 to 27, 1959, adopted a resolution in support of the Great White Fleet proposal. The Legion not only endorsed the principle of enacting legislation for this Great White Fleet in the Congress of the United States, but it also recommended public support of this proposal by the people of this Nation.

Mr. Speaker, I should like to insert in the RECORD a copy of this resolution:

RESOLUTION 641

Resolution in support of the Great White Fleet proposal

Whereas, a fundamental principle of the American Legion, as set forth in the preamble to the constitution is "to promote peace and good will on earth"; and

Whereas a proposal recently made at the War College by Comdr. Frank Manson, U.S.N. to create and maintain a new Great White Fleet; an unarmed mercy task force under the American flag, manned by Navy personnel, to pursue a definite intinerary around the world; and

Whereas this Great White Fleet during its stops of 2 or 3 weeks each at major ports (particularly in underprivileged countries) would place its hospital, medical and educational facilities at the disposal of the people of that country; demonstrating and training the doctors and nurses of that nation in our most advanced medical techniques; and

Whereas this Great White Fleet would be available at all times for immediate diversion to any major disaster area about the

world where its facilities might be helpful; and

Whereas the estimated cost of $30 million for the operation and maintenance of this Great White Fleet would be far less than has been demonstrably wasted in abortive foreign aid projects; and

Whereas such a Great White Fleet would be a living, daily symbol throughout the world of the sincere desire of the people and the Government of these United States of American for peace, good will and mutual understanding among all men: Therefore be it

Resolved; That the national convention of the American Legion assembled in Minneapolis, Minn., August 24–27, 1959, endorses the principle of enabling legislation for this Great White Fleet in the Congress of these United States; and be it further

Resolved; That the American Legion recommends public support of this proposal by the people of this Nation.

Sustaining the Veto

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. YOUNGER. Mr. Speaker, in the Washington Evening Star of September 3, 1959, there appeared an editorial and an article by David Lawrence on the Presidential veto of the public works appropriation which are deserving of being preserved in connection with this historic vote wherein the veto was sustained:

WINNING THE BIG ONE

The 1-vote margin by which the House has upheld the President's veto of the public works bill constitutes the closest of close calls. Nonetheless, it was a big win for Mr. Eisenhower in his touch-and-go battle to curb inflation by clamping down on unnecessary Federal spending.

It was a big win because nothing is dearer to a Congressman's heart than a public works bill—sometimes known as a pork barrel bill. There is something in it for the folks back home in almost every Congressman's district, and in this circumstance it is no easy thing to vote to sustain a veto. But the essential votes were there when the showdown came, and the logical inference is that the President, having won this fight, will be able to use his veto power successfully against any other unwise spending bills which may come before him. If this proves to be the case, there will be renewed hope for the future buying power of the dollar.

Mr. Eisenhower's objection to the bill centered on the fact that it carried 67 unbudgeted projects—projects which the administration had not recommended and for which no provision had been made in the budget. It is true that these projects would have cost only $50 million, a relatively small sum, in this fiscal year. But their ultimate cost would have been more than $800 million.

It will be said, we suppose, that the President's attitude is shortsighted, that long-range national development is being sacrificed in the interests of a misguided short-term economy. We do not believe that this is true. Without any of the unbudgeted items, fiscal 1960 expenditures for public works will total $1.1 billion—an all-time high. Furthermore, according to the President, Congress in the past 4 years has written 200 unbudgeted projects into public works bills, and these, in the end, will cost nearly $3.8 billion. Why add 67 more when they are not essential and when they would boost the ultimate unbudgeted costs by another $800 million?

As Mr. Eisenhower indicated in his veto message, these 67 unbudgeted projects represent desirable, as distinguished from necessary, undertakings. At the proper time provision can be made for them in the budget and Congress can begin appropriating the necessary funds. But these things should be planned in a responsible and orderly way. It is time to put a stop to the willy-nilly approach, and we are glad the President has been able to do it.

SUSTAINING THE VETO: REPUBLICANS IN CONGRESS ARE SEEN DEVOTED TO PRESIDENT'S LEADERSHIP

(By David Lawrence)

It's a good thing that, in the midst of his fateful trip to European capitals, President Eisenhower has not been confronted with unfavorable news from Congress. For, had the President's veto of the $1 billion public works bill been overridden, the people of Europe, accustomed as they are to a parliamentary system of government, might have construed the rollcall as a formal vote of lack of confidence in Mr. Eisenhower. This could have had a frustrating effect on on the President's mission abroad, where majority vote against the party in power customarily means a change in executive leadership.

Little consideration, on the other hand, was given here to this point by most members of Congress in their voting on the merits of the public works bill that the President had vetoed. Since none of Mr. Eisenhower's previous 143 vetoes have been overridden by the necessary two-thirds vote of both Houses, dramatic attention was centered on the final rollcall.

The margin of one vote by which the veto was sustained may or may not reflect the maneuvers that went on inside both parties. For the issue really turned on what the folks back home would say in those districts where waterpower projects and other Federal construction proposals had been promoted.

Every Member of Congress who had urged Federal appropriations that would bring about the building of public works projects in his own district naturally was on the spot. If he voted against the bill, there was the chance that political capital would be made out of this in the next election by a rival candidate. If the Member happened to be a Republican, he had to consider the effect on his constituency, especially on the Republican voters, if he deserted the leadership of the President.

Some Republicans, but only a handful, did vote to override the veto. Only a small group of Democrats deserted their party leadership in siding with the President. The issue was decided primarily by a straight party vote of Republicans and Democrats, respectively. The small number who crossed party lines really wielded the balance of power. Maybe if there had been any way to determine in advance exactly how the voting would go, the defenders of the bill might have won out. The last-minute changes indicated that nobody was quite sure of the outcome.

As it was, there were all sorts of stories being circulated among the Members to put them in a quandary. Thus, the vetoed bill contained appropriations for 67 new projects which the President said had not been provided for by the Budget Bureau or checked on by the Army engineers, who have for the most part the responsibility for their construction. One rumor was that, if the measure became law, the administration might have to cut down or delay some of the projects begun in previous years in order to hold down the total sum spent. This touched off a wave of apprehension among those Members of Congress who have a deep-seated interest in projects already authorized but not yet completed. It seemed to many Members that it would be better to have new legislation passed that would specifically take care of projects already underway without initiating additional projects. This was the main point in the President's policy in his veto.

Mr. Eisenhower has adhered to basic principles in his relations with Congress, and he is getting the support of the country because of the sound approach he has taken. He is not opposed to necessary construction of public works projects. But he feels that due consideration must be given to overall budget requirements. Usually local projects are enthusiastically recommended by the people in a given district, and a Congressman feels he has to go along with the community's wishes. But the President has to look at things from a national viewpoint.

The fact that nearly two-thirds of the membership of the House of Representatives wanted to override the veto indicates how intense is the pressure for what has often been called the pork barrel legislation. As the projects emerge from committee, a Congressman often feels he has to support the projects in another Member's district in order to get support for his own.

It was surprising, indeed, to find the veto sustained, but it was largely due to the devotion of the Republican Party in Congress to the President's leadership. Had the Republicans given way to selfish local interests, the veto would easily have been overridden.

The final test, sustaining the President's leadership, cannot but have a favorable effect on the Republican Party's position in the country, enhancing its prestige as a responsible party which is anxious to keep the budget in balance and to maintain the Nation's finances on a sound basis, as against extravagant spending and other inflationary policies.

Opposes Display of Russian Flag During Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. John Ayre, secretary, Luzerne County (Pa.) Executive Association of the Junior Order United American Mechanics, which organization goes on record as opposing the displaying, in any form, the Russian communistic flag during the upcoming visit to this country of Nikita Khrushchev:

JUNIOR O.U.A.M. EXECUTIVE ASSOCIATION,
Wilkes-Barre, Pa., September 2, 1959.

Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

HONORABLE SIR: The Junior Order United American Mechanics being opposed to communism, in any form, in the United States; the Luzerne County Executive Association of the Junior Order United American Mechanics, strenuously oppose the displaying, in any form, the Russian communistic flag

in the United States, before, during, or after the visit of Nikita Khrushchev, to this country, and we therefore ask your support in helping to keep said flag from being displayed.

Yours respectfully,

JOHN AYRE,
Secretary.

Vice Adm. Hyman G. Rickover, USN, Addresses the 60th National Convention of the Veterans of Foreign Wars of the United States, Los Angeles, Calif., September 3, 1959

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. VAN ZANDT. Mr. Speaker, some 20,000 delegates attending the 60th national convention of the Veterans of Foreign Wars of the United States at Los Angeles this week gave their approval to the Navy's nuclear propulsion program as outlined in an address delivered by Vice Adm. Hyman G. Rickover, U.S. Navy.

Honoring the father of the Navy's nuclear propulsion program, the VFW presented to Vice Admiral Rickover a gold medal award of merit and citation in recognition of his brilliant and determined leadership in the development of a nuclear task force as part of our national defense.

Vice Admiral Rickover's address follows:

OUR NAVAL REVOLUTION

I greatly appreciate the honor which you have bestowed upon me. As I have said many times before, no large project in this scientific and technological age can be the work of one man alone. I am sure you all realize that in honoring me you are really honoring the men and women who work with me in the laboratories, in the factories, in the shipyards, as well as in my own organization. I accept the award in that spirit and thank you in their behalf as well as my own.

The Veterans of Foreign Wars has always taken a keen interest in developments which affect our national strength. It is important in a democracy that you do so. Our country can be no stronger than the people, acting through the Congress, make their desires known. Your organization, by keeping informed on important national issues, plays an essential role in this process. Your past national commander, Congressman JAMES E. VAN ZANDT, of Pennsylvania, has continued to be active in both the Veterans of Foreign Wars and the Naval Reserve. He went directly from the Navy to the Joint Congressional Committee on Atomic Energy in 1946, when the Atomic Energy Commission was just being set up to take over from the Army's Manhattan project. He has played a leading role on that committee during the entire 13 years since that time, and I can assure you that his firthand knowledge and interest in military and atomic matters has been an important asset to our country. He has unfailingly backed the naval nuclear propulsion program and deserves a great deal of personal credit for it. He also participated actively in a valuable study which the Joint Committee made in 1956 on the education and training of scientists, engineers, and technicians. This study clearly demonstrated the gravity of our educational situation compared with that of Western Europe and of Russia.

I would like to review for you the status and plans of the Navy's nuclear propulsion program on which the Atomic Energy Commission and the Navy Department have been engaged for 12 years. This program has been undertaken during a period when great changes are commonplace. To understand what has happened and what may be expected in the future, it is useful to establish a scale to measure the current rate of technological change.

We often say that the steamship revolutionized naval warfare. But because the conversion of the world's navies from sail to steam took the better part of a century, the changes wrought were more evolutionary in character than they were revolutionary. The impact of the steamship was therefore less drastic than if it had taken place more rapidly.

The change that is taking place in our Navy today, however—the change from oil to nuclear power—is not only revolutionary in concept, it is also revolutionary in impact.

The first serious proposal to build an atomic powered submarine was made in 1949. Four and one-half years later the land-based prototype of the submarine was operating. A year and a half after that the *Nautilus* was at sea, and barely 90 days later she was accepted by the fleet as a combat-ready ship.

Now, less than 5 years after the *Nautilus* first went to sea, we are embarked upon a nuclear shipbuilding program embracing eight different types of propulsion plants for a variety of submarine and surface ship designs. We will have plants to power ships from the small hunter-killer submarine, the *Tullibee*, up to the nuclear aircraft carrier *Enterprise*, propelled by eight powerful reactors which will develop 280,000 shaft horsepower. Our present nuclear shipbuilding program consists of 37 submarines and three surface vessels either completed and operating, under construction, or authorized for construction.

Within a few years we should have at sea the first nuclear powered task force—complete from submarines to carriers. Thus, a technological and military revolution, which in the past would have taken the greater part of a century, will be essentially completed in about a decade.

No conventional submarine has ever run submerged at its top speed for more than 1 hour. By contrast, the nuclear powered *Seawolf* on a single cruise ran fully submerged for 60 days, covering a distance of 13,761 miles. She then surfaced only because she had completed her mission. The *Sargo*, early this year, returned from a single cruise of 19,000 miles, of which 18,880 miles were fully submerged; only 120 miles were on the surface, primarily for entering and leaving port. Further, the *Skipjack* is capable of maintaining indefinitely a speed few ships of any kind can match. And just how well our nuclear submarines are becoming at home in the ocean depths is evidenced by the fact that the *Nautilus*, in her 4½-year life, has spent a total of over 1 full year completely submerged.

Our nuclear submarines have done far more than demonstrate the basic capability of operating submerged at high speeds and for long periods of time.

Even as late as 1950, when the *Nautilus* land prototype was being built, an official publication was being distributed in Washington which contained the following statement: "Development of the transarctic submarine remains in the realm of fantasy."

Now, the *Nautilus* and the *Skate* have thoroughly proved that the transarctic submarine is a matter of reality. They have opened up a fourth large ocean area for the use of our Navy.

The nuclear submarine is particularly adapted to the missile age. Soon there will be in operation the *Halibut*, a nuclear submarine capable of firing Regulus type air-breathing missiles, and the *George Washington*, first of our Polaris-firing submarines.

Armed with the Polaris missile, these underwater satellites could launch their attack from far out in the Atlantic, the Pacific, or the Arctic Ocean. They could be placed anywhere within hundreds of miles of their targets. They could be dispersed over literally millions of square miles of ocean.

The problem of locating and destroying such a underseas fleet will be tremendous. The enemy would be in the position of a man trying to find a black cat on a vast and empty plain on a moonless and starless night. An aggressor would know that if he dared to attack us he, himself, would inevitably be destroyed.

We are beginning to see what nuclear power can do for the submarine. For the surface ship it will provide virtually unlimited cruising radius. Nuclear ships will not have to shuttle back and forth to shore bases for more oil, or require an endless chain of tankers. Nuclear power multiplies about 20 times the distance an aircraft carrier can travel at full speed without refueling, and about 50 times the distance a guided missile destroyer can travel at full speed without refueling. This dividend we can predict. However, as was the case for nuclear submarines, we will be unable to fully appreciate, until we actually operate these surface ships, the meaning of this dividend in terms of increased military capabilities.

Our naval revolution is proceeding quickly. But since returning from the Soviet Union I am more convinced than ever that we cannot afford to relax. The Soviets have the second largest naval fleet in the world. They have 450 submarines compared to our 120. They have done a good job of building an atomic powered icebreaker. In challenging our command of the seas they are proceeding as in all their other endeavors—deadly serious in attitude, unrelenting in aim, and energetic in achievement.

Since World War II the Soviets have built 350 new submarines to our 24. At the outbreak of World War II Germany had but 57 submarines and of these only 22 were oceangoing. Before the German submarine fleet could be destroyed 14 million tons of allied shipping sank to the bottom of the seas. It has been estimated that 20 percent of the entire allied war effort was tied up in antisubmarine warfare. It should be a sobering thought to all of us that the Russian submarine fleet is now 10 times as large as was the German submarine force at the beginning of World War II. The Soviets have more submarines today than the Germans had at any single time during that war.

Too often we think of this huge fleet of submarines merely in terms of ships that might someday lie in wait to sink our merchant and naval shipping. It is common knowledge that the Soviets can now launch missiles with ranges of at least 200 miles from their submarines. It would take but a single such missile accurately placed to cripple any one of our seaboard cities. Before too long missiles from submarines will reach any target in the United States. In my opinion, the best protection of our shores against missile-firing enemy submarines is in setting up submerged barriers of our own nuclear-powered attack submarines which can destroy enemy submarines menacing our coasts.

Fortunately we are, at the moment, ahead of the Soviets in the development of the nuclear-powered submarine. And, it is by far the best antisubmarine weapon we have today. We must make certain that we remain ahead with this antisubmarine wea-

pon system and that we build a sufficient number of these attack submarines to combat the Soviet submarine menace.

The nuclear submarine is a ship that requires no armament for its own defense. The ocean acts as its protecting screen and its armor. As a result, the submarine can be made all weapon, rather than part weapon and part shield. Therefore each of these nuclear submarines constitutes a complete task force in itself.

The work ahead is full of challenge for us. There is much to do to complete the development of an industry to support an expanding nuclear Navy. Our new nuclear shipbuilding capability is just now being tried out. A number of shipyards which have begun construction of nuclear ships have yet to prove that they can rise to the stringent standards of quality and excellence which are a necessity for nuclear power.

We have just scratched the surface in nuclear technology. The *Nautilus* traveled 62,560 miles on her first reactor core of which over half were while fully submerged. To duplicate this performance, a conventionally powered submarine having the size and the power of the *Nautilus* would have required over 2 million gallons of fuel oil. It would take a train of tank cars over a mile and a half long to carry this amount of fuel. On her second reactor core, the *Nautilus* steamed a total of 91,324 miles of which 85 percent was fully submerged. We are now installing in her a third reactor core that may take her three times as far as her first core. We are working on designs which we hope will result in even further improvements in performance and reduction in cost.

One final thought I would leave with you: the rapidity of change in our modern world. There are many examples, but two, one industrial and one military, stand out in the context of what I have said.

The industrial one is Near East oil. In 1901 an Englishman named D'Arcy obtained a concession to drill for oil in Persia. Everyone considered his venture to be highly speculative, and events soon proved this to be true. By 1908, after many unsuccessful drillings his resources were exhausted and it had been decided to discontinue further drilling. Just then oil was struck on the site of an ancient fire temple.

It was this chance discovery which, in the short span of 50 years, had a more profound effect on the industrial life of Europe and on world international affairs than had perhaps the events of any similar period in modern history. The Suez crisis of 3 years ago has amply demonstrated this.

The second example, the military one, is our own Air Force. On August 1, 1907, the War Department created an Aeronautical Division under the chief signal officer. This division consisted of one officer and two enlisted men. Only 40 years later that three-man organization had expanded to become the predominant military arm of the United States. Never before in all history has so tremendous a military change taken place in so short a time.

The lesson from these two examples is plain. We must expect even more rapid changes and displacements in the future. Predominance in any field today is no guarantee of position tomorrow. In light of the ever-spiraling scientific and technological revolution we must be alert; we must anticipate change; we must recognize that no institution is so hallowed that it must not be examined periodically; we must ever bear in mind that the law of life for organizations as well as for nations is: "Adapt or perish."

How Bond Rates Affect You

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. YOUNGER. Mr. Speaker, one of the most informative and effective articles which has come to my attention on the subject of Government bond interest rates is the following editorial from the September 7, 1959, issue of Life magazine:

HOW BOND RATES AFFECT YOU

Nobody in his right mind thinks that Congress would ever imperil the national defense by refusing to pay the Pentagon's bills. And if it did so there would be such an outburst of indignation that Congress would get cracking.

But the reverse of this is happening. The management of the public debt is also of vital concern. Yet Congress is refusing to give the Treasury the powers it needs to manage the public debt in a sound and orderly way. There has been no outburst of public indignation because the issue is difficult for laymen to grasp.

They had better grasp it, for it affects the value of their savings and the security of their future. By its failure to act, Congress is driving up interest rates and adding to inflationary pressures. Here are the simple facts:

The dead hand of the past—a World War I measure passed in 1918—puts a ceiling of 4¼ percent on long-term Government bonds and savings bonds. It is these bonds, bought by insurance companies, trust funds and the savings of individuals, which should carry as much as possible of the public debt because they check inflation by taking savings out of the scramble for goods.

This 41-year-old ceiling on bond interest makes it increasingly harder for the Treasury to sell new bonds. Institutions and individuals, since they can get better rates from other securities, refuse to buy them. Since 1946, for example, life insurance companies have reduced their holdings of Government bonds from 45 percent of their assets to a mere 7 percent. Many individuals cash in their savings bonds.

Instead of putting out long-term bonds with interest rates high enough to make them marketable, the Treasury has been forced to raise the needed money by "short-term paper" (e.g., 91-day notes), which are bought chiefly by commercial banks. Since they are virtually the same thing as cash, these notes can be used by the banks to expand their loans. They can lend $5 of new money for each $1 of Treasury notes they own. This has an immediate inflationary effect.

Furthermore, this "monetizing" of the debt tends to drive up interest rates as the Government competes with other borrowers for scarce money. In the last fortnight, for example, the rate on 91-day notes has just risen to 3.6 percent, the highest level since the bank crisis of 1933. If this trend continues, even short-term interest rates may soon exceed the 4¼ percent ceiling on long-term bonds. This freakish result is made more likely by Speaker RAYBURN'S announcement last week that Congress won't act this year on the President's reiterated request for lifting the interest ceiling. Such inaction undermines the dollar by raising doubts abroad as to its soundness and damages the Government's credit, just as it does the economy itself.

Some leaders are urging the President, on his return, to take the issue to the voters as he did on labor reform. If Congress adjourns without action, the President may call it back in special session. But voters themselves can help speed the necessary action by letting their Congressmen know that they back the President. He has stated the issue very clearly:

"The vital interests of all Americans are at stake because excessive reliance on short-term financing can have grave consequences for the purchasing power of the dollar. * * * Let me state as plainly as I can that this is not legislation to increase interest rates. * * * We always seek to borrow as cheaply as we can. * * * To prohibit the Treasury from paying the market price for long-term money is just as impracticable as telling the Defense Department that it cannot pay the fair market price for a piece of equipment. The result would be the same in either case: the Government could not get what it needs."

Tribute to Commodore A. J. Spriggs, Adviser to the Director, Electronics Division, Business and Defense Services Administration

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. JACKSON. Mr. Speaker, during the past 10 months, Commodore A. J. Spriggs, vice president in charge of eastern operations, Packard-Bell Electronics, Inc., Los Angeles, Calif., has served as w.o.c. adviser to the Director of the Electronics Division, providing technical advice on electronics industrial mobilization activities of the Business and Defense Services Administration. A career of service in the U.S. Navy in electronics and communications, and a period of years of experience in responsible positions in the electronics industries formed an ideal background for this assignment. Commodore Spriggs is a graduate of the U.S. Naval Academy, subsequently, he completed a year of graduate work at the Postgraduate School there, and earned an M.S. degree in radio engineering at the graduate school, Yale University. Commodore Spriggs is a senior member, Institute of Radio Engineers, a member of the American Society of Naval Engineers, the American Ordnance Association, the American Radio Relay League, and other professional groups. He is married and on completion of his tour of duty will reside in Beverly Hills, Calif.

A study by the Electronics Division of available data revealed a serious lack of adequate information on the operations of that segment of the electronics industries group which produces radar, sonar, missile guidance devices, communications equipment and the like. Since the defense of our country is dependent upon adequate capacity to produce these devices, it was determined that a survey of the manufacturing establishments engaged in producing them in 1958 be initiated.

Commodore Spriggs performed with distinction the assignment of developing a program for surveying the commercial, industrial, and military electronics and equipment industry. He secured the concurrence of the Department of Defense and other interested Government agencies as well as a cross-section of industry representatives in his plans for the most comprehensive survey of its kind ever undertaken by the Government. This involved the development of a schedule for reporting, together with comprehensive instructions, to elicit information on shipments, military backlogs, and in some cases factory inventories, for 64 separate product categories of commercial, industrial, and military electronics equipment from some 2,000 plants.

When the survey is completed, a study will be prepared and disseminated to the Office of Civil and Defense Mobilization and others concerned with mobilization readiness to form the basis for policy decisions. The results of the survey will also be published for the benefit of management people in the electronics industries. Because of its great commodity detail it will be an especially valuable tool for management's use in planning expansions of production capacity, for components as well as equipment.

Among his other major achievements are the consultation with officials on OCDM on programs relating to emergency radio communications during a mobilization period and consultation with other Government agencies and members of the electronic industries on needed revisions of order M-17 and and direction 4 to BDSA regulation No. 2. These orders have to do with deliveries of products needed to insure meeting defense requirements and the equitable distribution of the defense load on producers of certain electronic products.

Upon completion of his full-time duty status in the Electronics Division, Commodore Spriggs joined the ranks of the National Defense Executive Reserve. With the concurrence of officials of his company, he has agreed to serve if needed in the adminstration of electronics production programs during mobilization.

Commendation is due the officials of Packard-Bell Electronics for their fine contribution to the defense effort in making it possible for Commodore Spriggs to serve full time in the mobilization readiness work of the Electronic Division for more than 10 months.

On August 25, H. Herbert Hughes, Acting Administrator of the Business and Defense Services Administration, presented to Commodore Spriggs on behalf of Secretary of Commerce Frederick H. Mueller a certificate of merit in recognition of his outstanding Government service during the past 10 months. In addition, the Secretary gave Commodore Spriggs a personal letter of congratulations. Mr. Hughes also tendered to Commodore Spriggs a flag which Congressman DONALD L. JACKSON had caused to be flown over the Capitol as a token of recognition of his service to the Nation, the Business and Defense Services Administration, and the Department of Commerce. Mr. Hughes also presented a letter from BDSA Administrator H. B. McCoy expressing appreciation for his services.

Lesson for Moscow

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 27, 1959

Mr. DULSKI. Mr. Speaker, recently four boys left the United States for Russia to be returned to their parents' custody. The Illinois court's decision releasing these boys is noteworthy and, under leave to extend my remarks, I wish to include an editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on September 1, 1959.

LESSON FOR MOSCOW

We wish the Moscow newspapers would print the full text of a decision by an Illinois appellate court's chief justice releasing four boys to the custody of their Russian parents who returned to Moscow. But we doubt that they have or will.

Justice Thomas E. Kluczynski overruled a previous decision that the boys could not be restored to their parents until there was proof that they would have a proper home in Russia. Taking note of their desire to be reunited with their parents, the judge spelled out a humane concept of the sacredness of family ties that the Kremlin might well ponder.

"Although we feel our principles and philosophies are better for the civilized, peace-loving world," said the judge, "it is not in keeping with the American principles that we should force or induce by duress belief in them. The court cannot base its opinion * * * upon the proposition that the natural parents, possessed of a sacred and legally recognized right to the care and custody of their children, have embraced a creed not in keeping with our own."

If there were any reporters for Tass or Pravda present in the court, they no doubt skipped the judge's remarks after a Soviet Embassy secretary thanked him for his "human act." The philosophy that guided him in his decision, said Justice Kluczynski, represents a respect for family ties that the Soviet leaders should adopt in their treatment of the thousands of prisoners of war held in slave labor camps despite solemn promises that they would be restored to their homeland. The longer they are separated from their families, said the judge, "the more serious becomes the problem."

Veto Happy

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. GEORGE. Mr. Speaker, considerable criticism has been expressed by independent and Republican newspapers as to the President's veto of the public-works appropriation bill.

Many leading economists and conservationists felt that the no-new-start policy in connection with flood-control and water-conservation programs was shortsighted, expensive, and perilous.

An editorial which appeared in the Kansas City Star, a newspaper which is seldom critical of the Republican administration, expressed on Monday, August 31, 1959, the concensus of the great majority of people who reside in the Midwest area. It will be noted that the Star points out the Congress is not expected to surrender its responsibility to the Bureau of the Budget; neither is the Congress expected to surrender its responsibility to the President. But many people throughout the country seem to be under the impression that these responsibilities have already been surrendered to the man in the White House.

Actually, what has happened, government by veto is the order of the day. A veto-happy constitutional lame duck who follows the advice of those least able to counsel is rejecting good sound legislation with reckless abandon.

Progress in flood control and water conservation suffered a terrible setback, Mr. Speaker, by the veto of the President—and when the veto was sustained.

Mr. Speaker, I include the editorial as part of my remarks:

ACTIVE RIVER DEVELOPMENT MUST CONTINUE

The President's veto comes as a shock to the supporters of flood control and water conservation. Maybe some of the projects around the country are open to criticism. We don't know. But as it applies to this part of the country it is a very conservative bill. Nationwide, it adds only $30 million to the Budget Bureau recommendations. The argument is over the total obligation in future years.

It is hard to see this bill as substantially more inflationary in this critical period than the recommendations of the Bureau of the Budget. The question of how much the country should attempt to do at one time is, of course, open to individual judgment. In his veto, the President called on Congress to eliminate all projects that had not been approved by the Budget Bureau. In effect, he implied that the one final authority is the Bureau. On that we can't agree. Congress carries very large responsibilities for the development of the United States.

Today a large part of this country is subject to destruction by floods and withering by drought. Yet the means for protecting itself against floods and for storing the waters of its rivers have been recognized for a generation.

In some areas splendid progress has been made. But until all the major river systems are brought under control the Nation will have to accept prodigious waste. It will have

to bow to destruction by floods. It will watch its most precious resource—water—roll away to the sea. For a great nation to resign itself to such waste would be outrageous.

In the Kaw Valley the river control program is still in an early stage. In the last decade only one reservoir project, Tuttle Creek, has been started. For this basin the river bill proposed only one new start, the Wilson Dam. It is a small one. The Budget Bureau's position would hold back the Kaw River development for years.

Such delays don't save money. They simply delay the time of investment in essential projects. Each year of delay in the Kaw Valley adds a year to the risk of another billion dollar flood. Each year of delay, priceless water flows down the Kaw to be eventually dumped as waste in the Gulf of Mexico.

Opponents of river development like to refer to all appropriation bills as pork barrel. This prejudicial term is a special favorite of some private utilities. Many electric utilities have carried legitimate fear of public power expansion to the extreme of opposing all Federal dams. Not one of the reservoirs planned for the Kaw Valley is intended to produce power but they aroused persistent private power opposition.

We don't doubt that Congress is quite capable of including some unjustified projects. But the overall figures hardly indicate that it is a runaway bill. Certainly the country doesn't expect Congress to surrender its responsibilities to the Bureau of the Budget. By the nature of its work a Budget Bureau, present or future, can't be expected to be a leader in the development of the United States.

The majority leaders of Congress indicate that they will try to override the veto. That seems to be a natural and proper reaction.

Planes for the Marines

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Northern Virginia Sun of Friday, August 28, 1959:

THE PROBLEM OF AIR TRANSPORTATION: PLANES FOR THE MARINES

For the past several weeks, a House Armed Services Subcommittee has been investigating the adequacy of air transportation in the event of a mobilization. This is an excellent idea, particularly in view of the controversy over the point among the military services.

It may be, however, that the Congressmen have the cart before the horse.

Everyone talks about limited war as the worst threat we face at the moment. Shouldn't we prepare, then, for air transport in case of limited war?

We haven't, for example, enough air transportation now to get a battalion of combat ready marines out of the Caribbean in 72 hours, let alone to Europe or Asia where the fights are more likely to come.

The service weekly Navy Times said recently that "senior Marine Corps officers" had told them that the corps could not get troops into the Caribbean as fast today as they did into Lebanon a year ago. The reason given was that the Air Force cannot get the planes together and ready to go as fast as the marines can assemble the troops.

Last summer, the marines got a second battalion into Lebanon in 72 hours. It was mostly a happy combination of circumstances which made this possible. Every available bit of corps air transport was poised at the time to haul Marine Corps reservists to summer training. The planes were diverted to the Lebanon airlift and did the job.

The Marine Corps is designed and trained to fight limited actions over a comparatively short period of time and then turn the job over to units prepared to make a long stand. They establish a beachhead and punch a hole through for the Army. This means a lot of men and supplies in a hurry and fast replenishment. You don't get this when you have to work through a second party, which is the Air Force's part, when it is neither organized for your type of fight nor designed to meet your needs.

There may possibly be one best answer. Why not give the marines the planes and men to fly them so they won't be like the man standing in the rain waiting for a taxi when the need arises? If this isn't feasible, the Air Force might assign some transport squadrons to the corps.

Any other solution is liable to result in a lot of unnecessary casualties on some faraway beachhead.

Passage of Des Plaines Wildlife Area Legislation Vital to Illinois Recreation

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. COLLIER. Mr. Speaker, I would like to bring to the attention of my colleagues an item of legislation, H.R. 3894, which may die in committee in these last few days of the session and upon which action should be taken without further delay.

This bill directs the Army and the General Services Administration to transfer to the State of Illinois approximately 2,400 acres attached to the Joliet Arsenal grounds as wildlife hunting, game preserve, and recreational area adjoining the Des Plaines and Kankakee Rivers. This 2,400 acres should provide not only a wildlife and game preserve but also a fine recreation ground.

The Army, however does not wish to give up any rights to the 1,500 acres south of the present preserve and wants to substitute another area of the present preserve. This substitute area has been carefully inspected and pronounced to be totally unsatisfactory. The Army argues that it needs the other area for military maneuvering purposes. Even without the 4,000 acres in question, the Army would have 39,000 acres for maneuvers. It would seem to me that the Army could do some pretty extensive maneuvering in 39,000 acres.

It would be a shame for Congress to adjourn without concurring with the Senate action on this bill which is not only in the interest of the citizens of Illinois but concerns everyone interested in the preservation of our Nation's public recreational areas.

The Student and His Education: The Compelling Intangibles

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. MACDONALD. Mr. Speaker, I would like to bring to the attention of my colleagues a timely and excellent address by Dr. Edward K. Graham, dean of Boston University's College of Liberal Arts and Graduate School, entitled "The Student and His Education: The Compelling Intangibles."

Dean Graham delivered the address at the plenary session of the 12th annual Student Congress of the United States National Student Association, in Urbana, Ill., on August 24, 1959.

Dean Graham points out that what is needed most in this day and age is a spiritual rebirth in education, as prerequisite to the plans and programs that we are developing for the next decade. He also emphasizes that our colleges and universities have to provide the stimulus, the order of intellectual excitement and the climate of independence that will attract and hold the best minds we have, and keep them stimulated.

Prior to coming to Boston University in 1956, Dean Graham served as chancellor of the Women's College of the University of North Carolina, 1950–56, dean of faculties, Washington University, 1948–50, and assistant to the president, 1937–40, and secretary of the university, 1940–47, of Cornell University. He is a past president of the Association for Higher Education (NEA). I feel his remarks will prove to be mentally stimulating to Members of Congress.

The address follows:

THE STUDENT AND HIS EDUCATIONS THE COMPELLING INTANGIBLES

(By Edward K. Graham)

The general theme of the 12th annual Student Congress, "The Student and His Education: Views and Previews," is most provocative. It could take you almost anywhere. One look at the brilliantly conceived program suggests that it is doing exactly that.

One place where the theme takes us is the irrepressible question: Is the American university man obsolete?

This is a fair enough question. I do not propose to answer it—not now anyway. That is fair enough too. The answer has to come from the American university man.

At high flood tide of World War II, Carl Becker took an incisive look at what we

called, in those days of our innocence, the postwar world. "We cannot recover the past," he said, "but we can, within the limits set by nature and history and our own intelligence and resolution, make the future." He went on to say that we make the future either by default or on purpose, and "since we help to make the future in any case, it is better to make it not by letting things ride, but by having some idea of where things ought to go and doing whatever is possbile to make them go in that direction."

Mr. Becker called the essay in which this quotation appeared, "How new will the better world be?" Prophet that he was, he was suggesting that the postwar world was not going to be particularly new, and that there was considerable doubt that it would be any better, unless somebody tried to do something about it.

In this year of grace, 1959, those of us whose lives are bound up in higher education stand at about the same point that Mr. Baker stood back in 1943. Of course we are not involved in anything resembling a shooting war (except when somebody tries to revise the curriculum), but there are some interesting parallels. There is that awesome phenomenon that Barbara Ward has called "the deafening patter of little feet." The demographers—not to mention colleges and universities—are suffering a traumatic experience as a result of the explosion in the human population. The ornithologists have been puzzled for years by the decline in the stork population. The answer is very simple. The storks are working themselves to death.

There is something inexorable about this whole business of numbers. Looking at the years ahead, there is a temptation to believe that we shall not have our colleges and universities as we know them, but something else. This involves us in the national pastime of postexplosion planning. How many students can we handle? Will there be 3 million or 6 million in college in 1970? What are we going to do about the utilization of resources? Are community colleges the answer? What about Federal aid to education and a national scholarship program? Where did that loyalty oath come from? Where are we going to get the faculties? As a matter of fact, we get the impression that virtually every question has been asked except, "who put the overalls in Mrs. Murphy's chowder?"

That these questions have occupied so much time and attention is a healthy sign. The disposition is not to let things ride, as Mrs. Becker put it, but rather to have some idea of where things ought to go and to do whatever we can to make them go in that direction. Admittedly we have before us a gigantic task relating to such tangibles as dormitories, dining halls, financial resources, teaching and administrative staffs, organizations, devices for teaching more people in less time, and all the rest. There is, however, a real danger that in our preoccupation with what to do about the sheer quantitative aspects of "the deafening patter of little feet" that we may lose sight of our aims, while as someone has said, we urge each other to redouble our efforts. As the theme of our conference so succinctly suggests, education is an individual matter, and it happens only in a human being. The theme is "The student and his education." It is not "Six million students and where can we put them?"

As we move into the years ahead, these tangible things which are prerequisites for feeding so many warm bodies, getting them bedded down, seeing that they have enough teachers to go around, and so on, will be very important indeed.

But things are only part of the picture. As the late Alan Gregg has reminded us, when we are talking about colleges and universities we ought not to ask, "What is the setup?" We ought to ask "What is the story?" Even more than by things, the story will be told by certain compelling intangibles. These compelling intangibles will have a lot to do with shaping the course of colleges and universities. They may even help provide the answer to that irrepressible question: Is American university man obsolete?

Education, like all living things, is inevitably and drastically affected by the surrounding tissue—by the nature of the campus where it takes place. If we are going to talk about colleges and universities as the surrounding tissue, we ought to have some agreement on what they are. Anyone who has read the assorted brochures, press releases, and various other publications that are put out by well-intended but totally misguided public relations departments, or who has talked with alumni, faculty, and others who are interested, is well aware that our institutions are many things to many people—alumni meetings, a crusade in community service, a gigantic enterprise in human relations, a royal highway to economic success, a royal highway to social success, a disbursing agent, a receiving agent, one long committee meeting, a lot of papers to be written, a parking problem, an assemblage of vice presidents, a building project, IBM systems, and a lot of other things.

Somewhere in all these images, there must be some common denominator of purpose, some basic commitment, to which everyone could subscribe.

Looking at it one way, a university might be conceived as a place where people come to learn something that they have never learned before and a place where, through research, people try to find out something that nobody has ever found out before. But they have an added function. This relates to the intangibles—what colleges and universities stand for. Learning things that you have never learned before, and being part of something where people find out something that nobody has ever found out before, relate to freedom of inquiry and freedom of thought. They relate to independence of the human spirit and the quest for truth. In this, then, colleges and universities are a symbol not only of freedom, but of the responsibility for freedom of thought and freedom of inquiry that is inherent among free peoples.

In this sense, the mission of the university is to focus the attention of our society upon the possible (but not absolutely guaranteed) accomplishment of something good, rather than upon the avoidance of error.

The idea of the university was a lot easier to grasp when the university first appeared on our horizons in the 12th century. The university was simply a guild—that is what the word "universities" meant. It was the guild of masters and scholars. Before there were classrooms buildings and dormitories, before there was a college president, or a board of trustees, when there were no deans, only demons to be exorcised, there was a college or university—the guild of masters and scholars meeting in learned pursuit in a cathedral courtyard. Centuries ago, someone said that the University of Paris was bati en hommes, that is—built of men, a community of men. Nobody has ever improved on that definition.

These universities, then, "built of men," had as their basis a permeating humanistic tradition. They came on our horizon with the renaissance of the 12th century. The first and great compelling intangible which shaped the mission of higher education in the years of its birth was nothing more or less than a dream—an uplifting of the human spirit in the wake of stand-pat conventionalism and intellectual apathy that had characterized Western Europe (with the exception of a few voices crying in the wilderness) from the time of Boethius to the time of Abelard. This dream is a vital thing. It runs like a bright scarlet thread through nine centuries of man's effort to do something about himself.

Modern university man owes a lot to the dream of the devout clerics of Paris and Bologna, but his is the world of here-and-now. His education is affected primarily by what happens at Antioch and California, at Agnes Scott and Ohio State. The American campus is his surrounding tissue. Adequately to carry forward our role as critic and constituent, we need a clear view of the unique character of higher education in this country, as it exists today.

American colleges and universities, as President deKiewiet pointed out in an incisive analysis some 5 years ago, rests on the two pillars of quantity and excellence. In contrast to European institutions where academic tradition looks primarily toward the education of an intellectual elite, colleges and universities in this country are characterized by their infinite variety. Higher education in America is conducted as a mass enterprise, and within this enterprise, all shapes and sizes and conditions of institutions are included. Each attempts to carry forward its particular mission, and at the same time, to be good at it.

The great challenge to American higher education lies in the assignment which it has perhaps unconsciously assumed—education of vast numbers, and the achievement of excellence at the same time. Perhaps the challenge will always be here, but we make a start toward meeting it when we acknowledge the fact that excellence can best be appraised in the light of the specific mission which any institution has chosen for itself, and the success with which that mission is carried out.

Perhaps the most important element in determining the true worth of an institution is the genius or spirit of the place. Here we are dealing with one of the most important of the compelling intangibles. Every college campus worthy of the name, has a personality, and even a character almost as distinct as the character of personality of an individual. Conceivably, this personality or character—this individuality—may be in some danger of getting lost as colleges and universities are caught up in pressures of conformity to the public image of what a college or university ought to be. Nevertheless, of all our national institutions, our colleges and universities stand as the one best hope for individualism, for independence from the insecure togetherness that has produced the junior-executive syndrome—that peculiar combination of symptoms that has kept sociologies and novelists happily writing, and suburban realtors just plain happy.

It has been increasingly popular in recent years to bewail the sad state of the individual in an age of mass civilization. This seems to beg the question. The trouble seems to be not that we have too much civilization but that we have too many individuals. A civilization, after all, is only a conglomeration of individuals. Daniel Boone thought he was a victim of mass civilization when he could hear his neighbor's dog bark, and moved on. My neighbors think they are victims of mass civilization when they hear my dog bark, and wish I would move. The whole thing is relative. What we are up against is as nothing compared to what your children and my grandchildren will see on this earth. In the year 2059 these may well be known as the good old days of 1959. The problem of the individual, and more particularly the individualist, is to develop his powers and bring his influence to bear in such a way that he helps make the kind of society in which he wants

to live. And he works not with the society that he wishes he had, but with the society he has got.

As the education of the individual is conditioned by the surrounding tissues—that is, the colleges and universities in which it takes place—so are colleges and universities affected by the society in which they exist. The surrounding social tissue which we should influence for good may, in turn, exert pressures that shape our existence adversely.

It was suggested earlier that our colleges and universities are our one best hope in this country for maintaining independence of thought and freedom from that type of conformity which compels us more and more in the direction of the lowest common denominator of acceptable mediocrity. Is it possible that one reason for the declining prestige of our institutions may be that they have lost, in many instances, that peculiar individuality, that somewhat cantankerous independence, that set them off and distinguished them from other benevolent corporations such as the more enlightened industrial firms? Is it our job to turn out a phenomenon that might be called "the man in the gray flannel mortarboard"? If colleges and universities reflect in their thinking, and in their profession of faith, the lowest common denominator of acceptable viewpoints on social issues or if they reflect no viewpoints at all, they do not justify their existence as centers of forward-looking and progressive thought.

This is a problem that everyone ought to ponder in a generation when such a high percentage of our adult population is college educated. Going to college in and of itself is no longer a mark of distinction. It has become a prerequisite to status, and as more people go, the prestige factor will decline. Among the advantages most frequently asserted by our palpitating public relations officers is the economic advantage, closely followed by the social advantage. Both advantages are badly overstated, and the product of misguided people who frequently are themselves eloquent evidence of the futility of a college education that didn't take.

We have spoken of climates of opinion and public attitudes as a force which may work adversely in certain respects in the development of colleges and universities in the years ahead, through an overly sensitive response—on the part of colleges—to what they think the public wants them to be. I believe that the public wants the colleges first and foremost to be good. The public relations people have not adequately understood this important fact yet.

But let me give you an example of what happens when an institution takes a realistic look at what it has to offer, and a realistic look at what people want. When Harvard celebrated its 300th anniversary in 1936, John R. Tunis—I think it was—made a rather careful study of his class of 1911 as part of the reunion activities and reported on what his classmates had been up to during the 25 years since they got out of college. I don't remember all of his conclusions, but one of them I shall never forget. "The class of 1911," he said, "illustrates the futility of college men in general and Harvard men in particular."

Now, Harvard in those days was generally regarded as a place for Boston Brahmins, plus a few odd-balls, squares, and assorted misfits from the back country. There was the Business School of course, for normal people, but they kept that across the river, so that it would not contaminate anybody.

Look at the difference today in the public image of Harvard. Starting shortly after the war, Harvard made an accelerated effort to get across the idea that Harvard was for excellence wherever it could find it. The response has been amazing. People want excellence. Rightly or wrongly—and I think it is rightly—the public image of Harvard has changed from that of a relatively isolated phenomenon on the educational scene to that of a great university which has considerable significance for boys from East St. Louis, for example, provided they have enough on the ball to get in. This has been one of the best jobs in the history of public relations in higher education, honestly and eloquently relating what an institution has to offer, to what prospective college students really want.

College students want excellence and they want it in terms not of abstractions and generalizations, but in terms of meaningful experience. They want it in relation to the times in which they will live.

These times of great social change, with times of even greater change in prospect, are another of the compelling intangibles basic to our previews of the student and his education.

A rather remarkable conference was held in Salonika within the past month, under the sponsorship of the World Council of Churches. The conference was addressed to the responsibility of the church in areas of rapid social change. Here are some impressions from an account given me by Dean Mueider, of our school of theology, who came back from Salonika amazingly uplifted in spirit—even for a Methodist minister.

The conference involved all sorts and conditions of men. There were economists, sociologists, political scientists, and a variety ofr other academic people, as well as representatives from the various churches participating in the World Council. And they came from some 38 countries—from Western Europe and the NATO countries, from Japan and the Philippines, from the Middle East, India, the Belgian Congo, from Nigeria, Liberia, Ghana, and so on.

I was profoundly interested in one or two of the observations that Dean Mueider had to offer. In this gathering of the old and the young countries of the world it had become clear that a young country accepts responsibility for leadership, and produces leaders, once there is motivation for leadership. This can take the form of an expressive nationalism, as opposed to an aggressive nationalism or a defensive nationalism.

A second point brought out very strongly was that university people from countries which were consciously aware that they were undergoing rapid social change were convinced that you do not get at social problems in education except by an interdisciplinary approach; that we have long passed the time when isolated subject matter approaches can serve effectively to bring to bear university resources upon the problems of society. The import, I suppose, is not to eliminate specialism, but rather to emphasize the interdependence of fields of knowledge, and the need for integrated education—particularly in the social sciences—for productive citizenship in our time.

Now all of this set up a provocative train of thought. First of all, there are many types of social change in the world today, over and beyond those which we identify in the wake of the dramatic birth of young nations like Ghana. These changes take place in the older countries. They are taking place in America, and at a rate that is virtually fantastic.

This business of social change and higher education is a fascinating thing. The wandering scholars of the middle ages, the devout clerics of Paris and Bologna, Oxford up to the time of John and Charles Wesley—dedicated men worshipping God and the new humanism and the new science all in the same breath—were clearly conditioned to their centuries. There was liberal education as it came to America, designed to provide teachers for the proper instruction of youth, physicians for caring for them while they were in this world, and ministers for seeing that they were headed in the right direction when they passed on to the next one.

Now we are in a century when education would appear as the best hope for pointing the way toward living with other peoples on this contracted planet, and living with each other at home. This business of living with each other at home we usually think of as minority problems.

The first minority to hit these shores were the white protestants, who were outnumbered by the Indians and who came over here protesting against some protestants back home in England. Then there were the Irish. Then there were the Jews. Then there was the Negro, after Reconstruction when we got started on the long and unromantic road toward meaningful citizenship. Finally, there is the fifth minority—women. To these last, only this affectionate and unpatronizing word in passing: you will get what you want, because you deserve it and you have what it takes. Of course you will have to play by men's rules to get it. But this will not be hard. The hard part will be getting men to play by men's rules.

What I am getting at is that there is no such thing as a majority any more. Everybody belongs to a minority of one sort or another. And we all need each other.

During the Korean war, American soldiers added a new word to the vocabulary—"gook." They had heard the Korean use it, and so they used it to designate Koreans. They did not know that the Koreans were talking about them. I think it was my Korean colleague David Kim who told me that "gook" means anybody who is not from wherever you happen to be from—in other words, a foreigner. Everybody is a "gook" to somebody. All of us "gooks," faced with the happy necessity of living with all the other "gooks" in this world, are aware that an education which does not take this happy necessity into account and do something with it, is no education at all.

An educated American must know the language of some of the other peoples of the world, their culture, and their ethics, otherwise he is not a well educated American. There is no substitution for excellence in world understanding. I have seen the data on Americans who have been returned home from foreign service—both for the Government and for business—because they were not intellectually or emotionally equipped to do the job. The numbers run into the thousands; each represents, in a way, a failure in international relations. Each represents a failure in education.

What we need most of all is a spiritual rebirth in education, as prerequisite to the plans and programs that we are developing for the next decade. Our colleges and universities have to provide the stimulus, the order of intellectual excitement, and the climate of independence that will attract and hold the best minds we have—and keep them stimulated.

If there is to be a spiritual rebirth, then we have to look to the source of the excitement that brought the barefoot scholars to Oxford and Paris and Bologna those centuries ago; the excitement that followed in the wake of the great land-grant colleges, the peoples' universities, of the 19th century, the excitement produced by the rarified atmosphere of the graduate schools at the Hopkins and at the University of Chicago at the beginning of this century. We need new ideas from somewhere.

The recent history of the United States National Student Association has produced some of the best—and certainly some of the most stimulating—thinking that we have had. Perhaps the excitement that brings to not-so-barefoot scholars to Urbana for this 12th annual student congress suggests that the spiritual rebirth may be already on its

way. Take if you will, the commitments of the U.S. National Student Association. Compare them with the commitments of Andrew Dixon White who, 80 years before NSA was founded, envisaged "a system of self-government, administered by the students themselves." A university as Mr. White saw it, was for the development of a higher order of man, for "the development of the individual man in all his nature, in all his powers, as a being intellectual, moral, and religious * * * and bringing the powers of the man thus developed to bear usefully upon society."

To bear usefully upon society, this is the ultimate test of whether or not American university man is to become obsolete. I can give now my own judgment on the question that I asked on this point at the outset. He is far from it; a lot farther than my generation in college was. His great opportunity and challenge is to help his institution from becoming obsolescent; to lend it his strength and his support in the job before it.

What will the story be in the years ahead? How new will the bigger university be? Not so new, in all probability. All of us have a profound moral obligation to give, to the limit of our ability, educational opportunity to those who come to us in seriousness of purpose and who really should go to college. We have a moral obligation, furthermore, to give our support to national scholarship and loan programs designed to provide college education for the thousands of superior students who would otherwise be excluded for financial reasons.

Moral obligation does not, however, require that we abandon our original mission and purpose on any individual campus. No well established and successfully operating institution is going to change its dimensions to the extent that it will destroy what it has built, in terms of excellence, over the long years. There is, I think, considerable latitude remaining in our institutions in handling the increased number of applications that are flooding in upon us. This latitude lies in elimination of that considerable segment of the college and university population which probably has no business being there in the first place.

If our colleges and universities should, in their efforts to accommodate numbers, or to collect tuition, destroy what they have built over the long years in terms of excellence, then indeed we should not have our institutions as we know them, but something else. Will Amherst stop being Amherst? Will Cornell stop being Cornell? Will the University of Massachusetts stop being the University of Massachusetts? There is every reason to believe that they will do nothing of the sort.

Amherst will doubtlessly bring every resource to bear, within her mission and its purpose, to meet the demands upon her, but she has no moral obligation to educate everyone who wants to go to Amherst—only as many of them as she can wisely serve.

Cornell will keep on being Cornell, with a few more cyclotrons and the many-headed Hydra of the State University system to help take the heat off.

The University of Massachusetts will continue to be the vital, progressive, and expanding land-grant institution that it is—the people's University of the Commonwealth of Massachusetts. But it will build upon its recent and productive history only if the will of the people of the Commonwealth of Massachusetts can recognize its great potential, and can provide the resources so urgently needed and so recently denied.

It seems most unlikely that our institutions will not change their personality and character, and tear down what they have built up over the long years in terms of excellence, simply to accommodate numbers. Like most prophesies, this is true only within certain limitations. State universities and, more particularly, State university systems, are going to expand in response to a demand, or in response to what somebody thinks is a demand, and they will do this both by enlarging existing plants and by building new ones. Privately endowed institutions, perhaps to a lesser extent, will similarly undergo physical modification. Virtually all types of institutions undergo changes from time to time. They simply undergo more changes at some times than they do at others.

But there is a third type of institution. It calls itself privately endowed, but in reality it is tuition supported. More and more institutions fall into this category. It is my conviction that, whatever the type of institution, the money that a student pays for his tuition should go directly into services to the student, and should not go into plant or fringe operations that do not relate directly to his education. The tuition-supported institution may or may not expand, but it should not charge the student for expansion. It should charge him only for services.

Without being aggressive about it, the student has a right to know what happens to his tuition dollar. Many of you have heard the old bromide that it costs somebody twice as much as you put in for your own education. This used to be true at many places. It is still true at some, where endowment and annual giving programs are large and the proceeds are used to subsidize teaching and student services. It is not true at many others. If it were, we should simply cut the student body in half and raise faculty salaries. Large buildings have been built from tuitions that should go into instruction, student health services, and sound activities programs.

To carry to its logical conclusion the thesis that one of the great strengths of the American institution lies in its infinite variety, then the story of our education for the next urgent decade will be told not in the findings of Presidential commissions or in the reports of foundations and professional organizations. It will be told on each individual campus, and it will be determined in large measure on how well we direct the compelling intangibles for good.

This brings us back to the role of the student as critic and constituent, as the functioning part of the guild of masters and scholars. Hopefully, it will keep him intelligently involved, and intelligently participating, in the vital assignment of bringing our resources to bear on the strength and effectiveness of our colleges and universities not only now, but in his years as an alumnus.

The final intangible is a bit on the esoteric side, but it will be a powerful one. You may remember what was said at the outset about the uplifting of the human spirit and the birth of our first universities, and how this uplifting of the human spirit runs like a bright scarlet thread through nine centuries of higher education. This spiritual quality, aesthetic as well as religious, is reflected in interesting ways. We note in passing that the Annual Student Congress has no display of technological equipment, but it does feature an art exhibit.

Mr. Whitehead touched on this matter of spirit in his familiar phrase, "the habitual vision of greatness." In another place, he writes on the nature of beauty, and the appeal of beauty to the spirit. "Show youth where beauty dwells, and there it will abide."

Now this sets up a provocative train of throught, the relationship of beauty to the romance of education, and possibilities for illusion and disillusion.

Show youth where beauty dwells—beauty is an evanescent thing, and youth a fraction of a story not yet told. Abide—that means forever—and forever is a long, long time.

Is beauty in the setting sun? Refracted rays through dust, cold mist up there, a chill—a trace and more of strontium. (They don't make sunsets quite the way they used to do.)

Is beauty in a vapor trail? A sine-curve thrown across the sky, behind a silver dot in space. The moving finger writes on faded denim arch—first clean, white line, then feather edged; then empty space.

Will youth abide in Gothic arch at Chartres or Saint-Chapelle, where rib-and-panel vault, the buttressed walls, the rose that unifies the whole, glory to God reveal in glass and living stone? (Miniver Cheevey would have had it so.)

Or does beauty dwell in clapboard church, weathered, on a country road; in darkest watch of sickroom; or in public ward—wherever spirit sees through mist and dust of life refracted rays of hope, the spectrum of the heart.

Our colleges and universities are an act of faith and hope, and it is in faith, hope, and hard work that those who love them, and who believe in what they stand for, must lend them strength as we move into times when their greatest tests will be upon them.

The U.S. National Student Association has become a mighty force, as well as an eloquent voice, in forwarding the cause. And you have done this objectively, with imagination, and with responsible and mature insight. It may well be that the spiritual rebirth in higher education, so urgently needed, may be given its major impetus by the American student. You have the respect and the envy of those of us who have gone before you, and our confidence in you is exceeded only by our pride in what you are.

On this rising note, may God speed this 12th Annual Student Congress.

Hon. J. Bayard Clark

EXTENSION OF REMARKS
OF
HON. ALTON LENNON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 27, 1959

Mr. LENNON. Mr. Speaker, under the privilege of extending remarks in the RECORD, I wish to bring to the attention of our colleagues a further tribute to the late Honorable J. Bayard Clark. A splendid editorial from the Bladen Journal, Elizabethtown, N.C., follows:

[From the Bladen Journal, Elizabethtown (N.C.) Sept. 3, 1959]

BLADEN LOSES AN ILLUSTRIOUS SON

Bladen County has given a number of illustrious sons to the State and Nation during the 225 years of her history, but none have achieved more, nor reflected greater luster upon the mother county than Hon. Jerome Bayard Clark, who entered his last sleep at the twilight hour on Wednesday, August 26, in a Fayetteville hospital.

Mr. Clark's record in the Congress of the United States for 20 years, during one of the most trying times ever known in this Nation, was a record of achievement, and as a member of the important Rules Committee, he had an important part in framing the legislation which brought about an eventual victory in World War II.

Bladen is proud of her son's many achievements, but perhaps she loved him best for the man he was—a brilliant gentleman of the highest type of integrity, personal and public—a man of justice, but filled with mercy; a loyal friend, regardless of circum-

stances—a man to whom men of all stations in life could take their problems, and know he would do something to improve them—a friend of Bladen people always, and they loved him.

Congressman Clark never lost his interest in Bladen, and found pleasure, as long as he lived in visiting here, walking the dear familiar ways, clasping the hand of old friends, recalling many an incident of the years gone by, with remarkable exactness.

An illustrious son of Bladen has "drawn the mantle of his couch about him and lay down to peaceful dreams." His memory will forever be cherished here.

To Be Safe, Be Prepared To Fight

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview with Adm. Arleigh A. Burke, Chief of Naval Operations, as reported by Mr. Courtney Sheldon in the Christian Science Monitor of Wednesday, September 2, 1959:

TO BE SAFE, BE PREPARED TO FIGHT—A CAPITAL INTERVIEW WITH ADMIRAL BURKE

(By Courtney Sheldon)

Adm. Arleigh A. Burke ("31-knot Burke"), the brilliant destroyer tactician of World War II Pacific warfare, now Chief of Naval Operations beginning an unprecedented third 2-year tour of duty as a member of the Joint Chiefs of Staff:

Is "very much worried" about whether the Nation is spending enough to retain its capability for limited wars.

Says what the country needs for general-war deterrence "is enough missiles, and it is not very many, and then go a little slowly. That is why we (the Navy) put a limit, somewhere between 40 and 50, on Polaris submarines."

"Admiral Burke, what is the probability of limited war in the next decade?"

"Well, the Russians are trying to get control of the world, but they do not want to take any risks of destroying what they have gained. They push up to the point where they think they are going to have serious resistance. Then they stop, and they will actually retreat, as they did in Finland, and in other places. So, in general, the probability of limited aggressions in the world is, I think, quite great."

"How do you see the role of the Navy in such wars?"

"As a matter of fact nearly all the free world is on the sea, and maybe that is not accidental. Although the Navy cannot do the job by itself, the job cannot be done unless we first do our job."

"Do you feel that at the present rate of expenditures we will have the capability for limited war that you would like?"

"Not the capability that we would like. I am very much worried. I am not an economist. I don't know how much this country can pay in taxes. There is probably a limit beyond which we should not go. That is for other people to determine. Now within that limit military hardware is costing a lot more now than it did a few years ago. New aircraft costs a lot more money than 3 or 4 years ago. Any of the service missiles costs tremendously. So it means that there is less money available for other things, for lesser situations."

"What can be done about it?"

"You have got to do one of two things, either increase the total amount of money available, which is difficult, or adjust the balance within the amount of money that you have available. In adjusting the balance you have to take into account what the military forces will be called upon to do. And you go through the range of cold war, limited war, and general war. We have been emphasizing general war a great deal. I personally do not believe that as long as we have the capability of destruction of any prospective enemy that there will be a general war, because nobody can win on that."

"The Navy's Polaris ballistic missile will be another general-war strategic weapon. If you are thinking in terms of balance, this means a cutback somewhere."

"It should, in other strategic types of weapons that can do the same thing. Now all the intercontinental and intermediate range ballistic missiles and Polaris missiles, too, are only good for mass destruction. They are not good for limited situations because their destructive power is too great. If you spend all of your money on building general-war retaliatory forces, then you don't have any left over for those things which are more probable.

"What I am saying is that we need enough of these forces with the ability to destroy Russia, and no more. Now the question of how much is enough is dependent upon what you choose for targets and our knowledge of where the targets are."

"This is the question which arose during congressional hearings last spring from remarks by yourself and General Taylor which implied that we were not coming to grips with exactly what targets should be pinpointed?"

"That is right. We are coming to grips with them, but there is a difference of opinion on how many targets we should strike. We think there is a limit, and a very safe one. Make the best computation you can and then double or triple it, if you wish. Once you get this, let's spend our money for those things that we will need 5 or 10 years from now and which will still be around and still be invulnerable."

"This is not then a criticism of the decision-making process in the Joint Chiefs of Staff, but simply a different opinion?"

"On how much and how fast. The system is fine. Now you take an alert force. The Air Force is very much concerned and rightly so about the vulnerability of the Strategic Air Command. A missile surprise attack on this country aimed at SAC bases would create havoc. So SAC is quite rightly striving to get as much early warning as it possibly can get and to reduce the vulnerability by such means as dispersal and hardening, both of which are quite expensive. They have a strip alert and there is consideration being given to an air alert.

"Now should we spend a tremendous amount of money on air alert or should we increase the rate of production of missiles Polaris, Atlas, Titan? These missiles all do the same thing. What we need is enough missiles, and it is not very many, and then go a little slowly. That is why we put a limit, somewhere between 40 and 50, on Polaris submarines. They carry a sizable warhead. Each one of these submarines can destroy tremendous areas."

"We have a big war deterrent in the Strategic Air Command. Now is there a comparable command we should have for readiness for limited war situations?"

"The big war planning is not in SAC. It is done by the Joint Chiefs of Staff. War is fought by many people and many commands. Now in limited war the unified commands have the responsibility, and in cold war also. There is no way that you could have a single outfit, a single-man plan for limited war. You have difficult and different situations all over the world."

"Is it possible to look forward to a time, say in the next 10 years or so, when you would say we would have achieved an indestructible deterrent force?"

"No, and it will never be. There have been such forces in the past and remember what happened to Troy, Carthage, and Rome. The only way the world is going to be safe is for individuals and groups of people, nations, to continue to be prepared to fight for their freedom. When nations get complacent and satisfied and they would like to keep things just as they are, events move around them and they become engulfed in a more virile and less sophisticated civilization. That is what might happen to us."

Dr. A. E. Mercker

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McINTIRE. Mr. Speaker, Al Mercker has received recognition for his achievements in agricultural work at both government and private life levels.

I have had the privilege of having personal association with Al over a period of many years, and during this time I have come to respect his high character and admire his profound ability.

It has been said that a man is a reflection of his background, and the following article entitled "Men on the March," appearing in the August–September 1959 issue of the Vegetable Growers Messenger, points up why—as anyone who knows him can attest—Al is a man of many splendid dimensions.

Because many Members of Congress know Al Mercker, I feel certain they will be interested in these background ingredients that have contributed to the Al they know:

MEN ON THE MARCH

Al Mercker is probably the best known white potato man in the United States. Some say in the world, since he has traveled widely in North America and on the European Continent with leading U.S. agricultural representatives looking for ways to help U.S. growers to do a better job of production, packaging, transportation and marketing potatoes and vegetables.

He started out as a country boy and after finishing high school completed his B.S. degree in horticulture at Rutgers University, New Brunswick, N.J., in 1915. He worked his way through college by selling vegetables for New York commission houses. In 1918 the USDA Market News Division assigned him to Boston but not for long for he went into the Army. Discharged by the end of 1918 he was transferred to Chicago as a vegetable inspector. In 1922 he was acting supervisor in New York City and later trained inspectors for shipping points, formulated grades and standards in cooperation with State boards of agriculture and other agencies.

During 1927 he was chief of the bureau of markets for the New Jersey Department

of Agriculture. The next year he worked with the Federated Fruit and Vegetable Growers Cooperative Association and in March 1929 the late Secretary of Agriculture, Henry M. Jardine, invited him to become secretary of the Interstate Early Potato Committee. This was a joint program of the Agriculture experiment stations, extension services, State departments of agriculture, the BAE of USDA, potato producers and shippers.

Active in the development of the Pacific Northwest Potato Committee until 1935, he then became Administrator of the Warren Potato Act. Following the repeal of the act he worked on the diversion of surplus white and sweet potatoes into industrial byproducts for livestock feeds and new uses. He was active in the development of marketing agreements and potato acreage allotments.

Mr. Mercker is the man who started and fostered the idea of producing a better grade of starch from white potatoes. His plan readily gained the assistance of friendly European starch experts.

When World War II broke he was assigned to the War Food Administration and had an important part in the procurement and distribution of potatoes for the Armed Forces and civilians. The potato dehydration program for the armed services was a part of his work. Under the Steagall Act, when potatoes became a price supported commodity, Mr. Mercker administered the price support program in the F and V branch of the PMA as acting chief of the potato division. In 1948 he was instrumental in getting 300,000 tons of American potatoes exported to Europe.

In 1954 he received a plaque for meritorious work from the National Potato Chip Institute. An honorary life membership in the Potato Association of America was awarded to him 1955. The University of Maine in 1948 gave him an honorary doctor of laws degree for distinguished service to the potato industry.

After 36 years of loyal service this amiable, animated, and friendly man resigned from Government service to become executive secretary of the National Potato Council whose offices are located in the Munsey Building, Washington.

Every man has an avocation, "Al" Mercker's hobby is chrysanthemums and gladioli. For the past 8 years he has been president of the National Gladiolas Society of Washington, and grows about 200 varieties of this beautiful flower.

Always interested in young people he has been a long time active Scouter serving on the Cub committee and as chairman of the local Scout troop committee for many years. He is a member of the Lutheran Church and a congregational member of the Baptist Church, which is attended by all three of his sons, who by the way, might be called "chips off the old block." Albert E., Jr., a graduate from the University of Maryland in agricultural economics is now selling petroleum products in Saigon, South Vietnam, Asia. Son Rodney Clark graduated in forestry, Michigan State University, and is now in the Personnel Division of the National Health Institutes at Bethesda, Md. Donald F., the youngest, graduated from Dickinson College and lives in Detroit, Mich.

Dr. Mercker and his wife, Frances have been married 41 years and have resided in the same home in the Northwest section of Washington for the past 30 years. Her hobby is needlepoint work and her outside activities are devoted to work in connection with children's homes.

Next to potatoes Al's favorite dish is seafood. His ambition is to work as closely with potato growers as long as they will let him.

Potatomen say that hard hitting, industrious "Al" Mercker knows more about the potato industry than any other man in the country and he almost admits that his hobby is living, studying, talking, and eating potatoes.

Here is another "Man on the March" who has made a powerful contribution to the potato and vegetable industry and the Nation.

Gypping Bond Buyers, Taxpayers

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat on August 29, 1959:

GYPPING BOND BUYERS, TAXPAYERS

Uncle Sam borrowed $2 billion last month by selling 1-year "bills"—I O U's due next July. He had to pay more than 4.7 percent interest on them to attract buyers.

This is the highest interest rate he has had to offer to raise money since the Roaring Twenties.

Washington can't make investors buy Federal notes, bills, or bonds at any price it wants. The investor sets the market price, not the Treasury.

If Washington wants to borrow money, it has to pay interest high enough to lure investors into making the loan.

Somehow this simple fact of life has escaped the House Ways and Means Committee. Last week, it turned down the White House request for permission to lift the interest rate ceiling on long-term Government bonds.

At present, the law says the Treasury can't pay more than 4¼ percent interest on regular securities that mature in 5 years or more. However, the sky's the limit on Treasury I O U's that must be repaid sooner.

The House committee is trying to give the impression that it is holding down interest rates by refusing to up the ceiling. That, of course, is baloney.

Uncle Sam can't sell his long-term securities when they pay only 4¼ percent. So when he has to borrow he is forced to raise the money on short-term loans that aren't under a ceiling.

It is difficult, expensive, and inflationary for Washington to live from hand to mouth, by raising money on short-term loans.

President Eisenhower has asked Congress to lift this ceiling on long-term Government bonds, and to raise the interest rate on U.S. savings bonds. We hope Congress will say "Yes" to both requests.

Savings bonds now pay a maximum of 3½ percent interest, if held for 8 years, 11 months. More than 40 million Americans have some $42 billion of their savings tied up in these bonds.

But at the price Washington now has to pay to borrow money, the savings-bond buyer is getting gypped. For the past year, many of them have been selling their bonds, because the interest price isn't right.

Last month, the Treasury sold $350 million worth of these savings bonds—many of them on company payroll deductions. But more than $500 million worth were cashed.

What is happening to savings bonds and to short-term Treasury I O U's should be plain as the nose on your face, even to the House Ways and Means Committee; namely, that it cannot make Americans lend Uncle Sam money at low interest rates, when they can get a better return elsewhere.

What the House is doing in this: It is killing the sale of savings bonds and keeping Uncle Sam from floating long-term loans. As a result, the House is forcing up interest rates on short-term I O U's by making the Treasury rely on them more heavily than it should.

This stubborn attitude is making it more expensive for the Treasury to borrow money and depriving 40 million savings-bond holders of a decent rate of return on their funds.

The Ways and Means Committee should get its head up out of the sand and learn what's going on.

Award of Paul Bunyan Award to Senators Capehart and Sparkman

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. SPARKMAN. Mr. President, recently the distinguished senior Senator from Indiana [Mr. CAPEHART] and I were honored by the Lumbermen's Forest in Israel, an organization in Pennsylvania consisting of people directly or indirectly concerned with home building. This organization honored Senator CAPEHART and me by giving to each of us the Paul Bunyan annual award. The award was made to each of us according to the wording of the plaque "in recognition of his foresight and unrelenting effort in sponsoring legislation for a progressive housing policy aiming to provide the finest housing in the world for the American people." I deemed it a great honor and I am sure that the same was true for Senator CAPEHART.

On that occasion I made a brief talk. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, Senator CAPEHART, distinguished guests, ladies and gentlemen, I am overwhelmed by your courtesy in doing me this great honor. I think that even Paul Bunyan himself would have been impressed with the dimensions of your generosity.

It is fitting that there should be events, such as this, celebrated in the name of Paul Bunyan. His name is symbolic of the resilience and audacity of a frontier society. This frontier spirit is well expressed by Carl Sandburg when he says that—

"The people will live on.
The learning and blundering people will live on.
They will be tricked and sold and again sold
And go back to the nourishing earth for rootholds,
The people so peculiar in renewal and comeback,
You can't laugh off their capacity to take it."

Daniel G. Hoffman quotes those few lines from Sandburg and observes that the poet finds in the Bunyan stories, "conquests of terror by laughter, of despair by comic in-

genuity, and the victory of the indomitable human spirit over adversity."

No task was too great for Paul Bunyan, nor for the indomitable people who created his legend, nor for the people who came after him—both here and in freedom-loving lands abroad.

I wish that we had a Paul Bunyan to take over the task of housing the American people. This is a task which will require all our talents and all our determination.

According to the Bureau of the Census, in 1957 13 million homes in this Nation were substandard—this represents 24 percent, or 1 out of 4 of the 55,340,000 dwelling units in the continental United States. In 1950, the Census Bureau reported 16 million substandard dwelling units, so that in those 7 years we made some progress, but very little indeed when one considers the high level of prosperity during the period.

Why is this?

The simple answer is that we are not producing enough housing units to meet the need. We are not adding enough new units to force abandonment of many existing units which are worn out and have long ago ceased to be fit for human occupancy.

The formation of new nonfarm households over the past few years has amounted to about 1 million units per year. Housing starts, according to the Bureau of Labor statistics, have been a little over 1 million units per year. This is just enough to take care of new household formation.

We must increase production of housing in the future. We have a dual job. First, to produce enough new units to accommodate the big family formation expansion expected to take place in the mid-1960's; and second, to replace the old, wornout, and dilapidated units still occupied.

The babies of the midforties will be the new heads of households of the midsixties, so it requires only simple arithmetic to estimate the probable new family formation for that period. In addition to the need to build enough units to meet the requirements of new household formation and to replace existing substandard units, there is an ever-pressing demand for improvement in the quality of housing consistent with our existing standard of living.

The construction of homes priced to meet the growing needs of larger families is another pressure for expansion of housing construction.

With all these demand factors in mind, we have some rough idea of the job ahead of us. With the right product and the right price, housing production of the mid-1960's could easily double that produced today.

The question is—Can it be done? Do we have the tools to produce housing units within the next 10 years at a rate double the present performance?

I know what Paul Bunyan's answer would be—and my answer is the same. We can produce as much housing as we are willing to produce—and we should never rest until every family in this Nation has a decent home in a suitable living environment.

It is also fitting that Paul Bunyan should be a symbol for your efforts to encourage land reclamation and the development of forests in Israel. For Israel is indeed a frontier, even as our own land was—not so many years ago. Perhaps this work you do through your committee is in partial fulfillment of God's word, when He spoke through Isaiah to say:

"I will open rivers in high places, and fountains in the midst of the valleys: I will make the wilderness a pool of water, and the dry land springs of water.

"I will plant in the wilderness the cedar, the shittah tree, and the myrtle, and the oil tree; I will set in the desert the fir tree, and the pine, and the box tree together."

You in this assembly, and others all over the country, are helping Israel survive under difficulties almost beyond imagination. Israel is an area no larger than the State of Massachusetts, bordered on three sides by unfriendly nations, and suffering from a minimum of natural and climatic resources. We are helping this tiny nation to remain a lamp of freedom, in a part of the world besieged by Communist pressures, in spite of the many handicaps her people face.

What has already been accomplished toward making Israel economically independent is almost unbelievable.

Land under cultivation increased from 400,000 acres in 1949 to 950,000 in 1957. To restore these vast areas to fruitfulness was in many instances a matter of digging stones out of rough terrain by hand. Most of it was done, however, by modern agricultural equipment supplied in large part by help from people in the United States.

In a great program of reforestation in which your organization has played such an important part there have been planted 27,585,000 trees.

Even with this tremendous development of her land resources Israel supplies only about 70 percent of her overall agricultural needs.

Industrial production has increased by more than 300 percent since 1949. Productivity per worker has risen about 50 percent.

This greater industrial production gave a needed boost to Israel's exports, which quintupled during the decade. Exports totaled $200 million in 1957, and reached $250 million last year.

All this was achieved despite a crippling security burden, an Arab boycott, and the absorption of 900,000 immigrants.

We Americans, it seems to me, must assume these fundamental facts about Israel:

1. It is a reality. It is idle to argue whether or not there should be a country such as Israel.

2. The United States had a leading part in the establishment and recognition of Israel as a free and independent country. It cannot, and will not, stand idly by and see Israel destroyed.

3. Perhaps most important of all, despite the initial hardships and difficulties which this new little state has encountered and despite the efforts of the Communists to entice Israel into their orbit, Israel has stood firm for freedom in the great struggle of this mid-20th century.

To Israel we say: "We cherish your freedom and we intend to do what we can to keep you free."

It is imperative that we renew this assurance from time to time. We need to do so to make crystal clear to Russia and to others that we will live up to the moral obligation that we incurred when we helped to establish that little country.

By patience, tolerance, perseverance, and vigilance in the protection of individual freedom, Israel can serve to lead others to democracy and its many advantages.

It is encouraging that you are doing your bit in working for continued economic development and prosperity in that area.

Let me thank you again for this occasion and this opportunity to be with you. I wish you every success in your great work.

The Situation in Laos

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, September 4, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me with respect to the situation in Laos. The statement calls for renewed efforts for the establishment of a United Nations police force.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

The morning radio reports that the Government of Laos has asked the help of the United Nations in curbing the invading Communist forces calls for immediate action by the United States and the U.N. This is a legitimate request of a duly constituted government which is being victimized by outside aggression, and the free world cannot ignore it. No matter how much Peiping and Moscow may proclaim their innocence, the machinations of the international Communist conspiracy are clearly evident in the events in Laos.

I hope the United States will see its way clear to send further aid to the people of Laos in this crisis. I hope, in addition, that the wheels will begin to turn within the United Nations for the creation of a permanent international army which can deal with nibbling Communist aggression such as this. I am today writing to the President urging him to instruct the Secretary of State and our Ambassador to the United Nations to press for positive steps by the U.N. for the establishment of an international police force. Perhaps the crisis in Laos can serve as the spur needed for the U.N. to take this essential step to the building of lasting peace.

One of the most tragic aspects of the request of the Laos Government for U.N. help is that the U.N. does not have any kind of police force which can be rushed into the breach. There is no international army primed for instant action when such conflagrations break out around the world.

It is true, of course, that there is a splendid precedent for using a U.N. group as a buffer between warring states. The special U.N. Emergency Force has wrought miracles in patrolling the Israeli-Egyptian border in the wake of the conflict there. It has provided the cushion which was needed to keep the protagonists apart and promote stability in an area of acute tension.

It is my firm conviction there has been sufficient study and experience concerning a United Nations police force. There is plenty of evidence to show how great a factor it could be in preserving peace. No nation of good will can in good conscience oppose the creation of such a group.

Indeed, I believe we would have every right to question the motives of any nation which would oppose this essential step toward establishing a firm and lasting peace. The United States has repeatedly demonstrated its willingness to participate in an international army for peace and its resolve has been bolstered by resolutions adopted by the Congress.

Certainly, outbreaks of aggression such as we have witnessed in recent years in Korea, Hungary, various places in the Middle East and Far East, and now in Laos, make an international army an imperative the world can ill afford to ignore any longer.

It should, of course, be under the control of the United Nations, ready to move instantly in case of an international emergency at the request of a member government which believes itself threatened by outside aggression or subversion directed by another country.

In a world contracted by speedy communications and transportation, in a world in which so many nations possess the terribly destructive weapons of modern warfare, any international conflict—no matter how localized—can spread like wildfire and thus present a real threat to world stability. The only feasible answer to this challenge to the

peace of the world is a U.N. force capable of so spreading an international mantle over an embattled area as to inhibit—if not directly to prevent the spreading of any local conflict.

A U.N. police force need not be a huge, all-powerful army. It might not number more than 50,000 or 60,000. It might perhaps be best to establish a firm nucleus at all times centered under one command, with other forces in the individual countries available upon call.

The smaller nations should form the backbone of this international group. This will prevent the bigger powers running the risk of being dragged into a nuclear conflict which could doom all mankind.

Such an international army could not—and should not—fight wars. But it could serve as an effective deterrent to hostilities, could be a focus for the moral opinion of the world, and could serve numerous practical buffer uses in observation, patrol, and guard duty between hostile states.

Because of the dangers inherent in man's vast technological and material progress, because of the repeatedly demonstrated determination of some powers to stir up trouble at every opportunity, we must search with imagination and foresight for the answers to the enigmas of world peace. Today we have too little of either—at a time when we stand in desperate need of both.

Time is running short. Each new crisis brings us closer to the potential horrors of world war III. The next international brush fire may set off that world conflagration if the nations of the world do not rise to the occasion.

A permanent United Nations Police Force provides a new, decisive means by which the nations of the world which sincerely believe in peace can provide the machinery to quarantine regional conflicts and Communist military probes, and thus better insure their solution. It would be fitting for the United States, with its demonstrated dedication to creating a peace based on justice and morality, and with its repeatedly affirmed belief in the United Nations, to take the lead in this great task.

In the meantime, I am extremely hopeful our Government will do everything possible to give aid and comfort to the embattled Government of Laos. I hope steps can be taken within the U.N. to establish a temporary, emergency police unit to come to the aid of that nation as it attempts to resist the Communist. I hope ways and means will be found to send additional American aid to Laos. Clearly, the United States and the free world cannot stand idly by while Laos is engulfed in the tide of the international Communist conspiracy.

Labor Sunday Message, 1959: "Free Labor Important to Free People in Today's World"

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BRADEMAS. Mr. Speaker, for many years the National Council of the Churches of Christ in the United States of America and its predecessor organization, the Federal Council of Churches, has issued a message which is used throughout the Protestant churches of America on Labor Sunday.

This message is the product of collaborative effort by concerned church people from labor, management, agriculture, and the professions, together with clergymen.

The message for 1959, which is to be read in the churches on Labor Sunday, September 6, stresses the importance to the economy and the Nation of free collective bargaining and of organized labor's role and responsibility.

I am very glad to include in the CONGRESSIONAL RECORD the Labor Sunday message for 1959, together with "A Prayer for Those Who Labor":

LABOR SUNDAY MESSAGE, 1959: "FREE LABOR IMPORTANT TO FREE PEOPLE IN TODAY'S WORLD"

Always the churches should give thanks to God for the freedom that is both heritage and living fact about our Nation. In spite of many infringements in our practices, we cherish its spirit within our people, its exercise in our common life, and its embodiment deep within our institutions.

On this Labor Sunday it is right and fitting that the churches recognize and stress the vital place of a free labor movement in and its contribution to our society through the institution of collective bargaining. It is a sign and condition of our freedom that there exist voluntary organizations such as those of labor and management. The effort of these groups to solve together their mutual problems should be encouraged and their freedom to do so safeguarded, insofar as it does not encroach upon the rights of other groups and the common welfare.

FREE BARGAINING NECESSARY FOR ECONOMIC FREEDOM

We believe that free collective bargaining is a necessity for economic freedom in an orderly society. The alternative is for labor and management to have imposed upon them undue restrictions or even outright dictation by government. We as citizens, however, may justly expect both management and labor to consider and respect the rights of the vast majority of our people who are not participants in collective bargaining. If the common inerest of the people outside the parties to collective bargaining is disregarded, the people by and large must seek through their government to protect their freedom from any encroachment by either powerful corporate management or powerful organized labor or both.

Without organized workers there can be no collective bargaining. Labor's long struggle to gain recognition was motivated in large part by its necessity to match the bargaining power of employers. Responsible unions and management share the credit for the high place which collective bargaining in many fields of industry holds today among our democratic institutions.

That we are "all brothers" is God's doing; hence individuals who are indifferent to the effect upon others of what they do lay destroying hands upon the fabric of society. All the more intolerable is irresponsible action by an economic group: the harm it does falls upon people of all walks of life, ultimately including those in the offending group. Since free collective bargaining is one of the established features of the American economy, the continuance of responsible action by both labor and management is an absolute necessity.

HIGH LEVEL OF RESPONSIBILITY SHOWN

We commend organized labor for the high level of responsibility which it has shown in collective bargaining and which devoted labor leaders strive to maintain. It is indeed right for church people to be concerned about malpractices and corruption by some leaders of labor, in some instances acquiesced in by union members. This concern also is shared widely among the leaders and members of organized labor. But church people must not forget corruption disclosed on the part of management as well. On this labor Sunday it is important for our churches and their members to see not only the instances of corruption in labor but also to recognize the essential function and permanent contribution of organized labor.

We therefore call upon the churches to reexamine their own contribution toward the needs and functioning of strong and responsible labor unions. We urge our churches to promote among their people an appreciation of the legitimate and necessary role of organized labor in our free society. Free labor unions are important to all free peoples in today's world. We urge the need as well for a balanced rather than a prejudiced or partial view of the problems which responsible union leaders and their members confront both externally and internally and of how they are trying to solve them.

CHURCHES HELP MEMBERS GROW IN UNDERSTANDING AND PARTICIPATION

We are grateful to God that large numbers in organized labor are also in the churches. As a union leader or member each individual is responsible to God for his conduct in his union as in his other activities. We urge our churches, therefore, to help their members who are also union members to grow in their understanding of the purpose and place which unions properly have in today's world; and to encourage them to participate more effectively and responsibly in the life and affairs of their unions. Responsible group action there, as in churches or elsewhere, depends upon members with an informed and alert sense of individual responsibility.

A PRAYER FOR THOSE WHO LABOR

For those who labor without adequate reward, for those who labor for the common welfare, for those who perfect their skills for better performance, for those who direct the labors of others, for those who adapt machines to lift man's heavy burdens, for those who trade and those who transport, for those who mine and those who smelt, for those who cast and those who die, for apprentices and craftsmen, and for all who contribute to the health and welfare of their fellows through their industry and their effort, dear God, we thank Thee. May they receive their reward in the words of the Master Workman, "Well done, thou good and faithful servant." Amen.

Lafayette-Marne Day, September 6

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. MULTER. Mr. Speaker, Marquis de Lafayette, whose 202d birth anniversary falls on September 6, was the hero of two continents, the pride of two nations struggling for democracy and freedom.

He was born in 1757 in a chateau in Auvergne, France, and at the time of his death, in 1834, his name had become a household name both in France and in America.

This gallant and gifted son of France, who, in the course of our War of Independence, rendered invaluable services

and thereby earned the everlasting gratitude of the American people, was a remarkable man in many ways. In mid-1777, when he asked for and received a commission of major general, the highest rank after the commander in chief, he had not passed his 20th birthday. The youthful and precocious soldier of freedom quickly acquitted himself most honorably on the battlefield. As a resourceful leader and first-rate tactician, his abilities were fully appreciated by Washington.

When his military career in this country came to an end after the battle of Yorktown he returned to France. There he was made a major general in the French Army in 1781. Later he found himself in the very center of the French Revolution. In 1787 he became a member of the Assembly of Notables, and some time before the Revolution he urged the King to convoke the States-General. During the Revolution he constantly pleaded for personal freedom—for the abolition of arbitrary imprisonment, for religious tolerance, for popular representation, and for the establishment of trial by jury. He was rebuffed by many of the violently revolutionary leaders. He was sadly disappointed with the course of the Revolution.

For a while he had to flee France, and lived in retirement. In 1824 he revisited the United States at the invitation of President Monroe. Here he was overwhelmed with popular applause, and the Congress voted him the sum of $200,000. He gratefully accepted the gift, returned to his native land. He died on May 20, 1834.

Today in honoring the memory of this great soldier of freedom on his 202d anniversary, we also observe another event falling on the same date, September 6, that is, Marne Day, marking the first battle of the Marne which began 45 years ago early in the First World War and continued for the next 3 days. That battle has often been described as the turning point in that war. By participating in that world struggle and thus insuring the conclusion of that war in favor of democratic forces, we also repaid some of the debt to France which America had incurred at the time of our War of Independence.

In expressing our gratitude for General Lafayette's signal services to this country, and also in expressing our profound admiration for the gallant French soldiers who almost alone fought successfully in the first battle of the Marne, we pay our respect to their blessed memory.

Report of U.S. Commission on Civil Rights

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, September 4, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me with respect to the report of the United States Commission on Civil Rights.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

The report of the Commission on Civil Rights, although not yet officially released, already has stirred violent verbal blasts from some quarters. This reaction is not unexpected since the work of the Commission has been subjected to obstruction by its opponents from its very inception. It is obvious that there are some people who do not want the facts with regard to civil rights to be studied and discussed. These people are determined to leave no stone unturned in their conspiracy to prevent information on these vital issues from reaching the American people.

I have reviewed the report of the Civil Rights Commission with great interest. It is a balanced, well-documented analysis of the legal and moral problems in the way of realizing equality under the law in accordance with our democratic tradition. These problems are not sectional or partisan. They should be of concern to all Americans throughout the country who respect the Constitution.

I can well understand some differences of opinion with regard to the specific recommendations of the Commission. I cannot, however, condone the blanket condemnation and venom which have already been heaped upon its work by its diehard opponents. Nor can I sympathize with any effort to prevent Americans from exercising their sacred right to vote or from enjoying the same privileges under our laws regardless of their race, creed or national origin.

In my opinion, the Commission's recommendations for the most part are very moderate. Its first recommendation, for example, is that the Bureau of the Census be authorized and directed to undertake a nationwide compilation of registration and voting statistics. I thought we in this country had long passed the day when we would consider such statistic-gathering activities by the Bureau of the Census as un-American. The Commission also recommends that voting records shall be preserved and be made public provided that all care is taken to preserve the secrecy of the ballot. This seems to me to be an eminently reasonable proposal. There also are recommendations with respect to appointment of temporary Federal registrars, for prosecution of persons who under color of law deprive individuals of an opportunity to register and vote, and for the enforcement of the Commission's present subpena powers, which would certainly deserve Congress' support. The only dissent from any of these recommendations is by Commissioner Battle, the former Governor of Virginia. The other Commissioners, Chairman Hannah, president of Michigan State University; Robert Storey, the dean of the Southern Methodist University Law School; Doyle Carlton, former Governor of Florida; Father Hesburgh, the president of the University of Notre Dame; and George M. Johnson, former dean of the Howard University School of Law; were unanimous in their support of these proposals.

The Commission's report deals with housing and education as well as with voting rights and, of course, there are some differences among the various Commissioners with respect to specific proposals made in these fields. This in no way serves to undermine the importance of the Commission's report. Rather, it serves to emphasize the necessity for continuing the great work in which these men are engaged so that further light can be shed on the many difficult issues which are faced in the field of civil rights. These men, all of them distinguished Americans, are engaged in a great dialogue on a subject which goes to the core of our American way of life. Discussions and reports can pave the way for an era of ever-increasing freedom and liberty for all Americans. It has always been my creed that no American can feel secure in his freedom unless the freedom of all Americans is safeguarded. This appears also to be the dominant theme of the Commission's report. I applaud the results the Commission has thus far accomplished. Under no circumstances should we even consider adjournment until the authority for continuation of the Commission has been assured.

Labor Day Statement of George Meany, President, AFL–CIO

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. SHELLEY. Mr. Speaker, on this fateful day in the history of the American trade union movement. It is a distinct pleasure for me to include in the RECORD the statement of President George Meany of the AFL–CIO delivered to trade union members in the United States on the occasion of Labor Day, 1959. I personally would also like to take this opportunity to salute the 13.5 million loyal and honest trade unionists in the AFL–CIO and the other millions of organized labor rank and file this day honors. I include the editorial as follows:

[From the AFL–CIO News, Sept. 5, 1959]

MEANY URGES RESURGENCE OF UNION FIGHTING SPIRIT

(By George Meany)

Labor Day was created as a day of dedication rather than one of celebration. The pioneers who founded the trade union movement and precious little to celebrate back in 1882. The unions of those days were weak, impoverished and the targets of constant harassment by employers. It took a brave man, a man with deep loyalty and plenty of fighting spirit, to join a union and stand by his union under the oppressive conditions that prevailed before the turn of the century.

Today the trade union movement needs above all a rebirth of that fortitude and resolution which enabled Sam Gompers and his associates to lead a parade of progress for humanity unparalleled in human history.

They fought and won despite open warfare by employers and handicaps so great as to make their ultimate victory almost miraculous.

Today, labor faces another kind of warfare, a cold war deliberately invoked against the whole trade union movement by the big business interests of the Nation.

The spokesmen for these interests—such as the National Association of Manufacturers and the chamber of commerce—pay lipservice, of course, to the undeniable fact that unions have done a great deal to improve the American way of life and that unions are therefore here to stay.

But at the same time, big business leaders are doing everything in their power to weaken and destroy our trade union movement. Let me cite three major examples:

They have come out for a wage freeze, forming a solid wall of opposition to any further economic gains by the workers of this country. The steel strike, forced upon 500,000 steelworkers and their families, epitomizes this new form of economic pressure.

They have undertaken an all-out campaign of high-powered deception to prevail upon Congress to enact restrictive antilabor laws in the name of accomplishing labor reform.

They have financed at the State level a blistering bombardment to undermine the security of trade unions through adoption of the misnamed right-to-work laws.

These developments are not haphazard or unconnected. They didn't just happen spontaneously. They have been carefully planned and deliberately organized and heavily financed by the big business interests which are determined to cut down the power of organized labor.

That power has been a power for good for the people of our country. It has enabled the workers of America to gain for themselves the highest standard of living prevailing anywhere in the world. It has created the mass markets which have made industry and the farmers prosperous. It has made it possible for the great majority of the people of this country to live in decent homes, to send their children to school and to enjoy some measures of economic and social security.

Are the workers of this country willing to submit tamely to the forfeiture of these gains? Or are they ready to stand up together again, as their forefathers did in the old days, and fight for the preservation of their rights and their trade unions?

The American Federation of Labor and Congress of Industrial Organizations doesn't have to take a Gallup Poll to obtain the answer to those questions.

We know from direct contact with the members of our unions and the leaders of those unions that they are ready to meet the challenge head on.

In that knowledge, the AFL–CIO executive council chartered a program of action.

1. We have officially proclaimed this Labor Day to be "Support the Steelworkers Day," so that the 13.5 million members of our federation and their friends will be able to demonstrate their complete solidarity with the embattled Steelworkers. To make that support concrete, the general board of the AFL–CIO will hold a special meeting in San Francisco on September 18. At that meeting, a definite program will be drawn up to mobilize the maximum organizational, financial, and moral support of the entire AFL–CIO to insure victory for the Steelworkers. Once that victory is won, the whole wall of resistance erected by big business against further wage increases will crumble.

2. We have determined that we will have to organize for political education and political action in the same thorough and painstaking way that we organized in the past for economic purposes.

This program will take time and patience and hard work and money. But it is our only hope for the resumption of progress in the future.

We want the American people to understand that labor is entering upon the political battleground with reluctance. If we had any other recourse, we would be happy to stay out of politics. But our enemies have chosen to weaken the trade union movement through restrictive legislation so that it will be rendered ineffective at the bargaining table.

To remain true to our trust, to fulfill the responsibilities that the workers of this country have delegated to their unions, labor must fight back in the political arena. We intend to use every legal weapon we have, including the right of every citizen to engage in politics, to regain the ground we have lost.

In this effort, education will play a key part. Against the unscrupulous and deceptive propaganda unleashed against us by the opposition, we must rely on the power of truth.

We need not go beyond the facts and the record to prove our case.

The record shows that the AFL–CIO favors and supports the strongest possible law to drive the crooks and racketeers out of the labor-management field. The record shows that State and local authorities have failed to enforce existing laws against the criminal activities of these racketeers.

The record shows that under guise of Federal legislation against corruption, big business has sought to prohibit legitimate union activities such as organizational picketing and secondary boycotts.

The record shows that the AFL–CIO has demonstrated its integrity by expelling member organizations found to be dominated by corrupt influences and by establishing strict codes of ethical practice for all affiliated unions and their officers.

The record shows that no business organization has ever taken such stringent action despite the fact that the frauds and embezzlements perpetrated by business and banking executives make the transgressions committed by a few labor officials look like petty larceny.

The record shows that big business has tried to fool the public by masquerading its legislative attempts to destroy union security under the false front of "right-to-work" laws in the States.

The record shows that there laws, now in force in 19 States, have not granted the right to a job to a single worker; that they have not improved the economic status of a single worker; that their one and only purpose is to outlaw the union shop.

Once the American pepole fully understand these facts, the massive antilabor campaign instigated by big business will founder and collapse.

We have our work cut out for us. The opposition possesses unlimited resources and controls the main channels of communication with the public. They have a host of soft-soap artists at their command, skilled in distorting the truth and inventing artful propaganda slogans designed to mislead the public.

But we have on our side the strength of numbers and the power of truth. If we use them, we will win.

On this Labor Day, the the trade union movement, with the willing support of the decent working men and women who make up its loyal membership, pledges to work and fight until we do win.

Letter From Oregon National Guard

EXTENSION OF REMARKS

OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith an extremely interesting letter from the adjutant general of the Oregon National Guard.

Our guard units did an outstanding and remarkably prompt job in connection with the recent disaster at Roseburg, Oreg.

This letter points this out in detail and I commend its contents to any Members of the Congress who may have doubts as to the mobility and usefulness of our National Guard units:

AUGUST 19, 1959.

Congressman WALTER NORBLAD,
U.S. Representative,
House Office Building, Washington, D.C.

DEAR MR. NORBLAD: Regarding our recent tragedy in Roseburg, I thought you would be interested to know briefly the role the Oregon National Guard played in assisting the citizens and city of Roseburg.

On Friday morning, August 7, following the early hour explosion at 0115 hours (1:15 a.m.), the first unit of the Oregon National Guard was called out. The unit was Company D, 2d Battle Group, 186th Infantry, stationed in Roseburg. Approximately 50 percent of the unit was mobilized by 0145 hours (1:45 a.m.), which is less than 1 hour after the time of the explosion. This indicates the degree of organization and readiness that exists in our National Guard units without further enlarging upon the matter. The balance of this unit was present by 0600 hours (6 a.m.). The first elements of the unit stationed in Cottage Grove, Company B, 2d Battle Group, 186th Infantry, arrived in Roseburg about 0700 hours (7 a.m.) August 7, with the balance of the unit present by 1200 hours (noon) on August 7. These were the only two units initially called out by the Adjutant General's office as directed by the Governor's office. At 1130 hours (11:30 a.m.) on August 7, additional help was requested by officials in Roseburg. The Grants Pass unit, Company C, 2d Battle Group, 186th Infantry, was then mobilized. This unit was present in Roseburg by 1730 hours (5:30 p.m.). The total strength of these three units which were present in Roseburg was as follows: 20 officers. 1 warrant officer, 191 enlisted men.

The above units constituted the units of the Oregon National Guard that were utilized in the disaster area. The total strength was gradually reduced throughout the period August 7 through August 15, with the last National Guard personnel released from Roseburg at 2000 hours (8 p.m.) August 15. The total cost to the Military Department, State of Oregon, for the entire period was $10,833.53.

The primary duty of these units was to protect life and property in the Roseburg area in the initial days of the disaster until businesses were secured to protect against looting. After this had been accomplished, the National Guardsmen were used to isolate dangerous areas and buildings from all but authorized persons.

These National Guardsmen gave freely and willingly of their time. In many instances, the pay they received from being on military duty was much less than the wages from their civilian jobs. However, this was of no major concern to the men, as they knew the people of Roseburg had lost a great deal more. It is a glowing spirit and joint effort by our National Guard units in times of need such as this that make us all justly proud of the Oregon National Guard.

The merit and conduct of the National Guardsmen during the Roseburg disaster has been further endorsed by most appreciative and praiseworthy comments from civic and State officials who worked closely with the stricken city. I feel such words of praise are most deserving.

With best personal regards, and I look forward to the pleasure of seeing you again soon.

Sincerely,

ALFRED E. HINTE,
Brigadier General,
The Adjutant General.

Federal-Aid Highway Act of 1959

SPEECH
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8678) to amend the Federal-Aid Highway Acts of 1956 and 1958 to make certain adjustments in the Federal-aid highway program, and for other purposes.

Mr. WOLF. Mr. Chairman, I feel that I must point out some facts regarding my protest vote against the 1-cent-a-gallon increase in the gas tax. By closing off debate and not allowing amendments on the question of where we are going to get money to pay for the highway program, the American people lost and the special interests won. I want it clearly understood that I am in favor of the continuation of the interstate highway program. I am opposed to the procedure by which it became impossible to discuss on the floor of Congress the method of financing it.

Many Members of Congress were in support of alternative methods of taxation to the one proposed. The 1-cent-a-gallon tax increase will injure many people in very modest circumstances who consider gasoline a necessity for their livelihood. It is my feeling that Congress should have considered an amendment to the gas tax bill which would have reduced the 27½ percent oil depletion allowance for foreign oil imports. The Members of the Congress were aware that such an amendment was to be introduced by Congressman HENRY REUSS, of Wisconsin, had amendments been in order. This would have saved the American taxpayers millions of dollars and thus provided us with $2.4 billion necessary to finance our interstate highway program. If the Congress had supported a plan which would have reduced the oil depletion allowance from 27½ to 15 percent, the gasoline tax would not have had to be raised and the little taxpayer would not be hurt.

I am very sorry that one of the true beneficiary groups of the new highway system, the billion-dollar oil companies, are able to escape the tax burden which other people, not in oil, have to pay.

Another interesting paradox is that American foreign aid funds are being used abroad to build highways without an additional gas tax being imposed in those countries, while in America—to finance our own roadbuilding program—we are called irresponsible if we do not immediately impose an additional 1-cent gas tax.

The American people have been sadly misled on the problem of raising the gas tax so that highway construction would continue. The Administration has diverted moneys collected from the Federal highway fund for other purposes. There is at least $1.2 billion a year which belong in the Federal highway fund which is not getting there. Furthermore, there is no reason why, if taxes must be raised in this area, we must exclude taxing the fat oil companies by continuing to give them tax advantage after tax advantage while the average American must carry a heavier tax burden.

Author of Captive Nations' Week Resolution Points Way To Defeat Russian Cold-War Strategy and Tactics

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. BENTLEY. Mr. Speaker, as most Members of Congress know, the individual who initiated and authored the Captive Nations' Week resolution is Dr. Lev E. Dobriansky, a professor in Soviet economics at Georgetown University. In addition to his academic preoccupations, Dr. Dobriansky serves as 1 of the 44 constituting the membership of the Republican committee on program and progress.

In connection with the Captive Nations' resolution, it was my happy experience, Mr. Speaker, to encourage the efforts of Dr. Dobriansky by submitting the resolution in the House. The total effectiveness of the resolution, now Public Law 86-90, was demonstrated by the violent outbursts it produced in Moscow.

There can be no question of the fact that the resolution struck the nerve center of Russian Communist imperialism and colonialism. The paramount reason why Mr. Khrushchev was deeply disturbed by the resolution is due to the fact that for the first time our Government recognizes in this law the existence of the majority of the captive nations which exist in the Soviet Union itself.

If we press this vital point forward, Russia itself will be made to look rather weak. Without the captive resources of the Baltic nations, White Ruthenia, Ukraine, Georgia, Armenia, Azerbaijan, Turkestan, and the other captive non-Russian nations listed in the resolution, Russia itself would assume its real form as a third-rate power. It is this penetrating point that struck Mr. Khrushchev between the eyes. For it is this point which can, psychologically and propagandawise, prick the bloated balloon of Moscow's bluffish propaganda concerning the solidity of its military power, economic strength, science, and the like.

Mr. Speaker, on Sunday, August 30, the New York Times ran an editorial on "Lessons From Laos." The editorial warns that we have no apparatus to deal with the well-known Communist techniques of infiltration, subversion, and guerrilla fighting. These same techniques were used about 40 years ago to destroy the independence of most of the non-Russian nations now in the legalized prison house of nations known as the Soviet Union. Clearly, it would seem that it is high time we developed means to meet this permanent cold-war challenge.

Closely related to the resolution he initiated, an article titled "A Measure of Realism in the Cold War" has been written by Dr. Dobriansky to show the avenues open to us for a successful counteraction and even victory in the cold war. This article, which appeared in the June issue of the Ukrainian Quarterly, advances the practicable means toward a solution to the problem raised by the New York Times editorial.

Because of the grave importance of this problem and the keen interest of our Members in the thought given to it, I have requested that the New York Times editorial and the article written by Dr. Dobriansky be appended to my remarks.

[From the New York Times, Aug. 30, 1959]

LESSONS FROM LAOS

The situation in Laos is proving, once more, that the free world has given inadequate attention to its means of defense against the Communist conspiracy. Communist raiding parties have now struck within 16 miles of the capital. At least three areas in the northern part of the country are already under Communist control or in a state of chaos. The survival of free government in this newly independent kingdom is at stake.

Laos is a member of the United Nations, but the Secretary General admits that he is powerless. He cannot even send in observers unless they are requested by both sides in the controversy and naturally the last thing in the world that the Communists want is observation. The United Nations cannot take any forceful and immediate action without the authority of the Security Council where the Communist veto is expected, automatically.

The United States, acting independently, has announced its intention to airlift some small arms and ammunition to the tiny Lao Army. It may be possible to bring its effectives up from 25,000 to 29,000 men, to withstand the assault of North Vietnam and Red China, whose manpower and firepower are not under such modest limitations.

Even that little bit of help is joyfully welcomed by the free Laot as a symbol of the fact that at least someone, somewhere in the world, is concerned over their survival. And naturally it has drawn a prompt and bitter denunciation from the Communists in North Vietnam on the ground that "U.S. imperialists are seeking to expand the civil war in Laos into a real shooting war." This is no time for humor, but one may be forgiven a wry smile at the concern of foreign Communist North Vietnam over a civil war in Laos.

What all this demonstrates is that we have not yet developed any effective techniques for meeting the by now well known Communist tactics. We don't want a big war and the Communists know it. So they can keep up this unremitting process of hacking away at human liberties, knowing that the United Nations is powerless and that most members wish to keep the peace.

Some changes in the mechanism of keeping the peace and preserving human liberties are obviously needed. Perhaps the first change that is required is in our own thinking so that we can recognize a grave menace

when it appears, and not shrug it off lightly because it happens to be on the other side of the world.

[From the Ukrainian Quarterly, June 1959]

A MEASURE OF REALISM IN THE COLD WAR

(By Lev E. Dobriansky)

How to cope with the cold war thrusts and maneuvers of Moscow has been a fundamental and vexing problem for some time. By no means has the problem in any real sense been resolved. In fact, our Government has not faced up squarely to all the demands and issues involved in the problem. As a consequence, no clear-cut decision has been made on how to meet it, no apparatus or coordinating body exists at present to adequately deal with it, and our dearth of operation could only accommodate a defensive reaction, based on military might, to the successive challenges posed by Moscow. In each instance, some gain of a psychopolitical nature accrues to the enemy. This could not be otherwise since our defensive posture can only serve to minimize, not prevent entirely, his inroads into the broad field of operation offered by the free world.

The problem is not one that can be competently and satisfactorily handled by any existing executive agency. Moscow's cold war activity embraces military factors, to be sure, but much of the bluster, bluff, and blackmail built about U.S.S.R.'s military prowess plainly indicate that in this context the military is essentially a tool for the furtherance of broader political and psychological objectives. This dimension does not fall as an object of primary study, not to mention operation, in our Military Establishment. As another example, Moscow's unleashing of economic warfare against the free world creates a similar dimension in its cold war activity. Now the economic tool is utilized to achieve the same psychopolitical objectives. Our Departments of Commerce and State are properly concerned with these economic penetrations into the free world. But the most that one can hope for in either Department is a subsidiary study of this phase of the problem. The same may be said for the propaganda and information phase, cultural exchange, education, science, and other fields of enterprise in the cold war. Studies will continue to be piecemeal, interest in one aspect or another will fluctuate in response to the tune played by Moscow, and much of the effort and capital invested in these lines will yield less than maximally productive results for want of central purpose and efficient coordination.

If, somewhat inaccurately, one dates the beginning of the cold war period as 1947, the picture depicted above is not a pretty one. The picture is scarcely exaggerated; if anything, it is incomplete. After over a decade of experience with cold war activity, we find ourselves still stripped of the necessary means to engage intelligently and competently in it. Recently, some legislators on the House Appropriations Committee were amazed to receive a State Department request for funds to establish a section for the purpose of studying Communist tactics and techniques. As one of them pointed out, he was under the natural impression all these years that appropriations made along these lines were being continuously applied to this primary and necessary end. The obvious moral here is that in these matters one should not be guided by natural impressions and, effect, take things for granted. As a matter of fact, if the Department had actually conducted such continuous studies, there is little likelihood that they would have assumed any concrete operational significance and the problems of coordination and forming a composite picture of Russian cold war operation would still remain unsolved.

There are numerous reasons accounting for this present state of affairs. For one, the nature and scope of cold war activity continue to elude the understanding of many Americans. Some, pitiful in their grasp of Russia's historical background, view it as part of a "strange new force"—that has entered our world—"the strangest and most enigmatic in all history."[1] When, for instance, Khrushchev makes a warm actor's plea for the lessening of international tensions, they find it difficult to understand that this gesture is only another purposeful maneuver in Moscow's cold war operation. The zag—after the zig—is nothing new in Russia (not just in the so-called Soviet) history, and the end has both political and psychological import. Americans naturally crave for real peace. When it suits the calculations of their next operational move, the Russians are prepared to soothe this popular craving. The process misleads, confuses, softens, and gains time and advantage for a concurrent or subsequent move. Moscow's controlled cultural exchange program and recourse to economic aid and competition play on additional American instincts, with much the same results. Even the conduct of diplomatic negotiation is for Moscow a traditional cold war instrument. But many of our leaders, steeped in Western traditions, continue to believe that a high level conference with the Russians in an appropriate occasion for settling differences of view on particular issues.

Another reason for our lack of a cold war apparatus is the expressed distaste Americans have for Russian methods and techniques. It is frequently argued that we could not succumb to the use of such methods. The filth of lies, distortions, callous murders, and general immoral behavior is beyond our political upbringing. Thus we must depend upon our standard ways. In reply one could say that in a hot war we don't hesitate to employ any ruse or means of killing where it serves the end of our survival and self-preservation. Why should we be so discriminating under conditions of neither peace nor war, however, that to overwhelm the Russian cold war threat a condescension to such methods is not necessary. We possess powers of truth and knowledge that are not being fully used for want of organization and implemental zeal and imagination. In short, we haven't as yet developed an efficient apparatus for the utilization of these powers in the most effective ways possible.

Differing views as to the administration of a full-fledged cold war undertaking constitute a third reason for the absence of such a vital program. Those having these views are in complete agreement that such a project is a must. To a greater or lesser extent they do disagree with regard to its content. For example, this writer sees nothing really new in the cold war techniques and methods of the Russian Communists. There is nothing peculiarly Communist about them. Except for accidental variations of refinement and intensity, the substantive content of these techniques was provided by Russian totalitarianism politics as far back as the 16th century. These tools are the key to an understanding of Moscow's phenomenal creation of a vast empire long before Lenin and the Bolsheviks appeared on the scene. However, this perspective awaits expression and treatment once our facilities are adequately established. The newness of these techniques rests in the fact that Americans never encountered them before. For East Europeans of the traditionally subjugated nations, these are historically old methods.

[1] E.g., "What We Must Know About Communism," by Harry and Bonaro Overstreet, 1958, p. 9.

Many recent voicings that something creative and different must be done clearly indicate a widespread feeling of dissatisfaction with existing agencies on this score. Senator JACKSON, of Washington, soundly declared at the recent Military Government Association meeting in Washington that "We have been outmaneuvered politically in one vital area after another." He is right when he avers that "we have never been in the same league with the Russians in the psychological war of wits and words." The writer, David Lawrence, began his illuminating column recently with these words: "What a spectacle the Western governments are making of themselves these days as they flounder indecisively, in the midst of Soviet threats and ultimatums, seemingly afraid to meet squarely the challenging issues of the hour." Senate Majority Leader LYNDON JOHNSON gives further expression to this growing restlessness as concerns our operational inadequacies when he urges the calling of a summit of the heads of state of the free world.

These and many more evidences simply show that the requirements and demands of the current situation are not and cannot be met by our existing agencies. They are functionally fitted for other respective ends. This does not mean, of course, that with a new agency, created for the specific purpose of dealing with the realities of cold war operation, the fringe efforts of the existing departments would not be embraced. On the contrary, for policymaking reasons, a close coordination would be mandatory.

THE FREEDOM COMMISSION MEASURE

The measure of realism in the cold war is the measure now before Congress, known as the Freedom Commission Act. This measure is sponsored in the House by Congressmen HERLONG, of Florida, and JUDD, of Minnesota. In the Senate its sponsors are Senators MUNDT, of South Dakota, and DOUGLAS, of Illinois. The measure calls for the creation of a Freedom Commission, the establishment of a Freedom Academy, and the formation of a Joint Congressional Freedom Committee. Its basic idea was first advanced several years ago by the Select House Committee To Investigate Communist Aggression which was led by the Honorable Charles J. Kersten of Wisconsin. Two years ago Senator DOUGLAS sponsored a bill seeking this very Freedom Commission. The immediate stimulus given to the present measure was provided by a Florida group called the Orlando Committee for the Freedom Academy.

The bill is designed to provide much-needed facilities for the strengthening of our cold war position. As its objectives imply, it would correct the glaring inadequacy that exists in our executive realm. The Freedom Commission it seeks to create would be an independent agency composed of six members and a Chairman. The members and Chairman would be appointed by the President, with the consent of the Senate. One of the prime authorized functions of the Commission would be the establishment and supervision of the Freedom Academy training at the Academy would concentrate on knowledge of Russian Communist techniques and ways and means of counteracting them. Students would be carefully drawn from governmental, private, and even foreign areas. Other functions of the Commission include the establishment of an information center to aid all groups in an understanding of the Russian Communist conspiracy, the conduct of research and surveys, and a host of additional tasks aimed to realize the objectives of the act. The Joint Congressional Freedom Committee, consisting of seven Senators and seven Congressmen, would oversee the work and development of the Commission.

There is no question that this measure realistically fills in some serious gaps in our Government when it comes to this subject of

cold war preparation. The bill should definitely and overwhelmingly be passed. Its passage would be one of the crowning achievements of this Congress. Beyond a question of doubt there is no educational institution in our Government or in the private area that can be compared with the contemplated Freedom Academy. Second, no existing executive agency is equipped by administrative bent or facility to undertake the functions prescribed for the Freedom Commission. And third, since cold war progress is just as important and vital—if in the long run not more so—as atomic progress, the need for a Joint Congressional Freedom Committee is well satisfied by this bill.

THE BROADER SIGNIFICANCE OF THE MEASURE

This measure of realism in the cold war has a broader significance than an actual reading of it would suggest. First, it should be borne in mind that it isn't impossible for this country, and with it the free world, to suffer disastrous defeat at the hands of the present Russian Empire. The possibility of such defeat is not necessarily grounded in any precondition of a hot global war. As a matter of historical fact, the great advances in the expansion of the Russian Empire, both past and present, were achieved primarily through diplomatic duplicity and conspiracy rather than military means. Thus, if the defeat of the United States should come to pass, the increasing chances are that this tragic eventuation would not be the result of lapsed missile production, any technologic lags, deficiency in conventional arms, retarded space exploration, domestic economic difficulties, or a fictitious economic victory by Moscow. As one speculates with balanced weighting of each of these he cannot but conclude that this possible defeat would be the consequence of a stubborn misunderstanding of the traditional nature of the enemy, how he grew to be what he is, and the trained cunning of his diplomatic, political, economic, and conspiratorial ways and techniques. With the well-grounded projection that our deterrent power in military means will be of declining importance over the long run, the soundness of the preceding observation becomes even more striking.

If the estimate arrived at above is correct, then the significance and indispensable value of the Freedom Commission come into full view for the precarious period ahead. To live up to its expectations, the Commission would have to probe into one of the strangest phenomena characterizing America's role in international politics. In this country, strangely enough, with all its rich traditions of freedom, national independence, and principled opposition to colonialism and imperialism, the real chasm that exists between imperialist Russian totalitarianism and freedom-aspiring non-Russian nationalism seems to escape the minds of many, including many on the highest levels of Government. In these cases, which perhaps are far too numerous than the present critical situation can tolerate, it appears that their deficiency of knowledge concerning Russia qua, Russia is exceeded only by their lack of insight into the traditional spirituality and living revolution of our own Nation. Well exemplifying this was the Mikoyan exhibition in this country at the beginning of this year. Fortunately, however, this inexcusable condition is being steadily, though slowly, overcome by various contributions made in this field at our universities and in group action. The basic force of Russian totalitarian imperialism and colonialism would necessarily be a high priority item for the Commission.

UNUSED POWERS OF KNOWLEDGE AND TRUTH

As mentioned earlier, the argument of submission to the filth of Russian totalitarian behavior is grossly untenable. With honorable means and techniques the Commission can begin to utilize some of our unused powers of knowledge and truth to inflict severe damage upon Moscow's cold war campaign. In this respect its first area would be domestic. There is an intricate labyrinth of false preconceptions and disinformation concerning Russia and the U.S.S.R. and their relations to the United States. Doubtlessly, this cannot be dissolved in short order. Time, patience, and persistent effort are required. Not only an educational but a historical process is involved. This field of knowledge seems to excel all others in this country in confusion, misunderstanding, and even unpardonable ignorance. In its pursuit of objective studies the Commission would inevitably have to consider whether communism or imperialist Russian totalitarianism is a reality, whether the U.S.S.R. can be identified as any other state, whether—all sentimentalism aside—Russians can in any decisive manner be attracted to the responsibilities of freedom while the empire of their capital is maintained. These and other basic issues would have to be sufficiently clarified by the Commission if we are to adopt those approaches to techniques, via understanding, that would incisively penetrate and weaken the present Russian empire.

This first step would be the heaviest and at the same time most constructive responsibility of the Commission. In the order of first things first, unless we begin to rectify our own imbred misconceptions, we can't help but perpetuate old errors. For example, in this field of knowledge the failure of many scholars and writers to comprehend the empire character of the Soviet Union has led to all sorts of distorted and slanted observations. In the military sciences, for instance, the armed forces of the Soviet Union are erroneously viewed as nationally integrated units similar to those of Japan, Germany, and other true nations. Nothing could be further from the truth. In science and the arts, because of demographic ignorance contributions emanating from the Soviet Union are flippantly and uncritically characterized as Russian products. In the field of economics marked by ill-adapted symbols of GNP and the like, treatises are developed on the fallacious assumption that the Soviet Union is a national parallel to the United States. In many other fields the same basic errors of concept and interpretation crop up. In short, the actual is scarcely penetrated to grasp the real: the superficial is accepted in preference to the essential. For purposes of meaningful interpretation and action, the Commission, if it is to achieve a balanced coverage of the enemy and his techniques of deception, would necessarily have to consider alternative frameworks of analytic reference than that presently used.

This first step could not be constructively undertaken without the simultaneous development of the whole area of the non-Russian nations in the U.S.S.R. This area of study would have to be developed economically, politically, historically, and culturally. The cultivation of such study, which is virtually nil in this country, will undoubtedly produce many interesting results for perspective and policy alike. One important result is that both out of ignorance as to the nature of the non-Russian revolution in the crumbling Russian empire and out of halfhearted determination, the United States failed to support the ideas and principles of our own tradition in concrete application to independent Georgia, Armenia, White Ruthenia, Ukraine, Azerbaijan, Turkestan, and other non-Russian nations which determined themselves at the end of World War I. These nations were soon again individually subverted and subjugated by the imperialist successors to the White Czar. But the manifest significance of this period rests in the fact that the Russian Communists built upon this failure and our mistakes of 40 years ago and now threaten the very life of our own Nation. What should have been a second- or third-rate power is today, largely on the basis of accumulated captive resources, a contender for the world. More ironical still is the fact that the sole real imperialist power in the world today has actually stolen the American banner of the idea of national self-determination and freedom and successfully parades it in Asia and Africa. Plainly, then, the Freedom Commission in its positive concern for freedom everywhere would be morally obligated to launch systematic studies of this long neglected and yet vitally strategic non-Russian area of the Soviet Union.

THE PROSPECT OF REDRESSING A SAD RECORD

In addition to its broader significance and suggested opportunities, the Freedom Commission, should it come to pass, would have the tremendous prospect of working to redress somewhat the sad record of American relations with Russia. Whether one appreciates it or not, the successes of contemporary totalitarian Russian imperialism have been imposing and sweeping. These successes from 1918 to the present provide a concrete measure of fault and incompetence on our side. In the 1920's, soon after our contribution by indifference to the establishment of the now Russian Empire, we inadvertently saved the Russian Bolshevik regime by our charities through the American Relief Administration. In the thirties we furnished industrial know-how and capital to the empire, and soon thereafter cloaked the new imperial regime with the respectable bonds of diplomatic concourse. In the forties we spent billions to save Stalin and overlooked our own determining power in virtually allowing the Russians to expand their empire to the Danube and the China Sea. Our naive faith in Russian word and intention accommodated the leakage of the most vital atomic and missile secrets, and in this decade we witnessed the evaporation of our monopoly power. Finally, our ill-advised participation in the Geneva summit conference built up the international prestige of Stalin's criminal successors who are today strengthened by the sputnik, lunik, and intercontinental missiles. Regardless of the rationalization offered for each of these developments, the record is a sad and almost incredible one.

A midwestern professional friend of the writer has suggested as a title for the past decade of these relations, as concerns the United States: "From Atomic Monopoly and Supreme Air Power To Surrender Research." The pessimistic overtones of the title are not to be accepted, although the elements are factually valid. Yet it cannot be argued that we as a Nation did not lose much in the shortest period of time for any leading power. The reasons for this have in part been given above. There are others. But had there existed all this while an administrative entity comparable to the planned-for Freedom Commission, the results would have been immeasurably different. The nature of the enemy revealed itself decades ago. Nevertheless, to win the cold war means in some notable measure to redress our said record. And the Freedom Commission is purposed to realize such victory.

Irrigation and Missouri River Development Important to South Dakota's Future

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McGOVERN. Mr. Speaker, I am delighted that the House Committee on Public Works has approved my resolution instructing the Army engineers to undertake a survey as to the feasibility of slack water navigation on the Missouri River between Yankton, S. Dak., and St. Louis. I believe that such a study will show the desirability of slack water navigation.

It is my conviction that this type of navigation, now in use on the Ohio and Tennessee Rivers and other systems, will provide for the most efficient use of Missouri River water. Instead of wasteful releases of water to maintain the present free-flowing, 9-foot navigation channel, slack water navigation will permit the full development of hydroelectric power and irrigation in the upstream States. Furthermore, it will increase navigation efficiency downstream and add valuable hydroelectric installations to the stretch of the River below Yankton.

Two very fine editorials from outstanding South Dakota newspapers have recently recognized the importance of such a study. I include in the RECORD an editorial from the August 25, 1959, Daily Republic and a second editorial from the September 1, 1959, issue of the Aberdeen American-News:

[From the Mitchell (S. Dak.) Daily Republic, Aug. 25, 1959]

PEOPLE MUST PROVIDE PUSH FOR IRRIGATION

Congressman GEORGE MCGOVERN's efforts to clear the way for a study of slack-water navigation on the Missouri River has jumped its first hurdle with the agreement of the Army Corps of Engineers that such a study will provide authoritative and up-to-date data, something that is not available at this time.

The slack-water study was suggested by the Missouri Basin interagency committee at the prodding of South Dakota's Governor Herseth and the chief executive of the State of Iowa. The proposal is aimed at saving the stored water in mainstem dams for beneficial uses, rather than to dump it downstream for navigation.

This study, if it is approved by Congress, is only one step in seeing that South Dakota retain its rightful amount of the water now flooding thousands of acres that once provided income for individuals, counties and the State. The other steps must be made right here in the State if we do not want to wake up some day and find that it is too late to fill our demands.

The water resources commission this month made the first move in this direction when it organized as a State water conservancy district. This agency was created by the South Dakota Legislature to assist subconservancy districts to start irrigation projects that will use Missouri River water.

However, there is little the State group can do immediately in the formation of subdistricts. The legislature wisely provided that the support and push for the operating units must come from the people within the district, rather than from a State agency. This is as it should be for these are the people who will benefit most and who also must foot the bill.

The Bureau of Reclamation has been dragging its feet in the major survey of the James River area, partly because of money but mostly because of a lack of organized support for the irrigation project. The same is true in the Charles Mix-Douglas pumping plan which probably could be the first major project if local support can be organized to push through legal channels for the study.

The State water resources commission has been authorized to employ individuals capable of assisting subdistricts in their organization. This should be helpful. But even with this assistance the prime movers must be those residing within the district.

If there is real interest in irrigation on a district, rather than an individual, scale this should be the year to uncover it.

[From the Aberdeen (S. Dak.) American-News, Sept. 1, 1959]

MCGOVERN WEIGHS SOUTH DAKOTA WATER NEEDS

It didn't result in as large headlines as his comments on labor legislation, but Representative GEORGE MCGOVERN's speech Friday on the urgent need for irrigation was even more important to South Dakota.

The first district Congressman cited at Rapid City the benefits South Dakota can enjoy from irrigation.

Proper use of Missouri River water, he said, will make South Dakota prairies bloom.

What he predicts is certainly true.

Persons who have lived in this State any length of time know that when there is plenty of rain in South Dakota the soil produces with great abundance.

Water, not only for irrigation, is a key to future development—especially in areas such as South Dakota.

Representative MCGOVERN's interest in an imaginative water use program should be helpful in completing studies that will hasten expansion of irrigation.

One section in which persons of this part of the State are concerned is the James River Valley. It would be supplied with water from Oahe Dam near Pierre.

Representative MCGOVERN, during the same week, made a contribution toward development of another type of water employment. He testified before the House Public Works Committee, urging more efficient development of Missouri River water resources through a survey of slack water navigation possibilities.

He reviewed disadvantages to South Dakota of the current water use program and explained preliminary investigation indicates that instead of "huge, wasteful releases of water necessary to maintain a free-flowing 9-foot channel, a system of slack water navigation would be more beneficial both for navigation interests downstream and the irrigation and power needs of the upstream States."

"A system of low-head dams and locks will trap the water in small stretches of the river, slow down its flow, increase the electric power utilization, and improve the overall benefits of the entire river program for both upstream and downstream States," MCGOVERN said.

U.S. Foreign Policy Revised

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following column by Drew Pearson which appeared in the Friday, September 4, 1959, issue of the Washington Post and Times Herald.

Mr. Pearson, with his usual perspicacity, has cited several interesting changes which recently have taken place, or are taking place, in our foreign policy:

IKE SCRAPPING POLICIES OF DULLES

(By Drew Pearson)

Watching the eminently successful trip of President Eisenhower through Europe, I can't help but recall a historic day in Washington last May when the flag-draped coffin of John Foster Dulles lay in state in the National Cathedral. Foreign ministers from as far as Japan flew to pay their respect and homage. Even dour Andre Gromyko, Dulles' protagonist at many conferences, and gnarled old Chancellor Adenauer, Dulles' friend at many conferences, took the long trip across the Atlantic.

They came because Dulles' friend, the President of the United States, decreed that the Secretary of State should have a state funeral. Mrs. Dulles had planned a quiet family ceremony, but a deeply grieving President personally took charge of all funeral arrangements, even specifying the type of dress to be worn, and preparing the list of honor guests. He wanted the man who had worked so tirelessly to solve the problems of the world to have, in death, the recognition of the world. As a result, not even Presidents Roosevelt, Harding and McKinley, who died in office, were buried with such ceremony.

It was just 2 months and 5 days later that President Eisenhower began scrapping the policies of John Foster Dulles. He would be the last to admit this. And perhaps he didn't even realize he was scrapping Dulles' policies. But he did it first by inviting Nikita Khrushchev of the Kremlin to pay a personal visit to the White House, an invitation which Mr. Dulles had emphatically and consistently opposed unless our rights in Berlin were first guaranteed. They were not guaranteed, but Khrushchev was invited anyway.

Ike went even further by accepting Khrushchev's invitation to come to Moscow, which brought gasps of dismay from close friends of Dulles.

IKE BECOMES A DULLES

Then one by one, the President proceeded to throw overboard or discredit, without specifically naming them or perhaps even realizing that he was doing so, the watchwords and policies of his late Secretary of State. The only policy he kept was that of personal negotiation. Stepping into the Dulles shoes of the traveling-diplomat-salesman, he proceeded to carry his own ideas direct to the trouble spots and troubled statesmen of Europe.

He has been so successful that many diplomats wish the President had become his own Secretary of State long ago. But in so doing, here is what happened to the policies of Mr. Dulles:

Massive retaliation was a basic policy coined by Dulles in warning that the United States had great capacity to retaliate instantly, by means and at places of our choosing. In contrast, President Eisenhower told the world in his TV chat with Prime Minister Macmillan: "People want peace so much that one of these days governments had better get out of their way and let them have it."

Brink of war: This Dulles policy, outlined in Life magazine in 1956, completely evaporated at the Geneva Foreign Ministers Conference, when the United States ducked any showdown of power over Berlin and sent Vice President NIXON on a peace mission to Moscow instead.

Liberate the satellites: This basic Dulles policy was thrown out when Mr. NIXON conferred officially with the Communist leaders of satellite Poland, thereby switching the old policy of "liberation" to one of "friendship." Mr. Eisenhower further scrapped the liberation policy when, during his Bonn, Germany press conference, he said he would not discuss the liberation of former German territory—referring to that held by Poland.

Failure from within: Dulles had argued, privately and publicly, that the Soviet Communist system would come tumbling down of its own errors. As late as February 26, 1956, testifying before the Senate Foreign Relations Commitee, he said "They (the Russians) have made little progress in the last few years * * * The fact is that they have failed and they have got to devise new policies."

In Moscow, following Dulles' death, Vice President NIXON, broadcasting to the Russian people, paid tribute to the "thriving productivity of the factory complex of the Urals. * * * The efficient modern equipment of your factories. * * * The competitive drive for progress evident on every side * * * and most of all the people."

Direct disarmament: In December 1956 Harold Stassen, then in charge of disarmament, pleaded with Mr. Eisenhower for permission to fly to Moscow to carry on direct disarmament talks with the Kremlin. He was convinced the Russians were ready not only for disarmament, but a 10-year peace pact with the United States. Dulles vetoed the Stassen trip, eased Stassen out as disarmament specialist.

Today, one definite objective of the Khrushchev-Eisenhower exchange is disarmament.

Areas of Chronic Depression—Mass Production of Poverty

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 4, 1959

Mr. BYRD of West Virginia. Mr. President, in these pleasant last days of summer, when outdoor employment is high and much of our Nation is enjoying prosperity, it might be easy for us to forget that America still has great need of the area redevelopment bill.

But, in some parts of our country, life is not so pleasant, and winter soon will come to multiply the problems of those who have been thrown out of work by technological changes and other economic factors.

Lest we forget their plight, lest we forget that the Congress and the President still have a duty to bring economic relief and industrial stimulation to these so-called depressed areas, I wish to bring to the attention of the Congress a large, two-page article which appeared in the August 24 issue of the Oil, Chemical and Atomic Union News.

The article, titled "Areas of Chronic Depression—Mass Production of Poverty," deals entirely with conditions in West Virginia, which have occurred as a result of far-reaching economic changes.

I believe that these are economic facts which should be studied by every Member of this 86th Congress. Therefore, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AREAS OF CHRONIC DEPRESSION MASS PRODUCTION OF POVERTY

"I see young people leaving school because they are embarrassed at how they look and what happens to them. I see them wanting to get work and not being able to find it. I see them trying to get in the Army, and they can't get in the Army. They can't pass the physical tests. They are so hungry and they have been without proper food so long they just don't meet any of the eligibilities."

These were the words of Mrs. T. R. Fulton, a social worker for the Monongalia County Health Department, Morgantown, W. Va., an area that except for the war years has not known the meaning of prosperity in any degree for an entire generation.

Millions of words have been written about economic hardship in West Virginia. But no matter how many millions more are written they will not adequately tell the story of the stark and helpless poverty of thousands of the State's citizens, the ravaged bodies of its hungry children.

West Virginia's economic plight is blamed generally on the decline of its major industry, coal mining. But when Union News wanted a firsthand look at one of the Nation's so-called depressed areas the Morgantown-Grafton-Fairmont-Clarksburg section in the northeastern part of the State was picked because of its more typical industrial diversity.

In this region coal remains a major factor, but it is balanced by chemical and glass manufacturing, lumber, metalworking, and the natural resources for other industry.

But despite its raw materials and factory facilities, the area's outstanding production by far is that of human degradation.

At the height of the recession early this year the national average of unemployment was about 6 percent. In this area it was approximately 16 percent. For many years it has continued substantially the same percentage above the national average. The cumulative results have been devastating.

Mrs. Fulton continued and her descriptions applied as well in other counties in the area as to Monongalia:

"I see people living in houses without roofs, houses without utilities. I see children going to school without shoes and without warm clothing. I see houses and homes where children have nothing to eat except surplus commodities and the canned goods which their parents put up in the summer that they got from the fields and the bushes.

"I see illness untreated because of persons who are so ashamed of having no money they are not willing to ask a doctor, who has given them more than he should of medical care, for more medical care. They can't get operations, and they can't get medicine. I know this is true.

"I see fathers leaving the home and bad things happening to their families while they hunt for work. If they are lucky enough to work, then there isn't near enough money to move a family of 6 to 7 or 8 to a new town where the rent is 10 times as much. There isn't enough money to pay for room and board and to send something home to take care of the wife and children."

One man, father of 11 children, told his personal story. He is in his early forties, physically strong and mentally alert. Laid off from his job in a coal mine, he had not worked for 2 years until this summer when he succeeded in getting what he hopes will be permanent, but he fears will be seasonal, work in a glass container plant.

He lives in a tenant house on a farm for which he agreed to give the owner 4 days of farm work a month in return for his rent. A small garden supplements surplus foods received from Federal Government sources.

Clothing comes from relief agencies. One older daughter works as a domestic and her meager earnings go mostly for a few pleasures for the younger children.

Such is the wretched existence of one family, but the case is in nowise isolated. It is repeated not scores, not hundreds, but thousands of times in the counties of Monongalia, Marion, Preston, Taylor, Harrison, and Barbour that make up the area.

The Salvation Army at Grafton is performing a herculean job of distributing surplus foods in three of the counties. But in March, when it list of recipients had grown to 10,000 individuals, a spokesman for the Army said it was at the point of having to ask that a new distribution point be found.

They were at that time in the midst of processing between 400 and 500 new applications or reapplications for food and were simply unable to finance the increasing cost of their work.

At the same time, locals 154 and 158 of the Glass Bottle Blowers of America are distributing the surplus food to some 500 families whose breadwinners were idled by the closing of the Hazel-Atlas glass plant.

Clifford Clemmens, OCAW member who is AFL–CIO community services representative at Grafton, spends a major part of his time looking for jobs for displaced workers and distributing food to needy families.

Still there is not enough food, not enough clothing and, at this point, tragically, there is not even enough hope.

Probably the biggest danger to renewed prosperity for this potentially rich area is complacency. Thousands of the people of the region have been beaten down for so many years that they have come to almost believe that nothing can be done about the situation. And futility is not confined to the jobless.

True there are men of vision in the area who are trying with all their might to solve the problem. The State has an outstanding delegation to Congress. Democratic Senators ROBERT BYRD and JENNINGS RANDOLPH have worked strenuously in efforts to get Federal depressed areas legislation enacted.

Congressman JOHN M. SLACK, Democrat, although not from the immediate area, has done a monumental amount of research work on distressed areas generally and probably is as well informed on the problem as any Member of the House of Representatives. The other Congressmen, too, may be considered outstanding leaders in efforts to bring relief to the jobless and correct a pitiful economic situation.

Leaders of the Oil, Chemical and Atomic Workers, the Glass Workers, Miners and other unions help wherever they can.

Business groups in most of the communities have set up development funds with which they hope to attract industry, but these are woefully inadequate.

But on the whole the impression is that there is a lack of drive to the whole effort. Talk to almost anyone, jobless or business leader, and there is no spirit of confidence that there will be a solution of the problem in the near future—if ever.

While the State Legislature was in session earlier this year Editor Richard Parrish of the West Virginian at Fairmont did a tremendous job of publishing illustrated stories of hardship cases and prodding the legislators to increase State funds for relief. The hardened legislature, however, was unmoved and refused the funds, and Parrish readily admitted that this would be no long-range solution for the area's ills.

The editor of another daily newspaper was thoroughly familiar with the conditions and needs of the region, but it had simply never occurred to him that his organ, on its own, might campaign or crusade for early solution, might advance any ideas.

John Martin, editor of the Clarksburg Telegram, was only afraid that contract negotiations underway at the time between the Glass Workers and the Hazel-Atlas Glass Co. might result in the closing of the plant there and the loss of jobs for another 1,500 to 2,000 workers.

The area is rich in natural resources, coal, salt, limestone, and other chemicals. There is abundant water and a moderate supply of timber. Electric power is reported to be ample. The climate is generally good and the scenic beauty of the mountains a natural tourist attraction.

Yet the economy of the country has been steadily declining since the 1930's when china and pottery plants began moving away both through mergers in the industry and to more modern, mechanized factories.

Rather than modernize, in 1936, 1,200 were put out of work when Wierton Steel closed an obsolete rolling mill.

A few years ago a cement plant was closed down at the very time a multimillion dollar concrete bridge was being constructed across the Monongahela River only a stone's throw from the factory.

Over a year ago 450 employees were left jobless when Continental Can Co. closed its modern-appearing Hazel-Atlas glass plant at Grafton.

A chemical plant, constructed at a cost of $163 million by the Federal Government, lies idle at Morgantown. Operated by the Olin Mathieson Chemical Co. since 1953, the jobs of some 2,000 were destroyed when it was shut down last year.

Mechanization of other factories has forced the closing of more than 20 hand-blown glass plants in the area.

Problems of placing the region on its economic feet again are no doubt numerous and complicated. But informed people of the area are in almost unanimous agreement that inadequate transportation is one of the most difficult obstacles to efficient operation of industry.

It is pointed out that railroad service has declined markedly, spur and secondary lines have been closed down completely, and service on through lines has been sharply curtailed.

At the same time, while roads have not been allowed to deteriorate the highway system has not been expanded to replace the lost rail service.

Managers who have closed their plants have cited the transportation need as reasons for moving.

Clemmens told a congressional committee, "We have 23 one-room schools in Marion County, and due to the situation or condition of our roads, it would be impracticable to consolidate the schools," because the students could not be transported to adequate facilities at a central point.

It would seem, then, that a practical point to begin the rehabilitation program for this region—perhaps for all of West Virginia—would be a major, a tremendous, project of highway construction. The State could not do it alone; the initial money outlay would be too great. Federal help would be mandatory.

But a great many jobless could find employment immediately. There would be a sharp, quick boost to the economy. And as portions were completed there is little doubt that industries would be attracted.

Equally important, a concrete program with excellent promise of success would renew the courage, vision and confidence of a badly beaten people.

Henry L. Ash, director of the State's Department of Employment Security, recently stated that "the building of a great state or a strong nation requires at least three basic ingredients. One of these is human resources, namely people. The second requisite is natural resources. The third is ready capital."

He went on to point out that "the deposits as of June 30, 1958, in the banks of the State totaled $1,167,696,000, which constituted an alltime high of deposits in West Virginia's banks."

The State has the three requirements for a thriving economy.

What is needed is a program to put them in action.

IN A PROUD AMERICA

"Ashamed of their ragged clothing and hurt by the taunts of playmates, two little daughters and a son of a destitute Cabin Creek, W. Va., coal miner tried to burn their home in the hope of receiving gifts.

"Assistant State Fire Marshall, C. R. Cobb, said the three started at least 18 fires at the house. The parents put the blazes out before much damage was done. The girls are 13 and 10, the boy 11. There are three younger children.

"The father has exhausted his unemployment benefits. He just finished a month-long hospital stay in a bout with pneumonia.

"The 13-year-old girl said she was embarrassed by the jeers brought on by her shabby dress. She reasoned that if the home were lost, neighbors and the public would donate better clothing.

"There is virtually no food in the house." (Associated Press Dispatch.)

Long lines of empty coal cars parked on weed-grown sidings all over the State are symbolic of West Virginia's industrial misery. But not all of the area's woes can be blamed on the decline of King Coal.

Modern glass plant lies idle

This facility of the Hazel Atlas Glass Co., a division of Continental Can Corp., shut down a year ago, leaving 500 jobless. With this plant devoted principally to glass containers, industry has been hit hard by expanded use of paper, plastic, and metal for canning and bottling. Glass plants are being located nearer sources of products for which they will be used.

They were cold and probably hungry

Eight people, parents, and six children, live in this one-room cabin perched on a Marion County, W. Va., mountainside. They subsist on $14 a week relief money. When this picture was taken last winter the temperature was 8 degrees above zero outside but as they huddled about an inadequate gas heater, only heat in the home, all they had was summer clothing.

"Flight blight" signs greet the traveler entering Grafton, W. Va. They dot the town, urging residents to clean up and improve their neighborhoods. But the real blight of the area is on the minds and bodies of men, women, and children, families whose breadwinners have been jobless for many months, sometimes years.

Fabulous wealth lies idle as people go hungry

Some 2,000 people suddenly found themselves without jobs when this chemical plant at Morgantown, W. Va., was closed down over a year ago. Built by the Federal Government in the 1940's at a cost of $163 million, it is estimated that today it would cost $300 million to duplicate, yet the people of the area have been unsuccessful in efforts to find a company willing to operate it.

Glittering Generalities Courtesy of A.T. & T.

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 31, 1959

Mr. PORTER. Mr. Speaker, last month I read with interest a full-page advertisement which the American Telephone & Telegraph Co. placed in Life magazine August 3. It was entitled "Why in Heaven Don't You Speak Out on Inflation?"

Naturally I was interested. I estimate that millions of readers saw that appeal.

I believe this ad is part of a campaign being waged by big business as a part of the antediluvian thinking of the Republican Party. I have replied to other such ads and I have sent copies to the Bureau of Internal Revenue to see if they are legitimately paid for as a business expense.

Now no one is against a strong, sound, and stable dollar.

No one likes unreasonable demands.

No one approves excessive spending.

Neither do we approve of child beating or the kicking of dogs.

My point, Mr. Speaker, is that this ad, like too many appearing in newspapers and magazines these days, deals with glittering generalities. The vague proposal or statement is a favorite weapon of Madison Avenue.

I have written to the president of the American Telephone & Telegraph Co., Mr. Frederick R. Kappel, to offer some comments about his company's participation in what appears to be a big phony anti-inflation campaign.

The advertisement and my letter to Mr. Kappel follow.

AN INTERESTING LETTER SAID, "WHY IN HEAVEN DON'T YOU SPEAK OUT ON INFLATION?"

I have received a number of letters from men and women who are concerned about inflation. One A.T. & T. shareowner asked, "Why in heaven don't you speak out on this subject?"

The letter went on to say, "If you would alert the 1,625,000 shareowners and 700,000 employees to the facts about inflation, they would help spread the news."

I warmly agree that it is essential to alert more people to the dangers of inflation and we in the Bell System are speaking up and speaking out at every opportunity.

In recent articles and bulletins to employees, the Bell System companies have discussed the threat which inflation poses to the purchasing power of the dollar and to savings, insurance, and pensions.

At the annual meeting of A. T. & T. shareowners I pointed out that inflation has been a tough problem in the telephone business. But we have not just talked about the problem—we have developed more efficient equipment and introduced many economies of operation. It is worth noting that the price of telephone service generally has gone up less since World War II than most other things.

But we know that the forces of inflation are far too widespread and powerful for any one individual or business to stem them singlehanded.

This brings me to the question that I believe so many are asking: "How can I help?" In these ways, it seems to me:

By giving spoken and written support to those who are working for a strong, sound, and stable dollar.

By opposing unreasonable demands, excessive spending, and schemes that add fuel to the inflationary fire.

Your friends and associates, and especially your representatives in Congress, are entitled to your constructive views.

For our part, we will continue to fight inflation by pushing research hard and effecting economies in our business. And by speaking out against this threat to the people and the country.

FREDERICK R. KAPPEL,
President, American Telephone & Telegraph Co.
NEW YORK, N.Y.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., Sept. 3, 1959.

Mr. FREDERICK R. KAPPEL,
President, American Telephone & Telegraph Co., New York, N.Y.

DEAR MR. KAPPEL: Your full-page advertisement in the August 3 issue of Life magazine, entitled "Why in Heaven Don't You Speak Out on Inflation"? appears to be part of a concerted effort by big business corporations to influence public policy through paid ads in national magazines.

As I read your advertisement I could not help but reflect that you must have a pretty poor opinion of the intelligence of the American people to think that they could be influenced by so vacuous a statement. You are for a strong, sound, and stable dollar. So are we all. What specifically, then, is it that you would have us speak out against?

You urge the public to oppose unreasonable demands. But what the unreasonable demands are that should be opposed you do not tell us. Has it occurred to you that many of the readers of the advertisement might regard putting pressure upon governmental regulatory agencies to establish rates that add considerably to the cost of telephone service as falling into the category of unreasonable demands? And, you know, rate hikes are also inflationary.

The recent order of the Federal Communications Commission, cutting long-distance telephone rates by $50 million a year, would seem to indicate that if you were genuinely concerned about containing the forces of inflation you would make every effort to achieve a downward revision of the toll charges to your customers without putting the Government into position of having to do it for you.

Your urge us to oppose excessive spending. Here again you are deliberately vague. Surely, it is not your intention that the consumer should curtail his expenditures for telephone services. I presume that what you do have in mind is the reduction of governmental expenditures. Shall we curtail outlays for national defense, foreign aid, highways, schools, etc.? Shall the letters which you urge the public to write aim to support those Members in Congress who wish to maintain a lid on interest rates so as to keep down the cost of servicing the Government debt? Unfortunately, you furnish us with no guidance. Certainly you would want us to be discriminating. Otherwise the public might end up by unwittingly urging the adoption of proposals advanced by the Democratic Party rather than those advocated by the Republican administration, in support of which you are using the funds of the A.T. & T. for paid advertisements.

What we need from business leadership is more enlightenment rather than obfuscation, less of an appeal to the emotions and more to the rational consideration of great national issues. Madison Avenue techniques for getting people to purchase commodities are hardly the tools for promoting understanding and for arriving at intelligent decisions in matters of public policy.

As one of the largest business corporations in America, the A.T. & T. has joined the ranks of what is essentially an antidemocratic movement among certain top business leaders who are determined to employ the funds of their corporations for the purpose of influencing public opinion. Have you ascertained how many of your 1,625,000 shareholders would endorse your campaign to frighten Americans about inflation? I am certain that there are a great many stockholders who do not share your views on political and economic issues. They would, of course, not question your right as a private citizen to publicly express your views. But it is another matter when you use the name and funds of your company to foist on the public your personal opinions as to current events. The taxpayer has also a right to be aggrieved when these paid advertisements are charged off as a corporate expense.

You must have noticed, Mr. Kappel, that 2 weeks after you felt compelled through your advertisement to alert the American people on the threat of inflation, the second report of what is popularly known as the Nixon Antiinflation Committee was released. In contrast to the first report, issued only 7 weeks earlier, which stated that "our economy is now at a critical juncture urgently requiring action to forestall inflation," the second one contained no warning about the imminence of inflation. In the words of Business Week (Aug. 22), the former bristled with a sense of crisis with respect to inflation, while the latter was described as playing down inflation talk, with greater attention given to economic growth. This suggests that before you commit yourself to another full-page advertisement you had better check with the Vice President as to what is the latest official line. In that way you might get the maximum benefit out of your advertising expenditures.

May I remind you, Mr. Kappel, that during the past year when the administration was clamoring vociferously that inflation was so pressing and immediate a threat, fellow legislators with whose thinking I agree have pointed out that there was little basis in fact to support the Administration's claims; that the consumer price index had remained more or less at a constant level throughout the year; that most of the increases in the price level had occurred during and shortly after wars, when too many dollars were chasing too few goods; and that in view of our great responsibilities as the leading Nation of the free world and of our neglected needs at home, it was imperative that the Administration concentrate its efforts on promoting the acceleration of the American rate of economic growth.

I can only draw one conlusion from the antiinflation campaign. The term "inflation" has come to be a slogan employed by conservative elements to defeat any legislation which they look upon with disfavor. It is a weapon used to frighten us away from measures designed to improve the lot of the common man through programs for the removal of slum and blighted areas, for strengthening our school systems, and for expenditures on much needed public services and facilities. It also has had the unfortunate result of taking dangerous risks with the future of our national security through inadequate support of much needed defense expenditures.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

Excerpts From Speech by Senator Harry F. Byrd, of Virginia, at His 37th Annual Orchard Picnic, Berryville, Va., Saturday, August 29, 1959

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. ABBITT. Mr. Speaker, on Saturday, August 29, the Honorable HARRY F. BYRD, senior Senator from Virginia, gave his 37th annual orchard picnic at Berryville Va. Senator BYRD is so widely known, respected, and beloved by the people that I will not go into his many accomplishments but simply state that he is Virginia's first citizen and one of the outstanding statesmen of America. At the picnic, as has been the custom in the past, Senator BYRD delivered a most enlightening and cogent speech on the events of interest to our people. Under leave to extend my remarks, I include herewith Senator BYRD's speech:

One of the main topics of conversation in Washington is the approaching visit of Khrushchev. The Congress appears to be divided as to the wisdom of his visit. It has its minus side as well as its plus side. Should one of the hundreds of thousands of refugees who have come to America because of the cruelty of Communist Russia take a shot at Khrushchev, it might start a third World War. Such risks as this, in my opinion, outweigh the plus side of his visit.

I am one of those Senators who do not believe he should be invited to address a joint session of the Congress of the United States.

That is the supreme honor accorded only to those we can trust and those who are our friends, such as Winston Churchill. Should a resolution inviting him be presented, and I hope it will not be, I will consider it my duty to vote against it. I am not willing for the Congress officially to pay tribute to the world's greatest Communist and our most dangerous enemy by inviting him to speak formally to the Congress of the United States.

We all know that we must live in the same world with those who ideas differ from ours, and with nations which have different forms of government. But in the case of Russia, let us always remember that Russia is a totalitarian nation, controlled by one man who recognizes only brute strength.

Let us greet Mr. Khrushchev with courtesy, let us protect him in every way possible, but do not let him or any other Russian lead us into a sense of false security. And above all do not let him sell us a bill of goods.

We must keep our military strength equal to if not greater than Russia's. This is our only protection. The Russians equal or excel us in the field of rockets. They definitely excel us in submarines equipped with nuclear weapons, but we excel them in the air and on the sea and in the development of atomic weapons.

It is tragic that after World War II we should find it necessary to prepare ourselves against attack by a formidable nation whose leader appears to be bent on extending his frontiers and control over weaker nations wherever he can find them. As a member of the Armed Services Committee I tell you we must not let our guard down.

As has been my custom, I will give you a BYRD's eye view of the work of the Congress and elsewhere in the Government this year. I shall not go into detail because much has happened since our last meeting.

THE WARREN SUPREME COURT

I call the present Supreme Court the Warren court so as to distinguish it from those courts on which great Justices previously have served our country so honorably and well and with such distinction and dedication to our principles.

The Warren court continues to run true to form, continues to render decision after decision in defiance of constitutional democracy, which, in the brief space of about 180 years, has made America the greatest of all nations.

America has only one-sixth of the population of the world, one-seventh of the earth's surface, but produces one-third of all the world's goods. This is because of our competitive enterprise system and the freedoms of our people.

The Warren court hands down decisions on Mondays. Nearly every Monday when the Court is in session is a black Monday.

I will not go over the ground which I covered here a year ago when I listed the decisions of the Warren court since 1954. Beginning with the integration decision, these Warren court decisions have steadily weakened our democracy.

This school decision is perhaps the most iniquitous and infamous of all. It was not based upon law nor was it based upon the Constitution, as many distinguished lawyers have so often said.

Since I spoke to you last, the Warren court has rendered three more particularly vicious decisions:

One to search a man's house without a warrant.

Even under the despotic rule of the early English kings a man's home was his castle, and no one could enter without due process of law.

Another decision would destroy the right of States to control and protect their citizens from indecency and immorality in books and pictures.

The third was a decision to permit the States to tax interstate commerce, which is in violation of the interstate commerce clause of the Constitution.

It happens that I have two distinctions, although some may think they are not too creditable. One is that I am the only Member of the Senate now who voted against the Wagner Labor Act in 1935 which gave special privileges to the labor unions.

The second distinction is that I am the only Member of the Senate now who opposed the Tennessee Valley Authority.

These votes represent my philosophy of government. I do not believe in special privileges for either labor or business. I believe in the private enterprise system which is the source of our progress and advancement.

The Senate labor bill was a weak bill. I did all I could to strengthen it. The House labor bill is strong. It not only gives protection to the membership of the unions, but also controls secondary boycotts, hot cargoes, and such things which can destroy businesses not directly involved in any strike.

The House bill has strong provisions to prevent the intimidation of workers by means of picketing. Virginia is fortunate in that during the administration of Gov. William M. Tuck workers were guaranteed the right to work and are protected against violence and interference by pickets or otherwise.

The new Federal labor bill is now in conference where the differences between the House and the Senate bills are being worked out. Labor legislation must not be unfair to labor, but the excesses of ruthless labor leaders must be curbed. Only Congress has the power to do this.

James B. Carey, president of the International Union of Electrical Radio and Machine Workers, inadvertently gave an assist to the passage of the stronger House bill when he wrote to each Member of Congress threatening to defeat every Senator and Congressman who voted for the bill.

PRINCE EDWARD

Before I conclude let me mention that ordinarily public schools next week would be reopening all over the State. But this year not a public school in Prince Edward County will open. Never before in the history of public schools in Virginia or any other State has a whole county withdrawn from the public education system.

It is vital, I think, that we in Virginia and people everywhere in America understand the conditions that brought about this closing of all public schools in an entire county.

In 1951 a suit was instituted against Prince Edward County in Virginia and Clarendon County, S.C., to require school integration. In 1954 the Warren court rendered a decision directed at these two counties imposing integration in all public schools with deliberate speed.

The great and able Virginia judge, Sterling Hutcheson, in a memorable decision, found deliberate speed in the case of Prince Edward to be at least 6 to 7 years.

The leaders of the NAACP then took an appeal, although they were urged not to do so my many of those who favored the Warren Supreme Court decision. Then the Federal Court of Appeals overruled Judge Hutcheson and ordered the Prince Edward schools to be integrated in the school year beginning next week. Thus, the county of Prince Edward faced massive integration. Such an enforced integration means the destruction of the public schools in that county.

There are 1780 colored pupils in Prince Edward and 1562 white pupils. The people of Prince Edward were prepared. They had determined when the suit was first instituted against them 8 years ago that they would resist forced integration. They did this in order to preserve a system of education because they knew white students would not attend integrated schools.

It is significant that although Clarendon County, S.C., was the other defendant in the suit, no effort has been made by the NAACP to integrate in that county.

The people of Prince Edward made no threats, they issued no inflammatory statements. There was no violence and no disorder. They have calmly and deliberately established a new system of private education without the use of a single public-school facility, buildings, schoolbuses, or any other public-school equipment.

Every white student in the county will go to school, using completely nonpublic facilities. The parents of the colored students have not attempted to avail themselves of other means of education.

In order to comply with the decision of Chief Justice Taft, rendered in 1928, providing for equal but separate school facilities, Prince Edward expended $1 million on a colored high-school building. Prince Edward still owes $400,000 on this school. It will be closed. The blame for this situation must be placed directly upon the ruthless action of the NAACP.

The colored people of Prince Edward County have been the victims of their leaders. Their lack of education must be laid directly at the door of those NAACP leaders who have become the integration enforcement agents for the Warren court.

Since the NAACP is responsible for closing the Negro schools in Prince Edward it would be appropriate for this association to allocate a part of its large tax exempt income to aid the Negroes in this county to obtain an education. In doing this the NAACP could in part make atonement for the injury they have done to these members of their race.

Knowing the people of Prince Edward as I do, I am confident that they are prepared to do everything wthin their power to give the colored students of Prince Edward the same education they have had in the past in segregated schools.

The NAACP has won its lawsuits and the Negroes have lost their schools, operated 85 percent at the expense of the white people of Prince Edward.

It is a tragedy for everyone—all because the NAACP deliberately and maliciously forced this action upon Prince Edward. Prince Edward has taken the only action it could take. The county had sought by every honorable means to avoid this step. It was faced with the destruction of its school system. White parents had taxed themselves heavily to build new Negro schools, and the Negroes had as many classrooms as the whites—Negro schoolteachers were paid exactly the same as the white.

The action that Prince Edward has taken is courageous, and it was thoughtfully and well considered. The brave citizens of Prince Edward are true to the faith of their fathers.

Those who expressed confidence in the so-called moderation of the NAACP which is enforcing the integration laws, should not only take note of this ruthless action taken against Prince Edward, but they should note the recent statement by the NAACP spokesman, Roy Wilkins, which has great significance.

"With the collapse of massive resistance laws," declares Roy Wilkins, national executive secretary of the National Association for the Advancement of Colored People, "the South is trying to adopt a token compliance policy to get around the 1954 Supreme Court decision. Generally," he adds, "we are opposed to any form of token integration on the grounds that it is contrary to the Court's decision, but the NAACP will go along with plans where it appears to be a bona fide start toward desegregation."

Note that Wilkins accepts token integration only as a "bona fide start toward desegregation." Desegregation means massive integration.

I and other Virginians who advocated massive resistance to the illegal school integration decision of the Warren court have been bitterly denounced, chiefly by those outside of Virginia.

I stand now as I stood when I first urged massive resistance.

I believe then as I believe now that it is either massive resistance or in the long run run massive integration, and this would destroy our entire school system.

As one who has been honored so often by the Virginia people I felt my duty was to give the best advice of which I was capable.

At least under the massive resistance program Virginia remained segregated for 5

years after the Warren decision, notwithstanding the fact that massive efforts of the Federal Government and the NAACP were directed at Virginia alone.

Due to the concentration of all power against us today Virginia is the only southern State having enforced integration.

The policy was to break Virginia down first, and now the unholy alliance of the NAACP and the Federal Government will attempt the same strong-arm methods throughout the South.

I am firmly convinced that as long as the NAACP is in the driver's seat, the goal is massive integration all down the line in all walks of life.

Just a few weeks ago the NAACP met in New York City in annual convention and were addressed by so-called political notables.

A resolution was adopted declaring for complete integration of the races in all areas, effective on the 100th anniversary of the signing by Lincoln of the proclamation for the emancipation of the slaves. This program naturally includes declaring unconstitutional all State laws prohibiting mixed marriages.

If Warren lives long enough and remains on the Court this decision will certainly be rendered. It is not necessary for me to forecast the calamitous results of massive integration accompanied by legal encouragement toward mixed marriages.

Poison in Your Water—No. 165

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the El Dorado, Ark., Times of October 1, 1958, entitled "Dr. Hawley Warns of Diseases Caused by Open Sewers in City":

DR. HAWLEY WARNS OF DISEASES CAUSED BY OPEN SEWERS IN CITY

"Over the past 8 years 34 persons in Camden were stricken with paralytic polio and a recent survey showed that all but one lived in areas that do not have sewers," Dr. James Hawley said in a talk here Tuesday.

Dr. Hawley spoke during a panel discussion on the need for an adequate sewer system at the noon luncheon meeting of the Rotary Club.

In his remarks Dr. Hawley warned of the diseases that can be caused by open sewers. "Just because you happen to live in an area that has a sewer system does not mean you are safe, since flies and animals can carry the virus over the entire city," he pointed out.

Concerning the $1,150,000 bond issue for extending and improving the municipal sewer system, Dr. Hawley urged those present to cast their vote in favor of it at the special election on October 14.

This is why 20 local doctors voted unanimously to support the proposed sewer system at the last meeting of the Ouachita County Medical Society, he said.

The panel also included Bill Shelton, chamber of commerce manager, who pointed out that industries regard sewer systems of towns being considered for one of their factories. He said one of the main reasons one industrialist gave for not coming to Camden was the inadequate sewers. "Raw sewage is dumped into the Ouachita River," the industrialist stated on his report in turning down Camden.

"At the present time four large factories are considering Camden as a possible location. They have made preliminary study of the town but as yet don't know about the sewer situation, but they will find out," he said. The sewer bond issue must pass if we expect to bring industry here, he said.

H. K. Thatcher also spoke on the effect the raw sewage has on Ouachita River, which goes in at four different places. People who have boats know the terrible condition this creates, he said. "We must clean up our river or we will lose the economical value of what we are trying to do," he said with regard to getting a 9-foot channel for navigation.

The panel discussion was led by Mayor James Rowan. The floor was thrown open for questions after each panelist spoke.

Panel discussions like this are being held all over the city in an effort to inform the public of the need for sewer improvements. The next meeting will be on Wednesday night at Whitside School, starting at 7:30 p.m. It will be open to the public and individuals may ask any question they wish.

All Rotarians who expressed their opinion spoke in support of the project. Approval was indicated by the enthusiastic reception given the panel in their efforts.

Guests at the meeting were Jimmy Chambers and Frank Anthony, of El Dorado, and H. S. Neal, of Stuttgart, all visiting Rotarians. Steve Preston, of Camden, and Bobby Tutt and Herbert Asberry, of Harmony Grove High School, were Junior Rotarians.

Huron Editor Commends Colonel Hammond

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McGOVERN. Mr. Speaker, Col. D. G. Hammond, Omaha district engineer of the U.S. Corps of Engineers, has been enthusiastically commended by the editor of the Huron Plainsman, Mr. Robert Lusk, on the splendid manner in which he has helped to direct the development of our great Missouri Basin system.

The people of the Missouri Basin keenly appreciate the irrigation, power, navigation, industrial, and recreational values derived from full-scale development of the Missouri River. Colonel Hammond is one of the men who has played a key role in this development. I know personally of the fine work which he and his colleagues have accomplished.

His commendation from the Huron editor is all the more significant in view of the fact that Mr. Lusk is himself one of the basin's most outstanding authorities on matters pertaining to River development.

I include in the RECORD the Plainsman editorial of September 2:

COLONEL HAMMOND HAS EARNED OUR SUPPORT

Col. D. G. Hammond, Omaha district engineer, is to be congratulated for the manner in which he is handling his many duties for the Corps of Engineers.

With missile bases and other military installations demanding his attention, he nevertheless has kept the various Missouri River Basin projects moving ahead at a brisk pace.

His progress report, given at a joint meeting of Huron service clubs, indicates the overall Missouri Basin program has reached the half-way mark.

At this time, 31,700,000 acre-feet of water are stored behind Federal dams in the basin and 25½ million acre-feet of that water are deposited in the Missouri River Dam reservoirs.

At the same time, approximately 126,000 acres of land are being irrigated under Bureau of Reclamation projects while an additional 90,000 acres are receiving supplemental water for irrigation.

Flood protection below the dams is guaranteed, Colonel Hammond said, and a new record in waterborne freight is being written on the river with 521,000 tons having moved on the Missouri through the middle of last week, which compares to 485,000 tons for the same period last year.

For power generation, Federal projects in the Missouri River Basin now have a capacity of 1,095,000 kilowatts. Revenue from the Federal plants during the fiscal year (July 1, 1958, to June 30, 1959) was more than $12 million, most of which was returned to the Federal Treasury.

Then there is Oahe Dam, one of the world's largest earth-moving jobs. There now are 88 million cubic yards in the rolled earth embankment which will contain 90 million cubic yards when it is completed and completion will come before the snow flies this fall.

But that is only incidental to the big construction push on the project, which is the drilling of the seven power tunnels. Two of the tubes are half completed, another is two-thirds along, while a fourth is being started.

Next milestone for Oahe will come in July 1962, when the first of seven 85,000-kilowatt generators will go on the line. The 595,000-kilowatt installation, largest of the six mainstem dams, will be finished late in 1964.

Impressive as this record may be, there are further projects to be completed along the river.

Construction on Big Bend soon will be underway in earnest and, of course, the Oahe irrigation project, although not yet underway, is just around the corner.

How quickly will these and other basin projects proceed?

Colonel Hammond says a great deal depends upon the people. They have to make themselves heard, he says, or nothing will happen, no matter how worthwhile a project may be.

He is, in effect, asking the support of the people of South Dakota for the programs he has been handling so efficiently. He has earned the right to that support. The people should give it to him.

Taxpayers Rebelling

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 19, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks there follows an editorial from the Times News, pub-

lished at Twin Falls, Idaho, under date of July 26, 1959. It very clearly shows that even on essentials the people back home are really practicing economy. Such votes as those described in the Times News ought to teach Members of Congress two lessons. First, that the people themselves are willing to forgo a lot of those things which would be nice to have, and that when they do the voting themselves they elect to do without them. The opposite results when the Congressmen do the voting. Second, the Federal Government, in order to support its many extravagances of recent years, has preempted the field of tax revenue to the extent that the local communities are almost derelict for sufficient revenues for the real essentials. It is high time that the Congress stop voting those things which the people will not vote for themselves.

The Times News article follows:

TAXPAYERS REBELLING

While Twin Falls is confronted with a serious need for water and sewer system improvements, and considerable enthusiasm is being generated in support of a new civic auditorium, developments elsewhere cannot help but dampen our hopes.

On the local level at least, where it's easier for them to demonstrate their opposition, it is becoming more and more apparent that taxpayers are getting fed up.

In one respect, that is an encouraging sign. If all this local opposition eventually develops into a groundswell, it could sweep through the state legislatures and on to Washington where the results would really count.

Meantime, of course, the increased burden of taxation made steadily heavier by the state legislatures and congress, is working a particular hardship on local communities where public improvements are seriously needed.

The taxpayers, resentful of the mounting tax load they are being forced to carry, are not inclined to shoulder any additional burdens voluntarily, much as they might recognize the need for public improvements in their own communities.

These are the only public expenditures over which they have direct control. In these local bond elections they can defeat proposed projects, the added cost of which would be reflected on the tax rolls.

During the last session of our own State legislature, we had an excellent example of taxes being raised considerably higher than was actually necessary, despite an already existing tax load which is working to the state's disadvantage.

In Congress, of course, it's even worse with eager-beaver spenders doling out public funds right and left, not only in the United States but throughout the world, at the American taxpayers' expense.

Just this last week, three proposals such as we are discussing went down in defeat in bond elections in southern Idaho.

An unusually heavy turnout of Boise voters overwhelmingly defeated a proposal to build a $2,400,000 coliseum in the State's capital city.

For the second time in 6 months, King Hill residents defeated a $475,000 bond issue to build additional elementary school facilities.

By more than a 3-to-1 margin, Minidoka County voters in Rupert defeated a proposed 3-mill tax levy to construct a new jail and remodel present jail facilities into office space. The proposal needed a two-thirds majority to pass.

The defeat of these three proposals is significant. No doubt the additional school facilities are seriously needed at King Hill and the jail at Rupert is inadequate.

But the resounding defeat of a new coliseum for Boise came somewhat as a surprise because of what seemed to be widespread support. The auditorium had been endorsed wholeheartedly by the Boise Chamber of Commerce, the city administration, organized labor, the Boise Statesman, and an endless list of individuals and business houses.

The bond issue needing a two-thirds favorable vote to carry fell nearly 1,000 votes short of a simple majority when the nearly 10,000 votes were counted.

Foremost among the various reasons given for the defeat of the project was the following explanation by the Boise Statesman:

"It becomes more and more evident that the people are rebelling against more taxes. Congress has found this out. The coliseum bond issue was the first opportunity our taxpayers had to express themselves."

While it is unfortunate that taxpayers generally have reached a frame of mind where they no longer are inclined to underwrite the additional cost of needed public improvements, it's easy to understand why they are starting to rebel.

All this belatedly brings into sharp focus the ugly fact that State legislatures and Congress have gone hog wild in spending the taxpayers' money, with Congress the chief offender.

While the taxpayers are now swinging the ax where it is most immediately effective, they must realize how that works to the disadvantage of their home communities unless they carry their fight all the way to Washington.

It's more difficult to keep spendthrifts from being elected as our representatives in the State legislature and Congress, and it will take far greater determination on the part of everyone to get the job done.

When taxpayers generally load their guns for bigger game; participate in elections with a vengeance, and insist that all their representatives in government keep in line, then and only then will wholesale Federal spending be brought under control. Then and only then will the individual community be able to support its local needs, with money which formerly was going down the drain through Washington.

Meantime, it should be taken for granted that any plans for water or sewer improvements or a new auditorium in Twin Falls, must be well thought out on a businesslike and conservative basis.

Even when such improvements are an absolute necessity it's difficult to get them underwritten with the taxpayers in their present frame of mind.

The suckers are even getting leery of Government participation. They're not so quick to snap at those gifts which for years have been misrepresented as Federal aid. The tax bills they are receiving all too frequently from Uncle Sam are beginning to open their eyes.

Farewell to Walter Lee

SPEECH
OF
HON. T. A. THOMPSON
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. THOMPSON of Louisiana. Mr. Speaker, through my tenure of office it has been my great privilege to have known and associated with Walter Lee, a native of Mississippi and a dedicated servant of Congress in Washington for many years. It is with great reluctance that I accept the fact that Walter is retiring to a well-deserved vacation. However, it is my hope that he will have many years of happiness ahead with his lovely wife, pursuing those things of which he dreamed for many years. His unselfish service in Washington will serve as an inspiration certainly for me and, I am sure, for the many others whom he has "faded on" by association over the years. I hope it will be my good fortune to visit with Walter in the future and maintain the warmth of friendship over the years with this great American.

Continuation of Education and Training Program for Veterans

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the following resolution passed by the American Legion, department of Louisiana, in annual convention in Baton Rouge, La., July 23–26, 1959:

RESOLUTION URGING CONTINUATION OF EDUCATION AND TRAINING PROGRAM FOR VETERANS

Whereas the Congress of the United States, expressing the will of the citizenry by the enactment of the Servicemen's Readjustment Act of 1944 (Public Law 346, 78th Cong.), recognized the justice, equity, and the general value of a sound education and training program for the veterans of our country; and

Whereas the legislation enacted to provide such education and training benefits was for the purpose of restoring lost educational opportunities to those men and women who served in the Armed Forces of our country and has accomplished this purpose and has been an immeasurable factor in contributing to the economic security of our veterans and their families, as well as to the security of the Nation as a result of the increase in the general educational level and professional and technical skills of the veterans; and

Whereas the increased earning power of veterans directly attributable to the program is resulting in payment of increased income taxes which will more than repay the total cost of the program; and

Whereas notwithstanding the continuing involuntary military service program, Public Law 7, 84th Congress, denies entitlement to education and training benefits to all veterans who first entered service after January 31, 1955, which is grossly inequitable: Now, therefore, be it

Resolved, That the American Legion, Department of Louisiana, in annual convention in Baton Rouge, La., July 23–26, 1959, strongly urges a continuation of an education and training program similar to that provided by Public Law 550, 82d Congress, to all veterans of our country who serve in any period in which involuntary military service is au-

thorized, and urges the Congress to enact appropriate legislation to accomplish; and be it further

Resolved, That copies of this resolution be transmitted to the House Veterans' Affairs Committee, the Senate Committee on Labor and Public Welfare, all members of the Louisiana congressional delegation, and to the American Vocational Association.

Our Job To Preserve Our Way of Life

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. ABBITT. Mr. Speaker, Prince Edward County, Va., has been under the guns of the Federal judiciary since 1951. The Federal courts above the district level under the direction and at the bidding of the NAACP have tried to compel the people of this great county to submit to judicial intimidation, dictation, and usurpation of power. The people of Prince Edward County have refused to submit to unconstitutional judicial fiat, nor have they submitted to judicial usurpation of authority and arrogation of power. These great Americans and true Virginians have been fighting the battle for constitutional government and standing between the rest of the Nation and judicial tyranny. Acting through the appropriate officials, they have closed the public schools and are going to educate the white children of the county in private schools financed in large measure by the people of that noble county.

There have been so many outstanding leaders in this fight to preserve our way of life that no one person can be singled out. However, I feel it appropriate to say that J. Barrye Wall, the editor and publisher of the Farmville Herald, by his soul-searching editorials has done more than his share in pointing out the issues at stake and the need to continue to resist the would-be destroyers of our way of life.

On Friday, September 4, 1959, there appeared another one of his splendid editorials in the Farmville Herald. Under leave to extend my remarks I include that editorial:

[From the Farmville (Va.) Herald, Sept. 4, 1959]

OUR JOB

If there is a disagreement between the Richmond News Leader and the Lynchburg News in regard to the findings of two professors of Emory University prepared for the Southern Regional Council in regard to operations of public schools and private schools, it is certainly no concern of ours. We suspect the respective editors can take care of themselves in such a verbal battle, if it comes to that.

We would have hoped that the editor of the Lynchburg News would have left Prince Edward County out of the argument, but since this county has been brought in as a horrible example and the system of private schools here are already condemned to failure, even before they open, we believe it necessary to point to several facts and truths.

If the Perrow-Almond plan, passed by the legislature under considerable duress, is really a freedom of choice plan, as it is advertised, the people of Prince Edward have taken it at face value and exercised their freedom of choice. They made known their position in 1955, barely 7 hours after the Warren Court made known the rules in its implementing order of May 31, 1955. Funds for the operation of public schools were reduced then to a month-to-month basis with the distinct understanding that local support for public schools would cease when integration was ordered. This position was reaffirmed in 1956, and action was taken in 1959, when the Federal court ordered integration of Prince Edward's schools in September and refused a stay of the order.

The position of the present Virginia State laws of the Perrow plan, disagreement among attorneys, and the attorney general of their true meaning, pressures by Federal courts in the Warren County, Norfolk, Arlington cases, and the unprecedented favoritism in the Charlottesville case form a confused picture.

In view of this situation the white people, having established Prince Edward School Foundation, began preparations for educating their children in a system of private schools.

To this end they have pledged $265,871.49 of a budget of $300,000. In hand is $65,000 or more in cash, a sufficient amount to operate the schools for 3 months. Cash payments of pledges are being received daily as promised by the pledgors. That the schools will be financed this year is a certain conclusion. Contributions from neighbors and friends are being received every day. Incidentally, any contributions to the foundation are deductible for income tax purposes.

To house the schools, the people of the county have made determined efforts. Principally, the churches in the various communities will provide satisfactory housing. In two cases additional rooms have been erected by church members to assure comfortable accommodations.

Transportation will be furnished by the people in the various communities and surplus buses have been bought by Patrons, Inc., a corporation formed for that purpose.

Books for the libraries have come from many points in the southside Virginia, 4,000 from Richmond, 1,200 from Danville, 1,500 from South Boston, 3,000 from the libraries of the people of Prince Edward and its environs, and varying numbers from Hopewell, Emporia, Alberta, and other places. The need was for 2,500 books and the good people have contributed over 9,000 and still they come.

The classrooms in the private schools will be comfortable, light, airy, and adequate. The picture of the blacksmith shop shown on the editorial page of the News, we are sure, was mistakenly referred to as a classroom. It is the industrial shop—and where more appropriately would a metal and woodworking class be taught than in a former blacksmith shop?

If we are any judge of the determination of the people of Prince Edward there will always be private schools in Prince Edward as opposed to integrated public schools.

(1) Because the private schools will be operated equally as efficiently as the public schools.

(2) Because the people of Prince Edward will not submit to integrated public schools.

For how long will the courts and the Federal Government permit the county to deny educational opportunities to the Negro children?

The county of Prince Edward does not deny educational opportunities to the Negro children, now or at any time in the past. The Perrow plan provides for all children. A grant of at least $231 is available to every child in Prince Edward County, for use in private nonsectarian schools, or in public schools outside the county.

The colored people can provide education for their children by two or three easy steps.

(1) Form a corporation or an association under the laws of Virginia to operate a private school, either segregated or integrated.

(2) Establish a school accredited by the Virginia Department of Education, which can be done.

(3) Apply for scholarship grants offered by the State of Virginia through the Perrow plan of "freedom of choice."

(4) Acquire buildings for school use. These may be either buildings privately owned or built, or surplus schools owned by the county. They even may be rented in the discretion of the school board.

The county of Prince Edward has not denied the Negro children any rights they possess, any more than it has denied the white children of their rights. If any rights have been denied by anyone, we suggest that the NAACP-pressured Federal courts have denied both the white and Negro children of Prince Edward a public school system by the unconstitutional decision of May 17, 1954. They have forced many localities in Virginia to bend to their will of racial integration, including the city of Lynchburg, but not Prince Edward County. If Lynchburg chooses to compromise, that is its prerogative; if Prince Edward does not wish to compromise its principles, then let them do it without criticism from anyone. If this be folly, we will make the most of it.

Victory in the Dust Bowl

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. BREEDING. Mr. Speaker, since the following article portrays the condition as it existed in a part of my district during the drought years of the thirties, and since I know the people mentioned in this article and still live neighbors to them, I would like for every Member of Congress to read this article. If the good people of this area had not had faith in the land as brought forth in this article, in my opinion a great portion of the Southwest would have become a permanent desert. The article follows:

[From Reader's Digest, August 1959]

VICTORY IN THE DUST BOWL

Everybody in Texas County, Okla., knows Ed Tucker. They know his cool, white farmhouse that drowses under the cottonwoods 34 miles west of Guymon, the county seat, and 18 miles east of the Colorado line. Ed's neighbors have known his story a long time. To them, it may not seem the remarkable thing it is.

The Tucker place, with its huge barns, spreading fields, and mammoth combines, looks like many other prosperous wheat farm. In reality, it is not so much a farm as a battlefield. Like Gettysburg and Valley Forge, it was once a deadly arena in which men fought until their hopes, their fortunes, and their lives were beaten into the earth.

The Tucker farm is smack in the center of the country that gave the American language a new name for hell: Dust Bowl. The enemy was dust. The dust defeated thousands of men and drove them and their families off the land and into the inhospitable cities.

But the dust didn't beat Ed Tucker, though it all but drowned him. Nor did it beat Pearl, his wife, though she nearly drowned with him. Ed and Pearl stayed with the land and fought until it didn't seem sensible to fight any longer. Then they fought some more.

How great their victory was became clear last summer. In the bumper year 1958 the onetime Dust Bowl grew more than 8 million bushels of wheat. Ed Tucker, farming 3,000 acres, grew some 40,000 bushels. It was all prime wheat, and it all came from the very fields that in the 1930's had done their best to kill him.

Why had he stayed on, struggling in the blinding dust, when all around him his neighbors were pulling up stakes?

"I guess it's just this prairie country," Ed says. "Once you get used to it, no other kind looks good to you."

Ed's land is part of the High Plains. Ed was 7 years old when he first saw the flat, forbidding landscape of Texas County. His father, Schuyler Tucker, had been a schoolteacher in Greensburg, Ky., before he felt the urge, the quickening in his blood, that has driven so many Americans westward.

It was 1906. In that year 34 families—more than 125 people—left Greensburg to homestead on the Oklahoma Panhandle. Before long most of them were homesick and discouraged.

They had homesickness so bad that they had to pass a rule against singing "My Old Kentucky Home" at their get-togethers—it was just too upsetting to hear. Once a wit came to a Sunday social carrying a porcelain article designed for nocturnal convenience in the bedchamber. The shocked women drew away to titter in private, but when he explained it was "to catch the tears in case anyone breaks the rule," they burst out crying.

The trouble was the land. Bone dry, featureless, timberless, floor flat, it lay waiting, daring man to make a mark on it. There were no trees, no houses, no barns. It had been designed by nature for nomads. The Kentuckians had known so little about what they were getting into they had even brought fruit trees with them. They dug a trench around each tree to conserve moisture, and a few trees had survived long enough to put out blossoms. Then the wind tore the blossoms off before they could fruit.

For the land was savage. It was like the Australian outback, the blank Mongolian plain, the grim reaches of Siberia. Before the Kentuckians undertook to crop farm it, others had tried to tame this wild, intractable country, and had retreated, licking their wounds.

Cattle barons and homesteaders came hopefully, but were driven out. Finally the Kentuckians arrived. But they, too, found it a fearful struggle—requiring more than most men wanted to give. By 1916 the Kentucky colony had gone the way of all others. It was down to two families, the Tuckers and the Prices. C. W. Price's boys hung on until the onset of the Dust Bowl. Then they pulled out, and only the Tuckers were left.

Schuyler Tucker had a deep reverence for the soil. He learned what kind of wheat could stand the searing summer heat of the Plains. He learned how to plow so that the wind wouldn't blow his fields away before the wheat took hold. During the lean years he held on, raising just enough to feed his flock. But he knew in his heart that he wasn't going to be able to stick it out—not alone. He knew that if they were going to stay it would depend on Ed. His son Ed was 18 years old now, and he had a real knack with the land. Everything he put his hand to—whether animal or plant—did a little better than most.

Then something happened that seemed to seal the fate of the Tucker homestead in Texas County. Daddy Tucker came down with influenza. It was a long siege and, when he recovered, it was clear that he wouldn't have the strength to battle this land again. It would be up to Ed. Either Ed would dig in his heels and wrestle with the giant or the giant would shove the Tuckers off the Plains, back to Kentucky.

Suddenly, unexpectedly, the giant got help, and the battle seemed decided. Back in Greensburg, Granddad Perkins, Ed's maternal grandfather, owned what was practically a milliopaire's domain—2,000 acres of level bottom land. He offered Ed a rich farm on a platter. Ed merely had to come and pick it up.

All his life Ed had heard about the wonders of Kentucky. There were mountains there. And streams with fish in them. There were trees, and the grass was green. Any time you wanted it to rain you just had to whistle.

He was off like a shot, catching the same train that carried the letter saying he was coming. His father said nothing to stop him, but his silence concealed despair. As Ed's train pulled out, he saw his hopes for his homestead vanish with it.

Ed himself felt that in going to Greensburg he was, after long exile, returning home. It was an attitude he had learned from his elders. But it did not work out that way. When Granddad Perkins drove him around the Kentucky countryside, he'd stop the car at this or that likely farmstead. "That's a pretty bottom there," the old man would say, and Ed would take a look. "Yes, sir, it certainly is," he'd agree politely.

But he said it without enthusiasm, for a strange thing was happening in him. He did not feel at home in Greensburg. The countryside was pretty, yes, but only as scenery. The trees crowded him; the hills hemmed him in. And this country was settled. All the big jobs had been done by other men. What was there to do that would really stretch your muscles?

Ed kept wanting to tell his grandfather about John Green's well, back in Texas County. This was long before Ed's day. But Ed had heard the story a hundred times, and each time with a spine-tingling shiver of excitement.

John Green didn't have any water on his place, so he began to dig for it. Day after day he attacked the ground with a shovel. He went down 10 feet, then 20, then 30. When he got so far down that he couldn't use a ladder, he rigged a windlass at the top. He tied a sawed-off barrel to one end of the rope and a horse to the other. Every morning Mrs. Green would lower her husband into the well; he'd start shoveling dirt into the barrel and she'd have the horse haul it to the surface when it was full.

It took John Green 5 years of digging before he began to see damp rock under his feet. Finally, when he was 233 feet down, he reached water-bearing rock. It was a thrilling epic of persistence. Moreover—and this was even more thrilling—he did not have to shore up the hole as he dug. The sides had never once threatened to cave in, because it was all pure soil clear down to bedrock, a 233-foot mine of treasure that a farmer and his generations could live off forever.

Back in Kentucky, Ed thought about that treasure. And then he thought about the men who had tried to claim it.

Nature had presented the farmer on the High Plains with a challenge. Here's all the good earth you'll ever want. Just start plowing. But when you start plowing, look out. Keep one eye on the furrow and the other on the weather. Whatever you do, mind the wind. For the dead hopes of men beaten by that ceaselessly surging ocean of wind lay everywhere—sagging fenceposts, drifted fields, warping boards of abandoned houses.

But not all men had been defeated. There was John Green's well. It was still there, and now a grove of willow trees had grown up on the overflow around it. They stood tall and lonely, a beckoning sign to other men. Schuyler Tucker's family often picnicked in their shade. And other settlers came there to draw water before their own wells were driven. Often they stayed to relax and let the children play. But the best playing, Ed remembered, was just to stand under the trees and look out at the land. Here was a prize if a man could find a way to take it. Here was a future waiting, and the horizons stretched as far as a man could see.

In a few days Ed was on the train again, leaving Kentucky, going home to the High Plains. He didn't know then that his home was going to be turned into a dust bowl, and that he was going to be tested, year upon year, as few men since Job have been tested. He didn't know that he was to be cast in the role of David, or that Goliath was waiting.

The plains never looked better to Ed than the morning he jumped off the train at Guymon. He hitched a ride home, went into the house and pulled on his overalls. It was September, and his father was out beside the barn pouring seed into the boxes on the wheat drill. The team was hitched; when the boxes were full of wheat Ed took the reins and stepped into the seat.

The news in Texas County was that some more folks had moved in. They were the Chatwells from Sparta, Tenn. They had just bought land adjoining the Tucker place, and they had a daughter. In no time at all Ed was tastefully sprigged out to introduce himself. Whippy and blade-shaped, moving with a well-bred strut, he looked like a young sporting gentleman and acted as if he were at a race meet or quail hunt.

Ed remembers well what he thought the first time he saw Lillian Pearl Chatwell: there goes Mrs. Ed Tucker. And Pearl remembers well what she thought the first time she saw Ed: how did he get stuck behind a plow anywhere, least of all in Oklahoma?

She was a sunny-faced, graceful deerlike girl. Ed found her rinsing out some clothes in back of the house. No man to do things the easy way, he had to put up some hurdles, just to see if he could jump over them. "Well," he said loftily, "you look as if you'd make a pretty good washerwoman." Then he made sure she'd remember having met him by asking Pearl's older sister for a date, even after he'd been told she was already engaged to a beau back home in Sparta.

Confidence—the mark of the master: Ed had it. Time enough later, after you've caught the girl's attention, to smooth her feathers. The future Mrs. Tucker, all her feathers bristling as she watched Ed strut off with her sister, called it arrogance then. But that was before the long years proved it to be the rock on which her life and the lives of her children were firm-founded.

It was 1919. The Southern Plains were starting to fill up again. It had been that way for almost 50 years now. Ten dry years of nearly desert conditions would empty the land. Then would come the "good" years, when rainfall averaged about half what the rest of the crop-growing country got, and new settlers would arrive hopefully. This time there were a lot of young people, World War I veterans and their brides looking to start life.

A Virginian named Ed Brewer took up land just down the road a few miles and put up a big barn which became the scene of regular Virginia-style dances. A few miles in the other direction was the one-room schoolhouse, where the community often had box suppers and other gay get-togethers. Automobiles were becoming frequent, mak-

ing evenings in Elkhart, just across the Kansas border, and in Guymon possible.

Ed and Pearl didn't lack places in which to enjoy each other's company. But she was too young to consider marriage, she said. She was still saying it 4 years after Ed had started courting her. But by that time he had got her to admit they were going to marry somebody someday, even if not each other, and they might as well start studying up on home furnishings together. She took to slipping a Sears, Roebuck catalogue under the sofa cushion in preparation for Ed's Sunday afternoon calls.

But Daddy Chatwell usually made a third at these meetings. While the catalog moldered lumpily under the cushion, he talked to Ed about strip-tilling, about capillary water, about ways of feeding beef to change its marbling from yellow to white, and countless other topics of Texas County dry-land farming.

Daddy Chatwell got the devil for it regularly from his wife after Ed left. But it was more than parlor conversation to him. Long ago he had discovered that whatever he had learned about farming in the humid lands was of small use on the plains. Talking to Ed was better than reading books. The boy knew what the books were going to be written about. Nor did Pearl complain.

In fact, she was almost relieved that the big question was thus being put off. It wasn't Ed or the idea of marriage or young-girl foolishness that made her uncertain. It was the wide-open spaces. She wasn't used to this vast land with its endless, motionless sweep—and then there was all that wind.

"Does the wind blow like this all the time?" a newcomer to the plains asked, turning his back to the gale so that his words might be heard. "No, mister," he was told. "It'll blow like this for a week or 10 days. Then it'll take a change and blow like hell for a while."

It was an old folk-joke, but Pearl learned that it was exaggerated only somewhat. The winds blow across the high plains at the same average velocity through the years as they do on the seashore. There is nothing on that stupendous floor of land to act as a windbreak. The full impact of the wind blows right along the ground. Any obstruction will make a tricky rapids in the flow. The wind hits, bounces off, then coils up and springs back and hits again. Sometimes this makes trouble. Where a grain elevator is built right alongside a road, for example, they have to put up a sign: "Danger, Drive Slow, Wind Currents." It's a land that takes getting used to.

At the best of times—in the summer of a good year with crops covering the ground—there is danger of a kind of snow blindness. The sky will become a flickerless blaze of white, and the ground is so flat that you can shut out the sky only by walking with your head down. When you gaze at cattle off in the fields, you look as if they're grazing on the brink of a cliff. You can see the sky above and below them, glaring from between their legs. That's how flat the land is, and Pearl never ceased to marvel at it. Even today she isn't completely used to it.

The enormous, yawning monotony of the landscape produces an affliction that plains people recognize at once. A man would walk around with a shaken look, as if he he had just come away from some narrow escape. There would be a glaze of fever over his eyes, but he didn't have a fever and he had had no narrow escape. He had simply come down with "the loneliness."

But to some—and Pearl came to be one of them—the levelness has an exalting quality. Mountain-born though she was, she got so that she didn't miss the hills, for she learned that it was not earth but sky that made the plains landscape. Standing in one place, she could have an unobstructed view over a circle of earth with an area of more than 300 square miles. She could see a storm begin and end and start again. Here the rainbow attained its fullest range, its colors pulsing as if alive.

The nights in that 3,000-foot altitude were always cool and juicysweet. As the sun rose, the sage became warm and fragrant. The wind, perfumed with sage, came into your bed and woke you. What a land. Its alarm clock was a fragrant silence that made you ambitious to be alive.

And then you were out in the open where even a girl stood up so high above everything else from horizon to horizon that she could feel more a part of the air than of the ground. She could have the same sense of freedom that a bird must have. Elsewhere people could learn it only in love, but here the earth itself taught that there was nothing taller than man except God.

But the stillness had a feeling of death in it, too. The fields had the strange, deep quiet of a cemetery. There was the same quality to the silence as of a crowd of sounds that had been taken away, leaving a sense of loss behind.

Pearl used to think these things, and she used to ask Ed if he felt that way.

To Ed, the stillness and the open spaces meant something different. It meant challenge. Out here, where there was nothing but earth and sky, a man felt mighty tall—or mighty small—depending on how he was accustomed to look at things. If the wind and the everlasting stillness got you down, you became smaller and smaller, and sooner or later you were gone without a trace. But if you had a mind to stand up to the land and wrestle with it, before long the land would give in and become part of you. Then you had some of its strength. It was working with you. Only, you always had to look out. The land, Ed told Pearl, was like a fickle woman. It could turn on you and make you feel small again But always you knew the promise of glory was there, if you could manage to find a way to capture it.

"Isn't that something?" Ed wanted to know. "Isn't that reason enough for a man to stay with the land?"

Pearl had to admit it was—for a man. But a girl has to think of life for children. If a man sometimes felt small out here, what would it be like to be a child? In her mind Pearl saw two children, a boy and a girl, walking hand in hand, lost in the wasteland. But she never spoke of this to Ed.

For all his boldness, Ed was gentle with Pearl; yet he was persistent, and eventually she agreed to order furniture by mail. They wouldn't pay for it yet. They would leave it in the railroad station, crated, in case either one of them had a change of heart.

By that time, almost 5 years had passed since their first meeting. Finally, Pearl set a date—November 26, 1924, the day before Thanksgiving. But it was only to drive to Guymon. Ed could stop in front of the preacher's house as long as he wanted to. If she didn't want to go in, she wouldn't. They'd have to wait until they got there to see about that. All right, agreed Ed, he'd wait.

Ed was living alone at that time on the family homestead. His older brother was married and had already moved off the plains. His younger brother was away in college, and his parents were living in Hooker, about 25 miles away.

On November 26 Daddy Tucker drove out to the farm. He saw that, although it was only midmorning, there were tubs of bath water heating on the stove. He looked at them and then at Ed, who remained silent.

"If you're fixing to get married," Daddy Tucker said after a while, "we might get a turkey ready for you tomorrow."

Ed hesitated for a long minute. Then he said, "Go ahead. Catch your turkey."

That was all that was said.

Pearl's parents saw Ed drive up in his new $1,200 Buick. They saw Pearl come running down the stairs in her new dress, carrying a suitcase. "We're just going for a drive," Pearl explained.

"With a suitcase?" her horrified parents cried.

"We might stay over for Thanksgiving with Daddy and Mother Tucker."

So finally Pearl hurried off trembling into the wild dimness of a future on the High Plains.

All the folks said that Ed and Pearl had chosen a good year in which to be married. The weather on the southern plains seemed to behave according to a 10-year cycle: the 1890's had been bad, the 1900's good, the teens bad again. Now the 1920's were good, and the newlyweds had a right, in 1924, to look forward to 6 or more years in which to build up substance for the lean cycle that they knew must follow.

Eventually, Ed and Pearl knew, they would run into a year when there would be too much rain, or not enough. Or they would be hailstones that would fall like rocks, crushing and shattering the wheat.[1] They knew they could expect a summer when grasshoppers would come over the land in great wavy plumes like smoke, darkening the sun, eating the fields to naked stubble with a clicking sound that could rattle the windows in a house. Ed had seen these things happen. But, as he put down his wheat crop that fall, he felt tall and strong. He thought he had the land tamed for a while. And then the sky opened up and cut him down to size.

In his first year of marriage Ed's crop was hailed out. The wheat he sowed never brought back a dollar. They got into the lean cycle sooner than they figured. Ed took $400 of his savings and bought a junked combine. He fixed it up himself and set to work threshing the crops of neighbors who had not been hailed out. It netted him $1,000. The bad year was behind them. Next year would be better.

But in 1925 there was no crop at all for anyone. And this right smack in the middle of the good cycle. It was what on the plains they call a skip year. There was plenty of rain overhead, but the wind dried the danged stuff before it could fall.

"Never mind, dear," Pearl said to Ed. Pearl didn't care what the weather did. She had confidence in Ed. And Ed didn't care either. He had confidence in the land.

In 1925, as soon as he saw he was not going to have a crop again, he got a tractor. It was only a little secondhand Fordson, but it could plow 20 acres in a day, as much as a six-horse team. Ed traded two horses for it and set to work.

There was plenty of land available that year. The nomads, known locally as "suitcase farmers," didn't come in the dry years, and you could rent their fields for a quarter of whatever crop you raised on them. Ed rented 800 additional acres. His brother, Allan, had left college and was now living with Ed and Pearl on the family homestead. The two men spent the blistering weeks and months of the growing season summer-fallowing. Their only money came from the milk cows and Pearl's dowry—a flock of turkeys she had raised from poults.

It was a typical skip year. While the crop planted the year before died on one part of

---

[1] One night this past June (1959) a hailstorm covered 60 square miles in the vicinity of Selden, Kans., with 18 inches of ice. The storm collapsed the roofs of five business establishments, parts of the roofs of many other buildings, and inflicted a total crop loss on the wheat farmers in the area.

the land, the boys toiled on another, with nothing except Ed's confidence to tell them they would get anything for it next year.

But a good rain came early in September, which was just the right time, and seeds, machines, horses, and men were all deployed to race out and get wheat planted before wind and sun snatched the wetness away.

In the spring the wheat sprang up lustily. Pearl had become pregnant during the winter, and the child in her stirred now. Ed would look at his fields, then come back in and look at Pearl. "Things are busting out all over," he cried once with such excitement that Pearl had to laugh. It was a warm, fond time in life.

All that spring the weather smiled on Ed and Pearl and their spreading, burgeoning fields. In July, just before the harvest, Daddy Tucker came out from Hooker to see what the wheat amounted to. He took one look and had the best field chained off. Then he called in witnesses to testify to the accuracy of the count. It added up to an incredible 64 bushels to the acre, 4 times what was then the national average.

"Boys, you've done it," the old man cried. "You've learned the land."

The whole county had done it. "We showed 'em," the men were crowing as they strutted in to market. "We licked 'em, we beat 'em, we taught 'em a lesson." Ed Tucker crowed some, too. But he knew in his heart that the lesson had been taught by the earth. "If you heed the land," Daddy Tucker used to tell his boys, "the land will help you."

Nineteen twenty-six, a year of blessed memory, R.I.P.—it seemed that the machines had supplied all the answers. The Tuckers marketed 38,000 bushels of wheat during the summer at a price that ranged between $1.10 and $1.25 a bushel. A week after the summer ended—on September 28—there was a second harvest: Pearl gave birth to Elizabeth Allene.

Ed's hat went up into the sky. But he was careful to take it down again. He was 28 in 1926, a veteran with 20 years' experience. If the twenties remained fat years, the thirties must be lean ones.

Ed Tucker bought more land, built a nice new house on it for his new family, bought more and bigger machines—but he paid for everything as he went along. "Always keep a dairy herd," his father warned him, and he did. He was too far from the market to sell the milk, but he could slop it to hogs and sell the cream. "Never eat more than your cream check will buy," his father warned him, and he didn't. With his taste for elegance, Ed's machines had to be the newest and finest, his hogs prime, his dairy herd prize-winning blooded Holsteins. Yet as the 1920's ended he could look in his books and find that he didn't owe any man a cent.

Now the 1930's began, and Ed knew what to expect. It was the dance of life on the plains, the Oklahoma three-step—three steps forward, three steps back. There had been 10 fat years. Now look out for 10 lean years. As Ed looked at the horizon in a circle around his fields, he wondered when the trouble would come.

Every spring the winds would sweep the plains like a broom. A strong blow turned the Oklahoma Panhandle misty. On more and more days people began to wonder what had happened to the sun.

Nobody worried too seriously about it. Dust was inevitable where land was being worked and winds could rove for a hundred miles without bumping into anything higher than a jackrabbit. The dust was all good topsoil anyway.

But before long—in 1931, Ed remembers—he began to have to turn his headlights on in daylight. The dust was pretty thick all that spring. By 1932 there were real storms—regular dusters. The wind would slop drifts up against the houses and fences, and men would groan, thinking of all the extra work involved in cleaning the drifts up. But they learned they only had to wait. The wind would turn around and take the dust away.

Still Ed became uneasy. Some of his familiar fields began to develop a strange look, for not all the dust was being taken away. Topsoil on the high plains had been built up at the rate of 1 inch every 500 years. Now they were getting that much in a single blow.

Then strange things began to happen. Macy Coultice, one of Ed's neighbors, got caught out in a wind. Coultice was within sight of his house when the dust came over and swallowed up everything. He became so hopelessly lost that finally he just had to hunker down, smothering, and spitting, and wait for the air to clear. Later, Ed Brewer got lost between his barn and his house, and soon there were days when people had to grope to find the way in their own homes. The early-morning air, once so fresh, was now stifling, like the air of an attic.

Macy Coultice was the first one to come down with what came to be known as "dust pneumonia." He never felt right after the day he spent choking in the dust. Soon he began to have pains in his chest. A few days later he was dead. The dirty thirties had arrived.

They say now that 1926—the fattest year of them all—was the one that did it. But the trouble started long before then. It stemmed from ignorance of the land and from disregard for its ways. The suitcase farmers, the nonresident landowners, came with the rains to make a crop as one might come to a gambling table to lay down a bet. When they drove off after a harvest, they would leave the fields lying bare and uncared for. Hit-and-run farmers, Ed called them.

Credit was another cause of trouble. The plains demanded big-scale farming. The need for speed in working the land demanded machines. And the machines cost big money. To make them pay their way a man needed still more acres. So men bought machines on credit to work the land they would pay for when they hit the jackpot with a big harvest. Although Ed Tucker, Ed Brewer, the Coultices, and many others avoided such wild gambling, easy credit was the rage of the day.

The depression played its part, too. The businessman could counter falling prices by laying off workers, cutting production and expenses; the farmer's only counter was to increase production. When the extra production drove prices down even farther, the farmer had only one answer: raise still more crops. So they began to break open the marginal lands—the fields they knew should be left in grass.

This marginal land, rashly plowed to keep up with falling prices, was the first to become uncovered in the drought. The wind would nudge at and dislodge a naked soil particle. The dislodged particle would roll and slide along briefly, shoot up in the air for a foot or two—in a movement known as saltation—and then, in lafiding, dislodge another particle.

The soil movement would go on until the particles found protection from the wind in some depression. There they would collect in a pile until the pile had become big enough to fill the depression. Then the wind would get at it again and send the loose particles bouncing and rolling onward.

The crops went. The plants on the windward side of the field were the first to feel the force of the wind. When the first plant was shoved out by the roots, it would slide along to tangle with a plant beyond. Its naked roots sticking up in the wind like a sail, it would nudge, butt, and tug until the second plant was worked loose. Then the two plants would sail on in their fatal embrace until caught by the next plant downwind. This they worked loose in half the time.

That, dissected, was the anatomy of the disaster. By the time half the field was bare, the wind was rolling up the rest of it as quick as peeling. The fatal process began to strip Ed's crops before his eyes, and laid his good land as bare as the marginal land had been. All the earth everywhere was turning into a fog that flew up and fell down to fly up again in the unresting winds.

When he saw a field start to go, Ed would run and get his lister plow. A lister cuts a deep furrow, ridging up the dirt on each side, protecting the soil temporarily against the wind.

Ed would work with his face wrapped in wet rags against the pneumonia riding in the storm. He never had much feeling for his own safety, which worried Pearl; and, whenever she felt it had become dangerous for him to work more, she'd take Elizabeth Allene and young Lloyd (wrapping their faces in wet rags, too) and drive out to fetch him. At the gate to the field she'd start honking the horn. He couldn't hear it very far above the roar of the wind, and he couldn't see the car headlights until he was right on top of them. But she'd leave the headlights on and keep honking. Sometimes it would be an hour or more before Ed would show up.

By listing, Ed possibly could have held his own acres from blowing away—if others had looked after their land, too. But nobody was tending the many fields that were being abandoned or the fields owned by the suitcase brigade. The dust from this untended land would blow Ed's furrows shut in a few hours. It was like trying to put out a forest fire with a thimble. But, in the first years, he was able to save at least part of his meager, drought-stunted crops.

As the drought grew longer, the dust grew deeper. The nearly weightless motes rose high in the wind, a dense moiling whose turbulence subsided only when the wind stilled. In a calm the motes floated gently, descending lower and lower, landing at last on any vegetation in their path. Plants turned black and rotted, dried up by the wind or beaten by blowing sand.

There was apparently nothing Ed could do to save any part of his crops. The whole earth, even the irrigated parts of it, joined the fantastic rush into the air. Not even in the winter when it was frozen dormant did the bare ground stop its fatal roving. A blizzard would tear mud off the fields and mix it with snow.

It became like a plague out of the Bible. A cloud of dust might grow as solid and dark as a thunderhead and become as wide as two States. It would reach higher than an airplane could fly. It would move along slowly, carried by the wind. Once the front had passed, the dust-laden wind might blow for as long as a week.

By marshaling every possible ounce of courage and determination, some families still bore up under it. But the Dust Bowl had an average of about 100 days of dust-storms the early part of every year for 8 years in a row; 1932 through 1939. When the storms subsided, those who stayed on could see that their very fortitude was bringing them only greater ruin. For after every spring came the bone-dry summer, in which the hot sun further seared and baked the already Sahara-like fields, and no crops grew. What remained for those who held on could hardly be called life. Once men and women, now they were figures groping in a nightmare.

Texas County's population dwindled to roughly half of what it had been in 1907, at the first census. Farms were being sold for what they would bring, which was pitifully little. Nevertheless, the sellers all

seemed relieved to be rid of them. "I should have done this years ago," they'd say. "It's only sense to go while you've still got something left to make a start elsewhere."

Panhandle A. & M., the college at nearby Goodwell, went down to 92 students. The professors lectured on soil management through throats choked with dust. High schools that had been graduating 400 students a year closed for lack of attendance. "Why, there's nobody left to keep up a bridge game." Pearl realized, and it was true. The nearest neighbor was now miles away.

Soon the letters came back, from California and many other States—letters telling how well those who had been dusted out were doing. There were jobs in shipyards, jobs in factories or green new farms far from the dust areas. And as they read this news from the outside world, those who stayed behind often wondered why they did.

The only way a man could get any money here was to sell something he'd had before the hard times began. Ed decided to sell his hogs. To get a top price, he hauled them by truck all the way to Pueblo, Colo., 250 miles. He got 2 cents a pound.

Old man May Burton lived alone on his farm for a while, after the death of his wife. Then one day somebody saw his automobile parked outside the railroad station with the keys in it and no sign of the old man anywhere. His son, Castle Burton, was summoned from Boise City, 60 miles away. When Castle got to his father's house, he found all the lights on. There was food on the stove, and some had been served out on the table. There was a full plate, a broken-off piece of bread beside it, a full cup of coffee.

But May Burton had gone to California. He had done his day's work in the fields and had sat down to supper. Castle could see where his father had stopped. The fork was on the plate, still full of meat and beans. But he had never lifted it to his mouth. Instead he had driven to the railroad station taking only what he was wearing, leaving everything behind, even his car. It was as if, by leaving everything, he felt he would prove it was all nothing but a bad dream.

Ed and Pearl feel today that the presence of others who held solid in that rocked and riven world helped them to see the long years through. Men like Ed Brewer, the Virginian whose barn had been the scene of the merriest dances. Brewer kept reading the local newspaper for news of the outside: floods on the Ohio, on the Mississippi; earthquakes in California and Japan; frosts in Florida. Ed Tucker read, too. News of a flood in Kentucky made him feel good for a week. Like Brewer, he didn't wish anybody any harm. He just needed help in convincing himself that there would have been natural disasters to cope with wherever he had settled.

Their women held solid, too. Pearl had a terrible fear of the dust. But where men trust what they know, women trust love. Pearl felt that if only her family remained together in love, good must come of it.

But the good was a long time coming, for the wind continued to howl and paw at the house like an animal. At night they would hang wet sheets in front of the windows (which were already sealed with tape) and over Lloyd's crib. But morning after morning Pearl would wake up to find the only clean place left was the white outline on the bottom sheets where they had slept. There was no way to keep the dust out. It permeated bureau drawers and mounded up on the dishes in locked cupboards. Even the brooms had to be swept before they could be used.

Ironically, Pearl's lowest moment came during the first year of the big dust. It happened because of her lawn. It was not just a plain Oklahoma lawn, but pure beautiful bluegrass. She put a white picket fence around it and worked on it endlessly, making it a kind of sign, an unspoken promise about Ed's future with her. It thrived so well that the seedsman from Elkhart planned to put a color picture of it in the seed company's catalogue. Then the dust piled up fence high on it.

Ed took the fence down, but the dust had packed into a dune. He had to get his tractor and bulldoze it away. Pearl went into the bedroom and locked the door. When the job was finished, Ed could still hear her in there sobbing.

Ed had felt the same way about his pedigreed Holsteins. They were more to him that just a cream check. Handsome and costly, they were a sign he was making. When the dust began in 1930, he had 20 of them, worth up to $500 each. By 1934 he could neither raise feed for them nor afford to buy it; so he hauled his precious cows to Hooker, where he found a dairyman willing to rent them.

By 1936 that outlet was closed, too. For, as the farms died, the towns withered. The dairyman lost his customers and Ed had to take his cows back. But now he was close to scraping bottom. He sold his joy, his pride, his hostages to fortune, for beef. The $500 bluebloods brought $32 each.

When he walked across his empty fields, he felt as trapped and helpless as the wild animals he encountered. Blinded by the dust, they blundered on, falling and getting up, until they were exhausted. He would see a blinded jackrabbit standing motionless in the dust. He'd nudge it with his foot and it would fall over. He's nudge a blinded coyote. It would whimper away a step or two, then stand still as death. Ed used to wonder what the difference was between himself and these poor, suffering animals. He was not blind. But he was groping in an endless maze.

Of the more than 125 people who had started out from Greensburg so hopefully long ago, Ed was the only one who had stayed put. Even his younger brother, Allan, went temporarily to California. Many of the people kept title to their farms but locked them up and moved to greener pastures for the duration. If the land came back, they'd come back. If not, they'd be that much ahead on a new life for their families. Was Ed right in trying to finish what he had started? Was this being farsighted, or was it plain mulish blindness?

Ed would talk it over with Pearl after the kids were asleep. "Whatever you decide will be right," she told him. "Suppose you had to decide," Ed asked her, "for yourself, for your own best interests. What would be your decision then?" It was an easy question to answer. Pearl already had made the decision more than 10 years before, when they were married. "I think we should all be together, and you should do whatever you want," she said.

We won't go; we'll wait until they drag us? That was always Ed's decision.

A crisis came one afternoon. Elizabeth Allene was in school and a bad duster started. Children were sometimes kept at school overnight during dust storms, eating cold food and sleeping on the floor. Pearl didn't like that. But her greatest fear was that the storm might separate them for days. She put Lloyd in the car, honked Ed out of the fields and then they all drove off for Elizabeth Allene.

The school was exactly 1.8 miles from the house. They had clocked it several times, as insurance against being lost. On the return trip, when the speedometer showed 1.8 miles, Ed got out to look for his driveway. He discovered they were not on the road at all but in the middle of some field; there was no way to tell whose field it was. The roadside ditches were filled up; the fences were covered over with dust drifts.

"Well," said Pearl, "isn't it good that we're lost together?"

One thing was sure: they couldn't be far from home. But that made it the more shocking to Ed. For nothing was recognizable. You couldn't tell earth from sky, night from day. The car windows were rolled up tight, but you couldn't even see them. There was nothing to do but wait.

The car radio might have helped pass the time—except that you got only static when the dust was blowing. You got only static out of your own head, too, amid all the howling and battering of that choking dust. Ed sat back and closed his eyes to protect his eyeballs. The dust got in anyway. It put a fur on his teeth. It piled up in his shoes. And above all the static it seemed to broadcast one clear message: Move out, move out.

If we do move out, Ed thought, where will we go?

Daddy Tucker wanted Pearl and the children to move into Hooker. The minister there had left, and they could live in the empty parsonage. But Ed had said no. It would be too much like the beginning of the end. He liked being with Pearl and the children too much to be away from them long. Wouldn't his trips back to the land become fewer and fewer until eventually they stopped altogether?

Ed tried to think about it coherently, but suddenly he knew he could not ask his family to endure further hardships for the sake of the land. Pearl hadn't married a man. She had married a disaster.

It was night when the storm began to slacken. They couldn't tell just what time because the dust had stopped all their watches. When he could see to drive, Ed never bothered to figure out where they had been lost. Instead, he drove straight to Hooker.

They looked in on the parsonage to see what furniture Pearl and the children would need there. Then they drove home. Pearl said nothing until Ed asked her whether she wanted to start packing right now, or wait until morning. Then she asked, "Who'll bring you back from the fields when the dust starts?"

"I'll get back all right," Ed said. "I'll take the car with me." How? Pearl wanted to know. Would he leave the car lights on all the time?

"Now, wife," said Ed sternly, "you just worry about getting yourself and the children to Hooker."

"Don't you 'now' me," replied Pearl. "I don't care whether the dust blows or not. We're a family."

"But," protested Ed, "you said you'd take the parsonage."

"I did not," Pearl cried. "You said I'd take it. I didn't say anything. Go ahead, you take it. The children and I are staying here."

It was like Jacob wrestling with the angel. "I will not let thee go except thou bless me," Jacob said to the angel. To Ed, the land was his angel. He could not let it go except it blessed him.

No dramatist arranges life for a farmer. Like his defeats, his victories became apparent only gradually, long after they've actually happened.

In 1938 there was a little rain, enough to settle the dust and make a light crop. Now land was down to $4 and $5 an acre. Ed scraped up every cent he could get together and made the down payment on 480 acres. In 1939 there was less rain than ever. But what little there was fell at exactly the right time for a crop. By 1940 the drought was over. The good years had come back—the time of three steps forward.

Had the battle been won? Only the next drought could tell. In the meantime, work. The dust had stopped blowing.

They were heading into a good cycle—the forties—and the difference between the way they did things now and the way they had done them in the twenties was tremendous.

Science and technology had made big strides toward improving the use of the land. New seeds were developed. New techniques of soil management were learned. A new method of plowing, called stubble-mulching, left crop residues on the surface to protect the soil from blowing. Windbreaks were created on poor land by planting crops in 10-foot-wide strips athwart the prevailing wind. One strip would be a tall stand of milo (the local term for sorghum), the next strip the much shorter growing soybean, and so on, the short and the tall alternating across the field.

There were new kinds of machines, too, doing new kinds of jobs, all of them designed to help the farmer work his land scientifically and wisely.

New bladelike plows were developed to aid in the process of stubble-mulching. They could knife under the soil to cut the roots of weeds, yet they would leave the weeds and the stubble of the harvested crops standing above the soil for protective cover.

They were among the scores of new devices. Another was the dammer. It threw little dams of earth across the furrows as they were made. Now the dashing rains, instead of pounding the furrows into a slick sluiceway and running down them and away, were held and soaked in. All in all, Ed now shivered when he remembered how primitive his farming practices had been in the twenties.

Another thing the farmers of Texas County had to help them in the forties was water. There had always been plenty of water deep in the earth, but no cheap way to pump it out. There had been a deep-well turbine pump that could bring up 3,000 gallons a minute, but at a prohibitive cost for gasoline or electric power. Then, in 1945, the county was proved out as part of one of the largest-known natural-gas fields in the world. This discovery brought the cost of running the deep-well pump down to 25 cents an hour. This made it possible to irrigate and to grow just about anything on the plains. The farmer didn't have to depend on wheat alone. He could diversify—scatter his bets like anyone else.

True to form, the forties were good years on the plains, and as the fifties opened, Ed wondered: Had they learned the land this time? When drought came, and then wind, would the dust come again, or would the land hold?

They say that every drought ends with a rainfall. But nobody can say when a drought begins. Ed noticed that his plants were drooping in the afternoon sun. But they revived as the day drew to a close, and were fresh and crisp the next morning. Yet the earth was advancing toward a stillness. The time came when the plants failed to revive in the night and stood with bowed heads in the morning sun. The drought was on. The days began to march on Ed like an army of enemies in single file. The land turned brown. The grass at the bottom of the ravines and around the tractor-dug ponds was the last to die.

Where there was grass, jack rabbits gathered in milling herds. The farmers would join together in lines spread out over 2 to 3 miles and drive the rabbits into a wire pen set up in the fields. There would be about 5,000 rabbits at a time in a pen. Not daring to use guns for fear of shooting each other, the farmers would enter the pens with clubs and beat the rabbits to death. The women would join in, too. It was brutal work, but farmers have to choose daily what must die that others may live and, in a drought on the plains, the choice is limited even more sternly. The living stand on the dead to reach the last haggard bits of nourishment. Only the buzzards get enough to eat.

The year 1952 was drier than the driest year of the dirty thirties—only 9.16 inches of rain fell. And 1954 was not much better. People stopped looking for rain, but they never stopped looking for dust.

On February 19, 1954, Ed slept late, and so did everybody else. When they realized why, the old fear came back. There has been no light to wake up by. An old abominable, anguishing specter had emerged from its grave to blot out the light.

It was a dust storm as gigantic as those of the thirties, but this time it was the dust rather than the men in it that had to battle for survival. All over the plains, men charged out of barns on powerful, high-speed machines. They all listed the land, and the land held. The dust was bedded down in a single day.

But one battle is not a war.

The dust was now coming every spring. It got its head up every day, and every day, gratifyingly, it was beaten down. The new machines, the new ways of plowing and planting were giving man an edge in this relentless war. But wait for a big wind, Ed told himself nervously. The big wind arrived one day in April of 1956.

The sky kept growing darker and darker. Finally, even though the clock still showed some of the afternoon left, Ed quit the withering fields. It had become hard for a man to see what he was doing.

The black sky lowered a black lip, and Ed knew that a tornado was being born. The sky tried to get the lip back up. The lip of black air could be seen lifting, then dropping. Ed watched somberly. Thoughts scudded through him like birds, so fast it was hard to know what they were. Abruptly, for no reason, he wanted to laugh. The funnel of the tornado was sashaying as in a real old-fashioned flangdang. It was homing in eagerly on Ed Brewer's barn where he and Pearl had so often gone for their dancing.

Ed watched as the funnel gulped up all the air in Brewer's barnyard in a single suck. The barn gurgled, then exploded. So did a double granary. They went off like bombs, the air inside them expanding instantaneously to fill the vacuum left by the tornado.

The roads in that featureless country mark off the sections of land. Since a section is 1 square mile, you have only to go a mile in any direction on almost any road to come to a crossroad. It's like a checkerboard. Now, suddenly, the checkerboard was full of movement.

When he saw the timbers of Brewer's barn hurtling into the air, Ed Tucker jumped into his car. He could see cars racing along with him on either side. They were converging from all directions to bring Brewer help, each spaced a precise mile from another. He could see the little clouds of dust being raised by all the urgent wheels. The cars looked like little bugs scuttling away from the pursuing dust.

Suddenly it occurred to Ed how remarkable it was that he could see to drive so soon after such a violent windstorm had passed. What's more, he could see for miles. He thought back to a storm in 1933 which had kicked up so much dust that it was still dark on Ed's farm the next day.

Storms vary, of course. This 1956 storm hadn't lasted as long, but, even though it came in the fifth year of a great drought, it had raised so little dust that Ed could see that the Brewer house itself had been untouched. And when he found that both Ed Brewer and his wife, Ida, were safe, Ed Tucker felt like dancing. He couldn't say on a Bible which affected him more deeply: the fact that his old friends had escaped injury, or the fact that there was so little dust.

"Boys, you've done it. You've learned the land." At last, 30 years later, Daddy Tucker's cry was coming true in a way that give it real meaning. Not only a Tucker but almost everybody crop farming the high plains was beginning to "learn" the land.

When you talk to Ed Tucker today you have the same feeling you would get if you were to talk to a general who had planned, fought through, and won a series of battles in a long and desperate war. It would be fitting if Ed Tucker, in company with other generals, were to write his memoirs, giving the names, dates, and strategies of his campaigns. But Ed Tucker's memoirs do not need to be written on anything so insubstantial as paper. They are written, for all to see, on the rich and spreading countryside in Texas County, Okla.

Would that countryside be green and rich today if Ed Tucker had left? No one can say. The most Ed would say if you asked him would be, "Well, some of us had to stay."

Looking at Ed and Pearl, looking at their nighbors, the Brewers, and others, you realize that the people who had stayed had, or acquired a special strength that saw them through. It is as though they had poured their strength into the land and the land, having tested that strength and matured it, returned it a hundredfold.

Communist Propaganda in Asia

EXTENSION OF REMARKS
OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 2, 1959

Mr. BOWLES. Mr. Speaker, under leave to extend my remarks, I include the following statement:

The Speaker has generously granted permission to me to exhibit in the Speaker's lobby of the House of Representatives several samples of Communist propaganda typical of that now being disseminated in the Middle East and in south and southeast Asia. This exhibit is designed to acquaint Members of Congress with the scope, breadth, variety, skill, and effectiveness of Communist propaganda in this area of the world and with the corresponding challenge it presents for American policy.

Among the aspects of this challenge, highlighted in the exhibit, are the following points:

First. Propaganda from the Soviet Union and Communist China is supplementary in various fields and in different countries. Chinese propaganda, for instance, appears more often in Pakistan, which is at odds with the Soviet Union, while the Soviets are more active in Burma, where the Chinese are regarded as a direct threat. A major role is also given to propaganda from countries of central and eastern Europe, particularly in the sphere of cultural and economic affairs.

Second. Soviet and Chinese publications are attractive, and present life under communism in terms designed to appeal to the workers and peasants of most of non-Communist Asia. China alone sold an estimated $1 million worth of propaganda material at cutrate prices out of Hong Kong last year.

Samples of direct propaganda publications include:

From China: China Pictorial, China Reconstructs, Women of China, People's China.

From U.S.S.R.: The Soviets distribute New Times, Soviet Literature, Soviet Union, Soviet Land, Soviet Weekly, Soviet Woman, Culture, and Life.

From central and east Europe: Romtrans—Romanian Industry—Czechoslovak Life, Bulgarian Foreign Trade, GDR Review (East German), Do You Know the Rumanian Peoples' Republic?

In the middle east Communist French publications such as Democracie Nouvelle are available.

Asian Communist countries, such as North Korea and North Vietnam distribute their own magazines.

Third. The official Communist propaganda pamphlet campaign is accompanied by standard literature. Russian classics are constantly being reprinted in English. Indeed, more publications in English are now being printed behind the Iron Curtain for distribution in non-Communist Asian countries than are being printed for such purposes by the United States and Great Britain combined.

Each year, scores of new titles in Hindi, Bengali, and Urdu and other national languages are also released. "Handbooks on Marx," "People's China, U.S.S.R.," "Chinese Cooking and Chinese Papercuts," are on sale everywhere, as is the Constitution of the Soviet Union in nearly all languages. Important pronouncements and interviews with Soviet leaders are widely distributed.

Books and albums are published in China and Moscow on the visits of Soviet leaders to other Asian countries. Publications on Islam and Buddhism are frequently distributed.

Communist propaganda aims at filling gaps in available literature wherever such gaps exist. Thus there is much concentration on children's books such as "The Silver Hoof," "Frisky Kitten," "Ukrainian Folk Tales," and a series of "Peace Fables"—published in Bucharest.

Indian art publications are published in Moscow and distributed in India. Many art postcards sold in India are printed in Moscow.

This Communist propaganda effort through books and periodicals is, of course, only one arm of a sustained, long-term program. That program also includes the persistent use of radio, press, films, trade fairs and cultural missions. The following brief summary indicates the extent of some of these supplementary activities:

Radio: Communist Chinese broadcasts number 242 hours per week in 10 Asiatic languages and 5 Chinese dialects. Chinese abroad numbering 30 million are considered as an important target and instrument for Communist propaganda. Moscow broadcasts much more extensively—8 hours weekly to southern Vietnam for instance, 35 hours weekly to Persia, and an unspecified number in Hindi, Bengal, Urdu, Tamil, Telegu, Singhalese, and other Asian languages.

Press: The actual Communist press in Asia is not very extensive—6 papers in India, 2 in Pakistan, 4 in Ceylon and 5 in Japan. But Soviet and Chinese propaganda is carried on (a) through local press agencies which distribute news issued by Tass and the New China Agency, and (b) via extensive distribution of Chinese and Soviet publications in French, English and all Asiatic languages.

Films: Great emphasis is placed on presenting Communist films in Asia. Czechoslovakia, Poland, and Hungary make particular efforts in this field. In addition, Polish-Indian, Hungaro-Indian, Soviet-Indian film companies have been created and are discussing joint productions. The Soviet Union produced the national film "In Pakistan" and the so-called Indian monumental "Pardesi."

Trade fairs, cultural, scientific, and sport exchange missions between Asian countries and the Communist bloc have been considerably increased. The Soviet Union and China have their pavilions at all trade fairs such as the Indian Fairs at Hyderabad or Bombay, or in Pakistan's Lahore Fair. So have east European countries. Presently in Cairo and Bombay there are Czechoslovak, Hungarian, Romanian, Bulgarian, Polish and East German industrial shows. Czechoslovak string quartets and Rumanian dance teams, East German sport teams and Chinese wrestlers visit the majority of Middle East and Asian countries. Communist teams are present at all Asian festivals. Chinese Buddhist art exhibitions tour Ceylon, India, and Burma.

The single, overall conclusion of any current survey of Communist propaganda in Asia is its formidable continuity of purpose. It is a long-term effort, being conducted with purpose and skill. It is not calculated to achieve dramatic or immediate success, but rather long-term impact in depth.

The importance of Asia to Communist strategy is obvious. America's stake in the future of free Asia is equally clear. We will need new thinking and new responses if this challenge is to be met effectively in the months and years ahead.

I hope that this exhibit in the speaker's lobby will help broaden understanding of the nature of this challenge. In the preparation of this material for exhibit, the International Federation of Free Journalists was most helpful, and I gratefully acknowledge their cooperation. I hope that as many Members of Congress as possible will see this exhibit during the next few days.

Crab-Oyster Imports

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. MACK of Washington. Mr. Speaker, canned crabmeat and canned oyster imports from Japan are increasing at an alarming rate and threaten the prosperity and employment in the Pacific coast shellfish industry.

In the first 6 months of 1959 canned crabmeat imports from Japan totaled 4,289,000 pounds compared to 2,739,000 in the same period of the preceding year. This is an increase of 56 percent.

Canned oyster imports from Japan for the first 6 months of 1959 were 2,600,000 pounds compared to 1,853,000 pounds in the same 6 months of 1958 or an increase of 40 percent.

I have written to Representative HERBERT C. BONNER, chairman of the House Committee on Merchant Marine and Fisheries, urging that his committee this fall investigate the impact of these increasing canned shellfish imports upon the prosperity and employment in the American shellfish industry and to make recommendations to Congress as to the most effective way to protect the domestic industry against damage.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Historic Time for Polish Trip

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Orleans Times-Picayune of September 3, 1959:

HISTORIC TIME FOR POLISH TRIP—WARSAW VISIT AT IMPORTANT MOMENT—BOGGS

(EDITOR'S NOTE.—Representative HALE BOGGS, a delegate from the U.S. Congress to the Interparliamentary Union Conference, has just returned from Warsaw where the 47th meeting of the group is now underway. In the following article he gives his impressions of Warsaw and the meeting.)

(By HALE BOGGS)

WASHINGTON.—I was in Poland on the day before the 20th anniversary of Hitler's attack.

No one there has forgotten the 800,000 people who died there and the other 5 million who died in Poland in World War II. Every block marks the event with flowers, with a clean-up program, with special services in the churches which flourish everywhere.

But a city 85 percent destroyed has come back to life. The architecture is beautiful. The old city has been restored. Over a million people live there now, but as George Healy said in his series on his recent trip through the Iron Curtain countries it is a sad country.

I was lucky; I had an English-speaking driver. He had spent 3 years in England in the Polish Army during World War II. He told me that he ran a very small motorcycle repair shop. Only the smallest family-run shops are permitted to be operated privately. All the rest are state owned. He said that the real hope of the people was that they would get rid of the Communists. Without that hope the nation could not survive and sadness would be displaced by utter despair.

STATE ENTERPRISE

Practically all the members of the family, husband, wife, children, work in some state enterprise. Even so they earn just about enough to keep themselves in clothing and food, both of poor quality. None of the luxuries which we know and enjoy are permitted to these people. Practically every automobile is owned by the state. Things that we take for granted—refrigerators, dishwashers, automatic laundry machines, and so on—are unknown in practically every household.

My visit to Poland coincided with several historic events. It was a few weeks after NIXON's visit; Ike was in Europe preparatory to the Khrushchev visit to our country, about which the average Pole is skeptical, as are many other people that I met in attendance at the conference.

The glow of NIXON's visit still remained. The press reports which I read in our country about his reception in Warsaw were certainly not exaggerated. People came from everywhere to see the Vice President of our country and obviously the Voice of America and Radio Free Europe must have been quite effective because I was informed the local Communist press gave practically no attention to the time of his arrival.

IN SHARP CONTRAST

I was told that the people somehow or other had to buy their own flowers which were thrown at the Vice President's party in profusion. His visit was apparently in sharp contrast to that of Khrushchev whose time of arrival and whose route of entry into the city were not only well advertised in the press, but workers were given time off and provided with flowers and other trappings. Despite this, I am told, the welcome was anything but enthusiastic.

Now a word about the Interparliamentary Union Conference, which was the purpose of my visit. This was the 47th meeting, and I talked about investment in the underdeveloped countries. But the main thing was that we stole the march at the conference and gained a tremendous psychological advantage. One of our delegates, Congressman THADDEUS MACHROWICZ, from Detroit, is a native of Poland. He served as an officer in the Polish Army in World War I and has since gained distinction as a judge and as an outstanding Member of our Congress. He represented our group in the opening speech. He spoke in Polish. He told of his own life and he hearkened back to the events of 20 years ago when the Hitler-Stalin pact led to World War II and the dismemberment of a great country. He received a tremendous ovation from the assembled delegates and one of the British—they are not neophytes in diplomacy—came to me and said, "That was one of the smarest things that you have ever done." A real compliment from an Englishman.

LITTLE ATTENTION

Again the Polish press gave little attention to the Machrowicz speech. My recollection of what one paper said was, "He had given a subjective account of the events of 1939." But the Voice of America and Radio Free Europe gave it wide circulation and in a matter of hours he had people calling on him from many places in Poland.

Many things stand out in my mind. Again referring to the Healy series, which mentioned that in Russia only the old men and women attended the few remaining churches. In Warsaw a great many churches have been rebuilt. They are quite beautiful and the people flock to mass, not only on Sundays, but on weekdays as well.

My wife and I attended mass last Sunday at one of the old historic churches, St. Alexandra, which incidentally is one of the symbolic edifices which was razed to the ground by Hitler's forces, but restored magnificently.

The church was packed and attended by young and old, middle-aged, men and women, children and babies. They were extremely devout. As a matter of fact all of the streets of Warsaw on that Sunday were packed with people going to and from church. This strength of religion is a tremendous deterrent to the communization of the nation.

SENSE OF HUMOR

Despite their lack of freedom, the Poles maintain a fine sense of humor and incidentally they are not afraid to speak out against the Communists or the Russians. Stalin built what is called the Palace of Culture, a monstrous looking skyscraper building completely out of keeping with the architecture of the city. The Poles say that the best place to see Warsaw is from the Palace of Culture because then one can't see the Palace of Culture.

We went to a concert of native music and dancing which was most delightful. The leading architect of the city, a Member of their Parliament, said, "On the stage we Poles can be ourselves."

There are other quotes worth repeating. A taxi driver said, "There is no parking problem in Warsaw." Believe me, there isn't. There are few automobiles and these are practically all owned by the state. Most of the cars are Polish or Russian with some imports from Western Europe.

Senator MONRONEY said it was a good place to take his wife. "Nothing to shop for. Nothing to buy."

You see practically no window displays; there is little advertising; gasoline sells for $1 per gallon. The soldiers are unkept. They seem to have no sense of elan, and very little interest in being soldiers. I would hate to depend on them in a fight if I were the Russians.

YEARN FOR FREEDOM

Again I agree with the conclusions of George Healy. The Poles yearn for freedom. If there is a weak link in the Soviet chain certainly this must be it. The West must continue to hold out hope for these people who have valiantly fought for freedom for 1,000 years and who are noting not only the 20th anniversary of the attack on Warsaw by Hitler, but the 1000th anniversary of the introduction of Christianity into this country.

On the way home we had a brief stop in Frankfurt. What a contrast. Frankfurt, too, was destroyed, and it too has been beautifully rebuilt, but here there is a hustle and bustle of a city moving ahead in freedom; automobiles everywhere, shops full of impressive looking goods and consumer items of every type. People well dressed, and seemingly quite happy. What a contrast between private enterprise and communism.

The American delegation in Warsaw was not the only one using free speech, and telling the story of world Communist conquest. The Indian delegates talked about the attacks on their borders and Tibet. The representatives of Vietnam talked about what was happening in their country and Laos. What an experience this must have been for the Russians and other satellite countries to see free speech in operation. Meetings of this kind can indeed penetrate the Iron Curtain.

State Taxation of Income From Interstate Commerce

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mr. MILLER of New York. Mr. Speaker, pursuant to permission granted

I would further like to clarify a point with respect to the bill S. 2524, as passed by the House and Senate. It is not the intention of this legislation, in my opinion, that goods shipped into a State and temporarily at rest in a public warehouse should be singled out as a basis for the levying of a State tax against the shipper or manufacturer.

Significance of National Legislation to Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. WILEY. Mr. President, now that the end of the first session is in sight, there is opportunity to review some of the major legislative work that has been accomplished.

Looking at the calendar—and the schedule ahead—it is apparent that important work remains to be done.

Recently, in a broadcast prepared for delivery over Wisconsin radio stations, I reviewed the significance—and benefits to be derived from—action in these fields—particularly as it affects Wisconsin. These include highway, health benefits for civil servants, expansion of the school milk program, extension of the Federal Airport Act, liberalizing veterans pensions, and others.

I am aware, of course, that—in view of Uncle Sam's difficult budget problems—it is important that we take a look, from time to time, at the role played by the Federal Government in national programs.

That is why I was particularly pleased to join in cosponsoring the resolution, Senate Concurrent Resolution 70, introduced by the junior Senator from New York [Mr. KEATING], aimed at redefining State-Federal responsibilities in the economic field.

Although this proposal for establishing a joint congressional committee was introduced late in the session—too late for final action on it—I would hope that this would receive early consideration next year.

As a review of some of the major legislative action taken this session, I ask unanimous consent to have the text of my broadcast printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

WILEY OUTLINES BENEFITS OF LEGISLATION FOR WISCONSIN

(Excerpts of address prepared for delivery by Senator ALEXANDER WILEY, Republican of Chippewa Falls, over Wisconsin radio stations)

Friends, the 86th Congress is now winding up its 1st session. There is, of course, still a good deal of work to be accomplished prior to adjournment. These include a number of major pieces of legislation of particular interest to Wisconsin.

In evaluating legislation, questions arise such as: What will it do for us? How will it affect our progress in Racine, Milwaukee, Green Bay, Superior, Chippewa Falls, La Crosse, and other fine communities around the State?

Briefly, I would like to view the outlook for benefits to us.

NEEDED: FUNDS FOR HIGHWAY PROGRAM

First, let's take a look at the highway program. Unfortunately, the Congress has been too slow in acting upon legislation to provide additional funds needed to finance the highway building program. As a result, there has been serious curtailment in this program, which is designed to provide us with an improved and expanded network of highways.

"Question: What is its significance to Wisconsin, Senator?

"Answer: As of June 30, 1959, 180 miles of roadways were either under construction, or advertised for bid, in the Badger State. This amounted to $57.1 million in expenditures of which $49 million in Federal funds were contributed.

"Under the Highway Act of 1956, Wisconsin was scheduled to receive $26 million in 1961 and $23 million in 1962. Unless Congress acts to provide additional money, however, the State may get nothing in 1961 and only $5 million in 1962.

"Currently, Congress is considering ways and means of providing additional financing for this program. The task is to find an equitable way to provide funds for improving and expanding the National System of Interstate Highways—so badly needed to handle the ever-greater volumes of traffic now, and in the years ahead."

AID TO EDUCATION

"Question: What about aid to education, Senator WILEY?

"Answer: Under the Defense Education Act, passed in 1958, Wisconsin's State educational agencies and nonprofit private schools will receive financial assistance from the Federal Government for the purposes of (1) acquiring laboratory and other special equipment suitable for use in providing education in science, mathematics, or modern foreign languages; (2) expansion and improvement of supervisory and related services in public elementary and secondary schools in these fields; and (3) minor remodeling of laboratory or other space used for such materials or equipment.

"Recently, the State legislature took action to make it possible for Wisconsin to participate in this vital program to improve education in the fields of science and technology; with Wisconsin being eligible to receive up to $1,900,000 per year for the next 3 years on a dollar-for-dollar matching basis.

"Question: Is there any new legislation?

"Answer: As of now, there are pending in committees—in both the House and the Senate—bills to provide more Federal aid for constructing classrooms, laboratory facilities, and general aid. There now appears to be serious questions that there will be final action this session on this legislation."

HEALTH BENEFITS FOR CIVIL SERVANTS

"Question: Senator WILEY, as I understand it, Congress has approved a program of health insurance for folks under civil service.

Would this benefit many people in Wisconsin?

"Answer: About 20,000 civil servants would be eligible for participation in this program. The costs would be shared on a 50–50 basis by the employee and the employer—in this case, Uncle Sam.

SCHOOL MILK PROGRAM

"Question: Senator, I recall that you supported legislation to expand the school milk program.

"Answer: Yes, the bill, S. 1289—which I cosponsored—has been enacted to provide up to $84 million in fiscal 1960 for supplying milk in the Nation's schools, child-care institutions, summer camps, and similar nonprofit institutions. Under this program, Wisconsin children consumed over 80 million half-pints of milk in 1959; with over 4,500 schools and institutions participating. Approximately $2,745,000 of Federal funds was expended in financing this fine project. Overall, the program offers a splendid opportunity for improving the health of our youth; in addition, it provides a splendid outlet for surplus milk."

EXPANDING AIRPORTS

"Question: With the increasing volume of air traffic, is there any action to expand airport facilities?

"Answer: The Federal Airport Act has been extended by Congress this session. Under provisions of the new law, $993,906 annually would be provided in Federal funds for the construction and expansion of airports in Wisconsin during the next 2 years.

"The program would provide for airport facilities, taxiways, land acquisition, parking areas, and other purposes."

LIBERALIZING VETERANS' PENSIONS

"Question: Did Congress pass any veterans' legislation this session?

"Answer: Yes. The Congress approved—and the President has signed the bill, H.R. 7650—to liberalize pension benefits for veterans with non-service-connected disabilities, and their widows and orphans.

"Overall, more than 1 million pensioners in Wisconsin, and throughout the Country, would benefit from the liberalizing law. Among other things, the bill would provide pensions for widows and children of World War II and Korean veterans.

"The bill, of course, is not a completely comprehensive measure covering all problems in this field. However, it was designed to attempt to put benefits more on the basis of need."

VETO OF HOUSING AND RIVERS AND HARBORS BILLS

"Question: Senator, what about the housing and the rivers and harbors bills?

"Answer: As you know, the President vetoed measures in both these fields, because he felt the expenditures were too high.

"Now, the Congres is faced with the challenge of taking action—as I believe it should—on modified bills to carry forward these essential programs.

"Although there are many features in the housing bill, for example, it is particularly important that congressional action be taken to extend the FHA insurance authorization program. Under FHA, millions of American families have purchased homes. In Wisconsin, over 3,000 home mortgages, amounting to over $37 million, were processed in 1958. During the 1935–58 period, the FHA insured 39,671 mortgages in the Badger State.

"Overall, this program has helped to make it possible for three out of every five American families to own their own homes.

"Under the rivers and harbors bill, too, there are several Wisconsin projects—either for construction or for planning work. Among them were: work on the Mellen Channel; moving the village of Odanah, and raising the school, on the Bad River, construction at Bayfield Harbor; planning on the Eau Galle River; planning at Saxon Harbor; and planinng at Two Rivers Harbor."

SUMMARY

"Question: Senator WILEY, I know our listeners appreciate getting your review of the significance to Wisconsin of some of the major legislation acted upon in this session of Congress, including: Highways, education, health benefits, school milk, airports, vet-

erans' pensions, housing, and rivers and harbors development projects.

"Answer: Naturally, I am delighted that Wisconsin is sharing so significantly in these national programs.

"However, I believe it is important to make clear that—even though we are receiving substantial amounts of aid in several fields—it is well to remind ourselves that this is not a 'free gift' from Uncle Sam. Every Federal dollar that is spent comes out of the American taxpayer's pocket—yours and mine.

"Consequently, I believe it is extremely important that we take a new look—from time to time—at the kind of role Uncle Sam is playing in these programs.

"As President Eisenhower, reflecting the philosophy of Lincoln, has said:

" 'The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves, in their separate and individual capacities. In all that people can individually do as well for themselves, government ought not to interfere.' "

COMMITTEE TO STUDY FEDERAL-STATE RELATIONSHIPS

To better define State and Federal responsibilities, I have recently joined in cosponsoring a measure to set up a joint congressional committee. The purpose would be to study the entire field of economic relations between the Federal Government and the States. Following its study, the committee would report to Congress the results of its findings, together with recommendations on ways and means of remedying the many problems which recurrently arise in the field of Federal-State economic relations.

Specifically, the committee would aim to (1) insure fair and equitable distribution among the several States of Federal funds disbursed under grants-in-aid programs, (2) clarify and redefine relations between the Federal Government and the States in the field of taxation, and (3) restore to the States functions which are primarily their responsibility and which the States themselves are financially able to carry out.

CONCLUSION

Now, friends, I have greatly appreciated the opportunity to share this program with you.

This is your senior Senator, ALEX WILEY, saying, "Thanks for listening."

Procedure Followed When a Visiting Head of State Is Invited To Address a Joint Meeting of the Congress

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. McCORMACK. Mr. Speaker, in my remarks I include for the information of the Members a statement I recently made to the press and to television and radio stations:

There is considerable misunderstanding, even in the minds of Members of Congress, about the procedure that is followed in connection with the head of a state visiting our country and addressing a joint meeting of the Congress. In such case, the request always comes from the State Department to the leaders of the Congress, asking us to cooperate with the State Department in making such arrangements. In a press conference recently, President Eisenhower unintentionally made a statement to the contrary, to the effect that the executive department has nothing to do with the extending of an invitation. All such invitations start in the State Department, and they have been confined to those persons who are heads of state. In the case of Mr. Khrushchev, he is not the head of state of the Soviet Union. He is the dictator, and he is the boss, in every respect. Of that there is no question, and the world knows it, but he is not technically the head of state.

When a head of a state is visiting our country, the request for a joint meeting of the Congress comes to the leaders of the Congress from the State Department.

Drama of Hypocrisy

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. BOYLE. Mr. Speaker, although H.R. 1 the O'Brien lake diversion bill is dead for this session because of the action of the Senate in referring it to the Foreign Relations Committee after passage by the House, it still remains an issue of vital concern to the health and welfare of the people of my district, to Chicago, and a great section of the entire country. Mr. Leo Lerner, editor and publisher of Lerner Home Newspapers, has used his adept pen to aptly survey the problem. Under permission to extend my remarks I commend this article to my colleagues.

DRAMA OF HYPOCRISY
(By Leo A. Lerner)

There are facts. There are emotions. And there is fear. All three are motives.

In the current storm over more lake water for Chicago, the opposition has no facts, emotions are rampant, and fear is the factor that preevnts us from getting enough water to clean out the sluggish Illinois Waterway.

What are Canada, Wisconsin, Michigan, and the other States holding up our water diversion really afraid of?

Even they don't know. The recent note of the Canadian Government didn't say. It's just wild, blind fear. And there's a little politics mixed up in the fear, fear of political reprisal from farmers and fishermen along the water who think that diversion at Chicago will somehow lower their water level and do them unknown economic harm.

Funny how an unreasonable emotion makes decent people seem so suddenly indecent. Let's take Wisconsin. Of all the States I know this one has always been best governed, most reasonable, most logical. A newspaper like the Milwaukee Journal, a sensible man like Gov. Gaylord Nelson, an on-the-side-of-the-angels Senator like BILL PROXMIRE—all have made themselves appear ugly and unreasonable by their highly emotional reaction to Chicago's increasing its water draught from Lake Michigan. (PROXMIRE even conducted a Faubus-like filibuster last year.)

In more than 20 years I never read any editorialized news in the Milwaukee Journal. Suddenly the headlines began calling the diversion plan a water grab.

A hate twist in an otherwise fair newspaper is shocking, considering how little that reasonable men have to cling to in the world of modern journalism.

Never have I seen or read one fact to justify this unreasoning fear of Chicago's getting a little more water out of the Great Lakes watershed for sanitation and navigation. Canada and Wisconsin cannot expect a growing Chicago to choke to death for lack of water, no more than rural Wisconsin can expect Milwaukee to choke to death politically for lack of representation in the legislature. The Journal has been fighting against provincialism for decades, and suddenly it becomes itself narrow and provincial.

I think that what Congressman SIDNEY YATES and Senator PAUL DOUGLAS proposed to the Canadian Prime Minister makes a lot of sense. Let's have an impartial mixed commission of scientists from Canada and the United States study the effects of water diversion for Chicago.

Then if the harm is found to be nonexistent or minimal, let Chicago have its water and let the matter rest there, settled by logic and not by the shaking and shivering of people who don't really know what they're making such a fuss about.

I have my own theories. I think the problem is one of a strong feeling of guilt. Most of the cities in the Great Lakes Basin pour their waste and garbage into the lakes. They do not have adequate sanitation facilities and they are polluting the water supply, all the way from eastern Canada to southern Wisconsin. Even the ducks and geese are dying on the fresh water around Milwaukee.

The fact that Chicago, at the bottom of this queasy flow, has figured out a way to avoid polluting the lake and is making its waste flow harmlessly away to the Southwest, makes the big industries and big cities of the lakes feel guilty.

The only way they can maintain a false selfrespect is to pretend that Chicago is trying to "steal" their water. Guilty as they are of the disgraceful act of polluting the clear, fresh water, they cleanse themselves of the fault by trying to blame Chicago for attempting a small diversion, which Senator DOUGLAS estimates at one-quarter of an inch in Lakes Michigan and Huron.

If Canada and the Lake States would shake off their political dominance by the industries, power companies, and the towns defiling our water, and take action to force them to find ways to divert the pollution, the whole problem would solve itself.

The situation is a drama of hypocrisy that could have been written by Henrik Ibsen, whose "Enemy of the People" had the same general theme.

First Dividend of Khrushchev Visit

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Houston Chronicle:

[From the Houston Chronicle, Aug. 26, 1959]

FIRST DIVIDEND OF KHRUSHCHEV VISIT—REDS' ATTEMPT TO TAKE OVER LAOS

A lot of people expected considerable lessening in international tensions when it was

announced that President Eisenhower and Premier Khrushchev would exchange visits.

The first dividend of this new era of "peaceful coexistence" has come in. It takes the form of renewed Communist activity in the little Indochinese state of Laos, along with Red Chinese threats in the direction of India.

No doubt when Khrushchev arrives and President Eisenhower calls the Lao situation to the Soviet leader's attention, he will order an end to these aggressive moves.

Or will he?

"Come and Get" Is the Formula for Political Advancement

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Saturday, September 5, 1959

Mr. THURMOND. Mr. President, I take pleasure in calling to the attention of the Senate an excellent editorial from the September 2, 1959, issue of my hometown newspaper, the Edgefield Advertiser of Edgefield, S.C. It is entitled "'Come and Get' Is the Formula for Political Advancement." This editorial is based around a recent article which appeared in Human Events, and it merits the attention of everyone in this country because of its vital point that we should all work hard for what we get rather than sit back and depend on the security that too many feel "Uncle Sam" can afford and provide for us. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

"COME AND GET" IS THE FORMULA FOR POLITICAL ADVANCEMENT

A copy of Human Events of August 10 has been handed to the Advertiser, which it appreciates. A splendid article by the Honorable Samuel B. Pettengill is well worth reprinting, and if it is true that experience is the best teacher, Mr. Pettengill makes a good case of hardship being the best medicine, which pretty well summarizes his thoughts.

"In recent years," he says, "society has gone nuts on the pusillanimous cult of security guaranteed by Government; in short, a nation of parasites. The illusion of the age is that people can vote themselves rich. It is a superstition that social security depends on the promises of politicians; not on the character, competence, and courage of men. It is a fable and a fraud that the output of society can be greater than the input of individuals.

"It is a universal complaint that nobody wants to work any more, or only enough to get by. Employers are frantic for dependable employees.

"Theodore Roosevelt" (note: not Franklin Roosevelt—Editor) "attracted national attention when he said: 'I wish to preach, not the doctrine of ignoble ease, but the doctrine of strenuous life.' He said of himself, 'let me wear out, not rust out.'

"Theodore Roosevelt" (note: again not Franklin Roosevelt.—Editor) "dreamed nobly of his country, and, by the fire of his example, lit other fires in millions of homes. It was said that Washington founded the Nation, Lincoln saved it, and T. R. revitalized it.

"A century ago Giuseppe Garibaldi appealed to the strong side of men with these words: 'Young men of Italy, I offer you nothing but the water of the streams as your drink. I offer you nothing but black bread as your food, and nothing but the blue canopy of heaven and the lights of the eternal stars as your covering at night. But if you follow me, young men of Italy, you and I will be free.' They followed him and Italy became a united country.

"But today, the general appeal is to the soft side of men—envy, self-pity, covetousness, class hatred. Our elections have become auctions in which rival politicians of both old parties open the door of the Treasury in exchange for votes. 'Come and get it,' is the slogan as people become vandals of their own country and 'bread and circuses' the formula for political advancement.

"So we have cities with few citizens; many who wish to share the blessings of liberty, but shirk its burdens. This is not the spirit of 1776.

"It was said of those who crossed the Appalachians down into the valleys of the Ohio, the Mississippi, and the Missouri and pushed the frontiers of freedom to the Pacific shore that 'the cowards never started and the weak never arrived. With no capital save courage and no resource except resourcefulness, they built the American empire.'

"Avoid struggle and life becomes sterile, vapid, and meaningless. Our mental hospitals are being filled with thousands of neurotics, many of whom feel inadequate to meet life because they were protected from taking the bumps in childhood.

"Young people today face a time of struggle with an enemy of our country more dangerous than King George III in 1776—the godless Caesars of atheistic communism. Let's lick it. Put it and all its teachings out of our schools, churches, public affairs, and private life. What our fathers bequeathed us is still 'the last best hope of earth.' Save it for our boys and girls.

"Remember the poem of the frontier:

"I remember no dream of nursemaid state
That spoons me out my food.
No, the stout heart sings on its strife with fate,
For the toil and sweat are good."

Cappers Farmer Magazine Prods Congress on Farm Legislation

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. WOLF. Mr. Speaker, the September issue of the Cappers Farmer makes some potent and prodding observations regarding the action of the Congress to date on the question of coming to grips with the question of getting the farmers "parity of income in a marketplace considerably less than free."

Mr. Speaker, I do not agree with Capper's Farmer that only three men have tried to solve this problem. Many Members have tried and are working very hard on this dilemma, including myself.

I do agree with them that we must pass good legislation in this field and "put the responsibility for failure squarely on the President and his Secretary of Agriculture," if the President vetoes the bill.

I firmly believe, Mr. Speaker, that the folks who elected me to Congres wanted me to help write a farm bill. I sincerely hope the 86th Congress will yet prove it can write a good farm bill.

The editorial follows:

CONGRESS FLUNKED IN FARM LEGISLATION

Congress has failed once more to face up to its responsibility to agriculture. The promised drive for a practical, workable farm program never got under way. Fires lit by the mandate of last year's election fizzled.

By its inaction, Congress has left farmers on the public hot seat, subject to an ever-increasing barrage of criticism and ridicule.

Congress has done nothing to set up effective reduction and control of surpluses. It made only a halfhearted attempt to get wheatgrowers off the hook. The price-support program, so widely criticized by the Secretary of Agriculture and the urban press, remains basically unchanged.

By its failure to act, Congress has tossed farmers into the political arena of next year's presidential election. Again the whole farm issue must be dragged through a political campaign.

Inaction means that the farm mess will be permitted to drift for another year—with the tacit blessing of Congress. Possibility is increased that the price-support program may fall of its own weight with nothing built to replace it. Washington lawmakers may in fact have played right into the hands of those who want to end all farm programs.

Capper's Farmer gives credit to the stalwarts who tried. Time and again such earnest men as Senators GEORGE AIKEN of Vermont and FRANK CARLSON of Kansas and Representative FRED MARSHALL of Minnesota pled for unity and action on an improved farm program. But their efforts did not prevail against stubbornness, indifference, and partisan politics.

Admittedly, there are great difficulties in the way of writing new basic farm legislation. Disunity of farm organizations and noncooperation of the Secretary of Agriculture are roadblocks in any real progress toward a modernized farm program. But it is the responsibility of Congress to compromise group differences in writing acceptable laws.

Excuse that a good farm bill would have been vetoed falls flat. A veto would have put the responsibility for failure squarely on the President and his Secretary of Agriculture.

Capper's Farmer agrees with Grange Master Herschel Newsom who said at a recent congressional hearing:

"I have about lost patience with the attitude that we must pass only legislation that the President will sign. We should develop a farm program that will be good for the country. After all, we will have a new President one of these days. Even though it takes 2 years or more to put a program into effect, at least we should get on the right track."

The real issue here—which Congress is reluctant to face—is the role Government is to play in agriculture. Is Government to be an active partner or a passive bystander?

Capper's Farmer believes there's little choice. In the interest of a healthy agriculture, the public welfare, and national security, we believe our Government must work in partnership with farmers; must help farmers find a way to get parity of income

in a marketplace considerably less than free.

We believe that the present outdated, unworkable program must go. But we believe, too, that as bad as it is, it would be serious business to scrap it without first replacing it with one farmers and the public can live with.

The folks we send to Congress have to come to grips with this issue. Capper's Farmer beseeches them to face up to it now with bipartisan statesmanship. Surely, if we can lay aside partisan politics to unite on foreign policy, we can face up to responsibility on this critical domestic issue.

THE EDITORS.

Americans Save $1.7 Trillion as Assets Climb

EXTENSION OF REMARKS
OF
HON. FRANK E. MOSS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. MOSS. Mr. President, I commend the distinguished Senators from Montana [Mr. MURRAY and Mr. MANSFIELD] for their masterful analysis yesterday of the import of the President's veto of the public works appropriation bill. Few measures have come before the Congress this session which are so unquestionably a sound investment in the future of America.

In his veto message the President indicated that the principal basis of his objections to the Public Works bill was the 67 unauthorized new starts in the bill, and to a lesser degree the extra funds appropriated for surveys and new water resources project planning. Actually the cost of the bill was hiked only about 3 percent by these additions, or a net total of $30 million.

Mr. President, this is indeed a modest sum when stacked up alongside the wealth and resources of America. No one believes more intensely than I that all Federal spending should be carefully scrutinized as to its need and urgency, but we must also consider whether we are using our assets properly, whether we are needlessly shortchanging ourselves.

This was brought forcibly to my mind when I read an article this morning in the August 31 issue of the Deseret News, which is published in Salt Lake City. This same issue of the News, incidentally, carried a vigorous editorial supporting the President's veto of the public works bill.

The article to which I am referring points out that the American people are the "savingest people ever," which, of course, is most commendable, and that the Federal Reserve Board estimates the sum total of their savings to be over a trillion and a half dollars.

This means, Mr. President, that the extra funds for investment in the future of America provided for in the public works appropriation bill by the Democratic Congress are less than .002 of 1 percent of the total personal savings of the American people.

With this kind of "money in the bank," with a rapidly expanding population, particularly in the West, can we afford not to keep our water resource development programs going?

I ask unanimous consent that article from the Deseret News be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Deseret News and Telegram, Aug. 31, 1959]

AMERICANS SAVE $1.7 TRILLION AS ASSETS CLIMB

(By Joseph R. Slevin)

WASHINGTON.—Americans are the savingest people ever.

The Federal Reserve Board has come up with a staggering figure to prove the point. A number trailing a long string of zeros rarely is impressive these days but this one is: 1,721,700,000,000 (trillion).

That is the sum total of the financial assets held by the American people at the end of last year.

The Board isn't talking in millions or in billions. Our financial assets have shot past a trillion dollars and are well on their way to the two-trillion-dollar mark.

There are more consumers than anything and it's consumers who have been doing most of the saving. Their financial assets total $867.9 billion.

COMMERCIAL BANKS

Commercial banks are in second place with $238.6 billion. Corporations are third with $164.7 billion and insurance companies are fourth with $150.6 billion.

No other important group has as much as $100 billion, although the savings institutions come close with $95.4 billion. The Federal Government is well down the list with $40.9 billion of financial assets.

The favorite investment of the savers is corporate stock. There's $245 billion of it outstanding and consumers hold $386.8 billion.

LIKES STOCKS BETTER

The average American likes stocks much better than he likes corporate bonds. Consumers own only $9.6 billion of bonds while insurance companies own the lion's share of $59.3 billion.

What else do consumers own? Well, they have $92.1 billion in time deposits; $83.4 billion in life insurance savings; $64.8 billion in pension funds; $60.9 billion in currency and demand deposits; $51.2 billion in savings shares; $47.7 billion in U.S. savings bonds; $27.9 billion in mortgages; $25.4 billion in municipal bonds; $16.4 billion in marketable Government securities; and $1.4 billion in security credit.

One thing consumers do not have is gold—at least not that they're talking about, for it's against the law. The commercial banks hold the gold and they had $20.6 billion at the end of last year.

District Juvenile Judges

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. WHARTON. Mr. Speaker, my remarks are no doubt prompted by the fact of my many years experience and connection with juvenile courts but I recall that my first impression of the Federal City was utter amazement when I learned that we have but one children's court judge. Even assuming the highest type of citizen, this would seem entirely inadequate and after due observation I would not characterize the juvenile court situation as bordering on the ridiculous. In neglecting this court we have invited an increase in the crime rate and it is a serious one.

A good juvenile judge should be about 30 percent judge, one-third probation officer and social worker and the remainder a sounding board for beatniks and teen-agers in their relations with society and the general public. In juvenile court the calendar should be clear from day to day. Here is a court where cases cannot be put off for 6 months, or even 6 days. These misguided and ill-advised young people are running up the criminal statistics by leaps and bounds. Many psychopathic cases find their way into the court.

If you want ot know what accounts for the rapidly rising crime rate, just call in a juvenile judge. However, with a single juvenile judge in the entire District of Columbia, I can assure you he has little time to appear before congressional committees, and there is ample work for several judges here.

In this connection let us take note of the statement of a Democratic Senator from Oregon on last Sunday's television program and not be "a Congress of mistaken judgment."

Dr. William Campbell Browne, Prominent Physician of Curwensville, Clearfield County, Pa., Is Nearing the Completion of 60 Years Spent in the Practice of Medicine

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. VAN ZANDT. Mr. Speaker, at the turn of the century the community of Burnside, Clearfield County, Pa., beckoned to the youthful Philadelphia physician Dr. William C. Browne a year after his graduation in 1899 from Hahnemann Medical College. This year marks the 60th year of Dr. Browne's practice of medicine in Clearfield County, 34 years of which were spent in Burnside, and the remaining 26 years in Curwensville where he is still active at the age of 82 in the daily practice of his noble profession.

Dr. Browne's medical career is unique since it embraces both the horse and buggy era of the family doctor in rural America and the present highly specialized age of medical advancement. True to the high precepts of the medical profession Dr. Browne has kept pace with scientific progress in the field of medicine and surgery.

As a result he can indulge in fond recollections of the so-called "horse and buggy" days and enjoy comparing them with the modern methods of healing which he has acquired from constant study and daily practice of his profession. Thus in the discharge of his role of a country doctor who has acquired knowledge of all the modern techniques in the fields of surgery and internal medicine he speaks with outhority borne of 60 years of surging forward in medicine's and humanity's struggle against disease and death.

Dorothy Bladin Hill in a touching tribute to the family doctor had in mind such a physician as Dr. William C. Browne when she penned the following lines:

FAMILY DOCTOR

Out of a world of black ignorance and jagged fear
Standing sturdy like a beacon of guiding light
Dispelling the horror of a pain-filled night,
You come to us, with your brusque, good cheer.

How quick your hands to probe, your eyes to peer;
What God-given strength lies in your quiet might,
What sinewy muscles you use to win your fight.
It's over, and instantly your face is clear

As you smile over a task well done.
Quitely you repack your medical kit
And stop a moment long enough to say,
"How bright the room is with the morning sun!"
And then you go again, doing your needed bit
To help the world face yet another day.

During World War I Dr. Browne served in France as a captain in the Army Medical Corps. After his discharge from the Army Medical Corps he became a member of the Medical Corps Reserve and later retired with the rank of full colonel.

Dr. Browne during 55 of the 60 years of medical practice has had a valiant ally in his devoted wife Fannie. Together they celebrated their 55th wedding anniversary and Mrs. Browne's 82d birthday on August 4 at a dinner given them by their family at the Clearfield-Curwensville Country Club.

There are many families in the Burnside and Curwensville areas who can look back over the years and recall that they and their children and grandchildren have regarded Dr. Browne as "our family doctor." A great number of them were delivered at birth by Dr. Browne and today many of them as individuals take pride in saying, "I'm one of his babies."

The older residents recall Dr. Browne in his role as a general practitioner who drove his horse and buggy over the hills of Clearfield County with a little black bag that served as his drugstore. In those days there were few if any prescriptions to write because "Doc" Browne as he is affectionately called carried his remedies with him. His grateful patients found however, that he carried more than pills and cough syrup. He also dispensed confidence, advice, and cheer coupled with good commonsense, all of which proved powerful stimulants to troubled hearts.

Today "Doc" Browne still retains the same philosophy of life as he now prescribes the modern miracle drugs that are a monument to the progress of medicine.

It would be difficult to even try to enumerate the many kind deeds of amiable "Doc" Browne and the great good he accomplished for suffering humanity who sought and obtained his medical care. Suffice to say that many grateful hearts continue to sing his praises for his dedicated zeal in alleviating human ills. Those who were unable to pay for medical care were never denied "Doc" Browne's healing touch. The result is that such unpaid medical fees over a period of 60 years represents a sizable investment in humanity by the genial "Doc" Browne.

Truly he is a member of the large group of pioneering physicians who have added luster to their names and their profession and thus have merited lasting appreciation.

Ida Marian Breed emphasized the role the medical profession plays in the crowded ways of life when she wrote the following tribute which in a sense can be made applicable to physicians both living and dead:

MEMORIAL TO A DOCTOR

A straight young man goes swiftly by,
Once twisted child with halting crutch;
My heart sees a memorial
To my dead father's healing touch.

It has been my good fortune to value Dr. William C. Browne as a close personal friend for many years. Therefore, it is a pleasure to join in a dual salute to one of Clearfield County's best-loved physicians on the 60th year of the practice of his profession, and to extend to him and his devoted wife heartiest congratulations on their 55th wedding anniversary.

In concluding this tribute of love and respect to Dr. and Mrs. William C. Browne, I wish to include at this point in my remarks the following interesting article written by Mary Ellen McEwan, staff writer of the Clearfield (Pa.) Progress, which appeared in the July 11, 1959, issue following a personal interview with Dr. Browne at his office in Curwensville, Pa.:

DR. BROWNE IN 60TH YEAR OF PRACTICE

(By Mary Ellen McEwan)

A short, neat, elderly man walked into the waiting room. "I'll be with you in a minute," he smiled, as he returned to his office and one of the thousands of patients he has treated in the last six decades.

Dr. William C. Browne, of Curwensville, this year marks his 60th anniversary as a physician, having devoted his life to the service of mankind through the medical profession.

Still spry at 82, Dr. Browne was born March 30, 1877, in Philadelphia. He attended Girard College and graduated from Hahnemann Medical College in 1899.

A year after graduation, he took up residence in Clearfield County and began his practice in Burnside. Thirty-four years later he moved to Curwensville, where he has lived ever since.

In regard to his early years of practice, Dr. Browne recalled that at one time there was very little respect for members of the medical profession.

"People felt that doctors should be on call 24 hours a day, 365 days a year," he began. "Fees were meager. Why, even today's doctors' calls are just a little more than taxi fares.

"Transportation developments have helped the medical profession greatly in the last 60 years," he continued. "In 1900, Clearfield County had perhaps 1 doctor for every 1,200 to 1,500 people. Today, we have only about one-third or one-half that many physicians, but automobiles and good roads make it possible for a doctor to do 5 or 10 times the amount of work as he did in 'horse and buggy days.' "

Dr. Browne recalled that he often traveled in a buggy, and when the roads were too muddy for that, he would ride on horseback. "There were many times when the only way I could get to a patient was by pulling on my hip boots and wading through the mud," he added.

When asked if all of these experiences had ever affected his own health, he recalled that on many occasions he was sicker than the patients he visited, but that in 60 years' practice he has only missed 6 days' work.

Problems confronting medical science have changed during Dr. Browne's career.

"In 1902 I treated 190 cases of smallpox," he related. "Nowadays, this and other diseases such as diphtheria, scarlet fever, and typhoid, all great threats at one time, are not heard of very often."

Asked what he thought was the greatest discovery in medicine during his lifetime, Dr. Browne replied that antibiotics were probably the greatest advance, but that their use had been greatly abused at times by physicians who did not realize the potential dangers of the drugs.

Other great contributions to medicine cited by the doctor included the X-ray machine and the use of radium.

"From 1900 until today, the X-ray has developed into a wonderful tool of medicine," he explained. "Also, the use of radium has been introduced in the pathological laboratory, greatly advancing the diagnosis and cure of many diseases."

Looking toward the future, Dr. Browne said that he thinks the greatest need in scientific advancement is a definite means of making a diagnosis of cancer in its earlier stages when the disease is curable.

Sharing Dr. Browne's life with him for the past 54 years, Mrs. Browne is the former Fannie Browell. The Brownes, who will celebrate their 55th anniversary August 4, have three children and six grandchildren.

During World War I he served as a medical officer in France, where he studied for a short time at the University of Bordeaux after his discharge. Returning home, he remained active in the Reserves and retired as a full colonel in 1941.

Dr. Browne gave up confinement work 3 years ago, but he still keeps a full schedule of office, home, and hospital calls. Does he ever plan to retire? "Not as long as I'm able to work," he answered, hurrying to type a prescription.

In Honor of Walter Lee

SPEECH

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. SMITH of Mississippi. Mr. Speaker, it is with mixed emotions that I learned of the recent retirement of Walter Lee from his important post of

counsel to the House Judiciary Subcommittee on Claims. Through the years I have grown accustomed to relying on his wellspring of knowledge and his dependable judgment, and it is, therefore, with something near regret that I see him go. On the other hand, I realize that the faithful and competent fulfillment of the heavy demands for his personal service merits a well-deserved rest, and it is my prayer that he may enjoy peace and good health within the circle of his friends and loved ones throughout many years to come.

It is a source of pleasure for me to recall the warm personal friendship that I have shared with Walter Lee over the years, and it is my hope that I have not imposed on our friendship in a professional capacity. He has always taken a keen interest in the problems of my office, as he has those of every Member during more than 20 years, and for his innumerable services, I shall be eternally grateful. It would be especially remiss for me to have passed up this opportunity to pay tribute to Walter Lee, a grand gentleman, an excellent lawyer, and a great fellow Mississippian.

Although Walter Lee has vacated his office, the memory of his cheerful and cooperative spirit, his quiet dedication, and his personal ability will linger on as an inspiration to those of us who remain. It is to be regretted that he was the victim of a brain hemorrhage last week, but it is comforting to note the rapidity with which he is recovering. My prayer is for the swift and complete restoration of his health so that he may fully enjoy with his gracious and charming wife and family the years of retirement which he so rightfully deserves.

Laos in Trouble

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. WILEY. Mr. President, the crisis in Laos, emphasized by the appeal of its government for United Nations help should, I believe, be an "alert" for the free world.

For some time, now, the Communists reportedly have been staging attacks against the integrity of Laos.

The aggression, symbolic of the Communist-type subversion and infiltration, now apparently has been supplemented by stronger, more direct military attack.

In view of this violation to its integrity as a nation, the appeal of the Government of Laos, I believe, should receive a sympathetic ear in the United Nations. In addition, the free world—particularly the member nations of the Southeast Asia Treaty Organization—as well as the United States should see what can be done to lend assistance.

Today, the Washington Post contained a thoughtful editorial on the crisis entitled "Laos in Trouble." I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Sept. 5, 1959]

LAOS IN TROUBLE

The sudden appeal by Laos for United Nations troops indicate the near-panic of the Government in Vientiane about its ability to withstand the new Communist aggression. Joseph Alsop, in some splendid examples of alert, on-the-spot reporting, has told how the hit-and-run guerrilla attacks have now been augmented with a full-scale, artillery-backed invasion from Communist North Vietnam. The free world, and most particularly the United States, must supply adequate help quickly if it is not to be too late.

Clearly this is a sophisticated kind of Communist assault. Part of the dirty work is being done by raiding teams of the Communist Pathet Lao, and the effect of the terrorism is compounded by disaffection in the villages which the Pathet Lao has held in the past. But behind the Pathet Lao, guiding it and backing it up with troops and equipment, has been North Vietnam and, more indirectly, Communist China. The jungle country and the withdrawals of loyal Lao Army units have made positive identification of Vietnamese forces difficult; and the incredibly primitive communications complicate the situation further. But the invading troops and equipment do not come from Mars. To doubt the circumstantial evidence is merely to abet the Communist disguise.

Of course it would be preferable to have some independent verification through United Nations observers before other action is contemplated. But there has been too much dalliance already. The immediacy of the problem warrants a special session of the General Assembly if, as expected, the Soviet Union vetoes any action in the Security Council. Meanwhile it may be desirable to consider the dispatch of troop support from, say, Thailand, under the SEATO guarantee pending U.N. measures.

It is plain from the simultaneous trouble on the Indian border that Communist China and North Vietnam have decided upon a campaign of deliberate aggression and challenge. This can be met better now than later; if the locale is more difficult, the principle in resisting these Communist encroachments upon independent countries is exactly the same as in Berlin. It will be easier to hold Mr. Khrushchev accountable and demand his intercession if he understands in advance that the United States and its free world friends will take whatever military steps may be necessary to halt the aggression.

House Holds Ike's Veto Line

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the St. Louis Globe-Democrat on September 3, 1959:

HOUSE HOLDS IKE'S VETO LINE

By a margin of only one vote, the House of Congress yesterday sustained the President's veto of the $1,216 million public works appropriation measure.

This was a bitter decision for the Representatives to make. The bill contained hundreds of projects, in almost every congressional district of the country. A Congressman loves nothing better than to get a new post office, Government office building, or more flood-control funds for his constituency.

Why then did the predominantly Democratic House vote to uphold the Republican President's veto? It grows steadily more apparent that the politically attuned ears of House Members have heard a great deal of grassroots approval for Mr. Eisenhower's decision to get a balanced budget and dump red ink.

Ike vetoed the works program, as carpentered by the House, because it contained 67 projects in 32 States for which his budget made no provision.

The total for the bill was some $30 million in excess of budget allowances—not a great deal for so large a bill. But it would have knocked a hole in the budget—for what is commonly called a pork barrel catchall.

Undoubtedly many necessary, deserving works are embraced in the defeated bill. Among them are moneys for continuation of flood control projects in Missouri. Now Congress must tackle another works measure, and it will quickly.

Obviously essential commitments need to be met. It would be folly to abandon half-finished projects into which many millions of tax dollars have already been sunk.

But the next public works appropriations schedule that comes to the White House will have to stay within budget bounds and avoid unnecessary projects—for which we now haven't tax funds to pay.

Administered and Monopoly Egg Pricing Threat to Producer and Consumer

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. WOLF. Mr. Speaker, in the September issue of Farm Journal is an article which I believe will be of interest not only to farm folks but to our big city cousins. It deals with the question of monopoly pricing in the egg business.

I would wholeheartedly recommend to the House Committee on Agriculture a study of this system of egg marketing.

Mr. Speaker, imagine the feeling of the egg producer who sees the market for his product manipulated in this fashion; and how about the consumer's attitude?

As the concluding sentence of the article says: "It's plain that what farmers really need is a new way to price eggs."

The egg pricing story follows:

THE MEN WHO SET YOUR EGG PRICES

(By Claude W. Gifford)

(Most powerful man in an antiquated marketing system is Gordon Urner or nephew Frank. Each morning one roams through the jungle of egg firms near the waterfront, watches a 5-minute flurry of Exchange trading, then picks a price that's used the country over to pay for farmers' eggs.)

This is hard to believe, but a handful of traders—who operate in a few crusty old buildings near the New York waterfront—pretty much set the price that you get for eggs.

And these men get "the word" from one man—either bespectacled, courtly Gordon Urner, or nephew Frank. Each day, one of them prowls the wholesale center and Mercantile Exchange and names the egg price.

Throw in the Chicago egg market—which has even more glaring shortcomings—and the two markets play the tune that egg producers dance to almost everywhere in the country, except in the far West.

It's incredible, but true. I've just been to New York to watch the process. Care to go along on a world tour?

The people we'll meet are mainly wholesale "middlemen," brokers and speculators who deal in eggs on the Exchange and in the wholesale center.

These firms receive eggs trucked in from nearby and from as far away as Mississippi and Minnesota. They usually pay for these eggs on the basis of "New York prices" on the day of arrival. The eggs then go to jobbers who in turn distribute to hotels, restaurants, small stores, and the like.

They provide very few eggs to the biggest outlets of all—the chain stores.

The crumbling wholesale market center—where these people operate—is a jungle of little offices and partly cooled "egg holding floors." These are tunneled into dilapidated buildings that are jammed into a half dozen short blocks. This is what the trade calls the "street." It's the kind of a place where you wouldn't want to be caught at night, for it's only a baseball throw from the tough docks that line the Hudson River.

"Thirty years ago, this was a bustling center handling big trainloads of eggs that arrived from the West," relates David Meierfeld, egg dealer at 11 Jay Street. "Most of the eggs for the huge New York City population came through this center—and it took nearly 200 big wholesalers to handle the job.

"Then the chainstores started to bypass us and buy out in the country. Their trucks roll from the henhouse right to the store. Today there aren't more than 10 big receivers surviving in this entire wholesale center."

Add just two more things, and you've got the picture of this antiquated marketing setup that still wields tremendous power: The Mercantile Exchange in the heart of the "street"; and the private, 102-year-old Urner-Barry price-reporting service that issues the daily word on egg prices.

I called on John Clagett, executive director of the exchange. He pointed out that members have been trading eggs on the board since 1872. The 400 members also trade in butter, potato futures, and, oddly enough, platinum.

"This is a cash, spot market for eggs," Clagett explains. "It brings together all the forces of the Nation's egg market. Eggs sold on the board are graded, delivered, and paid for by 2 p.m of the same day."

Clagett says that a bid on the exchange—even if there are no takers (which often happens)—will set prices, since an unfilled bid shows that somebody is willing to pay that price.

"It's almost 10:30 a.m. now, opening time for the egg board," Clagett said. "It's open for 15 minutes of trading a day. Let's go down and see it."

We walked onto the exchange floor and found a dozen egg traders idly chatting in front of high blackboards that list 12 different grades and types of eggs—ranging from Nearby Fancy Heavy Whites to Pullets and Peewees.

A bell rang at 10:30 to open trading. I expected to see a commotion. Instead, the traders continued to exchange greetings, pleasantries, and trade talk, as if nothing had happened. And, frankly, nothing had.

Ten minutes later, at 10:40, a trader finally shouted a bid to a board boy standing at the blackboard; he rapidly scribbled down a 41-cent bid for two 25-case units of Nearby Extra Fancy Heavy Whites. Nothing happened. The trader upped the bid to 42 cents. Somebody shouted that he'd sell him the 50 cases.

The same bidder came back with a 41½-cent bid for another 50 cases; then a 42-cent bid. He got no takers this time. I noticed that there were only two other bids—and no takers—on the other 11 grades and types of eggs. Then the bell rang again—it was 10:45 and trading was ended.

I was told that it was normal for traders to use only 5 of the 15 minutes allotted daily, as had just happened.

Only 50 cases had been sold on an admittedly slow day. Was this, I wondered bringing together all the forces of the Nation's egg market, as Clagett had claimed?

But wait, something else was happening. The traders were now gathering around the Urner-Barry blackboard at the side of the exchange floor to see what the official prices would be. In a few minutes, Frank Urner posted the prices: one flat price for each grade, including 41 cents for the Nearby Extra Fancy Heavy Whites. This, despite the 42-cent exchange transaction and the unfilled bids of 41½ and 42 cents, which somebody was willing to pay, as Clagett had pointed out.

The price that Urner-Barry picked became the New York price, accepted as gospel by the traders, who hurried back to their places of business to use these prices as the basis for paying for the farmers' eggs they handled that day.

Traders in other cities across the country did the same as the wire service flashed the prices across the Nation.

"Even most of the chainstores use Urner-Barry New York quotations as the basis of their prices to farmers," says Dr. Alfred Van Wagenen of the Northeastern Poultry Producers Council.

Again next day I went back to watch exchange dealings. This time 33 bids were made on 7 of the 12 grades; 5 deals were completed in 2 grades. In each of the seven grades where bids were offered or deals made, Gordon Urner quoted an official price 1 to 2 cents under the exchange.

"How come?" I asked Gorden Urner.

"We've been in this business 102 years," he replied, "and we've learned that the egg trade wants one flat price—not a range of several cents for the same grade (such as the USDA reports). The single price saves time and trouble in making deals. Over the years, we've supplied the price, and the trade has accepted it."

"But how do you arrive at one flat price that's used almost the country over?" I questioned.

"We watch the supply and demand daily; we have instant contact with Chicago and Boston. Each morning we go down the street and size up the egg movement here in New York by talking with several wholesale firms. Finally, we go to the exchange and watch the trading. Then, based on our judgment and years of experience, we settle on a price."

"But," I persisted, "why do you quote prices ½ to 2 cents lower than sales or bids on the exchange, such as I've just seen?"

"We do our best to prevent unnecessary daily price variation—that's part of our function. We don't like to be thought of as price regulators," said Urner, "but you can't get away from some of that."

What's wrong with this system? Ask those who know most about it and they'll point out that:

1. New York conditions are not typical of the national egg market.

The wholesale center handles only a piddling amount of the national egg supply. Firms are influenced almost solely by their own supplies related to their small share of the New York City market.

It's estimated that one large chainstore in New York handles more eggs than the entire wholesale center.

A couple of extra truckloads of eggs on the New York "street" can throw the market in a tizzy. Because of the high market costs, less than 1 percent of the eggs received are shipped out again to other cities to clear local supplies.

"Supply and demand out in producing areas may not change, but New York prices do," charges USDA egg market chief, H. A. Rust.

2. Urner-Barry's quoted prices don't necessarily show what's happening in New York, even. Almost always there's a premium paid over the "quoted price"; sometimes there's a discount. But this information is not fully and clearly reported—nor understood by buyers and farmers around the country.

The eggs that a farmer sells to a country buyer by grade—or which are packed in cartons or delivered—are different from the bulk eggs that are used to set base prices in New York.

3. Exchange trading is exceedingly thin, artificial, inadequate.

Members don't rely on the exchange to buy or sell their supplies. Partly because of exchange fees and redtape, it's cheaper and easier to buy and sell on the street. They go to the exchange primarily to test the market and to protect their own margins.

A market this thin can easily be pushed up or down on any one day. "It's highly susceptible to manipulation with a few cases of eggs when it's an extreme market going up or down," says L. C. Giffen, USDA market reporter. "Often exchange trading runs opposite to what I find on the street."

Prices in New York change about once every 2 trading days.

4. The system puts too much power in one man's hands.

"Nobody is that good," says Henry Broad, one of the market's biggest receivers. "But still I base my entire operation on Urner-Barry prices, for lack of anything better."

Actually, Urner-Barry picks up little information from the street on prices, since most of the firms are using the price that Urner-Barry selected.

Even worse, the Chicago Mercantile Exchange price is reported by a private service that usually isn't even present. It calls an exchange employee who relates what happened.

"The nub of the trouble is that the central egg markets are dying," says USDA's egg price specialist, Norris T. Pritchard. "Yet the trade clings to central market prices by long habit—actually let's them set prices by default."

What can be done about it? Here are three suggestions that you hear:

Get egg co-ops and private handlers to aggressively price their own eggs and cut down on price gyrations.

In the Los Angeles area, large egg producers and farm groups negotiate for prices. The contracts are tied to retail store prices. Instead of fluctuating once every 2 days, prices change on the average of only once every 2 weeks. And the margins between farm and customer are among the smallest in the country.

The Poultry Producers of Central California—a farm co-op—has brought similar stability to the San Francisco area; as has the Washington Cooperative in the Pacific Northwest.

Other groups could follow this lead—but even nationwide co-ops couldn't hope to alter seasonal or yearly price fluctuations.

Improve the Government market reporting system.

The USDA is working on this now—but needs support. It wants to get more complete information on egg movements from country points, prices that retail stores pay, the volume moving at different prices and a "national picture."

Broaden exchange trading.

Seats now cost $4,000 in New York, and the rules, in effect, restrict trading to eggs that are already on the market.

But the Northeast egg co-ops have taken a bold step: They've formed an association that wholesales in New York and buys and sells on the exchange. "The trade will agree that we've stabilized prices on this market—and this has helped poultrymen everywhere," says Manager Wyn Geghan.

It's plain that what farmers really need is a new way to price eggs.

Centennial Celebration of the Establishment of Land-Grant Colleges

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to me, written by Mr. Fred S. Hultz, president, North Dakota Agricultural College, Fargo, N. Dak., favoring the enactment of House bill 4012, relating to the centennial celebration of the establishment of land-grant colleges, and so forth.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NORTH DAKOTA AGRICULTURE COLLEGE,
Fargo, N. Dak., August 18, 1959.

The Honorable WILLIAM LANGER,
U.S. Senate, Washington, D.C.

DEAR SENATOR: Those of use who are more or less concerned with legislation supporting the centennial of the land-grant colleges and State universities are greatly disturbed over the present situation concerning this proposed legislation. House Resolution 4012 passed the House some time ago but has been delayed for several weeks in the Senate. Apparently the bill was reported out promptly by the Senate Judiciary Committee and went to the Senate floor where approval was expected. * * * Since this legislation is distinctly not a party project we assume that the delay in action is caused by some misunderstanding or other.

There is certainly no need on my part to point out the invaluable services which have been performed for a century by many of these land-grant institutions. Here in our own State we are just entering the 70th year of such service, which is believed to have been of incalculable value to all North Dakotans.

Needless to say also, that it is not recognition with which we are concerned but, rather the opportunity for continuing and effective services which will arise from the centennial program.

We are somewhat hesitant to call on you for support of this legislation because of the many other projects so vital to our ongoing which demand your time and energy. Nevertheless, we deem this to be a worthy program and one which may prove important to the future of our State. Any help you can give in this matter will be deeply appreciated by all concerned.

Sincerely,

FRED S. HULTZ,
President.

Three Stars for Surgeons General—Eisenhower Establishes the Precedent

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, I am delighted to see that the Surgeon General of the Army is about to receive the rank of lieutenant general. I highly commend this action which is long overdue recognition of the vital importance of the Medical Department with its Medical Corps, Dental Corps, Medical Service Corps, and Nurse Corps, to the maintenance of the health and welfare of our servicemen and their families and to the combat readiness and efficiency of our Armed Forces.

The devotion and skill of our medical personnel in preventing disease and in reducing the fatalities and disabilities resulting from combat and during peacetime, has been a tremendous factor in increasing the manpower available for active service. This also has reduced our overall manpower requirements and as a result has saved millions of dollars in the cost of pay and support for these additional personnel, in medical care, retirement, and pension costs.

This achievement has been possible because of the strong, dynamic, and competent leadership and professional guidance of the Surgeons General of the Army, Navy, and Air Force.

As I indicated, I think it is most fitting that the Surgeon General of the Army has been recognized by this increase in rank. This recognition should also be extended to the Surgeons General of the Navy and Air Force. Their responsibilities are of no less importance than that of the Surgeon General of the Army.

The Surgeons General of the Army, Navy, and Air Force represent the Armed Forces and military medicine in many civilian professional and medical research groups. Unequal rank between the three has the connotation of secondary status to the medical department of the service or services not so recognized. The greater majority of the physicians of the country have served in one of the armed services.

The appointment of all of the Surgeons General to the grade of lieutenant general or vice admiral would be a significant recognition of the essential contributions of the physicians of the country in providing medical care for our servicemen, and conversely the lack of such recognition of one of the Surgeons General would be a reflection on the contributions and services of the physicians who are serving or have served in that service.

I have on several occasions recommended and proposed legislation to provide such three-star grade recognition of the importance of the medical departments of the armed services. During World War II the Surgeon General of the U.S. Navy served in the grade of vice admiral. Today the Surgeon General of the U.S. Navy—the world's largest navy—is a rear admiral while his counterpart in the British and French Navies are vice admirals. This reflects adversely on our Navy as a whole and on our country.

Of great advantage to the Armed Forces have been the advances in clinical medicine, medical research, and military medicine in this space and atomic age. Many of the aspects of military medicine are unique and have no direct counterpart in civilian medicine. These activities are vital in the adaptation of military medicine to our revolutionary changes in weapons systems with the challenge and problems of space flight, jet and rocket aircraft, and nuclear propulsion in aircraft, submarines, and ships. Air crew and submarine personnel selection, operational fatigue, vehicle habitability and personal equipment problems, atomic and nuclear hazard controls, and mass casualty treatment have necessitated major contributions by medical department personnel.

The Surgeons General are each responsible for the medical care of nearly a million men and a somewhat greater number of dependents and retired personnel. Each is responsible for a large industrial medicine program. For example, the Surgeon General of the Navy is responsible for the health of a far-flung military and civilian enterprise which has many ramifications due to the complex mission of the Navy, including the Marine Corps, with its aviation, submarine, surface ship, and amphibious operations. To support this mission, the Navy is one of the largest employers of civilian skills in the United States—over 300,000 people—and the Surgeon General of the Navy thus has direct responsibility for the occupational health and safety of this great group of people.

The mission of the medical department of the Navy involves plant facilities whose value is roughly one-half billion dollars and includes research and preventive medicine units, medical department schools, dispensaries, station hospitals, and 26 Navy hospitals whose average daily load is 10,000 patients with military and civilian staff of some 16,000 persons. Some 40,000 medical, dental, medical service and nurse corps officers, warrant officers, and enlisted hospital corps and civilian personnel come under the professional training and administrative responsibilities of the Surgeon General of the Navy. Similar responsibilities in industrial, operational, and clinical and military medicine and medical readiness and training evolve upon the other Surgeons General.

In closing I emphasize again that the importance of three-star rank for the

Surgeons General of the Armed Forces—Army, Navy, including the Marine Corps, and Air Force—evolves about both military and nonmilitary aspects of their role and responsibilities due to the scope of the former and the close interrelationship with civilian medicine, medical education and training, medical research, and hospital administration. The Surgeons General serve on major committees of civilian medicine. While they are primarily doctors they represent the Armed Forces in civilian medical gatherings and thus their rank is a factor in the recognition of the importance and contributions of military medicine to the country's defense.

Although considerable training and adaptation of civilian medical techniques is required to meet particular military medical applications, the Armed Forces must depend on civilian medicine for its basic source of medical manpower. The higher rank thus would be a tangible acknowledgment to the doctors of this country that the contributions of their profession to the defense of the country and the welfare of the servicemen is recognized and it would also be a recognition of the scope and essentiality of military medicine to our operational readiness and our ability to preserve the peace.

More Young People Should Learn That They Owe Something to Society

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. WILEY. Mr. President, today, one of the major social challenges in the country is that of channeling the vast reservoirs of energy, talent, imagination, and ideas of our youth into constructive activities. In this fastmoving age, the rapid changes in our social and economic system—as well as the scientific and technological revolution—unfortunately, has not provided adequately for the exercise of the talents and abilities of youth.

Consequently, several undesirable circumstances have arisen.

First. We are letting go to waste too much of the capabilities of our youth.

Second. Energies being dissipated in just killing time could better be channeled into constructive activities. In circumstances of this kind, someone has suggested that "the best way to kill time is to 'work it to death'."

Third. Because of their boundless energies not channeled into constructive outlets, too many teenagers are getting into trouble.

Regrettably, the Nation has experienced waves of bad behavior, ranging from truancy to murder. As a result, the rate of court cases is rising at an alarming rate. For example, it has been increasing 136 percent in 1948 through 1957.

What is the answer?

A great many studies and constructive efforts are underway at the National, State, and local levels. Insofar as these can contribute to solution of the problem, these should, of course, be carried forward with all possible speed.

However, I continue to believe that the major responsibility for channeling the talents, abilities, and energies of our young folks likes, first, with the parents, and, second, with the local commnuity.

Although national programs aimed at curbing juvenile delinquency can service a purpose, certainly, we cannot expect the long arm of Uncle Sam to reach into the homes across America, to train individual youths to be useful, productive citizens.

Because of the minimum opportunities for jobs and other activities to employ their energies, however, parents, I believe, require the assistance of the local communities in carrying out projects that will absorb the talents of our young folks.

In view of the wave of crime and misdemeanors, I would hope that, as a nation, we would soon wake up and learn how to deal effectively with this social problem. This should be accomplished before juvenile delinquency becomes an even greater legal and, ultimately, an economic burden as well as a social blight and a personal tragedy to millions of individuals and families.

Unfortunately, there has developed in recent years a kind of "the world owes me a living" philosophy.

For those of us who have experienced a "bit of life," we know this is not true. To the contrary, the person who seeks to live a fruitful, constructive, productive—and, yes, happy life, learns that this is achieved for the most part by dedication to worthwhile causes in a constructive field of endeavor, not by waiting for the world to "give us a handout" for a life—which, incidentally, I firmly believe is not warranted without a commensurate effort made by ourselves.

Recently the La Crosse Tribune published a thoughtful editorial entitled "It's Time for Young People To Learn That They Owe Something to Society."

Reflective of a good commonsense that bears significantly upon the juvenile delinquency problem, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the La Crosse Tribune, Sept. 1, 1959]

IT'S TIME FOR YOUNG PEOPLE TO LEARN THAT THEY OWE SOMETHING TO SOCIETY

A good house painter is a busy fellow these days most anywhere. Often he needs a helper.

We know a skilled, conscientious painter who took on a boy of around 18. The boy seemed willing enough to learn, and he soon was drawing $1.50 an hour, pretty fair country wages for a beginner.

Not too long afterward, however, the painter noticed that his boy was doing a pretty careless job. He was forgetting to paint whole sides of radiators, to finish off trim, and so on. The man found he was spending hours tracking after his apprentice, redoing the unfinished work.

Listening to the painter's complaints, the boy was unmoved. He didn't say he would try to do better. He said: "I won't be able to work for you any more unless I get $2 an hour."

That, needless to say, was the end of the boy's job.

But the point here is that he is just one of countless youngsters, entering the labor market either temporarily or permanently, who think the world owes them a good wage whether they work well or not.

Employers the Nation over can tell you stories of young applicants and workers who make astonishing demands in the way of salary and benefits, without offering convincing evidence of either ability or the willingness to work hard and learn.

If the demands are not met, they look elsewhere, with a presumptive arrogance that would ill befit them even if they were loaded wtih talent.

In this age we get an awful lot of this business of the young demanding things, from their parents, their friends, their schools, their employers, without feeling it necessary to offer much in return.

This is not the place to argue how the blame for this circumstance should be distributed. It is the place to say a society is in trouble when any fair proportion of its young people imagines the world owes them a living and a good time.

From parents on down the scale, it's time to tell them that they owe something to society, too. On this tough old crust, you earn your way, one way or another, or in the end you flounder and go under.

"But God said to Jonah, Do you do well to be angry for the plant? And he said, I do well to be angry, angry enough to die."—Jonah 4: 9.

American Veterans Committee Backs Fleet

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. EDMONDSON. Mr. Speaker, on July 21, 1959, the gentleman from Massachusetts [Mr. BATES] and I introduced in the House, and Senators HUBERT HUMPHREY and GEORGE AIKEN introduced in the Senate, concurrent resolutions calling for the establishment of a Great White Fleet of mercy ships to aid in disaster and distress areas throughout the world.

Mr. Speaker, the response in favor of this proposal, which is an idea of an Oklahoma naval officer, Comdr. Frank A. Manson, has been tremendous. It is a heartwarming experience to read the thousands of communications received by congressional sponsors endorsing the Great White Fleet proposal.

My office this morning received a copy of the American Veterans Committee's publication, the AVC Bulletin for September 1959, which contains a news story about the White Fleet proposal, and I should like to insert this story in the RECORD at this point.

AVC BACKS WHITE FLEET TO AID NEEDY—BOATS WILL SUCCOR HIT COASTAL SPOTS

WASHINGTON.—A resolution calling for the establishment of a White Fleet which will

give emergency aid to disaster struck coastal regions of the world was submitted to the Senate last month by Senators HUBERT HUMPHREY and GEORGE AIKEN, and was immediately endorsed by AVC's International Affairs Commission under the chairmanship of Bernard Cogan.

The bill, Senate Concurrent Resolution 66, proposes that U.S. Navy vessels now mothballed be restored to service and be operated by private philanthropic organizations. The fleet would include a hospital ship, a ship equipped to generate electricity, and one or more cargo vessels to transport supplies, clothing, and other equipment. U.S. surplus food would be made available for distribution, and the facilities of the U.S. Navy would be offered the fleet to maintain its operation.

Cogan, in his letter of support to Senator HUMPHREY, said: "This concept is a novel approach to the American effort abroad and deserves the support of all individuals and organizations in this country who recognize that the aspirations of the people of Asia, Africa, and Latin America will not be denied.

"Understanding and aid from America presented in this form significantly underline governmental assistance programs in underdeveloped areas of the world in ways that cannot be distorted by totalitarian propaganda."

Integration of the Races

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two well-written editorials which point up the mounting evidence that even most of the Negroes in this country—both North and South—do not favor forcible integration of the races. One of the editorials, entitled "Northern Negroes Seek Education," was printed in the September 3, 1959, issue of the Greenville News, of Greenville, S.C., which is ably edited by Mr. Wayne Freeman. The other, entitled "Negroes Oppose Mixing," was printed in the September 3, 1959, issue of the Augusta Chronicle, of Augusta, Ga., which is ably edited by Mr. Louis Harris.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greenville (S.C.) News, Sept. 3, 1959]

NORTHERN NEGROES SEEK EDUCATION

The New York Times has done its city and the Nation a distinct service, although a surprising one, by pointing out that Negro parents in many northern big cities are sending their children to the segregated South to go to school.

The Times' writer, no doubt, had full documentation for his story. Leaders of integrationist organizations in New York denied it, naturally, for they have long held out the hope that the solution to all of the Negro's problems lay in integration, either in the North or in the South.

This vain hope has attracted many Negroes from the South. It was not the only factor, of course, for many of them migrated because machinery had displaced a lot of hand labor on the farms, and they hoped to get factory jobs in the North.

But they have found the northern cities to be far short of the land of milk and honey. The story is being told every day in the headlines reporting strife, poverty, racial riots and gang killings in the "asphalt jungle" of New York, Chicago, Detroit, and Philadelphia.

It is not a new story. It has been trickling South by various lines of communication for years. It's just that the situation has become so serious that northerners can no longer ignore it.

Southern educators and, especially, those making a close study of the South's own racial and educational problems, long have been aware that children of Negro parents living in northern big cities were being sent to this region to go to school.

In most instances, perhaps, they are the children of migrant southern Negroes who are either unwilling or unable to move back home and find jobs. In others, we are sure, they are children of Negro parents who may have been born in the North but who have relatives in the South willing to provide homes for their children while they go to school.

There is no way of determining how many such children may be attending South Carolina schools. School officials trying to pin down family relationships among Negroes often run into a lot of vague answers. But there are enough instances on record of children, especially some of high school age, registering to attend Negro schools in this State to indicate that the number is large.

And who can blame either the parents or the children? Despite the difference in the amount spent per pupil, it is obvious that South Carolina is doing better by both Negroes and whites in segregated schools than New York is doing by either in integrated schools.

Other factors may be involved, but these parents are seeking a decent education for their children, first, and letting social change follow its normal course.

[From the Augusta (Ga.) Chronicle, Sept. 3, 1959]

NEGROES OPPOSE MIXING

Do-gooders bent upon forcing school integration in what they fancifully believe is the best interests of the Negro race must have suffered rude awakenings from two developments of the past few days.

The first was the acknowledgement by the New York Times through a front-page news story Sunday that many of New York's Negro families, protesting the spread of racial tension and juvenile delinquency, are sending their children to segregated schools in the South so that they may be educated properly.

The second came Tuesday when a Negro group in Birmingham wired President Eisenhower that most southern Negroes do not want forced integration and requested a Government-sponsored survey of southern Negroes to prove their point.

The New York revelation, which must have caused great consternation in the ranks of the NAACP and among those who have fostered its program for selfish ends, was to the effect that many Negro parents are thoroughly disenchanted with conditions in the schools of that city, some dispatching their children to reside with relatives in the South, others sending their youngsters to parochial and private institutions.

One Negro minister, the Reverend George E. Calvert, of the Church of the Son of Man, said that concerned parents found "it simpler to educate the children in the old culture than to make new, confusing city culture relevant to the lives of their children."

While Negro leaders in New York have estimated the number of Negro pupils leaving the city to attend southern schools as high as 2,000, chagrined NAACP officials refuse to admit the migration is on such a large scale. Nonetheless, another clergyman, the Reverend J. Archie Seagraves, of the Congregational Church of the Nazarene in Brooklyn, said that 10 of the 475 families in his congregation alone are sending children out of New York this fall. He said he knows of 20 other families taking similar action.

The inevitability that Negroes themselves would sooner or later see the utter ridiculousness of forced race-mixing is evident in the action being taken by these responsible Negro parents.

It is further demonstrated by the statement and request made in Birmingham. There, Samuel H. Moore, president of the Southern Negro Improvement Association of Alabama, wired the President that "I assure you that both races in the South are unalterably opposed to the integration of races in public schools. Racial hate and racial prejudice that was dead is now reconstructed." And then he asked:

"Since this is free America, why not put your racial policy upon voluntary action of the citizens, not forceful compulsion? Why not have the Government take a poll of the majority of the southern Negroes?"

Moore spelled out the underlying factor involved when he said the poll should be confined to southern Negroes because "our northern Negro brothers do not live in the South and therefore do not understand our southern bicultural society."

It is tragic that the white do-gooders do not understand, either.

Hapless Fledgling

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 13, 1959

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include an article from Barrons national business and financial weekly of August 17, 1959, entitled "Hapless Fledgling—The Feeder Airlines Point Up the Folly of Subsidy":

HAPLESS FLEDGLING—THE FEEDER AIRLINES POINT UP THE FOLLY OF SUBSIDY

For anyone who likes to call a spade a spade, the devious reasoning of Federal officials sometimes defies explanation. According to the CONGRESSIONAL RECORD, Senator JOHN WILLIAMS, Republican, of Delaware, upon scrutinizing certain peculiar dealings of the Small Business Administration, not long ago reached precisely that point of bafflement. A sturdy champion of good government, Senator WILLIAMS had criticized SBA for granting credit to poultry farmers, despite a highly publicized glut in the market. In response, he received a letter from Wendell B. Barnes, head of SBA, which he proceeded to describe in the following scathing terms: "Mr. Barnes' letter is a typical bureaucratic letter. It says one thing in one paragraph, then wobbles around for three or four more in an effort to explain the first, and then winds up with an entirely different version. * * * His plain duty, as he calls it, is to continue to make loans which, in the first part of the letter, he says he has not been making."

As a fitting companion piece of muddy official thinking, Barron's herewith nominates a recent statement by Louis J. Hector, member of the Civil Aeronautics Board. In a speech on the future of aircargo, Mr. Hector urged a crash program upon the industry. The Government, he said, should spur its

growth through what he called the "time-tested method of subsidy." In advancing his proposal, the CAB official skimmed lightly over several possible objections, including the circumstance that the air freight business, quite unaided, is thriving handsomely at the moment. More to the point, he chose to overlook the fact that right in his own backyard, with regard to the local or feeder air carriers, such an approach has proved to be anything but time-tested. Far from encouraging the fledgling industry to spread its economic wings, Government subsidy, so to speak, has kept it hapless in the nest. In Washington, as in Wonderland, words evidently mean what people want them to mean. Concerning the CAB and the feeder airlines, however, it is surely time to set the record straight.

What the record reveals is, to be sure, not wholly negative. The first short-haul carriers were chartered in 1946, under a Federal mandate to "cultivate the potential air traffic at small cities, at a reasonable cost to the Government and the traveling public." Since then, by some yardsticks at least, the group has come a long way. In the postwar years its numbers have grown to 13, of which 2—Allegheny Airlines and Mohawk Airlines—are listed on the American Stock Exchange. Serving more than 500 small communities (including such out-of-the-way spots as Glens Falls, N.Y., and Oil City, Pa.), the industry in 1958 flew more than 800 million revenue-passenger miles, a gain of 10 percent over 1957. Total revenues, including Federal subsidy, came to roughly $95 million, up from virtually nothing a dozen years before.

To those who cherish growth for its own sake, such a showing might seem impressive. More jaundiced observers, who have some regard for profit and loss statements and balance sheets (not to mention the taxpayer's pocketbook) tend to take a different view. To begin with, the industry's rapid expansion has been accompanied and, in large measure, caused—by a sharp rise in Federal subsidies. From roughly $12 million in 1949, such payments soared in 1958 to $32 million. In the current fiscal year, they are scheduled to exceed $50 million, a figure which approaches the annual sums which the CAB used to contribute to the support of the Nation's domestic trunklines.

What's more, unless somebody changes course, the cost will keep climbing. Last year alone, to illustrate, the CAB approved scheduled flights to nearly 50 additional localities, thereby at one fell swoop expanding the total served by nearly 10 percent. Several of the more aggressive short-haul carriers have pressed successfully for the right to compete on some routes with the trunklines. Finally, a CAB examiner, after an appraisal of the industry's finances, not long ago recommended a big increase in its authorized rate of return. To some interested parties, apparently, the sky's the limit.

For its mounting investment, the Nation has little to show. True, as noted, the short-haul carriers have burgeoned all over the map. However, sheer size is a poor substitute for competitive or financial strength, which the industry by and large sadly lacks. Among other things, it suffers from a badly lopsided capital structure. According to Selig Altschul, noted aviation authority, total captalization of the industry at the end of 1958 comprised 59 percent debt and only 41 percent equity, contrasted with 46 percent and 54 percent, respectively, for the trunk carriers. As of the same date, it boasted only $1 of net worth for every $5 of assets. In Mr. Altschul's view, the imbalance "is a source of extreme vulnerability in any period of adverse operations." Earningswise, the picture is no brighter. Last year several of the feeder lines operated at a loss; others, by virtue of counting in airmail payments not yet authorized, ran nominally in the black. In the fine understatement of the CAB, the industry has not been profitable enough to maintain financial integrity, attract capital on reasonable terms, and return reasonable compensation to investors. By way of ironic contrast, Flying Tiger Lines, Inc., largest domestic air freight carrier, has been thriving on its own. This year it is likely to report the best results in its history.

On close scrutiny, then, the time-tested method apparently doesn't always work. Indeed, its glaring defects belatedly have impressed themselves upon some members of the CAB, who now are seeking a new and better approach. In a speech before the Association of Local Airlines a fortnight ago, James R. Durfee, CAB chairman, remarked: "It does not serve the public interest in meeting its needs for an economical, efficient air transportation system simply to add more and more cities to the network, to carry more and more passengers at greater and greater annual costs." What Mr. Durfee's official rhetoric lacks in symmetry or grace, it more than makes up for in commonsense and candor. The time-tested way to build an industry—or a nation—is not government subsidy. It is the unremitting effort of competitive enterprise.

Laos Crisis Creates More Evidence for Need of U.N. Police Force

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, September 5, 1959

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news report, prepared by me, relating to the crisis in Laos.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

WILEY SAYS LAOS CRISIS CREATES MORE EVIDENCE FOR NEED OF U.N. POLICE FORCE

Senator ALEXANDER WILEY, Republican, of Wisconsin, ranking Republican of the Senate Foreign Relations Committee, today cited the Lao crisis as one more bit of evidence on the need for a United Nations police force.

"Around the world, the Communists—in Laos, on the India-China border, and elsewhere—continue to engage in infiltration, attempts at subversion, and outright aggression, to attempt to accomplish their goal of world conquest.

"The establishment of an effective U.N. police force, I believe, could do much to control and/or prevent such situations," Senator WILEY said.

"Overall, the nations of the world must increase their efforts to encourage respect for territorial integrity, international law, adherence to high standards of conduct, and, more particularly, to discourage such infiltration and aggression as is now occurring in Laos.

"Until enforcement machinery is provided, however, we can—in view of the Communists pursual of their goal of world domination—expect this kind of outlawry to continue to create threats to the security of countries.

"We recall that, in 1958, the U.S. Congress, by resolution, expressed its support for establishment of such an international force. Unfortunately, opposition by the Soviet Union has, until now, prevented the creation of such a force within the United Nations.

"The Lao crisis—as well as the India-China border dispute and other such Communist-inspired crises—furnish additional evidence of the need for establishment of an effective U.N. police force to curb such violations and provide for a more secure peace," Senator WILEY concluded.

Walter Lee

SPEECH

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. ABERNETHY. Mr. Speaker, when I came to the Congress in January of 1943, a new, green and inexperienced freshman Congressman, Walter Lee was among the first to visit my office to extend a cordial welcome to the Hill, and to make his guiding counsel available. Although I did not know Walter personally before that time, I had known him by reputation—a reputation which was good, indeed. He comes from a prominent and refined rural family most of whom I know personally.

Mr. Speaker, I take great pride in the fact that Walter is a native of my congressional district. While the citizens of the city of Jackson and of Hinds County in Mississippi claim him as their own, in reality he belongs to the people and the soil of Calhoun County, Miss., where he first saw the light of day and lived until his maturity. Even after all of these many years since he has lived and worked in Jackson and in Washington, Walter himself looks upon his native county as home. He frequently returns to the scene of his youth so as to renew and enjoy the associations of his early life and the worship in the little country church where he first came to know and dedicate himself to the service of the Supreme Ruler of the Universe.

Observing and appreciating his high quality and ability, Walter was persuaded by the beloved Congressman Dan McGehee, of Mississippi, to assume the clerkship of the old Claims Committee. He served with such proficiency that upon the party switch in chairmanships which was effected in the 80th Congress, Walter was urged to stay on as clerk of the Claims Committee. In fact, the late, lamented and lovable Judge Jennings, of Knoxville, who was slated to assume the chairmanship of the committee in the 80th Congress, conditioned his accepting this high responsibility upon the committee reelecting Walter as the committee clerk. There was no issue about it. He was retained and has there remained throughout these many years.

This, Mr. Speaker, is proof of the fact that Walter was then and is now one

of the most efficient committee clerks ever to serve on Capitol Hill. It is further proof that Walter has endeared himself to all Members of the House of Representatives, both Democrat and Republican. With his wonderful smile, penetrating personality and accommodating spirit he has established for himself the reputation of being everyone's friend, which indeed he really is.

Walter has earned the retirement which he is now about to enjoy. As he leaves our midst he does so with our profound thanks for his valuable services and with our good wishes to both him and his charming and attractive wife, Helen, that they will enjoy many restful, pleasant and happy years in their dream house down in the good Magnolia State of Mississippi. We wish them well and we particularly wish for Walter a speedy recovery from his current illness.

Migratory Farm Laborers

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. WILLIAMS of New Jersey. Mr. President, it has been my privilege to be named chairman of the subcommittee investigating the obvious injustice perpetrated on half a million American migratory farm laborers in this country, the so-called forgotten citizens. Members of the subcommittee will soon see for themselves the distressing conditions under which these migrants battle for survival. Secretary Mitchell has well described them "as lonely wanderers on the face of our land, living testimonial to the neglect that is possible in a wealthy society."

Although much work lies ahead for all of us before we can provide the bare fundamentals of social justice to which every human being is entitled, the stirring of interest in this subject from many levels has been indeed heartening to see.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the newspaper Labor and an article from the St. Louis Dispatch of August 29 which relates some factual information on a little known subject.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Labor, Aug. 29, 1959]

FARM WORKERS' PLIGHT SHOWS WHAT LIFE IS WITHOUT UNIONS

Ironically, while reactionary employers and lawmakers have been successfully fanning up antilabor hysteria to put over harsh new curbs on unions, some parts of the Nation have been getting a good look at what these employers want to turn back to.

The utlimate in life without unions exists among the great army of 800,000 unorganized migratory farm workers who toil each year on the Nation's factory farms.

Secretary of Labor Mitchell has described these workers as "lonely wanderers on the face of our land * * * living testimonial to the neglect that is possible in a wealthy society."

Recently, the Washington Post and Times Herald and the Denver Post spotlighted conditions that prevail among the thousands of migratory workers brought into Maryland and Colorado each year.

The Post and Times Herald reporter visited migrant camps in Maryland, next door to the Nation's Capital, and wrote a series of articles on what he found. He described crowded "shacks" and otherwise miserable living conditions for the workers' families, and workers crammed into trucks without seats or benches.

He wrote, "When harvest is good, a migrant picks until his knees are sore and his back aches. In a bad session, there is the specter of empty stomachs for himself and his family."

In a full page Sunday editorial, the Denver Post pointed out that the U.S. migrant farmworker "has been consistently written out of much of the social legislation of the past 20 years." He had no minimum wage protection, no jobless insurance, no union, and no vote. When he becomes sick he's a "charity case."

The newspaper concluded that "the braceros (Mexican workers brought into the United States) generally enjoy better working conditions and have more job security than the U.S. citizen." These Mexicans, unlike domestic workers, are protected by a law.

Meanwhile, Senators WILLIAMS of New Jersey, JAVITS and KEATING of New York, MCCARTHY and HUMPHREY of Minnesota, MCNAMARA and HART of Michigan, NEUBERGER and MORSE of Oregon, PROXMIRE of Wisconsin, MURRAY of Montana, and YOUNG of Ohio, are sponsoring bills that would require farm labor employers to register. This would facilitate a check on their hiring practices.

Also, in California, the AFL–CIO has launched a drive to organize American farm laborers. However, it is being bitterly fought by employers. The battle undoubtedly is going to be a long and tough one.

Several days ago, California's industrial relations director, John Henning, entered into the discussion as to what Russian Premier Khrushchev should see when he visits the United States.

Henning suggested that Vice President NIXON, a native Californian, bring Khrushchev to California to visit a farm labor camp. To show such shameful aspects of America, "would take real courage," Henning said.

Yet, in this way Khrushchev would be getting a true picture of exploited farm labor in the State—"a picture of people living in houses which NIXON would not permit his dog to live in," the State official added.

[From the St. Louis Post-Dispatch, Aug. 29, 1959]

The half-million American migratory farm laborers are not the forgotten citizens they so often seem to be. Secretary of Labor Mitchell has scheduled hearings next month on proposed changes in the Federal law designed to regulate the interstate recruitment of these workers in a manner which will not undercut wages, working conditions, and transportation practices in the areas in which they are employed. The amendments do not embrace a minimum wage or bargaining rights and they do not affect Mexican migratory workers now covered by Federal law, so they may be regarded as the bare fundamentals of social justice.

The Senate already has held hearings on legislation which would set a minimum age and a minimum wage for migrants. The chairman of the subcommittee, Senator HARRISON A. WILLIAMS, JR., Democrat, of New Jersey, also has announced a tour of migratory labor camps after Congress adjourns. Meanwhile, California, Maryland, Delaware, and Virginia are moving on the State level. But there remains a great deal of opposition, spearheaded by American Farm Bureau Federation.

American migratory workers constitute almost one-fourth of the 2,200,000 person who work more than 25 days a year on farms. Department of Labor figures show the number is increasing. The Department estimates these workers earn an average of $892 a year, from farm labor and from additional employment. This is an income so small that it certainly should not be reduced.

In a typical year, 17,000 of these workers register at the migrants' information center in Sikeston, Mo. About 7,000 help harvest Missouri's cotton, with the aid of several thousand more privately recruited in nearby States. About 4,000 Missourians go each year to Michigan to harvest fruit crops. As a general rule, most of the migrants work on factory farms, which depend seasonally on migratory labor.

Yet these laborers are denied the protection of the minimum wage law, unemployment insurance, laws covering labor-management relations, and most State workmen's compensation laws. Often they are not covered by State and local health and welfare laws, usually because they cannot meet residence requirements. The social security old-age and survivors insurance setup now covers them, however.

Secretary Mitchell's proposals would require the States to certify that there is no farm labor available within their boundaries before any of their farmers could avail themselves of the services of the U.S. Employment Service in recruiting migrants. The States also would have to examine crop yield estimates to show that migratory labor is essential. They would have to ascertain that the migrants are not offered wages lower than those prevailing locally. They would have to make sure that reasonably decent housing facilities are available, and they also would have to make sure of transportation facilities equal to those in the areas in which the workers are recruited.

Broadly, these provisions would require employers to maintain local standards which, in themselves, may be distressingly low for the migrants. That is the least that can be asked for the protection of migrants and local workers, too. At least, the regulations would prevent a contest in misery in which local and migrant workers underbid each other in an area in which compensation already is far from good. The ultimate answer probably is year-around employment. Short of that, the migrants deserve better protection than they get in their seasonal labors.

Address by Congressman Thaddeus Machrowicz in Warsaw, Poland, on the 20th Anniversary of Hitler's Attack on the Polish People

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. BRADEMAS. Mr. Speaker, this week marks the 20th anniversary of Hitler's infamous attack on the brave and

noble people of Poland. The brutal invasion of Poland in 1939 in turn touched off World War II, the war which brought so much suffering to millions of human beings throughout the world.

It is fitting indeed that two decades after Hitler's attack on Warsaw the ringing voice of freedom should be heard in that great city. The voice was that of our distinguished colleague from Michigan, Congressman THADDEUS MACHROWICZ, who last week in the chamber of the Parliament of Poland on the opening day of the meeting of the Interparliamentary Union. Our able colleague, the gentleman from Louisiana [Mr. BOGGS], also a delegate to this conference, has told the House of the tremendous ovation received by Mr. MACHROWICZ at the conclusion of his address, which was delivered in Polish.

Congressman MACHROWICZ is a native of Poland and served during World War I in the Polish Army.

Mr. Speaker, as we reflect on the continuing desire of the people of Poland to enjoy the full blessings of liberty, I am sure that Members of Congress will be moved as they read the address delivered on August 27, 1959, by Congressman MACHROWICZ in Warsaw. The address follows:

ADDRESS BY HON. THADDEUS M. MACHROWICZ

Mr. Chairman, honorable delegates, my request that as an American delegate I be permitted to speak in the Polish language is, I realize, somewhat unusual, but I would like to justify it by citing certain facts. I am personally of Polish birth and served in the Polish Army in World War I. I became an American citizen and the American Nation has entrusted me for the last 10 years with membership in its highest parliamentary body, and lately with membership in the delegation to the Interparliamentary Union.

I am very proud of my ancestry in the great Polish nation. I am equally proud of my citizenship in the great American Nation. This somewhat dual character of my individual membership impels me to make a few remarks which are probably more appropriate from me.

In his excellent report, the General Secretary called our attention several times to the great advances made in the last few years by the Polish nation in the economic and political fields under conditions which we all recognize as most difficult. I agree wholeheartedly with his findings in this respect.

It was unquestionably proper that in his address of welcome to this Interparliamentary Conference, the Honorable Aleksander Zawadzki, chairman of the state council of our host, the Republic of Poland, called to the attention of the delegates that this historic session is being held in Warsaw on the 20th anniversary of the commencement of World War II.

It was right here in Warsaw 20 years ago, on September 1, 1939, that a shower of bombs thrown without warning, without declaration of war, put into motion World War II with all its years of terror, loss of lives, and of untold damage.

There is no city in the world which withstood so gallantly so much suffering, loss of human lives, so much wanton destruction. A brief visit around the town still shows the scars left by those days of horror, despite the remarkable efforts of reconstruction by the Government and nation.

On this 20th anniversary of the commencement of the greatest military tragedy suffered by humanity—one which cast mourning over the entire world—a tragedy which took the lives of 20 million persons—in Poland alone 6 million or over 15 percent of the population—I would like to offer my respect to those to whom it is due. Above all, it belongs to the courageous population of Warsaw and all of Poland, which by its sacrifice of human lives, blood, suffering, and general destruction, demonstrated actively its dedication to those ideals which we in the Interparliamentary Union acknowledge, opposing aggression, that terrible threat to international security.

In discussing problems of international security and disarmament, we cannot, however, rest in paying our respect to this nation. The reconstruction of Warsaw from ruins and shambles, through the great effort of the Polish nation and Government, inescapably casts upon us the query: What was the reason for this catastrophe which literally destroyed an entire generation? How was this gigantic historic process, the results of which are felt bitterly by the entire world in both hemispheres, put into motion? And what lesson should the world derive from this experience?

I would like to recall to the honorable delegates some historical facts which throw significant and important light on the general problem of international security.

When 20 years ago, on September 1, 1939, the forces of Hitler made the unprovoked attack on Poland, they completely disregarded their international commitments, particularly the freely entered into Polish-German pact of nonaggression of January 26, 1934.

Only 16 days later, on September 17, 1939, Poland's powerful neighbors from the East commenced occupation of the eastern territories of Poland.

This joint action was by no means coincidental. On the contrary, it has been fully documented in the secret Stalin-Hitler pact of August 23, 1939.

This secret pact, concluded 8 days before the German aggression on Poland, cynically decided on the future division of Poland, an independent nation. These secret negotiations became public only after the war, after publication of the secret Hitler documents which fell into American hands after Hitler's defeat in 1945.

My limited time does not permit me to cite more completely from these documents, copies of which are in my hands, but they do disclose how the plan was actually put into action.

In reminding the delegates of these undeniable historical facts in connection with the attack on Poland, I sincerely hope that in consideration of that historical moment, we keep in mind all the facts and keep them in proper perspective.

A full and serious contemplation of these historical facts led me to the introduction of a resolution dealing directly with international security, which would serve to help prevent the recurrence of another world war.

Unfortunately, for purely procedural reasons, since it was not listed on the Secretary's desk within the prescribed time, it cannot be considered without unanimous consent, which I realize I could not obtain. The resolution merely states that the Interparliamentary Union solemnly declares that conspiracy between governments directed toward the destruction of the independence, freedom, territorial integrity and internal safety of any other state shall be deemed an international crime and, further, it is urged upon all parliaments to take effective measures on their respective national levels precluding the commission of such crimes.

I regret that we probably will not have the opportunity at this session to discuss that resolution, so proper and necessary to assure peace and security to the entire world. I do believe, however, that we shall never have fully accomplished our obligation in that respect until we adopt that or some similar resolution.

The Federal Government Can Save Tax Dollars—Move Its Operations to Depressed Areas

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. SAYLOR. Mr. Speaker, last week the proposal to reduce appropriations for schools in federally impacted areas was rejected by a House Education and Labor Subcommittee. The decision was disappointing to supporters of the administration's program to cut down on unnecessary spending. It was another blatant refusal to take a stand against inflationary practices.

The recommendations of Dr. Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, were modest enough, with the principal item providing for a 50-percent decrease in aid to school districts where parents of students work for the Government in another jurisdiction. A district in point is Montgomery County, Md., the residence of many men and women who are employed by the Federal Government in the District of Columbia. Montgomery County, which prides itself as one of the wealthiest—if not the wealthiest—counties in the United States, comes in for a handout of about $3 million this year under Public Law 874, which one of the laws the administration sought to modify in the interest of economy.

The total cost of the prevailing program amounts to $225 million annually, with beneficiaries including numerous school districts serving permanent military bases. Under the administration plan, appropriations would have been reduced by almost 30 percent the first year, with additional savings scheduled for succeeding years. At a time when the general public is alarmed at the high cost of Government that is constantly reducing purchasing power of the wage earner's dollar, it is extremely unfortunate that an opportunity to save more than $60 million annually was dismissed by the subcommittee. Yet it is encouraging that Members considering the amendments submitted this observation in their report:

> It is the feeling of the subcommittee that certain modifications of these programs may be desirable.
>
> For that reason, the subcommittee plans to take up the question again early in the next session with the intention of making specific recommendations.

Mr. Speaker, it is my firm hope that the subcommittee will in its wisdom make a complete reevaluation of the impacted area gratuities in order that the taxpaying public may at long last obtain relief from the current imposition on the Federal Treasury. Meanwhile, Congress can make a distinct contribution to the cause of economy if demands of local citizens are determined before sites for

further Government installations are selected.

As Representative of the 22d Congressional District of Pennsylvania, I should like to invite my colleagues to inspect the advantages of Armstrong, Cambria, and Indiana Counties as locales for military bases and Federal offices. Although our per capita income cannot be compared with that of Montgomery County, we should be happy to provide the necessary school facilities for children of Government workers if they are located in our district. We resent having to contribute to the education of students in communities that have pleaded for Government construction and then insist on subsidies to provide for normal services and facilities.

If Montgomery County cannot afford to pay for its own schools, give us some of the new Government offices that are contemplated for the future. We would appreciate the employment opportunities and steady paychecks that come with them. In our part of the country we have thousands of men and women wholly competent of serving in whatever capacities are needed. They will welcome the economic stimulation which Government payrolls provide, and in turn they will meet whatever tax assessments are necessary to maintain our schools.

The 22d Congressional District has ample space, excellent transportation facilities, and a climate far superior to that of Montgomery County. I suggest that Congress consider these advantages before deciding upon further new construction. We would be happy to be classified as a federally impacted area without permitting our school system to become a public charge.

Support of S. 2540: Automatic Promotion of Certain Officers Upon Retirement

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me in support of S. 2540.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ESTES KEFAUVER

For 34 years, the Navy, Marine Corps, and Coast Guard have enjoyed a tradition established by law allowing members of these services who were commended in combat to receive an automatic promotion upon retirement. This promotion did not carry with it extra pay or pension, but merely the prestige accorded to persons who had served their country above and beyond the call of duty.

On July 27 the Senate passed H.R. 4413, which had appended to the body of the bill a repeal of this tradition, effective November 1. Since this provision was never available to members of the Army and Air Force, it was, as it stood, discriminatory against members of these services. Accordingly, I introduced a bill which would extend this privilege to members of these services. My bill has been opposed by the Department of Defense, and in the absence of passage, perhaps termination of the privilege for naval officers will be the only way to end the discrimination.

With this, I am not taking issue. It is the abruptness of the termination which I oppose. When Naval, Marine Corps, and Coast Guard officers have charted their careers over a period of years expecting in good faith to have this tombstone promotion, as it is called, awarded to them in the twilight of their service, 2½ months is not enough time to change course. For those who may want to retire early in order to get in under the wire, adequate opportunity to revise their retirement plans is not afforded.

The Senator from Illinois [Mr. DOUGLAS], has introduced on behalf of himself and others, S. 2540, which will continue until July 2, 1960, authority to promote these officers who have been commended for combat action. I want to express my support for this bill. I believe it will effectively accomplish the original purpose, without working any undue hardship on the officers which would be affected.

Death of Rev. Thomas Cunningham, S.J.

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. GRUENING. Mr. President, a noble and gallant figure has passed from the Alaska scene. He is the Reverend Thomas Cunningham, S.J., known far and wide throughout Arctic Alaska as "Father Tom."

I ask unanimous consent that his obituary notice as it appeared in the New York Times of September 5, 1959, be printed in the Appendix of the RECORD.

It was my privilege to get to know "Father Tom" well in the early days of World War II when I was organizing the Alaska Territorial Guard units among the Eskimos in northern and northwestern Alaska. I appointed him commander of the guard unit on little Diomede Island, where he was serving at that time, the portion of U.S. territory closest to Siberia—for Big Diomede Island, only 2½ miles away, is Russian. "Father Tom" had a firsthand experience with the ruthlessness of our nearest neighbors, when he was captured by them, and being a priest, and therefore particularly a target for the animosity of Communist totalitarianism, was in imminent danger. Fortunately he was rescued by our Eskimos who were devoted to him.

Now this devoted servant of God and of his fellow men has gone to his reward, but the memory of his courage—physical and moral—and his great friendliness, will linger to the end of the days of all who knew him.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REV. TOM CUNNINGHAM IS DEAD; PRIEST IN THE ARCTIC OF ALASKA

POINT BARROW, ALASKA, September 4.—The Reverend Tom Cunningham, "the parish priest of the Arctic," died of a heart attack yesterday in his cabin at this northernmost tip of the United States. His age was 53.

Father Cunningham's death ended 25 years of missionary work in the largest Roman Catholic parish in the United States—150,000 square miles of ice and tundra above the Arctic Circle.

Last November Father Cunningham and 20 others were rescued from a wind-swept Artic ice island that had broken up in a polar storm. The Jesuit priest, an authority on ice conditions, had chosen the ice floe at the request of the Alaskan Air Command for use by scientists carrying out International Geophysical Year studies.

Father Cunningham, a native of New Zealand, came to Alaska in 1934. He first served on Little Diomede Island, then established missions at Teller and Nome before coming here.

In visiting his farflung parishioners, Father Cunningham often traveled as much as 2,500 miles by dog sled.

Father Cunningham was born of Irish parents. He entered the Jesuit order in Australia, studied in Europe, Montreal and California, and volunteered for Arctic missionary duty. He enlisted for chaplain's duty in World War II and the Army Air Force set him to teaching Arctic survival to pilots.

He became one of the world's few experts on the behavior of pack ice, by joining in hazardous scientific expeditions on ice floes 20 miles offshore in the Arctic Ocean. The knowledge he obtained came by camping with Eskimos on icepacks as they went on hunting expeditions. By living the Eskimos' life and mastering their language he won their respect.

Journeying with the Eskimos in their umiaks, or walrus-skin boats, he traveled throughout the barren areas. In the spring of 1938, he was on a hunting trip with Diomede Eskimos in a skin boat that was caught in ice and forced to land on Big Diomede Island, a Russian possession.

The Russian customs officials promptly arrested him for trespassing on Russian soil. Father Cunningham won his release by filling out a questionnaire that was in Russian. He gave his answers in Gaelic.

How Could the Supposed Experts Be So Wrong?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch.

Not only Lord Boyd Orr, but an eminent Canadian banker have assured us, after visiting Red China, that the Communists' gains there are miraculous and their startling claims justified. In the end, facts always impose themselves. The Communists are far weaker than they have succeeded in making many people believe. If we will continue to stand firm at this crucial juncture, as we will, and if certain allies will also, the

noble people of Poland. The brutal invasion of Poland in 1939 in turn touched off World War II, the war which brought so much suffering to millions of human beings throughout the world.

It is fitting indeed that two decades after Hitler's attack on Warsaw the ringing voice of freedom should be heard in that great city. The voice was that of our distinguished colleague from Michigan, Congressman THADDEUS MACHROWICZ, who last week in the chamber of the Parliament of Poland on the opening day of the meeting of the Interparliamentary Union. Our able colleague, the gentleman from Louisiana [Mr. BOGGS], also a delegate to this conference, has told the House of the tremendous ovation received by Mr. MACHROWICZ at the conclusion of his address, which was delivered in Polish.

Congressman MACHROWICZ is a native of Poland and served during World War I in the Polish Army.

Mr. Speaker, as we reflect on the continuing desire of the people of Poland to enjoy the full blessings of liberty, I am sure that Members of Congress will be moved as they read the address delivered on August 27, 1959, by Congressman MACHROWICZ in Warsaw. The address follows:

ADDRESS BY HON. THADDEUS M. MACHROWICZ

Mr. Chairman, honorable delegates, my request that as an American delegate I be permitted to speak in the Polish language is, I realize, somewhat unusual, but I would like to justify it by citing certain facts. I am personally of Polish birth and served in the Polish Army in World War I. I became an American citizen and the American Nation has entrusted me for the last 10 years with membership in its highest parliamentary body, and lately with membership in the delegation to the Interparliamentary Union.

I am very proud of my ancestry in the great Polish nation. I am equally proud of my citizenship in the great American Nation. This somewhat dual character of my individual membership impels me to make a few remarks which are probably more appropriate from me.

In his excellent report, the General Secretary called our attention several times to the great advances made in the last few years by the Polish nation in the economic and political fields under conditions which we all recognize as most difficult. I agree wholeheartedly with his findings in this respect.

It was unquestionably proper that in his address of welcome to this Interparliamentary Conference, the Honorable Aleksander Zawadzki, chairman of the state council of our host, the Republic of Poland, called to the attention of the delegates that this historic session is being held in Warsaw on the 20th anniversary of the commencement of World War II.

It was right here in Warsaw 20 years ago, on September 1, 1939, that a shower of bombs thrown without warning, without declaration of war, put into motion World War II with all its years of terror, loss of lives, and of untold damage.

There is no city in the world which withstood so gallantly so much suffering, loss of human lives, so much wanton destruction. A brief visit around the town still shows the scars left by those days of horror, despite the remarkable efforts of reconstruction by the Government and nation.

On this 20th anniversary of the commencement of the greatest military tragedy suffered by humanity—one which cast mourning over the entire world—a tragedy which took the lives of 20 million persons—in Poland alone 6 million or over 15 percent of the population—I would like to offer my respect to those to whom it is due. Above all, it belongs to the courageous population of Warsaw and all of Poland, which by its sacrifice of human lives, blood, suffering, and general destruction, demonstrated actively its dedication to those ideals which we in the Interparliamentary Union acknowledge, opposing aggression, that terrible threat to international security.

In discussing problems of international security and disarmament, we cannot, however, rest in paying our respect to this nation. The reconstruction of Warsaw from ruins and shambles, through the great effort of the Polish nation and Government, inescapably casts upon us the query: What was the reason for this catastrophe which literally destroyed an entire generation? How was this gigantic historic process, the results of which are felt bitterly by the entire world in both hemispheres, put into motion? And what lesson should the world derive from this experience?

I would like to recall to the honorable delegates some historical facts which throw significant and important light on the general problem of international security.

When 20 years ago, on September 1, 1939, the forces of Hitler made the unprovoked attack on Poland, they completely disregarded their international commitments, particularly the freely entered into Polish-German pact of nonaggression of January 26, 1934.

Only 16 days later, on September 17, 1939, Poland's powerful neighbors from the East commenced occupation of the eastern territories of Poland.

This joint action was by no means coincidental. On the contrary, it has been fully documented in the secret Stalin-Hitler pact of August 23, 1939.

This secret pact, concluded 8 days before the German aggression on Poland, cynically decided on the future division of Poland, an independent nation. These secret negotiations became public only after the war, after publication of the secret Hitler documents which fell into American hands after Hitler's defeat in 1945.

My limited time does not permit me to cite more completely from these documents, copies of which are in my hands, but they do disclose how the plan was actually put into action.

In reminding the delegates of these undeniable historical facts in connection with the attack on Poland, I sincerely hope that in consideration of that historical moment, we keep in mind all the facts and keep them in proper perspective.

A full and serious contemplation of these historical facts led me to the introduction of a resolution dealing directly with international security, which would serve to help prevent the recurrence of another world war.

Unfortunately, for purely procedural reasons, since it was not listed on the Secretary's desk within the prescribed time, it cannot be considered without unanimous consent, which I realize I could not obtain. The resolution merely states that the Interparliamentary Union solemnly declares that conspiracy between governments directed toward the destruction of the independence, freedom, territorial integrity and internal safety of any other state shall be deemed an international crime and, further, it is urged upon all parliaments to take effective measures on their respective national levels precluding the commission of such crimes.

I regret that we probably will not have the opportunity at this session to discuss that resolution, so proper and necessary to assure peace and security to the entire world. I do believe, however, that we shall never have fully accomplished our obligation in that respect until we adopt that or some similar resolution.

The Federal Government Can Save Tax Dollars—Move Its Operations to Depressed Areas

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. SAYLOR. Mr. Speaker, last week the proposal to reduce appropriations for schools in federally impacted areas was rejected by a House Education and Labor Subcommittee. The decision was disappointing to supporters of the administration's program to cut down on unnecessary spending. It was another blatant refusal to take a stand against inflationary practices.

The recommendations of Dr. Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, were modest enough, with the principal item providing for a 50-percent decrease in aid to school districts where parents of students work for the Government in another jurisdiction. A district in point is Montgomery County, Md., the residence of many men and women who are employed by the Federal Government in the District of Columbia. Montgomery County, which prides itself as one of the wealthiest—if not the wealthiest—counties in the United States, comes in for a handout of about $3 million this year under Public Law 874, which one of the laws the administration sought to modify in the interest of economy.

The total cost of the prevailing program amounts to $225 million annually, with beneficiaries including numerous school districts serving permanent military bases. Under the administration plan, appropriations would have been reduced by almost 30 percent the first year, with additional savings scheduled for succeeding years. At a time when the general public is alarmed at the high cost of Government that is constantly reducing purchasing power of the wage earner's dollar, it is extremely unfortunate that an opportunity to save more than $60 million annually was dismissed by the subcommittee. Yet it is encouraging that Members considering the amendments submitted this observation in their report:

> It is the feeling of the subcommittee that certain modifications of these programs may be desirable.
>
> For that reason, the subcommittee plans to take up the question again early in the next session with the intention of making specific recommendations.

Mr. Speaker, it is my firm hope that the subcommittee will in its wisdom make a complete reevaluation of the impacted area gratuities in order that the taxpaying public may at long last obtain relief from the current imposition on the Federal Treasury. Meanwhile, Congress can make a distinct contribution to the cause of economy if demands of local citizens are determined before sites for

further Government installations are selected.

As Representative of the 22d Congressional District of Pennsylvania, I should like to invite my colleagues to inspect the advantages of Armstrong, Cambria, and Indiana Counties as locales for military bases and Federal offices. Although our per capita income cannot be compared with that of Montgomery County, we should be happy to provide the necessary school facilities for children of Government workers if they are located in our district. We resent having to contribute to the education of students in communities that have pleaded for Government construction and then insist on subsidies to provide for normal services and facilities.

If Montgomery County cannot afford to pay for its own schools, give us some of the new Government offices that are contemplated for the future. We would appreciate the employment opportunities and steady paychecks that come with them. In our part of the country we have thousands of men and women wholly competent of serving in whatever capacities are needed. They will welcome the economic stimulation which Government payrolls provide, and in turn they will meet whatever tax assessments are necessary to maintain our schools.

The 22d Congressional District has ample space, excellent transportation facilities, and a climate far superior to that of Montgomery County. I suggest that Congress consider these advantages before deciding upon further new construction. We would be happy to be classified as a federally impacted area without permitting our school system to become a public charge.

Support of S. 2540: Automatic Promotion of Certain Officers Upon Retirement

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me in support of S. 2540.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR ESTES KEFAUVER

For 34 years, the Navy, Marine Corps, and Coast Guard have enjoyed a tradition established by law allowing members of these services who were commended in combat to receive an automatic promotion upon retirement. This promotion did not carry with it extra pay or pension, but merely the prestige accorded to persons who had served their country above and beyond the call of duty.

On July 27 the Senate passed H.R. 4413, which had appended to the body of the bill a repeal of this tradition, effective November 1. Since this provision was never available to members of the Army and Air Force, it was, as it stood, discriminatory against members of these services. Accordingly, I introduced a bill which would extend this privilege to members of these services. My bill has been opposed by the Department of Defense, and in the absence of passage, perhaps termination of the privilege for naval officers will be the only way to end the discrimination.

With this, I am not taking issue. It is the abruptness of the termination which I oppose. When Naval, Marine Corps, and Coast Guard officers have charted their careers over a period of years expecting in good faith to have this tombstone promotion, as it is called, awarded to them in the twilight of their service, 2½ months is not enough time to change course. For those who may want to retire early in order to get in under the wire, adequate opportunity to revise their retirement plans is not afforded.

The Senator from Illinois [Mr. DOUGLAS], has introduced on behalf of himself and others, S. 2540, which will continue until July 2, 1960, authority to promote these officers who have been commended for combat action. I want to express my support for this bill. I believe it will effectively accomplish the original purpose, without working any undue hardship on the officers which would be affected.

Death of Rev. Thomas Cunningham, S.J.

EXTENSION OF REMARKS
OF
HON. ERNEST GRUENING
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. GRUENING. Mr. President, a noble and gallant figure has passed from the Alaska scene. He is the Reverend Thomas Cunningham, S.J., known far and wide throughout Arctic Alaska as "Father Tom."

I ask unanimous consent that his obituary notice as it appeared in the New York Times of September 5, 1959, be printed in the Appendix of the RECORD.

It was my privilege to get to know "Father Tom" well in the early days of World War II when I was organizing the Alaska Territorial Guard units among the Eskimos in northern and northwestern Alaska. I appointed him commander of the guard unit on little Diomede Island, where he was serving at that time, the portion of U.S. territory closest to Siberia—for Big Diomede Island, only 2½ miles away, is Russian. "Father Tom" had a firsthand experience with the ruthlessness of our nearest neighbors, when he was captured by them, and being a priest, and therefore particularly a target for the animosity of Communist totalitarianism, was in imminent danger. Fortunately he was rescued by our Eskimos who were devoted to him.

Now this devoted servant of God and of his fellow men has gone to his reward, but the memory of his courage—physical and moral—and his great friendliness, will linger to the end of the days of all who knew him.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REV. TOM CUNNINGHAM IS DEAD; PRIEST IN THE ARCTIC OF ALASKA

POINT BARROW, ALASKA, September 4.—The Reverend Tom Cunningham, "the parish priest of the Arctic," died of a heart attack yesterday in his cabin at this northernmost tip of the United States. His age was 53.

Father Cunningham's death ended 25 years of missionary work in the largest Roman Catholic parish in the United States—150,000 square miles of ice and tundra above the Arctic Circle.

Last November Father Cunningham and 20 others were rescued from a wind-swept Artic ice island that had broken up in a polar storm. The Jesuit priest, an authority on ice conditions, had chosen the ice floe at the request of the Alaskan Air Command for use by scientists carrying out International Geophysical Year studies.

Father Cunningham, a native of New Zealand, came to Alaska in 1934. He first served on Little Diomede Island, then established missions at Teller and Nome before coming here.

In visiting his farflung parishioners, Father Cunningham often traveled as much as 2,500 miles by dog sled.

Father Cunningham was born of Irish parents. He entered the Jesuit order in Australia, studied in Europe, Montreal and California, and volunteered for Arctic missionary duty. He enlisted for chaplain's duty in World War II and the Army Air Force set him to teaching Arctic survival to pilots.

He became one of the world's few experts on the behavior of pack ice, by joining in hazardous scientific expeditions on ice floes 20 miles offshore in the Arctic Ocean. The knowledge he obtained came by camping with Eskimos on icepacks as they went on hunting expeditions. By living the Eskimos' life and mastering their language he won their respect.

Journeying with the Eskimos in their umiaks, or walrus-skin boats, he traveled throughout the barren areas. In the spring of 1938, he was on a hunting trip with Diomede Eskimos in a skin boat that was caught in ice and forced to land on Big Diomede Island, a Russian possession.

The Russian customs officials promptly arrested him for trespassing on Russian soil. Father Cunningham won his release by filling out a questionnaire that was in Russian. He gave his answers in Gaelic.

How Could the Supposed Experts Be So Wrong?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch.

Not only Lord Boyd Orr, but an eminent Canadian banker have assured us, after visiting Red China, that the Communists' gains there are miraculous and their startling claims justified. In the end, facts always impose themselves. The Communists are far weaker than they have succeeded in making many people believe. If we will continue to stand firm at this crucial juncture, as we will, and if certain allies will also, the

turning of the tide may be closer than most people think.

[From the St. Louis Post-Dispatch, Aug. 27, 1959]

INFLATED CHINESE CLAIMS

Communist China's humiliating confession that its vaunted production claims were grossly inflated recalls to us the report of Lord John Boyd Orr only 4 months ago that the Chinese Reds were doing all they claimed.

Mr. Boyd Orr, a former head of the United Nations Food and Agriculture Organization, and a board member of England's largest farming enterprise, went to China and inspected production personally on an extensive tour. Though the Chinese themselves now admit they raised only about two-thirds as much of the grain and only a little more than half the cotton they had claimed (with some similar reductions in steel and coal) Mr. Boyd Orr apparently was completely taken in. He said in May his inspection convinced him the Red Chinese estimates of a huge increase in food production were not exaggerated. He described the results as astonishing.

How can a qualified observer, in fact one of the world's foremost authorities, be so badly fooled? Presumably Mr. Boyd Orr was given a better than usual opportunity to see things for himself, but still he did not see them as they were. At any rate, a distinguished Scottish face deserves to be red, as well as a number of less-distinguished Chinese faces.

An Open Letter to Soviet Premier Nikita Khrushchev

EXTENSION OF REMARKS
OF
HON. GEORGE A. KASEM
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. KASEM. Mr. Speaker, the September issue of the Word, monthly publication of American Legion Post 51, Whittier, Calif., contains an editorial that presents a very mature approach in the form of an open letter greeting Mr. Khrushchev. Mr. Stanley C. Bumm is the able managing editor of the Word. The editorial reads as follows:

AN OPEN LETTER TO SOVIET PREMIER NIKITA KHRUSHCHEV

Greetings, Mr. Premier. On the eve of your visit to the United States this letter is prepared in order that you may have tangible evidence of America's solidarity in the understanding and appreciation of our Government.

We welcome you as a guest but we do not offer you the key to our house. We seek, as we hope you are seeking, a means to better understand the difference in governments and ideologies and not an exchange of agreements backed up by military might and threats of armed aggression.

Proudly and still with simplicity and conciseness we remind you what the United States of America represents.

The United States of America is a Nation characterized by a unique way of life. Building upon the foundation laid down by history's greatest exponents of human freedom and buttressed by convictions of individual dignity and integrity, the founders of our American way of life were well aware that they were creating a new conception of liberty and responsibility for mankind.

Our Nation has prospered, providing for the world the best example of what men can do for themselves, under God's will, when their energies are freed and their best judgment made the law of the land.

With our fundamental values being challenged by the Communists we in America are at work to clarify as well as to defend these values, to strengthen our understanding of them, and to assure ourselves that the convictions we have lived by will be made clear and fully glorious to our children and youth.

Man has worth and dignity as a human being in America, endowed by God with certain rights which can be violated but which cannot be taken from him. Among these natural rights are life, liberty, and the pursuit of happiness.

The individual under the American form of government has responsibilities as well as rights. Accepting the worth and dignity of all men, he respects their rights as he expects others to respect his. In the Christian tradition, he lives in the belief that man has great possibilities for intellectual, moral, and spiritual growth; and he acts to make the best use of his opportunities to promote such growth to himself and others.

The citizens of the United States understand that the personal freedom and the standard of living enjoyed by him rests on the labors of generations of men and women who have believed that in order to have a good, man must first create a good; who have devoted heart, mind, and muscle to building an America whose material wealth, while resting on rich natural resources, is chiefly a result of fully developed human resources brought to fulfillment by a way of life that frees energies and purpose as none other in the world.

America's greatness rests not upon her wealth, although that is great, nor upon her opportunities for self-improvement, although these are legion. The greatness of America grows out of the personal worthiness of the men and women of America. Under our from of government, we have found that freedom and the necessity for making great moral and spiritual values of our own. These values become our guide to live by, as we assume responsibilities for ourselves and the common good.

We believe in uniting to mobilize our present strengths and build our future defenses in this greatest of all struggles, the battle for the future of mankind.

Communist Action in Laos an Object Lesson for All

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

A WARNING ON LAOS

There are times when Communist impudence and effrontery reach depths that free and civilized men find hard to plumb. How is one supposed to react and retort to statements of policy and purpose that are obviously conceived in iniquity and born in falsehood? Presumably we wish above all for two things: to find out the truth and to keep the peace. The Communists in Asia are manifestly determined to obscure the former and prevent the latter.

The immediate case in point is the latest broadside from Peiping in which the United Nations is warned that the gravest consequences will follow if the United Nations dares to send observers to Laos to find out what is happening in that threatened kingdom. We are entitled to ask a few questions, even if we are somewhat bewildered in the devious labyrinth of Communist lies.

Gravest consequences to whom? To the United Nations? Red China is still at war with the world organization. To Laos? It is already in the obvious path of Communist conquest and there could be no graver consequence than the consummation of the plot which is apparently still being hatched in the top-level meetings of Moscow's agents, such as North Vietnam's Ho Chi Minh who, having just returned from Moscow, is now conferring with the agents of his transmission belt in Peiping, the top operators in the Red Chinese oligarchy.

Of course, the virtually defenseless Lao are not the prime target. The United States has drawn far more fire from Peiping. The United Nations is now the ostensible target and the Communists are testing out the weapon of intimidation, with the threat of gravest consequences if the United Nations so much as dares to ask for the facts.

The real danger to the Reds, obviously, is the truth in the case. Has the United States actually set up vast military bases in Laos, as Peiping continues to charge? It hasn't as U.N. observers could quickly find out. Is the border fighting inspired by the imperialists, as Ho Chi Minh charges? United Nations observers could make a prompt report. Is there actually a Communist conspiracy against Laos? United Nations observers would probably have to guess, since they would hardly have any more access to Communist territory than they had in Korea.

But even within limits the Communist obviously cannot endure a search for the truth. And if the United Nations shows any desire to look for it there will be gravest consequenses. There may be a little object lesson here for those who are still crying for Red China's admission to the U.N.

Report on Roseburg

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, Mrs. Olive Starcher, a staff member of the Medford, Oreg., Mail Tribune, and her husband visited the city of Roseburg and their friends, the Paul Helwegs, shortly after the terrible explosion of August 7 which has taken at least 13 lives and caused an estimated $12 million in damage.

It is hard to realize the extent of the damages. I think Mrs. Starcher's column of August 11 helps put it in perspective, as it relates to the world in which we all live. Under leave to extend my remarks in the RECORD, I include Mrs. Starcher's well-written and informative column:

POTPOURRI

(By Mrs. Olive Starcher)

PORTLAND.—It's Monday morning and 9 o'clock and Potpourri is on vacation. And so what do we do? We take typewriter (an old Underwood loaned by the Multnomah

Hotel) in hand and write. So many of our days begin in this fashion that somehow the week wouldn't start off well otherwise.

The two of us visited Roseburg yesterday. We had planned to do so on that Sunday before the disaster which struck the city last week, so did not change our plans. It seemed that a goodly share of southern Oregon had the same idea. Traffic was very heavy, and since all entrances to the city are patrolled by police or men in Army uniform—we took them to be National Guardsmen, it takes a long time to get anywhere.

In spite of the bustling traffic and many people at work replacing glass and otherwise repairing damage, there is a note of gloom in the city. The enormity of the task of rebuilding and renovation made necessary by the explosion and fire which demolished such a large part of the business district last week, is beginning to bear down. We were told that meetings of city and State officials, attorneys and insurance representatives were to be held this week to begin the colossal task of planning the rebuilding. There is much talk of damage suits.

Pappy and Potpourri called on the Paul Helwegs, whom we have known for many years, and who own a fine home on Riverside Avenue across the river from the city—about a quarter of a mile from the center of the town as the crow flies. Their story of the disastrous night must be much the same as that of hundreds of other householders.

Mrs. Helweg heard the fire siren blow and got out of bed to look toward the city. Seeing nothing, she returned to bed. In a few minutes the siren sounded again and about the time she stirred and wondered if she should get up again, the night was shattered with the huge explosion and a big window a few feet from their bed broke into bits and fell in on the Helwegs. The Helwegs thought, as it seems 9 out of 10 Roseburg residents did, that the city had been hit by an atom bomb. Remembering what they had read, the couple, with Mrs. Helweg's sister who had come from the Midwest to visit, hurried to the basement, picking up a small radio as they went. Plugged in, the radio was silent. After a time Mr. Helweg went to the phone and finding it working, asked the operator "What happened?" The frightened woman said "I don't know—I just don't know."

Eventually the Helwegs and their guest began to walk around the house and in the yard and street, as others were doing. Everyone was quite dazed—no one knew quite what to do next. It was some time before Mrs. Helweg discovered that her hands were covered with blood and it was realized that she had a large cut on her back—one which required several stitches to close when she at length could be treated by a physician.

The Helweg's neighborhood is quite near the hospital—which lost dozens of windows and received patients into rooms littered with glass and with contents knocked askew by the terrific blast. When a fire started in back of the hospital building, neighborhood men gathered to put it out.

When the Helwegs returned to their home and began to check the damage they found the heavy front door, which had been locked, had been blown inward, and the casings ripped loose. The knob and other hardware lay on the floor. A back door was in a similar state. Cupboard doors were wrenched open and the contents dumped on the floor. Mrs. H. particularly remembered the spice closet—"everything was scattered around—I had to sweep up stuff like parsley flakes."

Plastered ceilings are somewhat cracked, and blinds damaged. It seems that in some homes where draperies were drawn across the window, glass ripped great holes as the sharp sections blasted inward. Thousands upon thousands of pieces of plywood and sheets of plastic were used to cover the damaged windows.

Householders are worrying about how to be sure all the glass is cleaned up. Sunday the Helweg's son-in-law and daughter, the Terry Herchers and their two small sons were up from Medford. Since the broken windows fell both in and outside, the older folk kept a sharp lookout and warned the older Hercher boy not to play in the grass near the windows.

People about the city show evidence of injuries—many have cuts on legs and arms, bandaged limbs, facial cuts, and scalp wounds.

We were told that practically no one is being allowed into the area where the blast occurred and where damage is the heaviest with the exception of property owners, certain officers and others whose business is of the utmost importance. Sunday the ruins were still hot and smoking and the task of hunting for bodies and carrying on other needed work will not get underway until the rubble has cooled. Banks, hotels, stores, shops—all business right down town is stopped. The main post office is closed and business Saturday was conducted from substations.

The task of cleaning up the wreckage presents a different problem to every businessman or merchant. It is said, for instance, that a jeweler whose store was almost demolished is endeavoring to sweep up and save the rubbish in front of his building. Much of his stock of diamonds and other small jeweled pieces was blown into the street. By sifting through and examining each bit of this rubble, he may be able to recover some of the stock.

The bus depot, where we boarded the Greyhound Sunday evening, has windows boarded up or covered with plastic. The gas supply was still off. The ticket clerk asked us to look upward. The large light fixtures were all hanging loose from the ceiling, with a gap of 3 or 4 inches between the plaster and the fixtures.

Where to eat was a problem in Roseburg Sunday. Those cafes and restaurants still open were literally swamped not only with local residents whose homelife has been disrupted by the disaster, but by the hundreds of curious people who flocked into the area to take a look at the disaster.

When the earth-shaking explosion struck Roseburg, with the resulting mushroom of smoke, dust, and gas, followed soon by heavy fire, almost everyone thought the city had been struck by an atom bomb. There was no bomb—only one truckload of dynamite and other explosive material with an infinitesimal power as compared to an atomic or hydrogen bomb. Roseburg folk, other Oregonians and citizens throughout the United States are rightly shocked by this local disaster; they demand investigations, and action to make sure that such a horror will not happen again.

Yet Roseburg's disaster was as nothing when compared to that which befell the city of Hiroshima in Japan. On that August day a U.S. plane flown and manned by citizens of the United States dropped a bomb on Japan which brought the same type of disaster as struck Roseburg, only magnified thousands of times.

Thursday night this writer sat in beautiful, peaceful Lithia Park and heard Suzanne Hanson read from John Hershey's soul-stirring account of Hiroshima. For the first time the full significance of what had happened in Hiroshima dawned on this writer. True, we read the newspaper accounts, heard the radio reports and since that time have been a part of many discussions on the horrors and futilities of atomic warfare—its downright inhumaneness.

Friday morning, with Mrs. Hanson's voice still ringing in our ears, and with the word pictures which Mr. Hershey painted still fresh in our mind, we heard about Roseburg. Yesterday we saw and heard more. Yesterday we heard the cabdriver, the housewife, the businessman all saying "something must be done. This must never happen again." Voices filled with compassion and "how dreadful for the driver of the truck. His life is ruined. Better that he had died." Or, "I hope this teaches the men of that firm a lesson. How can they be so careless when human life is involved?'

Driving home from the United Nations meeting Thursday night in the park, there was more talk of Hiroshima, and bombs, and wars. We were reminded that the Japanese, while sinned against, have not been without sin when it comes to slaughtering their fellow men, and that after all, Hiroshima happened because we were at war, and after all, war is war.

Of the Roseburg disaster we say "it must not happen again." Of Hiroshima we say "but we were at war."

Recent Legislative Actions by Congress

EXTENSION OF REMARKS
OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 1, 1959

Mr. TOLLEFSON. Mr. Speaker, during the closing days of this session of Congress action has been taken on several measures which have been of importance to the people of the nation. A great many of my constituents have written to me concerning them.

THE FEDERAL HIGHWAY PROGRAM

The Federal highway program faced a serious crisis when it appeared that there would not be sufficient funds to keep it on schedule. Several projects in my State were confronted with the possibility of a slowdown or a shutdown. Not only did this involve a loss of work and jobs in the State, but it meant that the traffic requirements of the State would fall further short of the necessary goals.

The President had requested a cent-and-a-half increase in the Federal gasoline tax. The House of Representatives after a delay of many months finally approved a compromise measure which calls for a 1-cent increase in gas taxes until July 1, 1961. At that date 50 percent of the 10-percent tax on automobiles and 62½ percent of the receipts from the 8-percent tax on parts and accessories—presently going into the general fund—would be transferred to the highway fund. This measure will permit the highway program to continue with only a minor slowdown.

LABOR LEGISLATION

Following lengthy hearings, and after intense debate and consideration, Congress finally approved a bill calling for reforms in management-labor relations. Several bills were considered. Foremost was the Kennedy proposal, S. 1555, which was approved by the Senate last April. The House Education and Labor Committee reported the Elliott labor bill, H.R. 8342, which was supported by Speaker SAM RAYBURN in his nationwide broadcast. Another bill, the so-called Landrum-Griffin bill, H.R. 8400, bore the names of its authors and was supported

by the President over a nationwide TV broadcast. A fourth bill was known as the Shelley bill, H.R. 8490.

Eighty-five percent of the provisions of all bills were similar. They differed chiefly with respect to the extent to which they amended the Taft-Hartley Act. The Landrum-Griffin bill went furthest in this regard and was spoken of as the strongest bill. However, with respect to democracy in unions, elections of officers, reporting of union finances and the protection of union funds, all four bills contained approximately the same provisions. There was little or no controversy over these. The main controversies arose over the proposed amendments to the Taft-Hartley Act. The House approved the Landrum-Griffin bill. Because it differed from the Senate-passed Kennedy bill, it was necessary to send the matter to conference. The House and Senate conferees worked diligently for about 2½ weeks, and finally reached an agreement on a compromise measure. In effect, the Landrum-Griffin bill was softened somewhat. Both Houses of Congress then approved the compromise measure and it was sent to the President for his signature.

INCREASED INTEREST ON GOVERNMENT BONDS

Congress gave the President authority to give 40 million Americans who hold $42 billion of series E and H savings bonds bigger returns on their investment. The President in his message to Congress had requested that the ceiling on interest rates on long-term Government bonds be eliminated. People were not purchasing them in the amounts required to meet the Government's financial needs. Since 1956 bond redemptions have generally exceeded bond sales. In other words, more bonds previously acquired were being turned back than were being purchased.

The President in his message said that people in a free society could not be compelled to buy Government bonds when they could get better returns on their money from other investments. The Government needs to borrow money, and the Treasury Department has been confronted with the necessity of placing the entire national debt in short-term bonds on which the law does not impose maximum interest rates. It would be difficult to estimate what the cost of such a procedure would be to the Government.

After considerable delay by the House Committee on Ways and Means, a bill was presented to the House of Representatives which would eliminate the ceiling on the interest on series E and H savings bonds. The limit on the interest rate since 1957 as been 3.26 percent. The bill would also authorize an increase in interest rates on outstanding series E and H bonds. The President is given authority to increase rates in both instances where he finds the national welfare so requires. The bill contained certain other provisions to make Government bonds more attractive and saleable. After some debate, the House of Representatives approved the measure.

TVA CONSTRUCTION PROGRAM

Congress in recent years has not appropriated all the funds which the Tennessee Valley Authority has requested for plant development and new facilities—particularly steam plants for the generation of electrical energy. Congress passed a measure which authorized TVA to sell $750 million in bonds to obtaain the capital it needed. There would then be no need for annual appropriations by Congress.

The President vetoed the first TVA bill because it attempts to divorce the TVA's construction program of new power-producing projects from executive review and would not afford an opportunity for the President to exercise his constitutional role in the legislative process.

When it was agreed by the House and the Senate to delete the objectionable features from the bill by separate action, the President signed the TVA proposal.

It Is Red China's Own Behavior Which Makes Peaceful Settlements Impossible

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following concise and conclusive statement by the Honorable Henry Cabot Lodge, our Ambassador to the United Nations, on the reasons why Red China completely disqualifies herself for membership in the United Nations, a union of peace-loving nations to maintain peace:

STATEMENT BY AMBASSADOR LODGE

Sometimes we hear it said that the exclusion of Red China from the U.N. is an obstacle to peaceful settlements. But the real obstacle is Red China's refusal to settle any important question except by causing its opponents to surrender.

The U.N. is not the only place where conflicts can be settled. The United States has been in diplomatic contact with the Chinese Communists at Geneva and Warsaw since 1954. Thus they have a perfectly good channel for peaceful settlements if they want to use it, but they show no desire to do so.

Now, of course, we all agree that it would be a good thing if Red China's behavior were completely to change—and change so drastically that the word "honorable" can be applied to those who govern the Chinese people. But to make statements expressing this hope at a time when there is not a scintilla of evidence on which to base such hope is regrettable and misleading.

Remember that for a decade the people of China have been cut off from the community of law-abiding nations. It was not the community that cut them off but the barbaric behavior of their Communist rulers. The Chinese people deserve a great place in the community. The day they are permitted to resume their place will be a great day for mankind.

But there is no sign that such a day will come soon. There is not even a sign of modest improvement. When we study Red China's recent behavior we find such sins as these: the violent subjugation of Tibet; the attempts to conquer Formaso by force; the setting up of agricultural communes described by a leading scholar from India as more terrifying than all hells put together.

Also the vicious persecution of Christian missionaries, both Protestant and Catholic; the spiteful and inhuman refusal to release American citizens, five of whom are still held prisoner in Red China; the ceaseless stream of "hate America" propaganda, and refusal to account for 452 American soldiers missing since the Korean war.

Thus the score against Red China at U.N. speaks for itself.

Will The Church Bells Be Ringing?

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. LEVERING. Mr. Speaker, it is evident from my mail and from calls and other communications I have received, that a great number of earnest, hard-working Americans are perturbed about the approaching visit of Premier Nikita Khrushchev, of Russia.

For example, Mrs. Lois Bartels Moore has sent me a copy of a letter written to President Eisenhower suggesting that church bells should be tolled throughout the country each day during the period Mr. Khrushchev is visiting here. This is only one of a number of communications I have received from individuals who say some outward manifestation should be made on the part of the American people to show that they reject his godlessness and his belief in atheistic communism.

As we know, Mr. Speaker, some groups have suggested that the American citizens in the vicinity of Mr. Khrushchev, wherever he may be, when he visits our country, should attend prayer meetings wear black arm-bands, or otherwise show that they are mourning for the captive people behind the Iron Curtain.

It is not perhaps for us to say that the forthcoming visit of Premier Khrushchev cannot help to bring about lasting peace. Let us be praying that this move on the part of our President turns out to be fruitful and helpful in the field of international diplomacy. But I am sure many of my colleagues cannot help but join with me in wondering if it will prove to divide our people and weaken the resistance of the captive peoples of the world at a crucial moment in world history. Under leave granted me, I am inserting Mrs. Moore's letter in the record. It follows:

CHARDON, OHIO,
August 17, 1959.

The PRESIDENT,
The White House,
Washington, D.C.

MY DEAR MR. PRESIDENT: Because of my deep religious heritage my day begins and ends with a prayer. Often one is included for you, sometimes for Mr. Khrushchev.

I have been disturbed by what seems to be the lack of an organized plan to show Mr. K. the one great strength America has which Russia has not, our belief in God.

A thought struck me with force yesterday as I prepared breakfast before leaving for church. "Why couldn't church bells ring continually all over America during Mr. K's visit?" I glanced at the Women's Day calendar above my sink. The admonition was "Do all that is in thine heart; for God is with thee." (1 Chronicles 17: 2.)

When I arrived at services I found the first hymn was:

"Built on the rock the church doth stand,
Even when steeples are falling;
Crumbled spires in every land,
Bells still are chiming and calling,
Calling the young and old to rest,
But above all the soul distrest,
Longing for rest everlasting."

After the service I spoke with my pastor, the Reverend Kenneth Hoffmann, of Grace Lutheran Church, Cleveland Heights, Ohio, relating my experience.

He was most enthusiastic and offered to phone his brother, Dr. Oswald Hoffmann who is public relations director of the Lutheran Church, Missouri Synod, and also the speaker for the "International Lutheran Hour."

This morning I began calling my friends asking them to join in praying that this idea would be favorably received and that contact might be made with churches of all denominations to let our church bells speak for us.

The phones in this community are busy today. My latest call was from a friend who suggested I write to the President of the United States.

Very respectfully,

LOIS BARTELS MOORE.
Mrs. H. H. Moore.

Siegrist Exposes UNICEF

EXTENSION OF REMARKS
OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 5, 1959

Mr. MASON. Mr. Speaker, I have always been opposed to the United Nations Organization—particularly to that branch known as UNICEF.

When the United Nations Organization was initiated at San Francisco, it was done by men who left God out of the negotiations and refused to start its meetings with prayer. Alger Hiss, a well-known Communist and an agnostic, was the architect of the Charter of the United Nations, so the organization had two strikes against it before it went into operation.

The following broadcast of October 27, 1958, by the well-known news commentator, Bob Siegrist, entitled "Siegrist Exposes UNICEF," has been brought to my attention by members of the DAR. It is worthy of wide publicity. Therefore, I offer it for the RECORD as a part of my remarks for the edification of my colleagues:

SIEGRIST EXPOSES UNICEF

It has come to this reporter's attention that, again this year, American children are being asked to forego the Halloween practice of "trick or treat," and, instead, that they participate in a door-to-door canvass for contributions for the United Nations Childrens Fund, better known as UNICEF.

Under the directions of the New York-based UNICEF office, with its bureaucracy, publicists and internationally minded propagandists, this appeal for the begging services of our American children filters down at the local level through Girl Scout troops and various other church and/or school organizations.

If our children are told at all, that their efforts are sought for the United Nations Childrens Fund, or UNICEF, it is perfectly obvious to this reporter that those children and their parents—and even the majority of the adult leaders of children's groups through whom the U.N.-originated appeal is based—have little or no knowledge or information as to the real meaning of UNICEF.

Generally, it seems that our children are merely told that their help is needed in soliciting funds for the poor children of the world, much less fortunate than they, who thereby need their help.

Obviously, it takes little if any sales pressure from teachers or other trusted leaders of American youth to convince idealistic child minds that here, indeed, is a splendid moral, Christian way for our children to turn what used to be an annual period of at least mild, juvenile violence and general youthful troublemaking into a happy, useful act of Christian charity in behalf of those less fortunate than our own American children.

Unfortunately, however, this effort to convert America's traditional and nonpolitical Halloween into something entirely different is well in keeping with the massive effort for the perversion and absorption of all religious holy days and national holidays into instruments completely contrary to the ideologies and traditions upon which those days are based.

Just as the Kremlin has throughout its satellite ghost world committed this slaughter of religious holy days and national holidays, so too would the Kremlin do here in the United States.

Ever since the tragic founding of that grossly misnamed organization known as the United Nations more than a decade ago, the Kremlin has enjoyed great assistance in this direction from many persons in, about, and subscribing to the United Nations and its so-called principles.

Tragically enough, much of that assistance in the Kremlin-directed desire of breaking down American traditions and principles has been granted, unwittingly, by good and well-meaning people who, unfortunately, have chosen to accept at face value the U.N.'s propaganda rather than to examine what lies behind that propaganda along with the record itself which, all to frequently, is in great conflict with the propaganda.

As it has been with the U.N. proper and with most of its organizations and agencies, so, too, has it been with UNICEF.

Some of the sharpest and clearest punctuation of this truism is found in a compilation called "Facts About UNICEF," which has come to this reporter's attention through the Church League of America.

The general chairman of the Church League of America is Maj. Edgar C. Bundy, of Wheaton, Ill. Major Bundy distinguished himself as an Air Force Intelligence officer in World War II. Since that time, a great pro-American, a great patriot, he has dedicated his life to an outstanding one-man crusade for America.

One of Major Bundy's best-known contributions has been through his authorship of the authoritative and widely read book, "Collectivism in the Churches," which, for some time, this reporter has made available as a public service, to his listeners at the regular publisher's price of $5.

UNICEF, therefore, is well in line with Major Bundy's specialty, as it is with the distinguished American who compiled these "Facts About UNICEF," Lawrence Timbers, vice chairman of the antisubversive committee of the American Legion.

What follows is directly from Mr. Timbers' great report:

"One of the best examples of subversion," he says, "is that of the churches of this country being injected into the UNICEF program. UNICEF is United Nations Childrens Fund," as Mr. Timbers says, and he adds:

"Some ministers and others take issue with this statement, for the reason that they and their churches have been active in UNICEF Hallowe'en drives, and they do not want to believe the truth. They approach this problem," he says, "with closed minds and do not want UNICEF exposed."

Well, ladies and gentlemen, it's a pretty good thing to expose UNICEF. We're going to try and do it right now, thanks to Mr. Timbers and Major Bundy.

"In UNICEF," according to this report, "we have an organization, governmental in character, and underwritten by contributions from 81 governments. The United States Government contributes more than 80 percent to its support, and the other 80 nations contribute less than 20 percent. * * * 19 of the nations—and this includes all the of the nations—and this includes all the Communist and Iron Curtain countries—contribute in nonconvertible money * * * and this money can be used only to hire their citizens to work for UNICEF, or to purchase goods from that country, or to return it in aid to that country.

"Any fifth-grade student," says Mr. Timbers in his report, "should be able to see through the fraud that is perpetrated when UNICEF gives $1 in aid to a country, that country in turn provides on the average [of] $2. * * * Anyone would be willing to pay $2 to get $3 back and if the truth were known," he says, "those governments are spending that money to suit themselves * * * and UNICEF (and the organization WHO—World Health Organization) are accepting their reports as bona fide. It is just a case of one nation bidding against the others and the ones who offer the most, get the most UNICEF aid," he notes.

Then he goes on, "UNICEF has a U.S. National Committee to promote its program, and at least 19 of its 65 members, are or have been affiliated with one or more Communist front organizations.

"The first chairman of UNICEF was Ludwig Rajchmann, representing the Communist Government of Poland. He used his influence to get aid for the Communist countries. Just last year the Senate Committee on the Judiciary subpenaed him to ask him about his connections with Alger Hiss. He fled to Paris to get away from U.S. jurisdiction, but he is still the representative to UNICEF for Communist Poland. * * *

"Miss Joyce Campbell was an employee of UNICEF. She admitted that she had been president of United Federal Workers Local 12 and that it had been expelled by the CIO for being communistic. She admitted that she had been employed by the American Committee for Yugoslav Relief, which is on the Attorney General's list as a communistic subversive organization and that her position here was the reference that obtained her job on the United Nations appeal for children * * * I suspect," says Mr. Timbers, "that she is still working for a United Nations agency.

"Ruth Crawford was an employee of UNICEF and admitted that she was a member of the Communist Party, and that her sympathies are still with its programs and aims * * *. An inquiry to the U.S. Com-

mittee for UNICEF, asking if she still worked for them, has never been answered.

"Mr. William Berges, the UNICEF representative in Shanghai turned large stock of UNICEF supplies over to the Communists. In a speech to the Chinese Communists he said '* * * the ruling clique of America are responsible for the Korean war.' * * *

"The World Health Organization which cooperates with UNICEF by furnishing technicians, had as its head in 1955, Mr. Brock Chisholm, a Canadian. He advocates that Canadian and United States families should practice birth control and limit their families to two children. They should adopt children from the backward countries and the darker the skins the better, because he says the sooner we are all mixed into one race the better. * * *

"The two official UNICEF greeting cards, sold at Christmas time, are titled 'Brothers,' showing two figures embracing; and 'Community of Man,' showing four faces, one black, one red, one yellow, and one purple all joined together by the bonds of love, apparently," says Mr. Timbers, "meaning that when the black, white, yellow, and red races are mixed together according to Brock Chisholm, we will have a purple race.

"The artist who drew these two monstrosities was Hans Erni, a Swiss national and well-known fellow traveler and an active member of the Swiss-Soviet Friendship Association. In October 1949, the Communists, added a new maneuver to their fraudulent peace campaign. They formed delegations of world renown individuals under Communist control, to visit and influence the parliaments of the world powers. Hans Erni was in the delegation assigned to the United States. Our State Department, under pressure from the Senate, denied visas to these people, including Hans Erni."

And, by the way:

Major Bundy advises us that one of the articles for this year's UNICEF Christmas card is one Ben Shahn. We have on our desk from our files "Information from the files of the House Committee on Un-American Activities," dated December 5, 1955, which contains three letter-sized, single-spaced typewritten pages concerning Mr. Ben Shahn's associations and activities in connection with such publications as New Masses which the U.S. Attorney General has officially cited as a Communist periodical, and such organizations as the National Federation for Constitutional Liberties (officially branded as subversive by the Attorney General) for which Shahn designed, by the way, a pamphlet—according to this official report.

This report from Mr. Timbers goes on to say that: "UNTAA (the United Nation Technical Administration Agency) gives technical assistance to UNICEF. UNBSA plans programs for UNICEF," another U.N. outfit. "The Executive Chairman of UNTAA Board is David A. D. K. Owen, British Socialist. Head of (the other outfit) UNBSA, is Dr. Hans W. Singer, British Socialist. He advised Pakistan that Russia's brutal and disastrous collectivization of agriculture in the 1920's was an outstanding example of successful development planning.

"Messrs. Owen and Singer gave employment to many of the U.S. citizens who were fired from the United Nations as a result of loyalty hearings back in 1952."

"From [the] United Nations Children's Fund (UNICEF) financial report and accounts for the year ended December 31, 1956, and report of the Board of Auditors [note this]:

"UNICEF allocations to December 31, 1956 [and] contributions to UNICEF (by various countries)."

The allocation from UNICEF went to the tune of $325,000 in 1956 to Red Albania, which gave nothing; $5,500,000 to Red Bulgaria, which gave nothing; $3,500,000 to Communist China which, of course, gave nothing; $5,600,000 went to Czechoslovakia, Communist Czechoslovakia, which contributed, by the way, $34,722.22. Communist Hungary got $2 million, and gave nothing. Communist Poland got $19 million of UNICEF funds in 1956, according to UNICEF's own report and audit, and gave $80,000. Communist Romania got $7 million, gave nothing. By the way, in Romania, just tonight, ladies and gentlemen, the Red regime there is fearing the Hungarian-type freedom revolt, and the resultant persecutions and the incarcerations tonight in Romania are massive.

Yugoslavia, Tito's Yugoslavia, got in 1956 from UNICEF funds (80 percent of them from the United States of America) $18,200,000. Tito's outfit gave to UNICEF a token $200,000.

Now, there's more ladies and gentlemen, more, only time will prohibit us from giving it tonight. This report is available, we'll be glad to see that you get it.

We cite this report on UNICEF, what we have of it so far, in the public interest—with special emphasis on all of those persons who have found themselves employed through churches, schools, Girl Scouts, etc., as unknowing instruments for the advancement of this effort to enlist innocent American children in a campaign for funds—most of which go to Communist regimes which persecute the clergy, enslave the laity, and struggles to pervert to Satanic monsters, and in war machine against us, the very young.

We particularly commend this report to the attention of every parent of a school age child—whom we hope will query their children as to whether they have been solicited to help with this Hallowe'en drive, and in so doing, we certainly recommend serious consideration to the suggestion that if our children and their organizations wish to solicit contributions for the poor children of the world—that they do so in the name of and under the auspices of—their own churches and their own missionary societies and organizations of whatever denomination.

If we're going to help the poor children of the world—let's make sure that the poor children of the world benefit from our effort—that our efforts are not, instead, going to benefit Communist gangsters and their slavemaster regimes who multilate children, who destroy children, if not physically, mentally and morally, for the war machine used against the very children in the future who are being asked to contribute to the UNICEF fund.

What's the Big Rush To Adjourn?

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Saturday, September 5, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me in regard to the prospective sine die adjournment of the Congress.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

WHAT'S THE BIG RUSH?

That annual malady commonly called adjournment fever has made itself felt in recent days, and I am very troubled by what this development might portend. We have been witnessing today, as earlier in the week, some of the manifestations of this illness which appears to be peculiar to the banks of the Potomac.

I certainly want to join with my colleagues in commiserating with the leadership as these events have unfolded. And, of course, while the problems of a minority leader are great, those of a majority leader are prodigious. We should all have great sympathy for the vicissitudes of the majority leader as he labors with his many complex assignments and coworkers in these closing days.

However, we cannot abdicate our responsibilities as Senators in these last days of the session and close up shop without completing important tasks. No one seems to want to say it, but there is a strong aura of suspicion that some people want us to fold up our tent and leave before the impending visit of Mr. Khrushchev.

I must challenge any decision to adjourn before the end of next week if it will mean that must items will be lost in the shuffle. Khrushchev may be the Typhoid Mary of international statesmanship, but is that any sign that free Americans lack immunity to the virus he peddles? It really won't hurt us to be in the same city with him; nothing says we have to invite him into our parlor.

Now, there are a number of very vital legislative matters which must command the attention of the Senate before we can adjourn in good conscience. I refer particularly to the matter of civil rights.

We have received repeated assurances from the majority leadership that bills in this vital field will be brought up before the end of the session. But now there is talk of running out of town in advance of Khrushchev's visit without acting on civil rights. That, in my view, would be unthinkable, and I shall oppose any movement in that direction with all the weapons at my command. Surely, this Congress cannot in good faith adjourn without at least extending the life of the Civil Rights Commission. And there are other important proposals in this field which I think we should act upon.

It would be ironic, indeed, if we were to slight the civil rights of Americans just to avoid the presence of a man who has done more to undermine civil rights than any man in the world.

It is clearly beneath the dignity and prestige of the Congress of the United States for us to end our work and turn our back on the pressing needs of the Nation just because a foreign dictator comes to our shores. I trust this view will prevail as we enter the closing days of this session.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

A New Horizon for Labor

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "A New Horizon for Labor," which was published in the Philadelphia Inquiror for today, September 7, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A NEW HORIZON FOR LABOR

On Labor Day, 1959, the working people of America look forward to brighter opportunities than they have seen on this holiday in any recent year.

They also face challenges that will give a stern test to labor's mettle.

The last few days have brought to a spectacular climax the great national debate on legislation to drive racketeers and hoodlums out of labor unions. It was a bitter battle that shook the foundations of organized labor and aroused the American people as they had rarely been aroused before.

We believe that the rank-and-file working men and women of the United States of America—and honest, dedicated labor union leaders—have emerged from this struggle stronger than ever and that the entire country will benefit.

Enactment of a new labor bill by Congress last week was a victory for the workers—an appropriate Labor Day gift.

The bill is not antilabor, as some critics charge. It is prolabor.

It is anticorruption, antiracketeering, antihoodlum.

It is legislation to give American workers more effective control over union affairs, to rid the unions of thugs and thieves who pose as friends of labor for personal profit, to eliminate unfair practices by the minority of union officials who use force and violence as bargaining weapons.

But the battle is not yet won.

The underworld won't release its grip on the American labor movement without a fight. Enforcement of provisions in the anticorruption bill will be a difficult task requiring the cooperation of labor's rank and file and its responsible leadership. Additional legislation may be needed to finish the job.

This is a day for labor to reflect earnestly on the victories of the past and the tasks of the future.

Nearly 3 years of hearings by the McClellan committee and 2 years of congressional debate on labor bills have put the union movement in clearer perspective. They have shown that the vast majority of union leaders and members are law-abiding citizens who strive for reasonable goals by honorable means.

The hard core of gangsters and rogues who have infiltrated the ranks of labor union leadership is small in number but immensely powerful.

Workers who once were underdogs in their struggle to right the wrongs of unscrupulous employers now are engaged in a fight for freedom from persecution and abuse by irresponsible union leaders.

The Government of the United States and popular opinion of the American people are alined on the side of the workers. They stand at the dawn of a new day. Unprecedented progress is plainly visible on the horizon, rising above dark clouds cast by the Hoffas and the Becks and others who have sullied the good name of American labor unionism.

There is heartening evidence on every hand that the hoodlums in labor unions are receding from their high water mark under the pressure of a rising tide of public indignation.

One hundred and eighty years ago this month, when John Paul Jones was in command of an American warship under attack by a British frigate, he answered a demand to surrender with the immortal words "I have not yet begun to fight" and went on to victory.

We hope these words will be echoed with spirit and determination by the working men and women of America as they gird for decisive battle against criminal elements who are guilty of subversion against labor unions.

State Taxation of Interstate Commerce

SPEECH
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 2, 1959

Mrs. WEIS. Mr. Speaker, I am extremely pleased that the conference report on S. 2524 is being called up for consideration today, and I think the members of the Judiciary Committee are to be especially commended for the dispatch with which they have moved in seeking a solution to this vexatious problem of State taxation of interstate commerce.

In the past, interstate commerce has been at least relatively free from the burdens of multiple State taxation. As a result of the court decisions in the Stockham Valve case and in the Northwestern States Cement case, however, the door may now be open for any State to step in and impose crushing taxes on firms located outside, but doing business within, the boundaries of that State.

The burden of such taxation would be especially severe for the small businessman, whose volume of business in any one State would probably not even warrant continuing to do business in States imposing such taxes.

In fact, several firms in my own 38th District of New York have indicated to me that their volume of business in some States would be such that they probably could not even afford the administrative costs connected with keeping the voluminous records necessary to pay the taxes, let alone the taxes themselves.

Just this week, I have received word that 70 percent of the gross sales, both wholesale and retail, of the companies in Newark, N.Y., are made in interstate commerce throughout the entire country. Newark is the largest city in Wayne County, N.Y., which I am privileged to represent in the Congress, and it would be a fearful blow to the community's economy if crushing income taxes were suddenly imposed by a number of States in which Newark's business firms are operating.

S. 2524 deals with a portion of the problem by prohibiting States from taxing income derived solely from the solicitation of orders within a given State by out-of-State companies. The language of the bill itself makes it clear that this is not the final answer to the entire problem by providing for continued study by two separate committees of the Congress. But it definitely represents a step in the right direction, a step which is of vital importance to every businessman operating in interstate commerce.

Mr. Speaker, the absence of artificial trade barriers between the States has been responsible for much of the dynamic growth of this Nation, and the Congress has a grave responsibility to see that these channels of trade remain free and open. S. 2524 will serve the best interests of thousands of small businessmen throughout the country, and I urge adoption of this conference report.

Food for Peace

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. HUMPHREY. Mr. President, a fine editorial, entitled "Food for Peace," appeared in one of our fine Minnesota newspapers, the Mankato Free Press of August 11, relating to the pending legislation. This particular editorial supports the proposals which the senior Senator from Minnesota and other Senators have advanced in this body for a broadened program for the use of our food and fiber.

A paragraph of the editorial which I think is particularly helpful reads as follows:

It is difficult to find criticism of this plan. One of the areas where the United States has

been weakest is in assisting the economic development of the countries that we want to be our friends. We have stressed, rather, military assistance and have insisted that the countries to which we send arms must be ready to fight for our way of life.

Finally the editorial states:

It appears that food for peace is a step in this direction.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOOD FOR PEACE

The food-for-peace plan that has been proposed by Minnesota's Senator HUMPHREY is drawing considerable support as a vehicle with a twofold purpose. One aim is to dispose of surplus products that are filling warehouses and bins throughout the country and the other is to go a step further and give economic assistance to the nations that receive the products.

In this respect it seems a sound and worthwhile expansion of Public Law 480, under which Congress made it possible to sell surpluses abroad. The Senator has pointed out that it isn't meant to replace Public Law 480, but to strengthen it in the interests of needy people everywhere in the world.

The Senator's proposal calls for selling the products to nations that would pay the United States in local currency. The United States then would take the money that is received, pay bills with part of it in the nations that made the purchases and use the rest for loans that would help build the local economies.

The goal is an uplifting of the standard of living throughout the have-not countries, with the thought that it would both improve their economies and help build friends of the United States.

It is difficult to find criticism of this plan. One of the areas where the United States has been weakest is in assisting the economic development of the countries that we want to be our friends. We have stressed, rather, military assistance and have insisted that the countries to which we send arms must be ready to fight for our way of life. We have failed to give them a reason for waging this battle, because we haven't, by example, convinced them that our way is best. We talk of our generosity and our insistence on preserving the dignity of the individual, but we haven't put American democracy truly into action.

It appears that food for peace is a step in this direction.

Labor Day Statement by David J. McDonald, President, United Steelworkers of America

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. HOLLAND. Mr. Speaker, I am proud to insert in the CONGRESSIONAL RECORD a Labor Day statement by the president of the United Steelworkers of America, of which I am a member.

This Labor Day is not a happy one for the workers of America. They have just experienced the passage of a bill by a coalition of northern Republicans and southern Democrats to break down the economic life of those who toil. However, organized labor has taken setbacks before from the same type of labor haters that we have today. We will rise again, as the American labor movement will close ranks and become stronger than ever. We now know who our friends are in the Congress of the United States.

The statement follows:

LABOR DAY STATEMENT, BY DAVID J. MCDONALD, PRESIDENT, UNITED STEELWORKERS OF AMERICA

This is the day when working families pause from their labors recalling past victories that improved their living standards and set new goals for the future.

This is a different kind of Labor Day for millions of workers. It is a day of decision. And for the sake of all the people in our Nation, we must make certain we are choosing the right course.

We must not allow Labor Day, 1959, and all the Labor Days to follow, to be converted into another "Memorial Day" set aside to mourn lost opportunities and destroyed freedoms.

That workers everywhere are aware of the perils that face them is evidenced in the fact that today is also designated by the organized labor movement of America as "Support the Steelworkers Day." It is a day when workers everywhere are rallying to the support of a valiant group of steelworkers who are in the frontline trenches, standing up to an onslaught that could well be turned against all working families in our Nation.

In this enlightened age there are powerful industrial leaders who would turn us around and head us downhill back into the dark abyss of industrial serfdom.

They speak for a steel industry which has forced a half million steelworkers out of the mills in a fight for their rights and hard-won freedoms.

The steel industry deliberately fomented this shutdown, and turned its back on every union effort to settle it. Industry is testing the steelworkers now. If its campaign against the workers in steel is successful, it will turn the guns in open warfare against workers in other industries, while it also seeks to destroy their effectiveness on the legislative front.

The leaders of this rich industry are warring against steelworkers from treasuries swollen with undreamed profits. And they deny the just needs of their employees while their own pockets bulge with money reaped from fabulous salaries, stock option deals, and fat bonuses. Labor Day, 1959, is a day of crisis, not only for the steelworkers but all Americans. These are times when huge question marks grow on the horizon—questions which trouble those in the union movement, and questions which demand immediate answers from America.

Where would these powerful industrialists lead us? What will they substitute for a free democratic union movement? Will they drive us into a servile state at home while we fight the tide of dictatorship that looms larger and larger around our shores?

This must not happen. The United Steelworkers of America and the free labor movement is America's solidest insurance policy against those who would supplant the democracy we cherish with hated tyranny.

Because the men of steel have been thrust into the forefront in the battle for basic industrial democracy, Support the Steelworkers Day should be of special significance for every wage and salary earner who has hopes and goals for a brighter, happier future.

The Precarious Right To Vote

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. MORSE. Mr. President, in this morning's Washington Post and Times Herald there was published an editorial entitled "Precarious Right," the first sentence of which reads as follows:

A survey of Negro voting in the South conducted by the Southern Regional Council underscores with stark, incontrovertible figures the urgent need for civil rights legislation in the present session of Congress.

In the course of the editorial it is said:

It is, of course, the fundamental right of American citizenship—a right guaranteed by the Constitution of the United States. And this is why the Government of the United States must not fail or falter in protecting it.

The last sentence in the editorial is:

It ought to be operative before the next election despite the foot dragging so apparent on Capitol Hill.

Mr. President, I consider the protecting of the right of all citizens to vote, irrespective of race, creed, or color, to be the most fundamental and most important of all civil rights issues. Because I think it is so important and because we have proposed legislation pending in regard to the matter, Mr. President, are other reasons why I am taking the position that every possible effort should be made under the rules, particularly by liberals in the Senate, to hold this body in session until next week, and later, if necessary, to pass very much needed civil rights legislation, along with other legislation.

Mr. President, I ask unanimous consent that the editorial from the Washington Post and Times Herald entitled "Precarious Right" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRECARIOUS RIGHT

The survey of Negro voting in the South conducted by the Southern Regional Council underscores with stark, incontrovertible figures the urgent need for civil rights legislation in the present session of Congress. The council study shows that in 8 States of the Deep South—Arkansas, Florida, Georgia, Louisiana, North Carolina, South Carolina, Texas, and Virginia—the number of Negroes registered to vote dropped by 45,845 from 1956 to 1958. An estimated 25 percent of the eligible Negroes are registered in the South as compared with 60 percent of the white citizens of voting age.

When one considers the obstacles that have been put in the way of Negro voting in the South, the fact that more than a million Negroes have registered is a tribute to their courage and their sense of citizenship. They have registered in spite of poll taxes, in spite of literacy tests administered with gross discrimination, in spite of the hostility of registrars, and in spite of threats of violence and other forms of intimidation. The right to vote must be looked upon as precious in-

deed by those who face such perils to exercise it.

It is, of course, the fundamental right of American citizenship—a right guaranteed by the Constitution of the United States. And this is why the Government of the United States must not fail or falter in protecting it. There can be no doubt of the need to require States to keep registration and voting records—and to afford the Attorney General ready access to those records so that Federal protection of the right to vote can be made effective. This is a minimum requirement of civil rights legislation. It ought to be operative before the next election despite the foot dragging so apparent on Capitol Hill.

A Gift to Labor

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I would like to include the enclosed article, "A Gift to Labor," from the Peoria Journal Star:

A GIFT TO LABOR

If the labor reform bill approved in its final form by Senate and House last week had been planned as a Labor Day gift to American workers, it couldn't have been more timely.

Regardless of the complaints of labor leaders, the measure is a great step forward in protecting rank-and-file union membership and the public from gross abuses revealed in the hearings of the Senate Rackets Committee.

Testimony concerning these abuses has been sensational news for many months. It has often been shocking news, alomst unbelievable. The fact that most labor unions have not been invaded by the hoodlum element makes it no less shocking. If even one union could be taken over by racketeers and the members deprived of their rights, our labor laws needed correcting. This was emphasized by the fact that labor chiefs found they were unable to discipline corrupt unions.

Nobody could contradict the good sense of President Eisenhower's appeal when he said, in his television speech of August 6 that "any reform bill worthy of the name must also protect the individual rights of union members within their unions. It must assure them of fair elections * * * honest handling of their money * * * It must also give the Government authority to investigate and enforce these provisions."

Many members of labor unions will appreciate the protection of their rights given them by the new law. Those who have been the victims of treasury raiding by crooked officials will appreciate the Federal protection of their finances. And the new controls over union elections may revive the interest of membership in union activities.

For the protection of employers and the public, the new bill contains provisions against secondary boycotts and extortion picketing and limits on organizational picketing. (The Illinois General Assembly twice demonstrated its lack of courage in failing to outlaw racketing picketing.)

Those who manage the labor lobby in Washington were bitterly opposed to the Landrum-Griffin bill, but it was obvious that they did not speak for the rank and file.

Members of Congress, we believe, have no reason to fear retaliation by labor union voters, as threatened by the lobby.

A vote of gratitude from workers at the next congressional elections would be more appropriate.

The Farm Program

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. HUMPHREY. Mr. President, in the August 12 Willmar Daily Tribune, of Willmar, Minn., there appeared an excellent editorial relating to the current agricultural situation and the failure of the administration to present any comprehensive agricultural program.

My colleagues may recall that from time to time certain members of the Senate Committee on Agriculture and Forestry, the Senator from Missouri [Mr. SYMINGTON], and myself in particular, urged upon the administration the presentation of an overall, comprehensive farm program, rather than the patchwork, piecemeal attempt that has been made to prepare a program which today is working very poorly and at great cost to the American people.

I ask unanimous consent that the editorial in the Willmar Daily Tribune, entitled "Answers Benson," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANSWERS BENSON

Some time ago Secretary of Agriculture Benson stated publicly that Congress has never given him the kind of a farm program which he could properly administrate. In the complexity and confusion of programs for agriculture and all the hullabaloo about them—one could almost swallow Benson's statement as close to fact. At least those not conversant with Benson and his aims, could be mislead and deluded to think he was right. He has not fooled the farmers generally but he has deliberately had a part in misrepresenting the farm parity programs to the city folks.

If his complaint to Congress has fooled or impressed some of the representatives down there, Secretary Benson has not pulled the wool over the eyes of Senator HUMPHREY. For the Minnesota Senator really took Benson to the cleaners in a speech he delivered to the Senate on August 6. It was a dilly. Wish we would have the time and the space to reprint the whole speech.

We can give you the gist of it. HUMPHREY reminded Benson of proposal after proposal coming out of Congress which would do something about the farm problem. In practically every case the administration either turned thumbs down on them or they were killed by the veto or prospect of a veto. Plans to curb surpluses have been offered, programs to assure a stable agriculture, acreage controls, corrections of abuses found in previous programs. All these have gone for naught.

So the conclusion is evident. The administration really wants no program at all—Benson wants no program. They want them abolished and the farmers thrown upon the open market, in a survival of the fittest unabridged free enterprise where the strong will gobble up the weak, where the smaller farmers will be liquidated and we will be on the road of corporate farming and the big farming estates, which were once found in old Europe. Then the small farmer became a serf. Can history repeat?

That is what is going on in the business and industrial fields. They want the same in agriculture. The worship of bigness, out with the little fellow—he is only in the road of the corporate steamroller.

And is that what we want out here in rural Minnesota? Does America really want that? A Minnesota which when its small farms disappear will also see the rural town vanish A Nation which in losing its rural countryside will find that the Republic has inherited a mess of pottage in feeding its teeming metropolises!

If America is to remain the great democracy it is—a part of the anawer will not be "on to the big cities" but rather "back to the land." That is a major question in this whole farm problem, plus the right of farming to get a decent price for what it produces, commensurate with the income which is being received in urban fields. Out of the consumers dollar, the farmer seems to get the least for all his work.

Labor-Management Reporting and Disclosure Act of 1959

SPEECH
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. OLIVER. Mr. Speaker, even if there were no other reasons for me to vote against the pending conference report on the so-called labor-reform bill, I would vote against it solely because of the economic discriminations and disadvantages which are certain to develop against the economy of Maine and New England as a result of the "no-man's land" area of labor-management disputes jurisdiction.

The economic advantages which are guaranteed to the Southern States by the provisions of the conference report have been covered in detail by several of my colleagues. The "pirating" of the New England textile industry by the Southern States, over the past several years, has been accomplished by reason of the low-wage levels and lack of statutory and collective-bargaining requirements for decent working conditions in these States. Naturally, there has been almost unanimous support by Southern Congressmen for the punitive and restrictive labor-organizational provisions of the Landrum-Griffin proposal and its 90-percent acceptance by the House and Senate conferees. Wage levels and working conditions cannot be improved without strong, aggressive union organization in the South. This conference report nails down, by congressional fiat, the economic advantages of the South over the northern industrial States. In short, this Landrum-Griffin conference report

is a legislative license to procure northern industry and jobs. Does any industrial manager in Maine think for 1 minute that Arkansas, the home of that great "protector" of the rights of organized labor, Senator McCLELLAN, where there is a State minimum wage law of 16 cents per hour, is ever going to increase that minimum to Maine's $1 per hour requirement, as long as NLRB denied jurisdiction over labor disputes and proceedings is taken over by the State courts of Arkansas? Do any of the industrial managers of Maine or the members of the chambers of commerce of our communities, who have pressured me to vote for the Landrum-Griffin shackles for labor organizations, think for 1 minute that Alabama, Florida, Georgia, North Carolina, South Carolina, Tennessee, and Texas, where there are no compulsory laws for workmen's compensation, are going to be forced to adopt such 20th century protection for labor unless and until strong and aggressive labor organizations force the issue?

I would expect, Mr. Speaker, that every businessman in Maine, who applied the pressure on me to vote to curtail the organizing activities of unions, has on many occasions, expressed his opposition to the low wage levels and substandard working conditions of the South and yet these same leaders of industry in my State condemn me for voting against legislation which will perpetuate these unfair and substandard advantages which have so effectively undermined the Maine economy. Certainly, I was not elected to Congress to liquidate further our already diluted Maine industry and the sadly decreased number of jobs which it provides.

It is my sincere conviction that a vote for the Landrum-Griffin conference report was a vote to speed the flight of industry from the North to the largely unorganized South. Maine and New England industry will really get the "sales pitch" now to move into not only the unorganized, but also, the never-to-be-organized South.

Another strongly motivating factor in my vote against the Landrum-Griffin conference report was the open invitation for the powerful unions of the Nation to take over the small, struggling unions. Under the terms of this conference agreement, only the well-entrenched international unions with great assets and legal talent will be able to meet the legal delays, the legalistic entanglements and the slanted antilabor decisions of State courts, operating under State statutes and decisions. This, in turn, means that small unions who cannot afford to fight against these handicaps will be absorbed by the big unions which have caused the people of America, who have been getting this antilabor brainwashing over the past several years, to demand so-called reform legislation. The Landrum-Griffin conference report is not corrective—it is punitive and destructive of legitimate union activities.

Another inevitable result, in my opinion, of the adoption of this Landrum-Griffin conference report, will be encouragement and opportunity for racketeers and crooks to take over official leadership of small unions. Dedicated, honest union leaders, confronted with almost impossible duties of mandatory detailed financial reports and faced with criminal penalties, if found in violation of the so-called bill of rights of union membership, will refuse to expose themselves to the abuse of stooges, agitators, Communists, drunks and hired wreckers of their union organizations. They will resign and the type of leadership which the exposures of the McClellan committee publicized to the Nation will take over in increasing numbers. This probability is not good for anybody in America, for it is not good for the working men and women of America.

As I see the picture, Mr. Speaker, the adoption of this Landrum-Griffin conference report leads in only one direction. It is just one more step toward more restrictive labor legislation. The U.S. Chamber of Commerce, the National Manufacturers Association, speaking and acting for big business with their appetites for further labor control whetted by this victory, will press for the ultimate victory; namely, a national so-called right-to-work law and then, the antitrust stranglehold for which they are really aiming. Many of them have already so stated. The program of big business in America is not only to control financially and economically, but also politically. Strong labor unions now stand in the way of their objective just as America and the free world stands in the way of Khrushchev and his totalitarian power.

The Taft-Hartley law, and its maladministration for these past 6½ years, by the National Labor Relations Board, through its big business-administration appointees, has served as a brake to slow down the growth of labor organizations, which otherwise, today, would have numbered far more than the now organized 18 million of the total 67 million working men and women of America. If Taft-Hartley had not replaced the real magna carta of labor, the Wagner Labor Relations Act of the depression days, organized labor would have been far more effective in gaining equalization with the power of big business and accordingly would have been far more effective in the Congress. The Landrum-Griffin conference report will not only slow down further the growth and strength of the trade-union movement, but it will eventually lead to the more repressive developments to which I have referred; namely, the so-called right-to-work laws on a national scale and then, the crowning blow, the antitrust knockout punch. This will mean the breakdown of American democracy.

As long as I am a Member of this House, Mr. Speaker, my vote will never be recorded for legislation which makes illegal the economic weapons which the working men and women need, to fight for and get their fair share of the production of this great productive plant which is known as industrial America.

Mr. Speaker, I am opposed to and shall vote against this Landrum-Griffin conference report.

The Sanctity of Marriage

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, September 7, 1959

Mr. MORSE. Mr. President, in his column in yesterday's Washington Star, a weekly inspiring column discussing great spiritual truths, the noble Chaplain of the Senate wrote about the sanctity of marriage and the symbolism of the home as the foundation of our society. I think it is a beautiful column. It is well that we reflect upon it, particularly in view of the fact that so much of our writings these days, both in the field of the novel, and outside the novel and fiction, seems to cast a reflection upon the great moral values of the marriage institution.

I think it is a rather sad reflection on the state of American life that writers find such ready readers for such rot.

Because I thought the Chaplain yesterday rose to such great heights of spiritual leadership in setting forth the great moral truths, I ask unanimous consent that his column entitled "A Bride's Rosary," be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD as follows:

A BRIDE'S ROSARY

(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

The old saying that all the world loves a lover points to one of those facets of humanity which changing fashions of living do not alter. The love of a man for a maid, if it is unsoiled and free from base alloys, is as perennially fragrant as the scented breath of pink arbutus when spring trips north.

Across the centuries what a social system does with marriage has been a prophecy of what time will do with that civilization. Alas, that in these glittering gadget-mad days the holy estate of matrimony is being cheapened, desecrated and fouled—especially by those in the public eye who are both famous and infamous. Men and women highly paid, whose profession it is to depict life on the stage or silver screen, audaciously flout all the decencies by chasing from one mate to another with a license which savors of free love. The epitaph for many in this fast set is suggested by Kipling's insight, "A man may be festooned with the whole haberdashery of success and go to his grave a castaway."

Enslaved mainland China, whose life for many centuries has been rooted in the family ancestors, is now having its homes torn apart by its ruthless masters in the diabolical commune system in which the relationship of man and wife is reduced to the status of a breeding stable.

Missing the beauty of the ancient marriage rites in which religion played so great a part, even Russia has been lately forced to recognize the sanctity of marriage which was blasphemed by the new regime at the beginning of the revolution. Under the hammer and sickle they are now endeavoring to garnish godless wedding ceremonies with a few Marxist sprouts to offset to some degree the loveliness of the church's sacrament, with its solemn warning, "What God

hath joined together let no man put asunder." The Reds are finding that no pontifical dictum of Lenin has revoked the declaration of John Bright, "The nation rests on the cottage."

What a refreshing respite, to which the weary world has been treated, in the midst of salacious scandals and of frightening threats of pushbutton devastation when, by the miracle of today's communication and visualization, millions were able to fix their gaze on a church spire against the Norwegian sky and, on a sacred altar in that tiny church, as, with the whole world watching, an American groom and a Norwegian bride, coming down a church aisle strewn with roses and carnations, took each other for better or worse, till death do them part.

With paganism's blighting hands over more than a third of the planet's population and endeavoring to strangle the church of the Living God wherever its materialistic creed is enforced, here, before the listening world, was lifted up a Christian church, a Christian minister, a Christian altar, and Christian lovers anxious to have their love consecrated with the benediction of the Master, who, in the days of His earthly ministry, blessed the happiness of a wedding feast.

That lovely shrine in a valiant land is an emblem of the church of every name, now being subjected to terrific pressures and cruel persecution with arrogant demands that the church lose its soul by becoming subservient to a police state. Did we say the world was watching a "little" church, tucked away among the hills of Norway?

"A little thing this church? Remove its roots,
Ossa and Pelion would not fill the pit."

In the reality and the faith symbolized by that church in the hills of Norway is the hope, and the only hope, of this world's salvation.

It was a lofty conception of marriage which was lifted up before the world when, in that village church, Vicar Olav Gaute-stad stood at the ancient altar to hear their vows and to pronounce Steven and Anne Marie man and wife. His pastoral remarks, so simple yet so profound, seemed like a lovely rosary whose beads could be counted by untold millions with profitful remembrance. The pastor that day displayed a string of Christian virtues gleaming like lustrous pearls. It was a rosary that the Christ of God would gladly bless. Shall we count its beads as this faithful shepherd of souls so reverently unfolded them? We quote exactly his admonitions.

The first has to do with that mightiest monosyllable, God: "I pray to God that this day may be the beginning of many days of happiness and the blessing of the Most High."

The next bead is love: "The real love which is from God breaks down all the conventional barriers. In His eyes we are all equal."

The next is heritage: "In our time, when the majority of youth seems to take as their ideals those of doubtful moral qualities, the press of the world is paying tribute to an ordinary girl who has taken pride in being industrious, reliable, and faithful to her Christian heritage."

The next bead is home: "To build a good home is perhaps the greatest of all arts. You who stand before the altar today have the best possibilities to build a good home—for both of you have taken good building materials from the homes of your childhood—homes of prayer and Bible reading and God-fearing parents."

Then comes practice: "A home is not only a question of foundation, it is also perseverance of spirit—the spirit of love and goodness. Without that spirit even a home beautiful and rich may be barren because of the evil spirit of egotism, self-assertion and caviling."

The next pearl is example: "Set an example, let folks see a Christian home in which love and a willingness to serve are something that naturally belongs to everyday life."

And last comes belief—the creed by which true believers live: "Never forget that the greatest happiness is to have personal belief and trust in Jesus Christ. In that faith you are to help one another to come to everlasting life."

What a string of heavenly pearls to handle as the days go swiftly by—God, love, heritage, home, practice, example, belief. All that the preacher said that wedding day as he held up this devotional rosary is summed up in one of the great hymns of the church:

"Happy the home where God is there
And love fills every breast,
When one their wish and one their prayer
And one their heavenly rest.

"Happy the home where prayer is heard
And praise is wont to rise,
Where parents love the sacred word
And all its wisdom prize."

Public Works Projects

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. BROOMFIELD. Mr. Speaker, in our consideration of the latest bill to appropriate funds for Federal public works projects, we have a graphic example of why our Presidents should be given "item veto" powers in appropriation bills.

The President has objected to some 67 new public works starts which will cost us for than $800 million over the years. These projects have not been eliminated from the bill proposed by the House Appropriations Committee and which is due for a vote on Tuesday.

It is in the interest of our Nation that the President have a means of eliminating objectionable projects from bills such as this one without killing funds for worthwhile projects at the same time. There is no way that these objectionable projects can be extracted without vetoing the whole bill.

Therefore, the President and Congress are faced with the prospect of killing a bill which contains many worthwhile projects or approving a bill which will cost our taxpayers a great deal of extra money.

All of us know that appropriations for new public works projects are deceptive. First-year engineering and construction costs for these projects are relatively small. It is in later years that Congress finds itself in the position of appropriating billions of dollars for projects which quite often should not have been attempted by the Federal Government in the first place.

Tax dollars are hard to come by. Let us save them and balance the budget now and in the future.

In the past 4 years, Congress has tacked on some 200 new projects over and above those projects provided for in the budget. These new starts are going to cost our people some $3,800 million before they are completed.

It would be wonderful if a Taj Mahal or a Great Wall of China could be constructed in every congressional district in our Nation so that each Member of Congress would have something tangible to which he could point with pride.

But this is one of those times in which Members of Congress should view with alarm.

It is my hope that those Members of Congress who find themselves in the very least embarrassed by this present predicament will keep in mind the necessity and the service to the American people which would result from item-veto powers for our Presidents, the vast majority of whom have sought such powers during the past half century.

These neatly wrapped, expensive packages which are presented to us by the Appropriations Committee unfortunately contain a great number of bad apples along with the good ones.

In rather a unique method, the House Appropriations Committee has come up with its newest solution to this problem.

Instead of eliminating the bad apples, we are asked to slice a 2½-percent chunk off all the apples in the package whether they are good or bad.

This novel approach to the public works program certainly would not meet with the approval of any housewife shopping at the grocery store. If such an alternative were presented to her and she were given no opportunity to eliminate the good from the bad, I believe that her decision would be to eliminate apples from her diet until such time as they were of better uniform quality and content.

Interest Rate Ceilings on Government Securities

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Bloated Bondholder a Durable Ghost," published in the Louisville (Ky.) Courier Journal of August 25, 1959. The article deals with the interest rate ceilings on Government securities. I think it is appropriate in view of the discussion we have had today. The editorial punctures the conception of the "bloated bondholder" and is a strong argument supporting the administration's position with respect to increasing the interest rates on Government obligations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BLOATED BONDHOLDER A DURABLE GHOST

On August 12 President Eisenhower listed some of the things he hopes Congress will do before its present rapidly waning session ends. First of all he put an upward adjustment of the interest rate ceilings on Government securities. The House Ways and

Means Committee had that same day approved a bill granting that authority to the Treasury.

However, last week the committee—or, for practical purposes, the Democratic majority in the committee—reversed itself, and put the President's request on the shelf, or in effect denied it for the present session. The committee's action demonstrated that not only the President but also Congress possesses a power of veto. Mr. Eisenhower, who has brandished his own veto club rather provocatively, may need a civics lesson. Even so, this was expensive and reckless pedagogy.

However, what probably influenced the Democrats more than a desire to educate Mr. Eisenhower was the psychology indicated by the old-fashioned term "bloated bondholder"—a favorite in the political oratory of earlier and simpler times. The term has become obsolete, so far as we know, but evidently the bondholder is still bloated in many minds.

But suppose that he still were vastly bloated—and he, in the case of Government securities, is usually not an individual but a bank, insurance company or other institution holding funds in trust—he will not be unbloated by refusing to let the Government pay higher interest rates. He will simply be inclined to find other and more profitable places in which to invest the funds which he has or which are entrusted to him. In short, Uncle Sam is at a disadvantage when he goes to the money market, and is compelled to resort to devices costly to the taxpayer.

The Democrats may not be moved by the serious difficulty in which the present interest rate ceilings put Treasury Secretary Anderson. But have they given up hope that the next Treasury Secretary may be one of their own?

Congress of the Lithuanian Community Resolutions Concerning Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mrs. GRIFFITHS. Mr. Speaker, last night I was the guest of the Congress of the Lithuanian Community meeting at Detroit, Mich. This organization had members from 20 of our States present, as well as guests from Canada and Italy and other foreign nations. These people, who understand well the meaning of American freedom and Communist tyranny, resent the visit of Mr. Khrushchev to this country.

Their feelings are well expressed in the following resolution:

The Congress of the Lithuanian Community, meeting at Detroit, Mich., September 5–6, 1959, and representing over 20 States and many communities in the United States composing the Americans of Lithuanian descent resolved:

Whereas news eminating from the press and official pronouncements from Washington indicate that the Communist dictator and enemy of all democracies is preparing to visit the United States of America;

Whereas such a visit would be an acceptance of a person non grata, who negates all human freedoms, justice, and principles enunciated in our Constitution upon which our way of free life is based;

Whereas such a visit would diminish all hopes of enslaved nations to regain their independence and freedom and their belief in American democracy;

Whereas acceptance of Khrushchev as an honorable guest would augment his prestige in the Communist world by strengthening the Communist position in such countries as Italy, France, South America, Asia, and Africa, where, up to the present time communism was on the defense.

Whereas his trip to the United States of America would disorient American allies in the West by sowing discord, suspicion, and lack of confidence in the American foreign policy and weaken the unity of the NATO nations;

Whereas our acceptance of oppression of free nations would divide the Americans into opposing camps in their foreign policy and thus, diminish our unity and effectiveness;

Whereas Khrushchev's trip to America would injure prestige of America, whose citizens sincerely believe in American independence and human freedoms expressed in our Constitution to all of which Khrushchev and his regime are diametrically opposed and bent upon destroying;

Whereas Khrushchev's visits to our cities would encourage a more aggressive policy of the Soviets to enslave more free nations and intensify demoralizing propaganda in a free world: Be it then

Resolved, That all efforts by any means available be used to prevent Khrushchev's visit to the United States of America unless he complies with some of the basic conditions which follow:

1. Restore independence and freedom to all occupied and enslaved nations by the Soviet Union.

2. Liquidate all concentration and slaved labor camps and repatriate all enslaved peoples to their respective and freed countries.

3. Abandon East Germany and allow free elections.

4. Give up the Soviet Imperialistic arms and cease all internag and external activities designed to create trouble spots in the world.

Adopted on this, the 6th day of September, 1959 at Hotel Sheraton Cadillac, Detroit, Mich.

SUPREME COUNCIL OF THE CONGRESS
OF THE LITHUANIAN COMMUNITY.

Possible Candidacy of Senator Scott for the Presidency

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "SCOTT Could Help GOP Ticket," published in the Washington Evening Star of September 3, 1959, dealing with the possible candidacy for the presidency of the distinguished Senator from Pennsylvania [Mr. SCOTT].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCOTT COULD HELP GOP TICKET
(By Gould Lincoln)

The Republicans have two potential and probable candidate for their 1960 Presidential nomination—and perhaps a dozen for second place on their ticket. Their presidential possibilities are by general consent Vice President RICHARD M. NIXON, of California, and Gov. Nelson A. Rockefeller, of New York. Many Republicans would be delighted to have both on their national ticket, one for President and the other for Vice President. But both the Vice President and the Governor have announced they are not interested in and will not have a vice presidential nomination. Mr. NIXON, quite naturally, does not wish to make a career of being Vice President. He will have held that office 8 years at the close of his present term. Governor Rockefeller apparently prefers to remain New York's chief executive if he fails to win a presidential nomination.

MANY VICE PRESIDENTIAL POSSIBILITIES

The list of possible Republican nominees for Vice President extends across the country, from Gov. Mark O. Hatfield, of Oregon, to Senator Hugh Scott, of Pennsylvania, and Ambassador Henry Cabot Lodge, of Massachusetts. From the wide expanse in between come Minority Leader of the House Charles Halleck, of Indiana; Gov. William A. Stratton, of Illinois; Secretary of the Interior Fred A. Seaton, of Nebraska; Postmaster General Arthur E. Summerfield, of Michigan; Secretary of the Treasury Robert B. Anderson, of Texas and Connecticut; Senator Barry Goldwater, of Arizona; and then again in the East, Secretary of Labor James P. Mitchell, of New Jersey; Senator Clifford P. Case, of New Jersey; and Attorney General W. P. Rogers, of New York.

Vice President NIXON and Governor Rockefeller could head a ticket with any one of these potential nominees for second place, except that the Attorney General also being from New York could not be the choice on a ticket with Mr. Rockefeller. However, should Mr. NIXON be the choice for President, the nomination for Vice President would likely go to an easterner or a man from the Middle West, and if Mr. Rockefeller should have first place on the ticket, the choice for Vice President would probably be from the West or Midwest.

Many of these possible Republican choices for Vice President have had wide experience in politics and government. Two of them in the past have been chairman of the Republican National Committee, Senator SCOTT and Postmaster General Summerfield. Mr. HALLECK is making an outstanding record as Republican leader of the House, a strong Eisenhower supporter. Ambassador Lodge, representing the United States at the United Nations, has been highly praised by the President for his work. Governor Hatfield, by his election last year, turned aside the Democratic tide running in Oregon. Of them all, however, Senator SCOTT demonstrated his vote-getting strength in a most surprising upset election in Pennsylvania, the old Keystone State, still second only to New York in number of presidential electoral votes, though now equal to California.

Senator SCOTT, although a freshman Senator, is no newcomer to Congress. For 16 years he represented a Philadelphia congressional district in the House of Representatives. His campaign abilities are attested by the fact he first won the nomination for Senator in 1958, without backing of the organization, and then went on to defeat the Democratic Governor, George Leader, by the margin of 112,765 votes, while Governor Dave Lawrence, Democrat, was being elected by 75,000 votes over his Republican opponent. Mr. SCOTT's victory gave the Pennsylvania GOP a shot in the arm which was much needed and was acclaimed as a Republican

gain virtually as remarkable as Governor Rockefeller's victory in New York.

SCOTT'S POPULARITY GROWS

During his service in the Senate, which began last January, Senator SCOTT has shown himself an indefatigable worker and a strong supporter of President Eisenhower. The results of a statewide poll, recently taken in Pennsylvania, indicate that he is even more popular with the voters than he was when elected. The questionnaire distributed to some 10,000 voters, Republican, Democratic and independent, asked among other questions, how well the voters thought President Eisenhower, Governor Lawrence and Senator SCOTT were doing their jobs. On the basis of approval and disapproval, the score stood—on Mr. Eisenhower, approval, Republicans 99.4 percent, Democrats 69.4 percent, independents 69.5 percent; disapproval, Republicans 5.7 percent, Democrats 30.6 percent, independents 30.5 percent. On Lawrence, approval, Republicans 61.4 percent, Democrats 81.9 percent, independents 56.4 percent; disapproval, Republicans 38.6 percent, Democrats 18.1 percent, independents 43.6 percent. On SCOTT, approval, Republicans 93.6 percent, Democrats 88.9 percent, independents 89.9 percent; disapproval, Republicans 6.4 percent, Democrats 11.1 percent, independents 10.1 percent.

This poll indicates that SCOTT would bring strength to the Republican national ticket both from Democrats and independents, especially the latter. To win, the GOP needs both.

Labor Day Honors Rank and File Laboring People

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. SHORT. Mr. Speaker, there has been a great deal of discussion on the general subject of labor here on the floor of the House during the past several weeks. Some of us who voted for legislation that would protect the rights of rank and file union members and the small businessmen have been unjustly criticized for supporting antiunion legislation. I certainly do not in any sense consider the Landrum-Griffin labor reform bill, as revised by the House-Senate conference committee and overwhelmingly approved by the House on Friday, September 4, a labor-busting bill or a killer bill, as some labor leaders would have the public believe.

So much has been said on this subject that I will not take up any more time with my own remarks. I want to bring to the attention of the Members of the House, however, an editorial which appeared in the Washington Post this morning. I think it very fitting and proper that this great newspaper has seen fit to print such an editorial on this national holiday which this Nation has declared in observance of the welfare, rights, and dignity of the laboring people of our Nation:

[From the Washington Post and Times Herald, Sept. 7, 1959]

NO DOGHOUSE FOR LABOR

Labor Day 1959, finds some of the leaders of organized labor in sackcloth and ashes and others deeply confused by the events of last week. Congress not only enacted a stiff labor reform bill; it did so by overwhelming votes in both Houses. It was not merely the coalition of Republicans and southerners that ignored the protests of organized labor, but almost the entire Congress. Does this mean that the country has suddenly swung into an antilabor mood?

Despite the gloom in some labor circles, we think the question must be answered with an emphatic "No." The people have conveyed to Congress an unmistakable demand for legislation to protect the rights of individual workers, to oust racketeers from the labor movement and to curb various practices that some unions have indulged in to the detriment of the public interest. But in our opinion the support for good working conditions, high wages, the right of workers to organize and bargain collectively remains unshaken. Not for a moment did the public call for a killer bill against labor. Rather, the bill won landslide support because of the belief that its provisions are fair to organized labor as well as to employers and individual workers.

Some persons who have abused the great power now in the hands of labor unions are certainly in the doghouse, but not labor as a whole. Taken as a group, the U.S. 71 million working men and women have the highest living standard ever known. Most of them have also attained a large measure of economic and social security along with the right of voluntary association to improve their working conditions. They enjoy the rights of free expression, free movement, and general participation in the political life of the country. Congress has closed some doors to corruption and arbitrary use of power, but the national interest in a strong, vigorous, and clean labor movement is as great as it ever was.

State Co-Op Directory Shows Number of Co-Ops Down

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. WILEY. Mr. President, unfortunately, the Congress this session will not, apparently, succeed in passing any broad-scale legislation that will substantially improve the Nation's farm program and brighten the outlook for the American farmer.

We recognize, of course, that this situation is the result of a number of factors, including the inability of farmers and farm organizations, as well as national agricultural planners, to get together on what a majority feel should be done in agriculture.

In the light of this situation, it is especially important, I believe, that: First, we reexamine the existing programs in operation to assure that, functioning as efficiently as possible, they are providing the maximum assistance to the American farmer; second, that we continue efforts to see what modifications can and should be made in the overall farm program to brighten the economic outlook; and third, to encourage and, as desirable, expand those activities which, of themselves, are making a contribution in this significant field.

Today, I would like particularly to comment briefly on the role of cooperatives in the farm economy. In Wisconsin, as throughout the Nation, cooperative organizations are making a tremendous contribution to help the farmer survive the economic tide that regrettably, in recent times, has been running against him. In our Badger State, there are 1,184 organizations. While this is a substantial number—making Wisconsin second in number of cooperatives, and fourth in volume of business in the country—it represents a decrease in organizations from 1,222, in 1956.

I am aware, of course, that, that from time to time, questions arise as to the proper role of cooperatives in the economy, the tax treatment for such co-ops, and other questions. While these must be resolved on an equitable basis, I firmly believe that the co-op, in its proper role, can and will continue to make an important contribution to better life on the American farm.

Recently, the Farmers Union News published an article on the scope of the co-op movement in Wisconsin. The article, entitled "State Co-Op Directory Shows Number of Co-Ops Down," illustrates that, despite a reduction in the number of organizations, our Wisconsin cooperatives—with an estimated 404,500 members—is making a significant contribution to many facets of our economy. I request unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE CO-OP DIRECTORY SHOWS NUMBER OF CO-OPS DOWN

Operating throughout Wisconsin this year are 1,184 cooperative organizations incorporated under chapter 185 of Wisconsin Corporation Laws according to a directory of cooperatives just prepared by the farm cooperative assistance section of the markets division, State department of agriculture.

Over the past 2 years, 32 new organizations filed articles of incorporation but complete dissolutions were filed for 18 associations and mergers and consolidations reduced the total number from 1,222 in 1956 to the present 1,184.

The number of all types of dairy cooperatives decreased from 354 to 300, poultry and egg associations from 22 to 10 and vegetable marketing organizations from 15 to 10.

Greatest consolidations have taken place in the farm supply associations which handle feed. The number of such groups dropped from 226 to 176. In the service cooperative area, the number of artificial breeding associations is 22 as compared to 52 in the 1956 directory, as consolidations toward larger centralized organizations took place.

There were increases in general farm supply and livestock marketing cooperatives. The former jumped from 60 to 125 while the

latter increased from 40 to 116. Farm management associations grew in number to 55.

The directory classifies the cooperatives into six groups. There are 461 agricultural marketing associations, 335 purchasing associations for supplies, and 251 service cooperatives for dairy herd improvement, artificial breeding, spraying, trucking, telephone, and electric associations.

A total of 115 co-ops sponsor fairs, farm management associations and general farm interest groups. There are 13 housing and real estate cooperatives, 5 printing and publishing firms, 2 funeral homes, a monument company, a storage cooperative, a body shop, and an industrial development organization.

Wisconsin was second in number and fourth in volume of business with $570 million and 404,500 members. Minnesota exceeded Wisconsin in number of members and California, Minnesota, and Illinois did more dollar volume, according to figures supplied by the U.S. Department of Agriculture.

During the past fiscal year ending July 1, 133 cooperative associations were audited by accountants of the Wisconsin Department of Agriculture. Twenty-six co-ops received assistance in incorporating and 15 were dissolved. Two consolidations were completed and at least five others are now planning mergers.

Besides the cooperatives chartered under chapter 185 of State statutes, the Federal Government charters 21 national farm loan associations and 17 production credit groups. The commissioner of insurance charters 183 township mutual insurance companies and the State banking commission 728 credit unions. These increase the number of all co-ops in the State to 2,133.

Some of the more unusual types of cooperatives include 2 community hospitals, a dry cleaning plant, 7 fur marketing associations, and 21 groups which provide their own water supply for home use or irrigation.

An Unbeatable Presidential Team

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. MASON. Mr. Speaker, on June 18, 1959, I made a 1-minute speech in this House proposing a Nixon-Rockefeller team to represent the Republican Party in the campaign of 1960—DICK NIXON for President and Nelson Rockefeller for Vice President.

I said at that time, by joining the East and West, by joining the two most populous States, by tying the conservative Republicans and the modern Republicans together, by teaming up two very popular and effective votegetters, we would have an unbeatable political team.

Mr. Speaker, evidently that proposal of mine has germinated, has caught on, and is spreading. A letter printed in the Christian Science Monitor on Friday, September 4, 1959, expresses the same thought that I expressed in my speech of June 18, 1959. However, it was expressed in different words. As a part of these remarks, therefore, and to reemphasize the proposal, I offer the following letter from the Christian Science Monitor:

A NIXON-ROCKEFELLER TICKET

To the CHRISTIAN SCIENCE MONITOR:

While our Republican leaders are jockeying for strong nominees they know they will need to win the 1960 election, let us Republicans not lose sight of the fact that we have a young, experienced, and capable man in our Vice President, RICHARD NIXON. Some seem ready to throw him aside for the popularity gained recently by Gov. Nelson Rockefeller. We have two good men here, each with his own capabilities.

Mr. Rockefeller, with less than a year as Governor, has undoubtedly demonstrated his abilities to forthrightly tackle any problem in debate, gain the people's confidence and win votes. He has shown a conservative approach to budget balancing. From a previous administration he gained invaluable experience in the South American trouble spots which would make him a valuable addition to the new administration as South America is presenting increasingly complex problems.

Mr. NIXON also has shown his ability to meet opposition in debate or discussion and frankly win the confidence of the people. He has exhibited this ability in his many travels and has well represented us abroad. He has been able to grasp the problems he saw and return with valuable information as well as suggestions to the President. This has been of considerable worth to him in preparing him for the office he may hold. His trip to Russia has strikingly shown this.

Vice President NIXON's experiences in his present office have been larger in scope than any previous holder of that position. In carrying out the duties, so largely expanded for him by this administration, he has become sharpened to meet the requirements of the office of President. During the President's illness he carried on admirably even in the eyes of some of the opposition. He has shown that he has the capabilities to attract not only a national but an international following.

The administration has wisely built up the job of Vice President of the United States from what it previously was. In this changing age the President's job is too big for one man. A young, vibrant Vice President and the advice of older men with their valuable experience are a necessity for a modern administration.

Here we, as Republicans, have two men with all the qualities needed to win this election. The two combined could well gain the 18 to 22 percent of the Democratic votes needed. If warm personalities and graciousness mean anything in an election, they both are excellent votegetters on this score. Their sound health is also going to be a factor in the coming campaign. Their large electoral vote combination is most favorable.

Therefore why don't we, in view of the fact that this is going to be a hard and bitter fight, run Mr. NIXON for President on the same ticket with Mr. Rockefeller? In 4 to 8 years Mr. Rockefeller should be in a fine position to run for President and win. This is just commonsense.

HAL KORMAN.

OCEANSIDE, LONG ISLAND, N.Y.

Success of Oregon Centennial Exposition and Trade Fair

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. NEUBERGER. Mr. President, the notable success of the Oregon Centennial Exposition and Trade Fair has been heralded in an editorial published in the Oregonian of September 3, 1959. In my opinion, major credit for this outstanding achievement, accomplished with relatively limited financial resources, should go to Anthony Brandenthaler, chairman of the Oregon Centennial Commission, and to his able associates. Mr. President, I ask unanimous consent that the editorial, entitled "Encore," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ENCORE

Whatever the final box office statistics at the centennial exposition, the centennial year in Oregon will have been a success. For the observance of the passing of 100 years of statehood has been the occasion for a number of events that should and could be repeated.

The International Trade Fair held in conjunction with the exposition has been an unqualified success, both during the phase of catering to buyers and that in which it has been open to the public generally. A similar fair annually would be supported by the Portland metropolitan area.

The city has had and is having a taste of opera, such as has been available here all too seldom. A committee has been formed to organize permanent sponsorship for the New Savoy Opera Co. of Reed College, which last month delighted full houses at the Oriental Theater through a 4-week run. The company's performances of Gilbert and Sullivan operas, if scheduled annually, could become as celebrated as Ashland's justly famous Shakespearean festival.

And this week Portland is host to the San Francisco Opera Co., considered by many persons to be the best in America. The company's appearance here precedes the opening of the opera season in San Francisco, which annually attracts many Northwest residents. Let it be hoped that the response at the box office here will be sufficient to convince the San Francisco Opera Co. that an annual preseason visit to Portland will be mutually worthwhile.

Meanwhile, there are but two more weeks to see the exposition, along with its big, new attraction, "The Oregon Story." Those who have viewed the rehearsals for the elaborate arena event tell us that it, too, is worthy of occasional repetition. The home folks who haven't yet visited the exposition should mark their calendar right now. For although certain features may be revived, Portland will not soon again have such a big show for so little.

Pennsylvania Secretary of Commerce William R. Davlin Honored by Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Hazleton (Pa.) Plain Speaker on Friday, September 4, 1959, reporting the honor bestowed upon Secretary Davlin by the VFW at its nation convention recently concluded in Los Angeles:

DAVLIN CITED BY VFW FOR CREATING NEW JOBS

LOS ANGELES.—The creation of new jobs for veterans and others—a project dear to the

heart of the distressed areas in Pennsylvania—was the basis for an award to a Cabinet officer of that commonwealth by the Veterans of Foreign Wars in a ceremony held here today.

The VFW's Gold Medal of Merit and a citation were presented to Pennsylvania Commerce Secretary William R. Davlin by newly elected Commander in Chief Louis G. Feldmann, of Hazleton.

It was Feldman's first official presentation after his election to the top post of the 1,300,000-strong organizations of overseas veterans holding its 60th national convention here.

Davlin was cited for "his pioneer program in establishing an industrial development partnership between State government, local committees of community leaders, and private enterprise to create more jobs for veterans."

TWENTY THOUSAND NEW JOBS

Pennsylvania's program of providing loans for community-sponsored industrial development groups which Davlin pioneered has been a major factor in creating nearly 20,000 new jobs in the State's critical employment areas in the past 3 years. The program is being copied closely by many other States.

The new VFW commander in chief also is a prominent figure in industrial development at the community level.

He is one of the organizers and is an official of Can-do which has brought almost 1,000 new jobs for men to the Hazelton area in a do-it-yourself project.

Can-do has raised over a million and a half dollars by selling bonds. Funds are combined with loans from the State and local bank financing to erect new factory buildings at Valmont Industrial Park.

This program has won Hazleton a Freedom's Foundation award and has pumped new lifeblood into a community which was on the verge of becoming a ghost town when World War II had ended and the veterans returned to find few, if any, jobs available.

In making the presentation to Davlin, Feldmann said "your efforts represent the ultimate in cooperation and demonstrate how Government can work hand-in-hand with veteran and community groups to their mutual benefit."

Special Labor Day Message

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. WILLIAMS of New Jersey. Mr. President, it seems to me that this Labor Day, 1959, has particular meaning. It follows closely a time of wrangling and emotionalism which has brought about legislation designed to curb misuse of power in the union movement. It comes, too, at a time when we find over 500,000 of our Nation's labor force idle by a strike against 12 major steel firms.

Does this imply a "suppression of the masses" or an example of the "downtrodden American workers" as Mr. Khrushchev likes to refer to the great mass of America's laboring force? I think not. I think it is once again a striking example of freemen in a free society, free to bargain for their individual rights and free to undertake reforms where needed.

It will be rather difficult I feel for Mr. Khrushchev to comprehend these things when he visits our country. I wonder if he will understand that Americans have fought for the right to disagree, to voice their opinion at the bargaining table, to engage in violent controversy. Americans have been ever thus. But—eventually—in the typical American fashion, differences will be resolved. Not perfectly, nor permanently, of course. But in the true spirt of a democracy in action.

So as Mr. Khrushchev's visit approaches, we would like to tell him on this Labor Day, of the great strides that have been made for the workingman in terms of economic prosperity and social justice since 1882. We would like to tell him that it is these 17 million workers in our country's trade unions who have contributed so much to the Nation's industrial progress. And while they may fiercely argue their point of view, they treasure above all their right to argue.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article from the Sunday Home News, New Brunswick, N.J., of September 6, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPECIAL LABOR DAY MESSAGE

DEAR MR. KHRUSHCHEV: Inasmuch as you are soon to be the guest of this country, and inasmuch as the "downtrodden American worker" seems to be one of your pet concerns, it might be fitting on this holiday we call Labor Day to speak directly and frankly to you about certain misconceptions you hold.

Let's warn you right off that during your visit here you may see some factories closed—not because of any holiday—and some picket lines, and maybe even some violence. But be aware that strikes are authorized by the workers themselves, who have the freedom to use this weapon if bargaining talks break down.

(We know there are no strikes in Russia, but is it because everything is just hunky-dory over there, or is it possibly because workers are unable to strike?)

And be aware that, even should U.S. labor disputes reach the strike stage, bargaining is still going on behind the scenes and differences will eventually be settled by discussion and compromise. Not perfectly, not permanently, not without hardship.

But when have freemen been perfect? Freemen, we repeat.

Each settlement, we hope, means one little step forward. We humbly claim to have taken quite a few steps in the direction of economic prosperity and social justice since our country's first strike of Philadelphia printers in 1786, since the first union of cobblers was organized in 1792, since our first Labor Day in 1882.

Yes, Mr. Khrushchev, there's been a lot of wrangling going on in Washington over labor reform legislation, following exposure of corruption in both labor and management. But it's a question of weeding out the rotten apples without ruining a barrel of pretty good fruit.

It is not, as your crude propagandists proclaim, another instance of the suppression of the working masses.

We have the same kind of hassles when it comes to changing the ground rules of college football. We may argue like blazes and call each other names, but we're all interested in improving the game.

Many other countries also celebrate a Labor Day, on May 1. Workers take the day off—without pay—to march in protest against their conditions. And police are out in force to see that they do not protest too much.

We know that May 1 is a holiday for workers in your country, too. They gather in huge throngs to watch the parade of Soviet military might and to give thanks to Big Brother for being so good to them.

Here, you'll probably find most of us Americans off fishing or enjoying the quiet—or noise—of our backyards. If you think that shows a lack of unity or patriotism, just try telling us that.

Above all, Mr. Khrushchev, remember when you get here that the Labor Day we just celebrated was instituted by workingmen to honor the workingman, not a regime or an ideology. Workers won this country and its privileges by the sweat of their brows. And workers of all kinds—blue-collar, white-collar, laborers, thinkers—work to keep this democracy going.

If you think you've got a better system to offer, you're welcome to believe it. But please, Mr. Khrushchev, do not take it as a sign of disrespect if we yawn in your face.

Sincerely,

AN AMERICAN WORKER.

Making Better Use of Missouri River Water for Irrigation, Power, Navigation

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, September 4, 1959

Mr. McGOVERN. Mr. Speaker, a most able South Dakota editor, Mr. John Sittner of the Lake Preston Times, has written a thoughtful editorial calling for a more efficient use of the great water resources of the Missouri Basin. I am pleased that Mr. Sittner has strongly endorsed my resolution which was recently approved by the House Public Works Committee authorizing the Army Engineers to survey slack-water navigation feasibility on the Missouri. Mr. Sittner's editorial in the September 3, 1959, issue of the Lake Preston Times, follows:

LET'S GET THE MOST FROM IT

Expanding industry, expanding population and an ever-higher standard of living are putting an ever-increasing strain on one of the Nation's basic natural resources—water.

And the drought in South Dakota this year is making us realize as never before the necessity for using to the ultimate the water resource offered by the Missouri River, for irrigation as well as for power, flood control, and recreational opportunities the development in bringing.

So it is with a great deal of interest that we should view efforts of our congressional delegation to secure for our State the fullest development of the Missouri River basin.

Fullest development means more than appropriations for dams and irrigation projects, and quite significant is the current interest in developing slack-water navigation, a project in behalf of which Representative GEORGE MCGOVERN appeared before a House subcommittee last week.

This basic problem, in short, is this: South Dakota's needs require a large reserve of water for release for power generation during the winter months, and our future irrigation needs will also require a large reserve of water.

But what's happening now? Much of the water is being released during summer months for maintaining free-flow navigation on the Missouri, lowering the reservoir levels and reducing the amount available for present power generation and future irrigation.

McGOVERN has asked the committee to authorize a Corps of Engineers' study of feasibility of slack-water navigation—the establishment of a series of low-head dams downstream that would maintain navigable levels without expenditure of so much water.

Such a program would seem to make good sense, for it would use the same water many more times than we're using it now. Right now the Nation is using South Dakota rainfall just a few times—where it falls, to generate power at Randall and Oahe, and to provide navigation. Install a slack-water navigation system, and you can use it to better advantage—where it falls, to generate much more power and at a better time of the year at Randall and Oahe. In addition, we would have a ready reserve for irrigation purposes in the future; also, navigation would be improved because you wouldn't have current to contend with in a slack-water system, and, also, the low-head dam would provide additional power downstream.

Actually, there's nothing new about slack-water navigation. We have it on the Tennessee and Ohio Rivers, as McGOVERN pointed out to the subcommittee. And the entire Nation has benefited from the intensive development of those river systems, particularly the Tennessee, where TVA has helped a backward part of the Nation increase tremendously its share of the national productivity.

In Europe, Asia, and other parts of the world they've learned how to use the same water over and over for multiple uses, for they haven't had an unlimited supply of natural resources to waste.

And in this country we should realize we no longer have those unlimited resources we bragged about so much in the past. So far as water is concerned, we're limited, we're actually hurting, right now.

It's high time we began getting the maximum benefit from our water, to realize the full potential of the great Missouri River development.

Girl, 10, Revives 2-Year-Old Sister

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. McCARTHY. Mr. President, the heroism of the young is well known to readers of history and also of the daily newspapers, but rarely have I encountered a more compelling example of youthful courage and intelligence than in the case of 10-year-old Linda Kay Gibson, of Maplewood, in suburban St. Paul, Minn.

Last Thursday, Linda Kay saved the life of her 2-year-old sister, who had stopped breathing after a convulsion, by applying oral respiration until the smaller child began to breathe again.

Mr. President, I ask unanimous consent that the Washington Evening Star's account of Linda Kay's heroism be printed in the Appendix of the RECORD.

There being no opposition, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Sept. 5, 1959]

GIRL, 10, REVIVES 2-YEAR-OLD SISTER WITH MOUTH-TO-MOUTH RESPIRATION

ST. PAUL, MINN., September 5.—"After all, Joyce is the only baby sister I've got; I simply had to do something."

Linda Kay Gibson, 10, had only this simple explanation for the mouth-to-mouth respiration that police and family doctor credited with breathing life back into the tiny body of her 2-year-old sister.

Joyce, ill with a high fever, suddenly went limp and stopped breathing after a convulsion in the family's suburban Maplewood home Thursday night.

"Right away, mother was frantic, on the telephone trying to get the doctor and the police—and, well, I just had to do something," Linda Kay said matter of factly yesterday.

What she did was to start forcing her own breath into the baby's mouth. She continued for about 5 or 10 minutes.

"Once in a while Joyce would sort of gasp a little and stop breathing again—I was half crying, but I kept at it," said Linda Kay.

When police and the doctor did arrive, Joyce was breathing regularly again.

"They said I did good," Linda Kay happily reported.

"I remembered reading in the newspaper how one kid saved another kid's life by breathing in his mouth," she continued. "So I thought it might work with Joyce.

"To get more air I ran outside with her in my arms and then stood and breathed in her mouth. I shook her a little and called to her—and it worked."

Her mother, Mrs. Eugene Gibson, 33, said that even after the baby's breath was normal, Linda Kay insisted on staying up most of the night watching Joyce.

The doctor said the lung congestion and high fever resulted from an infection. He decided that Joyce did not require hospitalization. He prescribed medication and hot baths.

Linda Kay's father, absent at the time, added his praise for her efforts when he got home. Linda Kay goes into the fifth grade when school opens here next week. The Gibsons have a third child, James, 8.

Attorney Louis G. Feldmann of Hazleton, Pa., Elected Commander in Chief of Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two news articles which appeared in the Hazleton Plain Speaker, Friday, September 4, 1959, on the election of Attorney Louis G. Feldmann as the new commander in chief of the Veterans of Foreign Wars:

HAZLETON ATTORNEY IS COMMANDER IN CHIEF OF FOREIGN WARS VETS—THUNDEROUS OVATION PUTS FELDMANN IN OFFICE AT CALIFORNIA CONVENTION

(By Dom Antonelli)

LOS ANGELES.—Attorney Louis G. Feldmann of Hazleton today was elected by acclamation as commander in chief of the Veterans of Foreign Wars and installed in that office amidst colorful pomp and pageantry of military color guards and veterans' ritual.

When Feldmann's name was posted with the nominations and a vote was asked for by outgoing Comdr. John Mahan, Montana, the more than 1,500 delegates who jammed the beautiful Pacific ballroom of the Hotel Statler-Hilton in Los Angeles, shouted their unanimous vote for Feldmann.

Then Julian Dickinson, adjutant of the VFW, declared the Hazleton attorney was duly elected commander in chief.

STANDING OVATION

Immediately as the delegates accorded him a standing ovation, Feldmann and his wife, Ann, were escorted down the aisle to the rostrum by the VFW master sergeant at arms staff, including Assistant Sergeant at Arms Frank Pataki, of the Hazleton detail of State police.

Honorary escorts for Feldmann during the procession to the rostrum were Gen. Graves B. Erskine, U.S. Marine Corps, retired; and Brig. Gen. Don Hittle, U.S. Marine Corps. They were led by the Marine Corps color guard in dress blue uniforms. Following was a Marine Corps Drum and Bugle Corps from Camp Pendleton, Calif., which played the Marine Corps hymn as the ex-marine sergeant from Hazleton was installed.

Others in the procession were led by cheering members of the Pennsylvania delegation carrying their State banner and followed by delegates from the other States including Alaska and Hawaii.

Assistant Sergeant at Arms Pataki was accorded the honor of escorting Feldmann and his wife, their nephew, Peter Fagan, and niece, Judy McKernan to the place of honor on the ballroom stage while television cameras whirred and flashbulbs popped.

OUTLINE PLATFORM

In his acceptance speech, Feldmann said that the theme of his administration for the VFW would be progress, responsibility, peace, and work for victory.

He explained that veterans must realize that they have to work in peacetime just as hard as they fought in wartime for those things which they cherish.

He continued that the approach to the various problems must be realistic and positive. Among those projects he plans are establishment of a committee to examine the ever-growing problem of facilities in veteran's hospitals, also to establish programs and to continue those now in effect for youth activities such as baseball and other sports, Boy Scout work and Americanism programs.

HITS DELINQUENCY

Speaking of the veteran's responsibility on community problems, he emphasized that juvenile delinquency needs immediate attention, "It is a responsibility of everyone in this room to fight this community blight. Men who know the horrors of war must do their utmost to stamp out this cancerous menace."

Feldmann added the VFW will continue the people-to-people program which he originated and hoped to build a new village for Korean war victims under the very guns of the Communists.

He said this year the VFW will take a leading role in the fight against international communism, adding that "we must be ever vigilant against those Communists who masquerade as Americans."

SILENT, CIVIL

Speaking of the controversial visit to this country planned for Soviet boss Nikita Khrushchev, the new commander-in-chief said to the delegates "let us be silent, but civil. Let us demonstrate that the VFW backs the President of the United States and at the same time let us show the Soviet leader that we Americans have a freedom to worship as we please by attending service in our own place of worship during his visit to this country."

He concluded with the assertion that he will work for victory, total victory in peace as we fought for it in war.

As commander in chief of the VFW, Feldmann will lead an organization of over 1,300,000 members with 10,000 post and representing four major conflicts. He is the third marine veteran to assume the top national office in the 60 years of the organization.

Other officers elected were: Senior Vice Commander Ted C. Connell, Killeen, Tex., and Junior Vice Commander Robert E. Hansen, St. Paul Minn.

NOMINATES FELDMANN

Making the nomination of Feldmann for commander in chief at the 60th annual VFW convention Thursday afternoon was former Gov. Ed Arn of Kansas. Arn is a justice of the Kansas Supreme Court.

Seconding the nomination was Gen. Graves B. Erskine, USMC-retired, who is now an assistant to the Secretary of Defense.

Judge Arn was introduced by John Piparato, Easton, Pa., commander of the VFW's Pennsylvania department.

PRAISES HAZLETONIAN

General Erskine, who was Feldmann's commanding general during World War II, said of the ex-Marine sergeant that "Lou Feldmann's long and illustrious record is indicative of what can be expected of him as commander in chief. I am confident he will fulfill the many responsibilities in a commendable manner and with great dignity."

HIGH SIGNIFICANCE

The stature of the post to which Feldmann has been elected has grown to a point where it is becoming increasingly significant at two levels—international and community.

As head of the 1,200,000-strong organization which has over 10,000 posts in the United States and territories, Feldmann will be a spokesman for an organization which uses its cumulative strength—based firmly in the grassroots of hometown America to establish, support and guide projects in the field of veterans' welfare, charity, community service, and participation in governmental affairs. The VFW represents the new look, typical of our veterans' groups which today exercise a responsible mandate from their members to speak out on matters of importance in the fields of national defense, foreign policy, education, welfare, etc.

And on the community of the man whom the VFW members select as their commander in chief a spotlight of publicity is focused during his tenure, since it is obvious that a man who can reach that pinnacle must have a background of service to his own community. The eyes of those who recognize the immensities of the VFW also will focus on his commander's hometown to see just what kind of a place produced such a leader.

BREAK FOR HAZLETON

For Greater Hazleton, this can prove to be one of its bigger breaks in this decade which saw the community fight up out of its economic doldrums and win renown with CAN-DO and other projects.

Such national and international publicity already manifested at the 60th national convention in Los Angeles will be a great boon for the continued industrial development progress of Hazleton.

Indicative of the kind of attention the VFW commandership attracts is a partial list of the prominent people who have been guests of and callers on the Feldmanns at their suite here in the Statler Hilton Hotel.

The guest list ranged from industrialists like Walter O. "Spike" Briggs, owner of Detroit Lions, to four-star generals such as G. B. Erskine, assistant to the Secretary of Defense and a former commanding general of the U.S. Marine Corps.

Others were C. D. Jackson, executive vice president of Time and Life, Robert Christenberry, postmaster of New York City and former state boxing commissioner, Jess Gorkin, editor, and Fred Blumenthal, Washington editor, of Parade magazine, William R. Davlin, Pennsylvania Commerce Secretary, Hugh O'Brien, the Wyatt Erp on TV, retired Gen. Pat Carney, former Congressman from New York, Maj. Gen. Robert Quinn, Chief of Army Information Services, Timothy Murphy, Boston financier, Sumner Whittier, director of Veterans' Administration.

Prominent jurists such as Edward Arn, ex-Governor of Kansas, justice of Kansas Supreme Court, and Judge John Dougherty, chief justice of Cook County, Chicago, also were guests with many other high ranking public and military officials.

Assisting Feldmann and his wife Ann, as hosts for the reception were Dr. and Mrs. Leo Corazza, Freeland; Dr. Michael Matsko, McAdoo; Mary Capparell, Betty McKernan, George Chisnell, Dom Antonelli, Victor C. Diehm, Mr. and Mrs. Robert Sacco, Trooper Frank Pataki, Judy McKernan, and Peter Fagan.

NEW VFW COMMANDER ATTENDED NIGHT SCHOOL, WORKED FOR LAW DEGREE

A Hazleton attorney who once worked as a waiter, cook, chauffeur and hosiery salesman is the new national commander of the Veterans of Foreign Wars.

Attorney Louis G. Feldmann was elevated to the post today at the national VFW convention in Los Angeles just 5 days before his 50th birthday. His election to the top VFW post in the United States culminates an active career which has won him accolades from veterans and civic groups.

WAS DISTRICT ATTORNEY

His career has covered civic, industrial development, veteran and political fields and he served as Luzerne County district attorney from 1952 to 1956.

He is presently one of the key figures in the affairs of CAN-DO, the organization which is bringing new industry to this region.

NATIVE OF WILKES-BARRE

He was born in Wilkes-Barre, son of John T. and Jessica (Cole) Feldmann. The family resided in Wilkes-Barre, Forty Fort, and Kingston. He lived in Kingston until his graduation from high school.

After graduation, he went to work in the Allentown area selling construction equipment. He then secured a job in Chester. During his high school days he held many jobs, including newsboy and office boy.

In 1929 he entered night school at the University of Pennsylvania and worked days in a variety of jobs. In 1931 he secured a Coxe Scholarship and entered the university's day school. Following his graduation he did graduate work at the university on a graduate scholarship.

Feldmann taught for several months at the Penn Treaty High School in the first adult educational program in the United States.

HELD OPA POSTS

From 1933 to 1942 he was employed as stores inspector, accountant and special investigator for the Pennsylvania Liquor Control Board. In 1942 he became associated with the Office of Price Administration at Pittsburgh where he was chief investigator.

In 1943 he graduated from the Duquesne University Law School, where he attended night school.

He is married to the former Anne R. McKernan, of Hazleton, and is a member of St. Gabriel's Church.

SERVED IN MARINE CORPS

Feldmann's military career began on June 9, 1943, as he enlisted as a private in the Marine Corps. In 1945 he went overseas where he served on the Mariana Islands and Guam. He was discharged in November 1945 as a sergeant, having continuously refused a commission.

A month after returning to civilian life he joined Drake-Wear Post 589 in Hazleton. The following year he was elected post commander. The same year he was elected judge advocate of the Anthracite Counties Council, VFW, and in 1947 became the council's commander.

He also served as judge advocate for the 11th Pennsylvania District, VFW, judge advocate for the Department of Pennsylvania, VFW, Department of Pennsylvania junior vice commander, senior vice commander, and as department commander in 1950. He served as president of the Joint Veterans' Council of Pennsylvania, which includes all the major veterans organizations, chairman of the Loyalty Day Committee of the Pennsylvania Department, and chairman of the VFW National Loyalty Day Committee.

RECEIVED CITATIONS

In 1948 he received the Greater Hazleton Veterans Association award "in recognition of his service and devotion to the veterans of the region."

Other awards:

Wilkes-Barre Lions Club, Red Cross citation, Unico National, Hazleton Chapter No. 1, Veterans of Foreign Wars national citation for Americanism work and Loyalty Day, and an honorary life membership in the Hazleton Junior Chamber of Commerce.

CIVIC ACTIVITIES

His civic activities have included chairman of the Red Cross Fund campaign, cochairman of General Solicitation of Industrial Development Drive (Electric Auto-Lite), chairman of Civic Improvement Committee of Hazleton Chamber of Commerce, member of the President's Mid-Century White House Conference on Children and Youth, member of the advisory board of the Salvation Army, member of the Catholic Charities, member of the Heart Association, member of the Hazleton Educational Council, member of State Veterans Reemployment Rights Commission, president of Joint State Veterans Council, past judge advocate of Marine Corps League, Department of Pennsylvania, member of the American Legion, member of the Catholic War Veterans, and national Americanism chairman of the VFW.

He is also a member of the Lower Luzerne County Bar Association, Wilkes-Barre Law and Library Association, Pennsylvania Bar Association, American Bar Association, American Judicature Society, and Commercial Law League.

An Open Letter to Khrushchev by Jess Gorkin, Editor of Parade Magazine

---

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, September 7, 1959

Mr. NEUBERGER. Mr. President, I was very much impressed with an article entitled "An Open Letter to Nikita

Khrushchev," which was contributed to the September 6, 1959, issue of Parade magazine by the editor of Parade, Mr. Jess Gorkin.

Therefore, I ask unanimous consent that Mr. Gorkin's article from Parade, which was published in the September 6 issue of the Washington Post and Times Herld, be printed in the Appendix of the RECORD for the information of my colleagues, especially in view of the debate in the Senate during recent days over Mr. Khrushchev's forthcoming visit to the United States as the invited guest of President Eisenhower.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN OPEN LETTER TO NIKITA KHRUSHCHEV

(By Jess Gorkin)

All Americans, even those who did not welcome the invitation, are interested in your coming visit. We all want you to see us as we really are, to test for yourself the sinews of freedom.

Communism has created a subterranean world of half-light, which apparently has distorted your image of us. Your speeches are burdened with misconceptions that we hope this trip will dispel.

You have repeatedly declared that "the impoverishment of the proletariat is the law of capitalism." We hope you will look around as you traverse our land. Notice the automobiles that choke our highways, the television antennas sprouting from our housetops, the stores swarming with shoppers. Are these the fruits of poverty?

If you doubt that all classes partake of our prosperity, you should break away from protocol and mingle with our common people. Visit our neighborhoods, inspect our homes, judge for yourself our living standard. Since most Americans keep telephones, you can open any telephone directory, select a name at random and visit his home. You will find he lives better than his counterpart anywhere else in the world.

You will be unable to avoid the newspapers, billboards, and radio-TV commercials that move the goods produced under capitalism. Such saturation advertising obviously is directed at a mass market. From this you can see how capitalism depends upon widespread distribution of our national wealth.

You will meet millionaires here. Ask them about their beginnings. You will be surprised how many started as humble workers. Any American can dream of becoming President or a millionaire for there is no limit to individual progress.

You may conclude that the dollar decides our fate, but it is merely the reward for work and skill. You may accuse us of being a nation of comfort seekers. True, overindulgence is a national failing. We are constantly searching for ways to produce better goods in less time at cheaper cost, to make life more enjoyable.

"The days of capitalism are numbered," you have said. "Just as cells are constantly renewed in a living organism, so in society do old forms die and new, more progressive and advanced ones are born. Such a new form is the Communist society." The American system was born from the bloody triumph of our forefathers over despotism. Out of the wilderness they wrested a mighty civilization. Since those stirring days, we have met changing conditions with new ideas. Our economic growth has been matched by political and social progress. Now we face the future with boldness and imagination.

You have been obliged to introduce economic incentives into your own society. These are capitalistic roots, Mr. Khrushchev, but don't be afraid. You can find out what it's like to be a capitalist yourself by purchasing a few shares in one of our great corporations. Learn how your investment can earn dividends; attend a stockholders' meeting; read the company reports mailed to you in Moscow.

Our officials may try to steer you from labor strife. Don't let them. Find out where a labor strike is taking place; insist upon going to the scene. Then meet with management; talk with the workers; sit down at the bargaining table. You will discover that labor strikes are not expressions of Marxism or class warfare. The twin pedestals upon which our labor-management structure rests are the right of workers to earn good pay and the right of management to make a fair profit.

Our success depends upon peace, not war, as you have so often charged. It is not true that "war is wanted by the big monopolists who make profits from the armaments race." Any straight-talking industrialist will tell you that, in an age of intercontinental missiles and H-bombs, factories can be devastated. And without factories, there are no profits.

Although our economy is geared for peace, we have not ignored the necessity for military preparedness. You will find little justification for your boast that you "could crush the United States" with your bombs and missiles. We hope you see enough of our military strength to inject sober realism into future Kremlin assessments.

You have been scornful of our two-party system of government, asserting that both political parties represent the same vested interests. We suggest you visit the Democratic and Republican National Headquarters, and hear what the rival leaders say about each other. For an insight how our Government carries out the will of the people, stop by any Senator's office and ask to read the mail from his constituents.

Contrary to your charge that our papers print only "untruths and misinformation," you will find that the press is totally free of any capitalistic censorship or Government interference. Read for yourself the criticism of government, conflicting views, and factual reporting found in our newspapers.

We don't expect to convert you to capitalism. But we hope you will see enough to judge the mood, temper, and ability of our people more accurately in the future. Our stake in peace is far too great for us to desire war or to capitulate if war is forced upon us.

We do not ignore the hand of friendship. At various times in our history, the British, Spanish, Mexicans, Germans, Italians, and Japanese have been our mortal enemies. Now they are our friends. Our relations with the Soviet Union could also improve if both sides worked to make it possible.

My True Security

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. OLIVER. Mr. Speaker, in Congress, we often discuss the necessity for preserving our national security from external threats; however, the basic factor which has made our country great, that of personal security, is frequently ignored. I refer to personal security developed through initiative, self-reliance, and courage, the qualities that have enabled the United States to progress so effectively. The future of our country will depend upon our national ability to complement the results achieved individually with effective action exercised by our Federal Government.

Miss Cynthia Peters, Maine's representative in the junior chamber of commerce's "My True Security" contest, has effectively captured the concept of personal security and its importance in our American way of life. In these days when Americans too often look for security above all else, Miss Peters points out that initiative and self-reliance are prerequisites for individual progress. It follows that these same qualities are prerequisites for national success as well.

Maine people, generally, are genuinely proud of Cynthia's contribution and I, particularly, representing her congressional district, deem it a great privilege to recognize her contribution by making her essay a part of the permanent RECORD of Congress:

MY TRUE SECURITY

(By Cynthia Peters)

"His brow is wet with honest sweat,
He earns whate'er he can,
And looks the whole world in the face,
For he owes not any man." [1]

From the pen of Henry Wadsworth Longfellow flowed these well-known but powerful words. Have they any value or significance today?

When these lines were written, they undoubtedly expressed his feelings about life and the single man. His village blacksmith was an individual relying upon himself alone. He was dependent upon his own efforts and powers; he had complete confidence in his own efficiency and initiative and self-reliance.

He achieved much, great and admirable, from his self-reliance—self-satisfaction, gratification, self-respect; yet not in an instant, not in an hour, not even in a year. He labored diligently; he built fortitude and character; he established standards and foundations; he applied his energy and displayed it in the initiation of his actions.

Although he "owed not any man," somewhere along the path of his youth, the village blacksmith must have been dependent upon someone other than himself. Perhaps, his mother or his father or his nearby friend taught him about life and its enormity; about people, friends, or enemies; about his duty to himself and to mankind. There, somewhere, he was taught and he learned and he applied his knowledge and skill, building for himself, a sound security.

We, too, you and I, must find personal security. Yet without the accompaniment of initiative and self-reliance, it can never be attained. To be personally secure, one must believe in his own thoughts and principles and trust that what is true for him is true for all people. Security is inevitable when one relies upon the integrity of his own mind and upon the safety of his own methods. One must stand firmly implanted in his self-trust and escape from all imitation and mockery. Be the man without the crutch, support yourself.

Self-reliance builds the leader, not the follower; initiative leads to success, not to failure. Nothing can bring you or me peace and security but the possession of self-reliance and the spontaneous drive of initiative.

---

[1] "Village Blacksmith," Henry Wadsworth Longfellow.

"It is easy in the world to live after the world's opinion; it is easy in solitude to live after our own; but the great man is he who, in the midst of the crowd, keeps with perfect sweetness the independence of solitude."[2] With these immortal words of Emerson ringing in our ears, let us lay our firm foundations for a safe, but powerful, true security.

The Democrats and the President's Veto

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, September 7, 1959

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in Appendix of the RECORD an excellent editorial from the Arkansas Gazette, entitled "The Democrats and the President's Veto."

I endorse the editorial's view that the issue of party identity and responsibility is the gravest threat facing our democratic institutions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, Sept. 4, 1959]

THE DEMOCRATS AND THE PRESIDENT'S VETO

It has been remarked, by us, and now by others, that the 86th Congress "belongs," properly speaking, to House Republican Leader CHARLES A. HALLECK, of Indiana. Although like thinkers in his party were mowed down in windrows in the 1958 congressional elections, and although Mr. HALLECK himself barely survived, it is the minority spokesman from Indiana who has most effectively given his impress to this Congress, and who may well be remembered longest for it.

However, if it is not too late to switch nominations we'd like to put forward the name of Representative A. S. HERLONG, the Florida Democrat, as a symbol of the 86th Congress. It was A. S. HERLONG who first voted to override President Eisenhower's veto of the rivers and harbors bill—and then switched his vote to "present," thereby insuring that the veto would be sustained. This, in our view, has become painfully representative of the present-day American political scene and of the Congress, in particular.

The touted Democratic 86th Congress has been present, but that is about all.

Looking at the last-minute changes of signals which upheld the Presidential veto of the water projects bill by a vote of 138 to 274 (with 1 more vote needed to override), it is difficult to escape the conclusion that a number of Democratic Members of the House were as interested as President Eisenhower himself in preserving his record of never having had a veto overturned. Why this should be so is a question that we will leave to the Democratic Members concerned and to the party's leadership in the House

Representative HERLONG's nonvote on a critical party issue was, then, a symptom rather than a cause.

Our objections to the Landrum-Griffin bill, for example, have not been so much over its contents as against the manner of its passage.

There was a time, and not so long ago, when if a President wanted a bill such as Landrum-Griffin, he would have campaigned for it, proposed it formally in an early state of the Union message, and fought for its passage, getting the votes where he could, but concentrating his fight along party lines. He would not have waited until the final months of his final term and then jumped abroad a hybrid concoction brought forth by a hydra-headed but essentially formless bipartisan coalition.

The temptation now is great to support Senator MCCLELLAN, of Arkansas, and Senator STENNIS, of Mississippi, in their move to attach a rivers and harbors rider to the foreign aid bill as a retaliatory gesture. But this is what the antiforeign aid Republican leaders in Congress (as distinct from the President) have wanted all along, and there is the fact that the national security might be hurt by such a maneuver. In a similar fashion, Senator KEATING, of New York, charging southern foot dragging on civil rights legislation, has sought to attach a civil rights rider to a peanut acreage bill.

Such circumnavigations of what ought to be separate, straightforward issues might appear to work for a time, but not for the long haul. Even so, the American people, according to a recent Gallup poll, appear rather to like the idea of a Government permanently divided between the two major parties—with the inevitable blurring of major public issues and the consequent difficulty in fixing political responsibility.

It may well be that this issue of party identity and party responsibility is the single gravest threat facing our democratic institutions, larger in the gravity of its implications than civil rights, labor racketeering, national defense, or what-have-you.

Improved Soil Bank

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. SCHWENGEL. Mr. Speaker, the soil bank law passed by Congress has been a distinct advantage to the farm economy and, more important than that, to the economy of our country. Unless our farmers have good soil in which to raise food for our people, they cannot and will not be properly fed. Therefore, it is important for us in the Congress to give attention to the important area and especially as it relates to the conservation. Recently editorials appeared in the Wallaces Farmer and the Des Moines Register which dwell on this subject and I think it would be very worthwhile for my colleagues to read and study. I, therefore, insert them in the RECORD:

[From Wallaces Farmer]

IMPROVED SOIL BANK

The revised conservation reserve program promises to be one of the most efficient farm adjustment plans yet devised.

By efficient, we mean that the tax money being spent will achieve its purpose. It goes to farmers, not to grain warehousemen and processors. And it goes to farmers who definitely help other farmers by reducing or completely ending their farm operation.

USDA figures show that the price support cost of products that would have been grown on retired land would have been at least twice as much as actual conservation reserve costs. Thus the soil bank provided a net Government saving of $317 million this year.

The changes in the reserve for next year eliminate most of the objections that have been raised—without seriously hurting the overall program. City investors can no longer buy run down farms and rent them to the Government.

No longer can people rent State, city, or other publicly owned land and put it in the soil bank. Even the clamor of businessmen that small towns in fringe farming areas would dry up has been met. No more than 25 percent of any one county may now be retired.

The bidding scheme for accepting applications will stretch the available money as far as possible. Only those in best position to retire land are likely to bid low enough to get their application accepted this year.

Only one problem remains—not enough money has been appropriated to retire the land needed to balance production with current demand. A halfway measure won't do the job—it will only draw more criticism from the nonfarm front.

[From the Des Moines Register, Aug. 29, 1959]

SOIL-BANK ADVANTAGES

The Federal soil-bank program has been pretty small-scale so far. It hasn't affected total farm output very much. Only the poor land is placed under contract to keep it out of production. Moreover, farmers often can increase production on the remaining land in crops by use of fertilizer and more intensive methods.

But removing land from crops by renting it to the Government in the soil bank does have some effect in holding production down, in the short run, at least. It thus works in the direction of easing the surplus problem.

Unlike the acreage-allotment program, the soil-bank program removes the land completely from production for 3 to 10 years. Under allotments, farmers often have been able to substitute other crops on the allotted acreage. For example, farmers have been permitted to grow feed crops on land taken out of cotton, corn, and wheat. Often this meant no reduction in total output and may have even increased it by inducing better rotations and better-balanced livestock-feed supplies.

Another advantage of the soil bank is that it tends to save the Government money on price-support operations. The Department of Agriculture has calculated that the conservation reserve program saved the Government about $700 million in price-support costs in the 3 years 1957, 1958, and 1959.

This calculation is based on an estimate of the quantities of price-supported commodities that would have been grown on the land if it had not been in the soil bank. In 1959, the Department estimated, farmers would have grown 143 million bushels of corn on land which is in the soil bank. The price-support costs to the Government for this much corn, including storage, transportation, etc., would have been $249 million.

This cost is based on the cost of acquisition of the corn minus the estimated returns to the Government from domestic and export sales of surpluses. Obviously, this method of figuring costs leaves something to be desired. Not all the supply of a commodity is sold to the Government, even in the case of corn, where all producers are eligible.

Nevertheless, the Department of Agriculture has a point. A given expenditure on the soil bank would not be wholly an addition to total farm-subsidy costs, since it would tend to reduce price-support costs.

Price-support spending often tends to worsen the problem it is intended to alleviate by encouraging farmers to produce more of the price-guaranteed crop. Soil-bank payments tend to encourage farm adjustment—by making it possible for some farm-

ers to reduce farming operations and take off-farm jobs and for others to retire from farming altogether.

Would it not be sensible, therefore, to greatly increase the soil-bank program in the next few years and make it the primary instrument of farm-income support and resource adjustment?

Address by Hon. Ben Arnold, Member, Arizona State Senate, Before 38th Annual Conference, Western Association of State Highway Officials

EXTENSION OF REMARKS
OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, September 7, 1959

Mr. GOLDWATER. Mr. President, the Honorable Ben Arnold, a member of the Arizona State Senate from Pinal County, addressed the 38th annual conference of the Western Association of State Highway Officials at Billings, Mont. on June 24, 1959. I think his speech is most provocative. It is one which all Senators should read, particularly those who come from the Western States, for which the interstate highway bill is creating many problems.

I call attention, for instance, to one statement which Senator Arnold made:

Certainly the superhighways are wonderful devices to serve mankind. But man has other needs—he must find access to and from his neighbor's home, from his farm to market, from his community to the neighboring town.

Throughout his speech, Senator Arnold speaks of the problems with which we in the West are confronted. We in the West have not sought interstate highways, but only better highways to serve our own people.

Mr. President, I ask unanimous consent that Senator Arnold's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HON. BEN ARNOLD, MEMBER, ARIZONA STATE SENATE, FROM PINAL COUNTY, BEFORE THE 38TH ANNUAL CONFERENCE OF THE WESTERN ASSOCIATION STATE HIGHWAY OFFICIALS, BILLINGS, MONT., JUNE 24, 1959

Mr. Chairman, delegates to this 38th annual conference of the Western Association of State Highway Officials, guests, and friends. I am most grateful for this opportunity of discussing with you one of our mutual problems.

It is certainly a privilege and pleasure to be here in Billings, Mont., today, and to experience firsthand the association with you men who are performing one of the most notable tasks of the 20th century. I can think of no assignment more important for the public welfare of these United States than that of building and planning the roadways of tomorrow.

I feel humble indeed to have been invited to this conference and to speak for a few minutes on a subject which I know is of interest to you all.

At the risk of being facetious, I would like to say first off that I wish right now I had the powers of a Houdini and could transfix, for a moment, the picture I make here on this platform. For, with that power, I would hastily put together for myself a montage, if you please, in which I would include Solomon, of course, for his vast wisdom; Cordell Hull, for his great diplomacy, and Lady Justice with her picturesque scales and then, and only then, perhaps I could speak adequately on the subject assigned me: "How can we maintain the confidence of our legislatures?"

A wise man once said that "only the builders are truly in communion with creation." Certainly, you and I can find little satisfaction in our lives beyond that which can be measured by what we have contributed to the total good of our society and the service of our fellow men, and you who have built and maintained our highway system can take pride in your accomplishment.

The very fact that this subject has aroused sufficient concern to be included on the agenda of this meeting would, I suggest, indicate the existence of a serious problem.

This assignment is both a challenge and a responsibility for me but I would be less than honest with you, or with myself, if I refused to squarely face the implications in the subject title assigned to me.

Let me assure you I'm not an expert of any kind. I'm not a professional politician. I operate a business in a small town—a town small enough that my neighbor's needs and problems are communicated to me on a daily basis. And I serve in a State where the population is still relatively small, and all that I have to say to you today is no more than the voice of one man, the thoughts and opinions of Ben Arnold.

No man can rightly claim that his opinions adequately and completely express the opinions or beliefs of any group or any organization. Ben Arnold, a State senator, cannot separate his thinking and his beliefs from those of Ben Arnold, the businessman in a small community. For we are each of us individuals, reflecting in our personalities, and our opinions no more than our own experience.

I would suggest the very title of this talk is ambiguous. How can we, the officials involved in the building of roads and the awarding of road contracts, maintain the confidence of the legislature?

I would submit to you that a member of a legislature in any of your States is not, and must not be, regarded as an individual who, when he sits in the legislative halls, becomes one personality, and when he operates his business or follows his profession in his home community, becomes another personality.

And I would suggest that if there be a problem of maintaining the confidence of the legislature, then that problem is more truly represented in a statement which would not attempt to narrow or confine the field.

Members of the legislature are elected, and if they be good members of the legislature, they will reflect and mirror the opinions and the thinking of their constituents. And this problem, truly defined, is not one of merely maintaining the confidence of the legislature; rather it is a problem of maintaining adequate communication with all of the residents of a State.

Gentlemen, in these days of tremendous progress, these days of tremendous demands on those who govern, confidence is a big and weighty word. It is premised on results and lasts only so long as the results are pleasing to those who seek to use it.

And if such a problem exists, then I would suggest it has its genesis in the prevailing pressure of our times which has, of necessity, in some instances, built a barrier which has prevented adequate communication, which has served to isolate professional thinking in every field.

You highway builders deal with substantial sums of money. You are preoccupied by the technical requirements of your assignment. You are, I suspect, frequently absorbed in your jobs to the exclusion of all other interests. Now the highway construction problems enjoy, in many States, a special type of revenue, and the Federal-aid projects and the Interstate Highway Systems receive considerable financial assistance from the Federal Government. But if there is a State highway engineer in this audience who at this moment doesn't honestly need more money than is currently available, then I would say that gentleman is enjoying a uniquely favorable situation.

Now the interests of the people are not antagonistic to the interests of the highway builders. This statement may cause some of you to raise your eyebrows in disbelief. You may remember a particularly painful session; you may have experienced the bitter community rivalries which enter into highway locations. I sometimes suspect that the members of the Arizona State Legislature spend some of their time feeling like the shuttlecock in a badminton game—batted back and forth by the intense partisanship of residents of rival communities, and the highway commission.

You and I are not so naive as to believe that everyone in our growing areas will ever be completely satisfied with any governmental decision.

But the problem, as I view it, is one of mutual understanding and this will never be achieved unless, and until, there is a mutual trust.

If you and I are arrayed on the opposite sides of a question, and I view you with suspicion, and you regard me with distrust, we have created a situation which can never be resolved.

You people who are engaged in planning and building our highways in your respective states are seeking the kind of confidence which is measured by public acceptance of your official decisions.

You want to be assured that these decisions will, for the most part, be accepted and supported by the people who are elected to represent their fellow citizens in your State legislatures.

All of us, no matter what our station, no matter how humble our occupation, as individuals, are eager for the approbation of our fellow citizens. We are disturbed and concerned when our actions, which we believe to be well motivated, are met with sneering criticism. And let me assure you—you gentlemen have no monopoly on this type of destructive condemnation.

I can tell you for a fact that most men and women elected to public office are constantly subjected to criticism.

In the last 35 years in this land of ours it has become fashionable to be cynical, to suspect and to believe that those who hold public office, either by election or by appointment, are motivated primarily by a desire to feather their own nests.

The professional debunkers have been so successful in their attempts to downgrade American traditions that you and I must realize patriotism is regarded by some people as a corny emotion. The great leaders of this nation, past and present, are constantly subjected to snide criticism—to the well-planned jabs of the know-it-alls who profess to read into very public act an evil motivation.

You and I have inherited this situation, and it will never improve so long as we

merely hold meetings and lament the sadness of our situation.

We can counter with bitter, intemperate criticism in reply. We can dismiss these things as the outbursts of selfish men. We can say the public is dumb or uninformed or apathetic, and let it go at that.

We can enlist with those cynics who profess to recognize a hidden, selfish motive in every act of a governmental agency.

We can promote and develop an open warfare between the Members of the legislature and the administrators of our highways. But this is the course of destruction and ruin.

What, then, is the alternative?

I would suggest that first of all you and I must grant to the other individuals with whom we must deal the same charity of honest motivation which we like to maintain for ourselves.

There will be differences of opinion. But let us not dismiss an honest difference of opinion with the charge that the proponent of the opposite course is guilty of selfish motivation. When questions are asked which seem to imply by their phrasing a suspicion of our actions and our motives, we can resist the natural human reaction to respond in kind, and instead, make a full and frank disclosure of all the factors involved.

Now I know that these decisions which affect the future of your State, the welfare of your people, are never arrived at easily or simply. They don't come down from some Mount Olympus in a neatly packaged form. They should be arrived at after an agony of indecision, after a careful inspection of all the facts, after a weighing of alternative possibilities.

And I would suggest that if we are to maintain the confidence of our fellow men, we must be willing to share with them every fact, every possibility, every alternative, and we must regard their suggestions as an honest attempt to help us solve our problems.

With the development of the Federal Interstate Highway System, many communities in our Western States are threatened with what they believe may be economic ruin as a result of the rerouting of a present highway.

In my State this problem of small city bypass has assumed enormous proportions, and the people involved believe they are fighting for their economic existence. The gas station operator who puts his pumps by the side of the road when there was only a trickle of traffic. The motel operator who built his units in advance of the needs of the traveling public. The small towns whose merchants believe much of their prosperity is dependent upon the highway traffic—I would suggest these people are entitled to share with you all the problems of highway relocation.

These individuals can only look to their legislators, themselves, and to their civic organizations for support. They can't pass the buck as some highway commissions have done, and blame the relocation on the Federal agency. And the members of your legislature who represent these areas would be guilty of extreme bad faith if they allowed the expressions of concern of their communities to go unanswered.

Too often for the design engineer, the area of concern becomes a matter of distance and topography. To the engineer planning a better tomorrow, it is entirely logical to him to select the most direct possible route and it is probably inevitable that in this forward progress some communities will suffer. But when their pleas are ignored, when their requests for a hearing are denied, when their viewpoint is dismissed as merely an expression of selfish interest, then I would suggest there has been opened a breach between the highway builders and the people which will never heal unless and until there is a recognition of mutual interest and a reconciliation of divergent viewpoints which perhaps must inevitably become a compromise.

Perhaps a simple answer to the question you and I are discussing today would be to say that highway commissions and highway departments need better public relations—I have refrained from using this phrase so far because too frequently the term "public relations" merely means the employment of slick techniques to confuse or persuade the other fellow that the decision you have already made is really the right one.

High priced publicity men in an organized campaign of newspaper stories, surrounded by all the trappings of the pageantry of press-agentry, is a paltry substitute for public understanding; and I would submit that what is required to solve this situation is not public relations, but public understanding.

As an elected member of the legislature of my State, I am constantly at the command of my constituents. My first responsibilities are to a certain number of people in a certain geographical area. I must account for my stewardship every day of my life, for as long as I serve in this capacity I belong to these people.

Am I wrong as a representative of these people to repeat the questions they have asked of me when impending decisions regarding highways concern them?

Is it wrong for a State senator or a member of the house of representatives to use his talents and his ability to defend and protect the interests and the welfare of the people who elected him?

Every constituent in my county feels, and justifiably so, that I represent him and his particular interest. Should I fail to do so, I should be remiss in my oath of office.

Does this then postulate a situation which is impossible of solution? I think not. But it is a situation impossible of solution unless there can be mutual trust, mutual understanding, and a mutual willingness to consider the other fellow's point of view and to effect a compromise which will provide the greatest good for the greatest number, and do the least injury to the citizens who are adversely affected.

In the past several years, the interest and the publicity in the Interstate Highway System has, in a large measure, removed primary and secondary road projects from the front pages of the local newspapers.

Certainly the superhighways are wonderful devices to serve mankind. But man has other needs—he must find access to and from his neighbor's home, from his farm to market, from his community to the neighboring town.

Does it then seem so strange that men and women whose first concern may involve these primary and secondary roads should feel their interest is being neglected?

Let me make it clear—I am not accusing you gentlemen of neglecting this primary and secondary road interest, but I am saying that the public emphasis on the superhighway has operated in such a way as to create the impression in many areas of a great lack of concern for the primary and secondary road users.

Everywhere in our world today individual liberty is diminishing. Freedom is under constant assault. The concentration of power constantly operates against the dignity of man.

The very bigness of some of our projects defies comprehension. Certainly no highway engineer has time to visit with every citizen.

Certainly no highway commission could find the hours to discuss and debate every decision with all of the individual citizens who express an interest in highway building.

As our highway departments increase in size, as your task becomes greater, and your staffs become larger, there is that inevitable removal and separation from the people who, in the final analysis, will use the roads you build and will pay for them.

Bigness has many penalties. I suspect its greatest liability is to be found in this inevitable separation and, in such a climate of remote authority, arbitrary decisions are possible.

In moments of impatience, we who are convinced of the logic and justice of our position are tempted to regard questions as criticism, to avoid or evade responsibility by attributing a decision to some other agency or some other operational group.

Our world today stands divided. On the one hand, the advocates of the totalitarian philosophy proclaim that dictatorial decisions are more efficient. They support the theory that most individuals are either incapable or indifferent and, therefore, the voice of the individual must be discounted.

This is the philosophy expressed today by the Marxian materialists—but here in this great land of ours we still proclaim the importance of the individual, and despite the errors and mistakes of the past 35 years, we still operate a representative form of government.

This may not be the most efficient governmental system. This may not be the most economical governmental system. But for free men there can never be any other acceptable course.

And you and I who believe in the freedom of the individual, in the right of public expression, in the principles of representative government, are confronted with the responsibility of meeting each new problem with a firm declaration of that basic faith.

And I would say to you who are members of highway commissions, or members of the staffs of highway commissions, that you will maintain or regain the confidence of your legislatures when you grant to them the same trust that you would like to receive from them, when you speak to them of your problems with the same frankness you would elicit from them.

When you recognize the divergent pressures, and the sincere conflicts of interest which at times may compel them to adopt a position which opposes the official position of your commission.

Let us then, each of us, meet good faith with good faith. Let us devote some of our time and talents to the consideration of the other fellow's position, and, above all, let us resist the temptation to dismiss questions as criticisms and creatures of evil motive.

The highway into the future must be built, and we in America will build this highway, not alone with concrete and asphalt and steel, but the highway we build must serve more than the vehicular traffic. It must be more than a magnificent engineering achievement, for it will be built with the blood and the labor and the savings and the ingenuity and the genius of all America; and it will provide a pathway to freedom or a turnpike to slavery. Our children and their children and generations unborn will judge what we build, not by the alinement of a curve or the placement for a bridge or the total mileage, but by its usefulness as an instrument for the progress of the people of this land.

Gentlemen, more than almost any other professional group, you will shape the future. Let us build together for the progress of free men, based upon a mutuality of understand-

ing and respect, recognizing the rights of individuals to voice and maintain differences of opinion. Let us bring to every problem an openminded willingness to share with each other the problem of a decision.

When you are tempted to strike out blindly at those unreasonable fellows in the State legislature, please keep this in mind.

For all our failures, and for all our ineffectiveness, for all of our preoccupation with our own small worlds, we are together enlisted in a project to build a better America; to preserve that great legacy of freedom and independence and individuality which we have received.

To provide greater opportunity so that we maye make progress in transportation and science and the arts and the professions, to the end that all who live in this land may enjoy a greater realization of that purpose for which man was created.

Clif Stratton Writes

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. SMITH of Kansas. Mr. Speaker, much has been written about the Khrushchev visit—and much has been said over the airwaves. We get many letters pro and con on this visit. Many of those who write commending this visit seem to do so on deep religious beliefs—that we should forgive and love our enemy.

To those persons I commend the following article written by a longtime resident of Washington, D.C., and as a noted political writer for the late Senator Arthur Capper of Kansas—who served 30 years in the Senate.

Clif Stratton writes:

CLIF STRATTON WRITES

Welcome, Nikita?

Second Book of Kings, 20:

"12. At that time Berodachbaladan, the son of Baladam, king of Babylon, sent letters and a present to Hezekiah: for he had heard that Hezekiah had been sick.

"13. And Hezekiah hearkened unto them, and shewed them all the house of his precious stones, the silver and the gold, and the spices, and the precious ointment, and all the house of his armour, and all that was found in his treasures: there was nothing in his house, nor in his dominion, that Hezekiah shewed them not.

"14. Then came Isaiah the prophet unto King Hezekiah, and said unto him, 'What said these men? and from whence came they unto thee?' And Hezekiah said, 'They are come from a far country, even from Babylon.'

"15. And he said, 'What have they seen in thy house?' And Hezekiah answered, 'All the things that are in mine house have they seen: there is nothing among my treasures that I have not shewed them:'

"16. And Isaiah said unto Hezekiah, 'Hear the word of the Lord.

" 'Behold the days come, that all that is in thine house, and that which thy fathers have laid up in store unto this day, shall be caarried into Babylon: nothing shall be left," saith the Lord.' "

The more it changes, the more it is the same.

Memorial to Judge William Lewis

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. SILER. Mr. Speaker, even in the rush of these closing days of our 1959 session of the 86th Congress, I would like to take this opportunity to memorialize one of our former Members who served briefly in 1948, Judge William Lewis of London, Ky., and who represented my district in the U.S. Congress during that year and who has now passed out of this mortal life at the age of 90 years at his home in Kentucky, on August 8, 1959, after a lingering illness of several years' duration.

I knew Judge Lewis during the days of his maturity as a lawyer and a judge and as a public figure in southeastern Kentucky. He was always kind, affable, congenial, and courteous. Never did I see him in anger or exhibiting a spirit of vindictiveness toward his fellow man. He was a scholarly man and one of the ablest lawyers down in my part of Kentucky. He understood the mountain people and their homespun philosophy and their humble origin. He himself had the same philosophy and origin, for he came from the humblest of the humble. Although his fill-in term of service was very brief, yet he must have impressed quite a few Members of this body with his native ability and his pleasing personality because several who served with him have inquired about him since I became a Member of Congress.

Judge Lewis' career in public service covered half a century. For 18 years he had been judge of the same circuit—made up of Clay, Laurel, and Jackson Counties.

His son, Ray C. Lewis, London, served later the same district as circuit judge.

On April 24, 1948, he was elected to Congress to serve out the remainder of the term of the late John M. Robsion, Sr. This was in the strongly Republican Ninth District, which is now the Eighth.

The Democratic Party leaders made one attempt to nominate a candidate, but were prevented by a flood from holding a scheduled convention. So only write-in votes opposed Judge Lewis in the special election. He won easily.

But he had had a much harder time in the deadlocked nominating convention on April 2, 1948, at London. County chairmen and chairwomen from the 17 counties in the district voted to select a nominee. Thirty-two people voted and 17 votes were needed for the nomination.

Five men were placed in the race, but after several ballots there were 15 votes for Lewis, 15 for John M. Robsion, Jr., son of the late Congressman, and 2 for Charles L. Seale, Booneville.

The tally remained unchanged for three ballots. Judge Lewis was backed by former Gov. Simion Willis' faction of the party.

After the seventh ballot the younger Robsion withdrew. He said,

It is harmful to the party to continue this deadlock. While we all have our personal ambitions, there comes a time when somebody has to give.

On the eighth ballot, Judge Lewis won with 27 votes to 4 for Seale.

Mr. Robsion later moved to Louisville and was elected to Congress from the Third District and is the GOP nominee for Governor this year.

Judge Lewis did not seek reelection in the fall of 1948.

He was born in Perry County, Ky., on September 22, 1868. He was educated in public schools in Perry and Leslie Counties and in Hyden High School and Laurel County Seminary. A private tutor taught him law.

In 1890 he became Leslie County sheriff. He was named Leslie County school superintendent in 1894. In 1899 he was elected to the Kentucky General Assembly.

From 1903 to 1909 he was Commonwealth's attorney in the 27th judicial district. He served as circuit judge of that district from 1909 to 1921, and from 1927 to 1933.

Survivors include his wife; the son, Judge Ray Lewis; and a daughter.

Mr. Speaker, I wish to extend to the family and many friends and relatives of Judge Lewis my deepest sympathy in the loss of this well-loved man and able leader from my part of Kentucky.

Congressman Moore To Tour District

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. MOORE. Mr. Speaker, as this session of Congress draws to a close, we all are looking forward to an opportunity to return to our respective States and visit and talk with the people whom we have the honor to represent here in the Congress.

Inasmuch as the First Congressional District of West Virginia is only an hour's time from Washington by modern air travel, I have made every effort to spend as much time in my district even while the Congress was in session. This has permitted me to better help and assist the people in my district and has given me a better than average knowledge of conditions in West Virginia and how the folks back home feel on particular legislative issues. Also, throughout the session, I have maintained an office in the district to better serve my constituents, and I have made a great many personal appearances and speeches in the seven counties which I represent. However, the limited time which I have been able to spend in my district has not permitted me to travel about as much as I would like, and to talk with persons who have problems on

which I, as their Congressman, might be of assistance. Consequently, I am looking forward to adjournment as a time when I might visit each community and hold regular office hours during which time persons might drop in to say hello or to sit down and discuss specific problems.

In preparation for these annual visits in each community, I have made arrangements for office space in various courthouses, post offices, and other civic buildings where it will be convenient to meet and privately discuss problems with individuals, who might want to see me. The following schedule has been arranged and in each instance the time shown is local time in the particular community:

Tuesday, September 29, Hancock County: 10 a.m. to noon, courthouse, New Cumberland; p.m. to 5p.m., post office building, Weirton.

Wednesday, September 30, Brooke County: 9:30 a.m. to 4:30 p.m., courthouse, Wellsburg.

Thursday, October 1, Ohio County: 9:30 a.m. to 4:30 p.m., fourth floor, post office building, Wheeling.

Tuesday, October 6, Taylor County: 930 a:.m. to 4:30 p.m., post office building, Grafton.

Wednesday, October 7, Marion County: 9:30 a.m. to 5 p.m., courthouse, Fairmont.

Thursday, October 8, Wetzel County: 9:30 a.m. to 12 noon, courthouse, New Martinsville; 1 p.m. to 4 p.m., city hall, Hundred.

Wednesday, October 14, Marion County: 9:30 a.m. to 12 noon, post office, Farmington; 1:30 to 4:30 p.m., city hall, Rivesville.

Inasmuch as my district office is situated in Moundsville and is open to the general public 6 days a week, I have scheduled no courthouse visit for Moundsville but my constituents from that area are invited to present any problems they may have at any time to me personally in my district office.

These visits in the various cities and towns are as informal as we can possibly make them, and workers, businessmen, and housewives are urged to drop by for a chat. No appointments are necessary and all persons are welcome to come as "they are" to see and visit with their Congressman. I hope the tour this year will be as successful as it was last year when we had several hundred people each day stop by our "mobile" office to let me know their feelings on various matters.

As I have stated, my district office, located in the Mercantile Bank Building in Moundsville, is open 6 days a week to serve the residents of the First Congressional District. When I am out of the office on official business, there is always a competent member of my staff available to answer questions or assist persons with their problems. I always welcome having my friends call upon me whenever my services might be of particular assistance.

The Farm Problem Must Be Attacked on Many Fronts

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. HOEVEN. Mr. Speaker, under dates of July 7, 8, 9, 20, and August 3 and 12, I included in the RECORD articles in a series on the farm problem prepared by Alvin F. Bull, managing editor of Wallaces' Farmer. I wish to include today the final article in this series which appeared in Wallaces' Farmer on September 5, 1959. I sincerely hope that all Members of Congress will take the time to read these timely articles on our agricultural problems:

HERE'S WHERE TO START—THE FARM PROBLEM MUST BE ATTACKED ON MANY FRONTS

(By Al Bull)

Rising farm production has swamped the domestic food market and overflowed into a huge Government storage program.

At the same time, declining farm prices plus rising operating costs have put a squeeze on net farm income.

There's no single, easy cure for an ailment so complex. The only real answer is to attack the problem on several fronts at the same time.

The attack has two major areas: (1) building bigger markets, and (2) reducing supply.

We all prefer the first. But a previous article (New Markets) in this series pointed out that efforts in this direction alone will not be enough. However, they can whittle down the size of the surplus.

BIGGER MARKETS

Here are steps we can take to move more farm products:

1. Use a food stamp plan, or other means, to distribute surplus food to needy people.

2. Continue research on nonfood uses for farm products.

3. Turn consumers to foods requiring more agricultural production resources. From a breakfast of corn flakes to one of bacon and eggs, for example.

4. Boost exports. This offers the greatest hope—if food is tied to economic planning (including education) in underdeveloped nations. Such a move requires long-term, rather than year-to-year food commitments.

Even if these posibilities were all pushed to their practical limits, they will not handle our average annual surplus. So supply control of some sort is the likely companion to the above measures.

In recent years, most of our supply control has been the storage of grain to keep it off the market. Storage costs zoomed as the grain piled up. Most folks now realize that storage without strict production controls gives only temporary relief.

The best way to reduce output is to transfer some land, labor, and capital from agriculture to other uses. Or let some of these inputs lie idle.

Low prices can force the transfer or idling of these inputs. But this method soon bankrupts even good farmers, and depresses the whole economy. So it is better to encourage, rather than force, such changes.

LONGRUN SUPPLY CONTROL

The surplus problem threatens to be with us for many years to come. So at least some of the adjustment should be long range.

Here are some long-range steps we can take:

1. Increase vocational guidance and counseling. This could help steer capable farm boys with an opportunity to operate an adequate unit into farming. It could guide those without this opportunity into occupations where they will be better paid.

Earl O. Heady, director of the Center for Agricultural and Economic Adjustment, put it this way in a recent talk:

"We predict for a sow what she will be worth in the future; or we can tell what she is worth at a half dozen different markets. But we don't predict for a farmer's son his worth at different locations and in different occupations.

"Which is more important, the sow or the boy?"

2. Improve the reporting of job opportunities throughout the Nation by State employment services. The best jobs may be outside the local community, even outside the State.

Suppose a young fellow on an unprofitable farm wants to take a job as a mechanic. It would help if his local employment office could tell him of openings in Des Moines, Cedar Rapids, Los Angeles, and Detroit, as well as in his local community.

T.H. Schultz, economist at the University of Chicago, has even urged a direct subsidy plus vocational training for farmers who want to get nonfarm jobs. He calls it homesteads in reverse.

3. Encourage industry in small communities. Some folks on small farm units have trouble making ends meet. Part-time work provided by industry is the happiest solution for those tied closely to their farm and community.

4. Educate rural people on alternative investments. Stocks, bonds, and nonfarm real estate may bring higher returns than new equipment or more hogs.

5. Emphasize business analysis, long term outlook, and agricultural adjustment in extension service activities. The better folks understand what is happening, the better they are able to adjust to the changes.

Nearly all the farm outlook information is for next week, next month, or at most, next year. Yet many farm decisions, including the decision to farm, cover a much longer term. We seriously need 5-, 10-, and 20-year outlook information.

6. Develop more land for recreation. Shorter work weeks and higher incomes have increased the desire for outdoor fun. People, as a group, seem willing to pay for it, too.

Unfortunately, these long term steps bring results slowly. They will do little to solve the problem next year—or even in the next 5 or 10 years.

So direct, shortrun measures for supply control are called for. These measures must, as far as possible, work in harmony with the long term efforts outlined above.

Of the inputs going into agriculture, land is probably easiest to remove. In the past, we've made some move in this direction but with programs that didn't get the job done.

SHORTRUN SUPPLY CONTROL

Marketing quotas, acreage allotments, and soil bank are aimed at supply control by reducng the acreage in production.

Both marketing quotas and acreage allotments have been unpopular with most farmers. Yet stiff cross compliance rules are necessary to make these programs work. They also tend to keep production from concentrating in areas with lowest costs per unit.

Production payments are mostly a means of transferring income to farmers. This method may have merit in short run situations, but it does not attack the heart of the problem.

A soil bank program seems most acceptable to individual farmers and to groups which must get behind any program that is to succeed.

Coupled with soil bank could be programs for additional recreation areas and other programs to shift land to less intensive use. From pasture to forest or from wheat to pasture are two examples to use.

A whole-farm soil bank is most effective in reducing output. If only part of the farm is taken out of production, labor and capital formerly used on the retired part goes to increase output of the remaining acres.

The whole-farm soil bank also encourages some older farmers to retire early. This reduces the size of the agricultural labor force.

Another step we can take soon is to trim Government programs which increase agricultural output.

Reclamation projects bringing new land under irrigation are out of step with the times. Such work should be delayed until the extra production is needed.

Parts of ACP could be dropped. Liming, tiling, fertilizing, and similar practices are output-increasing rather than soil-conserving.

The soil-conserving practices of ACP could be retained and justified on a general welfare basis. The same goes for our extensive research and extension service setup.

COMBINED ATTACK

A deliberate, overall program calculated to strike the farm problem at its core has been delayed too long.

Let's take all practical steps to expand our markets.

Let's get started on long range measures to make farming as profitable as other occupations.

Let's use short-term measures that are consistent with long-range goals to bring about the adjustment needed as quickly as possible.

A Hellenic Contribution to America

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. McCORMACK. Mr. Speaker, mankind is indebted in many ways to Greece and her people. For example, the glories of ancient Greece in her intellectual and legal contributions to mankind has left their imprint throughout the centuries, and despite the passage of time, are a living dynamic influence today.

As immigrants have come to our shores from many other countries, there have been immigrants come to our shores from Greece. All immigrants and their descendants have made their contributions to the progress of our country. And among them, none have made more contributions than Americans of Greek origin. Wherever they have settled, or wherever they are located in our country, they are industrious, hard-working persons, interested in civic and charitable activities—a good neighbor and fine Americans. Their patriotism and their love of America is above reproach. Their activities as Americans, and as a part of American life, national and local, are too numerous to mention.

Their latest effort—one of significant importance—of the American-Greek community in America, is the establishment in Boston, Mass., of our Nation's first Hellenic University.

This is a project of major importance to Americans of Greek blood and to America itself.

When this university is completed, it will be a direct link between intellectual and legal Greece of centuries ago, and of America of today and tomorrow. It will be a living memorial principally established by donations of Americans of Greek blood to the ever-living principles of truth that the great philosophers and learned men of ancient Greece gave to mankind.

For truth, once established, lives forever and cannot be destroyed. The exercise of truth may be temporarily suppressed by dictatorial governments, but can never be destroyed. And none knew this better than the philosophers and learned men of anicent Greece. And history supports this fact.

There are many fine Americans of Greek origin who are deeply interested in the success of this new Hellenic University. One of them is a close and valued friend of mine for many years, Judge John C. Pappas, of Boston, Mass.

At the Supreme Convention of the American Hellenic Educational Progressive Association—AHEPA—held in Los Angeles, Calif., on August 16–22, 1959, Judge Pappas delivered an address entitled "An Hellenic Contribution to America" relating to the dreams and ambitions of Americans of Greek blood to establish this proposed university.

Knowing Americans of Greek origin as I do, I confidently predict that they will establish this new proposed university and make its operation a great success and a real contribution to American life.

In my remarks, I include the splendid address made by Hon. John C. Pappas at the recent convention held in Los Angeles, Calif., on August 16–22, 1959.

I also include an editorial, "Athens in America," appearing in the Boston Traveler of September 2, 1959, and an article written by Richard Jacobson, appearing in the Boston Traveler of August 31, 1959:

A HELLENIC CONTRIBUTION TO AMERICA

(An address by Judge John C. Pappas, supreme convention, American Hellenic Educational Progress Association, August 16–22, 1959, the Ambassador Hotel, Los Angeles, Calif.)

Last year at this time, in my hometown of Boston, I enjoyed the rare privilege of speaking to the supreme convention of the American Hellenic Educational Progressive Association at its 1958 convention.

Last year I did not have the honor of being a delegate, but was simply a guest speaker. Today I feel distinguished to be among you as a delegate from the Boston Chapter of AHEPA.

I hope that some of you who are here today may recall that when I spoke to the convention last year I tried to remind the assembly that "our endowment is culture."

In my talk I tried to reactivate our interest and rekindle our pride in the Greek spirit that created the greatest culture ever known to man. I tried to remind our audience that the Greeks were the first intellectualists—that they had a passion for using their minds—that the Greeks were the first scientists, and that all science goes back to them.

That the modern Greek has not forgotten this is brilliantly demonstrated by Greek-born Dr. George M. Papanicolaou of Cornell University Medical College, who was described in a recent issue of Time magazine as the man "who has done more to save lives threatened by cancer than any other man."

The Greeks were the first people in the world to play—all sorts of games and athletic contests of every description, including, I might add with a blush, horse racing.

As that world renowned classicist, Edith Hamilton, who on her 90th birthday was made an honorary citizen of Athens, said, "to rejoice in life, to find the world beautiful and delightful to live in, was a mark of the Greek spirit."

This fierce possession of that spirit of life also included the concept of the liberty of the individual which brought about the world's first democracy.

But, most important of all, was the Greek character, which was to the Greeks a man's share in qualities all men partake of. The Greeks always saw things as parts of the whole.

These, then, were some of the cultural aspects—aside from the sculpture, the literature, and the relics of the incomparably beautiful buildings—which caused me to say last year, and causes me again this year to remind this audience that our endowment is culture, and that we have reached a point in our life in America where we must dispense this endowment through our own institution of higher learning.

I am speaking, of course, of the eventual establishment of the Hellenic University of America—using the existing facilities of the Holy Cross Greek Orthodox Theological School in Brookline, Mass., as the nucleus.

The provocative plan for the eventual establishment of our own university has been approved by the board of trustees of our theological school, and I am delighted to tell you that work started some time ago on the very first of the new buildings at the seminary, and that I am hopeful by the time I return to Boston the new building will be completed. Thus, the actual physical work on our own Hellenic-sponsored university has begun, and step No. 1 practically completed.

The board of trustees of our seminary has also unanimously voted to accept the creation of the charitable vehicle through which funds will be accepted for the eventual establishment of our university.

The charitable corporation through which the archdiocese will accept funds will be known as the Friends of the Proposed Hellenic University of America.

Without going into details let me read to you the corporate purposes and powers from the bylaws:

"To foster the charitable, educational, and eleemosynary purposes of the Greek archdiocese of North and South America, and more particularly for the purpose of expanding the physical facilities and educational program of the theological school of the archdiocese in Brookline, Mass., enlarging the religious instruction program of the said archdiocese, providing for the eventual establishment of a nonsectarian university with the theological school as a nucleus in said Brookline, Mass., to be known as the Hellenic University of America, provide financial aid to the patriarchate, and for such other educational and religious objectives as the said archdiocese may determine."

Thus, step No. 2—the medium through which we can accept funds—has been accomplished by the board.

Step No. 3—the acquisition of more real property contiguous with our present property—has also been accomplished. I am delighted to tell you that the theological school has just purchased 25 acres of land adjoining

its property, thus providing the land requirements for the eventual establishment of our university. You will be happy to know that the theological school now owns approximately 60 acres of desirable land which is more than sufficient space for the university we envison.

With the unanimous approval and finalization of these three steps—the adoption of the plan to establish the Hellenic University of America, the approval of the establishment of the Friends of the Proposed Hellenic University of America, as a means of raising funds, the acquiring of more real property—the board of trustees has been alert, astute, and farsighted. They should be commended for their wisdom.

The concept of the eventual establishment of the Hellenic University of America is a provocative plan, and goes hand in hand with the ascending dignity of our people in this country.

His Eminence Archbishop Iakovos and America's leading Greek-American industrialist, Spyros Skouras, are cochairmen of the fund-raising activities for the proposed university.

I need not tell you how fortunate the Greek community in America is to have two such distinguished men of vision and endless energy to provide us with their leadership.

His Eminence had planned to be with us on this convention, as you know. And he had planned to tell you of his enthusiasm for the eventual establishment of our university.

My dear friends, an hour before I boarded the plane in Boston for this marvelous convention I visited His Eminence at the hospital in Boston where he is convalescing from his recent operation. I am pleased to be able to report to you that he is now resting comfortably after suffering considerable pain. How fortunate we are to have this inspirational leader. His devotion to us is infinite.

In the short hour I was with him he told me of the deep regret he feels because he cannot be here with us. Of course, he sends his blessings.

He told me of the high regard in which he holds the AHEPA as an organization and of the affection he feels for its officers and members.

His Eminence reminded me of the many accomplishments of the AHEPA during its 37-year history—the many building programs and scholarship funds undertaken by the AHEPA to aid the cause of Hellenism in America; the leadership of the AHEPA in the fight for equality in immigration laws; the selling of over $400 million in war bonds during World War II; the contributions of the AHEPA to the Greek war relief program; the successful AHEPA hospital campaigns during World War II; AHEPA's support in justice for Cyprus; and, most recent of all, the completion of the AHEPA Hall for Boys at St. Basil's Academy, and the present construction of the AHEPA school at St. Basil's.

His Eminence agreed with me that the AHEPA firmly believes in the theory that education is everybody's business and that the AHEPA, with its laudable and generous activities at St. Basil's, has made this belief abundantly evident.

Because of AHEPA's firm conviction in education—its middle initial is "E" for education—His Eminence, as national cochairman of our fund-raising campaign, believes it is not only proper but natural that we should make our first major appeal to the Grand Order of the AHEPA.

I only regret that His Eminence is not here to convey these thoughts to you himself.

Unfortunately, also, Mr. Spyros Skouras is in Europe on business and cannot tell you personally of his enthusiastic interest in this exciting venture. But, only last month in New York at a meeting with His Eminence and with Greek-American lay leaders, Mr. Skouras had this to say relative to the university:

"There is still a considerable number of us who emigrated here. But the Greek immigrant is no more. We have now the American of Greek extraction. He is an integral part of the American community. He is now a citizen of substance and moral stature. Up to now, he has been consolidating his position, contributing to American life as a whole by his industry, by his eagerness to work and to learn, by his example as a law-abiding citizen, by serving his adopted country faithfully in peace and war.

"But now he wants to give more—he is in a position to give more. And he looks around. He wants to be identified with America, to leave a lasting monument to this great country of ours, to give something of greater, more lasting value.

"One of the great needs of America today is schools. With our rapidly expanding population, this is of paramount importance.

"Everywhere the cry is for more and more schools. Young people have difficulty in entering college. There are not enough to fill the demand. Other minorities have contributed toward that need. So will the American of Greek extraction.

"Let us give America another great institution of learning, equal to our existing great and world famous universities. A university where any American of any ethnic background will be proud to send his sons, a university toward the establishment of which any American will be willing to contribute.

"Such a university then will be the contribution of the American of Greek extraction to American life and culture. And such a university must have also a school of theological studies. This will fill the need for the higher, more rounded preparation of any theological student, but especially those of the Greek Orthodox faith."

If a man of Mr. Skouras' stature can find the time to analyze the situation as just described, surely we lesser lights can find the time to dedicate ourselves to this concept of a university sponsored by Greek-Americans.

Although I spoke about the Greek spirit, the university itself will be nonsectarian: And, to its halls of learning will be welcomed boys of all faiths.

As Mr. Skouras indicated, the Greek community in America will be rendering a great service to its adopted land by providing a much needed institution of higher learning.

According to all available statistics, the need for additional reputable colleges is fast becoming critical. Five years from now the need will be acute. All colleges with good standards are crowded, and admission to colleges of high standing is extremely difficult.

The establishment of a Greek-sponsored university in New England seems to me to be particularly appropriate because it was to New England shores that first came those seeking freedom. And, it was in New England that the first colleges were established.

I have talked with many persons associated with colleges and universities and they are thrilled with the decision of the seminary board to establish our university. They think it is a wonderful idea.

When His Eminence Archbishop Iakovos came to Boston last spring to break ground for the first of our university buildings we together visited His Eminence Richard Cardinal Cushing, popular Roman Catholic archbishop of Boston. Cardinal Cushing was delighted to learn of our decision and said it was about time we did sponsor our own university. He said he would personally endorse it and would make a financial contribution toward its success as soon as the drive is commenced.

What better time than right now on the occasion of the 37th Supreme Convention of the Order of the AHEPA—to announce the opening of our campaign for $5 million for the establishment of our university.

What better way can we announce the opening of this campaign than by an outright pledge or contribution by the Order of AHEPA of a sum of $250,000, thus making this the first large gift to the campaign.

The AHEPA has done more than any other organization in the United States to unify Greek-Americans, and I am sure that you, as delegates, and the AHEPA as a whole, will respond to this appeal. And when we return to our homes we will be able to tell the members of the AHEPA who honored us by electing us delegates of the wonderful role that we played in the establishment of a university in their name.

[From the Boston Traveler, Sept. 2, 1959]

ATHENS IN AMERICA

For a long time Boston has taken pride in the artistic and intellectual assets that have made it known as the Athens of America.

And now there's reason for more satisfaction, as that description takes on the shape of literal truth in plans for establishing the Nation's first Hellenic University in Jamaica Plain.

The $100 million nonsectarian college, already under construction by the Greek Orthodox Theological Seminary, will add substantially to Boston's standing as a cultural and educational center.

It comes at a fortunate time—in the midst of America's pressing need for more colleges to accommodate a fast-growing student population.

And in emphasizing the Greek heritage, as it will, it will underscore the origins of democracy, to the benefit of all of us.

As important as anything else, the new university will serve as a focus for the fine relationships that exist throughout the Greek community in America.

[From the Boston Traveler, Aug. 31, 1959]

ONE HUNDRED MILLION DOLLAR UNIVERSITY PLANNED BY GREEK GROUP

(By Richard Jacobson)

The Greek Orthodox Theological Seminary has bought the adjacent 25-acre former Bacon estate in Jamaica Plain and will build on it America's first Hellenic University.

The seminary, which now occupies a 35-acre site in Brookline and Jamaica Plain will be the nucleus of the proposed $100 million educational institution.

The university will be nonsectarian and dedicated to inspire and continue the heritage of Greek culture in America.

Although its support will come from Hellenes throughout the United States, Judge John C. Pappas, a moving force behind the development, emphasized that this "will be an educational institution which every American should and will support."

The Bacon estate was purchased at auction in 1941 by the late Vincenzo Barletta of Roslindale, a contractor. The latter's widow sold the million-foot estate, located off Jamaica Pond, to Judge Pappas, acting for the seminary.

The purchase price was not disclosed, but it was believed to be $200,000.

Judge Pappas said the Greek community in America felt that now was the time to establish a university—a time when higher education of the American youth was so vitally needed.

SAYS GREEK CULTURE HAS MADE UNITED STATES STRONG

"Greek culture has contributed so much in the past to make America strong" he said, "that the Greek community felt this heritage

should be encouraged and continued in full bloom in America and with American vigor.

"Hellenes are aware that only in education can we stop the advance of communism and dictatorship in the world. The future of Greek heritage lies in the inspiration we can give to our American youth and to those generations yet unborn.

"Only a university we can call our own—yet which will also belong to all Americans—can nurture that inspiration.

"This university—the first Hellenic University of America—will be our endowment in culture."

WILL SET UP CHAPTERS THROUGHOUT UNITED STATES

Pappas said chapters to support the proposed university would be established throughout the United States as foster alumni groups.

"Spyous Skouras, of New York and California, prominent business industrialist, will lead the campaign for the $100 million," Pappas said.

The first $250,000 building of the university is under construction and will be dedicated shortly.

It lies alongside the seminary, which is the Holy Cross Theological School.

The first structure will contain a library, classrooms, and a gymnasium.

The cost was underwritten by Judge Pappas, his brother, former U.S. Amdassador Thomas A. Pappas, Angelos Cotsidas, and Theodore Tonna, all of New England.

Pappas said Massachusetts was chosen as the site for the university because of the presence here of other great religious and educational institutions, such as Boston College, Tufts, Boston University, and Harvard.

He also cited, as an example of what an ethnic group could do, the amazing growth of Brandeis University under the auspices of the Jewish people.

"I am a member of the board of trustees of Brandeis," he said, "I have seen this educational institution rise in 10 years into one of America's mightiest schools of higher learning for all Americans."

Why a Labor Day?—It's an Old Tale

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I would like to bring to the attention of the Congress, as well as the Nation, an editorial by J. Spencer Gray, editor of the Herald, of Westchester. This, the 1st session of the 86th Congress, will go down in history for its active participation in the enactment of legislation to protect and safeguard the rights of the laboring man. I, therefore, deem it only appropriate to salute the workers of our great country on this, their national holiday, with the following summary of events by Mr. Gray in observance of Labor Day:

Labor Day can be variously defined as: the end of summer; the beginning of the school year; a Westchester traffic jam; or simply an excuse for a long weekend away from the office.

But the founder of the holiday, Peter J. McGuire, conceived it as a tribute to "the industrial spirit, the great vital force of every nation."

In 1882, McGuire, a leader in the Knights of Labor, proposed that a day be set aside to honor the workingman. He suggested the first Monday in September, since it came almost midway between Independence Day and Thanksgiving Day.

The Central Labor Union of New York adopted his proposal and held the first Labor Day celebration on September 5. As McGuire had suggested, the union paraded through the streets of Manhattan, to show the strength and spirit of trade and labor organizations.

Shortly after, the Knights of Labor voted for an annual celebration. In 1884, the Federation of Organized Trades and Labor Unions of the United States and Canada—predecessor of the American Federation of Labor—voted to make the celebration national.

The first State to make Labor Day a legal holiday was Oregon, in 1887. The Legislatures of Colorado, Massachusetts, New Jersey, and New York quickly followed suit and, in 1894, Congress made Labor Day a national holiday.

Labor Day now ranks with Independence Day, Washington's Birthday, and Thanksgiving Day as the most generally celebrated holidays in the United States.

Is Space the Way to Peace and Abundance?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. McCORMACK. Mr. Speaker, the gentleman from New York [Mr. ANFUSO] is not only one of the ablest but one of the most devoted and serious-minded Members of the Congress, enjoying the respect of his colleagues and the confidence of Speaker RAYBURN and myself. He is one of the most active members of the newly established, important Committee on Science and Astronautics and is chairman of one of its subcommittees.

Congressman ANFUSO attended the 10th Annual Congress of the International Astronautical Federation that was held in London, England, on September 4, 1959, and delivered a splendid and imformative address to the members attending this particular congress. The address being entitled "Is Space the Way to Peace and Abundance?"

In my remarks I am pleased to include the excellent address made by the gentleman from New York [Mr. ANFUSO]:

IS SPACE THE WAY TO PEACE AND ABUNDANCE?

(Address by the Honorable VICTOR L. ANFUSO at the 10th Annual Congress of the International Astronautical Federation, London, England, September 4, 1959)

Mr. Chairman, distinguished members of this congress, and guests, at the outset, I wish to congratulate the members of the International Astronautical Federation and particularly its illustrious president, Mr. Andrew G. Haley, for bringing us together. Mr. Haley, as an organizer and as a pioneer in the field of international cooperation and space law, has no peer.

As a member of the Science and Astronautics Committee of the U.S. House of Representatives, I feel that on this occasion we can share a few thoughts of common interest.

Let us first face the fact that never in its history has the world been so near to destroying itself; that never before has so much deception in diplomacy been practiced and that never has there been so much talk of peace, while all the planning is for war. The situation is like inviting someone to your home for dinner, while making arrangements for his demise.

It is in this kind of world that we must seek the ingredients for peace.

We know that man has already discovered a new world—many times larger than the world Columbus found—but it is one of unexplored horizons. We have opened the door to the heavens' pathless way. The questions now being asked are these: Will, what we find there, be good or evil? Will it prove to be a boon to humanity, or are we getting nearer to the day of destruction?

As we look back over the recent past, it is hard to believe that man's efforts to penetrate outer space came to fruition less than 2 years ago. Prior to that time, most people regarded satellite orbits and interplanetary travel as nothing more than the fantasies of children or visionaries, of comic-strip cartoonists or science-fiction writers. During these past 2 years everyone has come to recognize that the practicality of space flight has been demonstrated. The impact of all this on people's minds has been unprecedented. Of all the wonders wrought by the progress of science and technology, it seems to me that none before—not even nuclear energy—has opened such vistas for mankind. Certainly none has ever promised to free us, while still alive, from the earth itself.

At this great international gathering, it is fitting to review the material benefits, in new knowledge and the practical applications thereof, which we may reasonably expect from man's future explorations in outer space. No less important is it for us to consider the prospects that may be offered for permanent world peace. But we must not let ourselves be so dazzled by these glittering possibilities that we forget the deeper meaning of our emergence into outer space. I refer, of course, to man's moral sense, his curiosity and capacity for wonder, his faith and reverence in God, and his spirit of adventure.

I shall not waste the time of this learned audience with details of the possibilities which the exploration of space has to offer. As a layman, I am interested in the practical aspects of these discoveries and particularly how this will affect our daily lives. I am interested, for example, in the observation made by Dr. James Van Allen who said that the progress of space science and technology will bring (and I quote):

"A rich and continuing harvest of important practical applications. Many of these applications will be of military value; but their greater value will be to the civilian community at large."

Dr. Fred Whipple, Director of the Smithsonian Astrophysical Observatory, said:

"Weather forecasting, in my opinion, will become a science instead of an art. I predict that its value to the country will greatly outweigh the cost of the entire (space) program."

Dr. Wernher von Braun said that communication satellites will not only pay for themselves, "but pay for trips to the moon and other ventures in this business."

The few examples I have cited could be multiplied many times. They are the serious predictions of responsible and eminent men.

I am convinced that the expansion of knowledge and its applications can be speeded up by providing greater incentive for scientific and engineering efforts. Accordingly, I introduced a bill in Congress in April of this year, known as H.R. 6288. It

calls for the creation of a Presidential Medal of Science, which is to be awarded to persons who make outstanding contributions in the physical, biological, mathematical or engineering sciences. Needless to say, achievements in the space sciences and technology are included. My bill was passed unanimously by the House of Representatives on August 19, 1959, and 2 days later by the Senate of the United States. I trust that this law will serve as an incentive for further scientific progress.

I am further convinced that the progress of space science and technology and the peaceful uses of outer space will be greatly facilitated by a full partnership of cooperating nations. Many projects in outer space, which could benefit all mankind, would be literally impossible without international cooperation, for example, if they required the use of worldwide tracking or telemetering equipment or of launching sites in certain geographical locations. Costs alone will prevent some nations, or even any one nation, from undertaking certain ambitious space operations. Some of these space projects can be done better and more cheaply if they are carried out as joint enterprises of two or more nations.

There is reason to hope that a good deal of international cooperation in the peaceful uses of outer space will be forthcoming in the foreseeable future. A good beginning has already been made. The cooperation of many nations in the International Geophysical Year (IGY) and the Committee on Space Research (Cospar) established by the International Council of Scientific Unions, has been most encouraging. Even the United Nations ad hoc committee on the Peaceful Uses of Outer Space has produced some valuable results, although several nations have refused to participate in its work on the ground that its membership is unrepresentative. This situation should be corrected as soon as possible.

I propose that all governments interested in the peaceful uses of outer space should create a Committee on Space Cooperation, with fair representation from the Communist and non-Communist worlds. In my opinion, the Committee should be established within the framework of the United Nations. In any event, its functions would be the exploration and development of outer space in the common interest of all mankind. If subcommittees were subsequently formed in the various member nations, I would hope that in my own country, at least, suitable representation would be provided for science, industry, and the Government, and that both the legislative and executive branches of Government would be represented in its membership.

The challenge of outer space demands a full and true partnership, first among nations, then among science, industry, and government. To deny such participation in the peaceful exploits into outer space would widen the no man's land barrier presently existing between the Western and Communist worlds and would invite further full-scale competition. The discoveries then, on both sides, could easily be diverted, not to create a peaceful and closer knit world of abundance where no one need be in want, but to create even more menacing ways of destroying the world than we have today. Thus we would all be the losers in such competition.

Prior to attending this meeting, I addressed letters to both President Eisenhower and Prime Minister Khrushchev urging that they discuss this one area of possible agreement as a step toward world unity. I have further suggested that this proposal be given consideration by the United Nations and the NATO powers prior to the meeting of the heads of state.

An example of what can be done by joint peaceful cooperation is the agreement reached in April of this year between the United States and Canada in ionospheric research.

Another example is the agreement announced only July 29 of this year between the United States and Great Britain under which agreement British scientists will prepare the instrumentation for satellites to be put into orbit by the United States.

Still another forward step in the joint use of outer space is being taken by the International Telecommunications Union, which is meeing at this moment in Geneva.

I believe that agreement on space frequencies could set a pattern for multilateral cooperation in other space activities. Through their partnership in outer space, nations can learn the ways of meaningful cooperation on earth. Certainly cooperation is a more fruitful and more effective method than coercion—or even mere coexistence—if our goals are peace and abundance.

Whether mankind's emergence into outer space will serve the cause of peace is still a matter of hope, rather than conviction. It is true that space technology can be used for either peace or war. For that very reason, however, war has become all the more obnoxious and impractical. General Lemnitzer, the U.S. Army Chief of Staff, predicted recently that missiles will soon create "strategic nuclear disarmament," becoming so numerous and relatively invulnerable that no attack can prevent retaliation.

Regardless of such military considerations, I feel strongly that an arms race to dominate outer space must be avoided. National rivalries should be confined to the earth—and, if possible, buried there for all times.

Some observers have suggested that enterprises in outer space will provide mankind with a moral equivalent of war. Early in this century, the American philosopher and psychologist, William James, made the following comment:

"What we now need to discover in the social realm is the moral equivalent of war; something heroic that will speak to men as universally as war does and yet will be as compatible with their spiritual selves as war has proved itself to be incompatible."

We may reasonably conjecture that in the vastness of outer space man may at last find a moral equivalent of war, to evoke and satisfy his longing for adventure, his fascination with the unknown, his need to be challenged and tested to the final limit of his strength.

In addition, it is fortunate that space technology may provide the means, at long last, to maintain world peace. The risk of surprise attack, for example, could be minimized by a system of international satellite surveillance.

Perhaps the immensity of the cosmos and the new knowledge of its mysteries resulting from space exporation will bring the peoples of the world closer together in new patterns of cooperation. Is it too much to hope that man's mind and spirit will expand with the scope of his activities?

Let me conclude by saying that space can be, if we will, a way to world peace as well as abundance. If earthmen can get together on this one thing—the peaceful exploration of outer space—then that very space can be the way to the creation of a world of abundance, making war outmoded and unnecessary.

For America's Coal Miners and Workers: Take Vittles Away

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Saturday, September 5, 1959

Mr. SILER. Mr. Speaker, on this Labor Day, which is a great holiday for all of our ordinary folks, including both the organized and unorganized workers of America, it is a good time to pause and reflect upon the treatment one creature of congressional action is currently according to a great many of those God created in His image among the ranks of persons who toil here in our country.

I am now referring to that governmental corporation, Tennessee Valley Authority or TVA, which seems to signify only "take vittles away" as far as the coal miners of my congressional district are concerned. TVA buys plenty of coal somewhere and at certain prices but only at such prices as to mean "take vittles away" for the average coal miner or at such prices as to invite bankruptcy and a nonprofit operation for the average operator.

Not only does TVA seem to starve coal miners and operators in my own district but it also seems to follow a policy of "buy foreign" instead of "buy American" when it goes out into the open market to buy its turbines, generators, and similar equipment for its overall operations. Mr. Speaker, I would feel much ashamed to face my fellow Americans if I bought a car, or a suit, or a box of matches, of foreign manufacture. I would not want to save a few paltry pennies in order to "take vittles away" from those who go to bat for America in time of war and pay tax bills for America in time of peace.

I would like to insert the following article taken from the United Mine Workers Journal under date of September 1, 1959. This article emphasizes the problem and is very timely and its contents certainly should be pondered by the Congress that created TVA for the benefit of our people. The article follows:

NEWS FOR UNEMPLOYED AMERICANS

The Tennessee Valley Authority, which has just been handed a carte blanche by the Congress to do as it pleases, spent three times as much money on foreign-made equipment last year as during all the years since TVA's inception in 1933.

TVA reported domestic and foreign purchases totaling $125,936,788 during the Government fiscal year ending June 30 for materials, equipment, supplies and nonpersonal services.

Of this, $66,924,517 was for manufactured goods, such as turbines, generators and transmission lines; $51,931,238 for raw materials, such as coal to generate electricity, and $7,081,033 for miscellaneous services. The latter category included barging of coal, labor costs in installation contracts and the like.

Twenty-seven percent of the total money was for manufactured equipment purchased from foreign firms. This amounted to $17,900,000, compared with $5,600,000 on such purchases for all previous years since 1933. All but a small fraction of the foreign purchases went for generators and transformers.

About 41 percent of the total, or $51 million, went for coal purchases for TVA steamplants. This was $33.5 million less than the previous year, probably reflecting TVA's continued purchase of dog-hole, nonunion coal.

American Council of Polish Cultural Clubs Convention at Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. Joseph F. Lester, of Kingston, Pa., in which he encloses a résumé of the 1959 convention held in Wilkes-Barre by the American Council of Polish Cultural Clubs, Inc.:

AMERICAN COUNCIL OF POLISH CULTURAL CLUBS, INC.,
Wilkes-Barre, Pa., September 4, 1959.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR DAN: Thank you very much for your letter and your suggestion to have the story of the American Council of Polish Cultural Clubs convention held in Wilkes-Barre inserted by you in the CONGRESSIONAL RECORD.

Thanking you for your kind contributions in helping make the Wilkes-Barre ACPCC convention an outstanding one, I am,

Sincerely yours,

JOSEPH F. LESTER.

RÉSUMÉ OF THE AMERICAN COUNCIL OF POLISH CULTURAL CLUBS CONVENTION, 1959

The American Council of Polish Cultural Clubs, Inc. (ACPCC), held its 12th annual national convention at Wilkes College, Wilkes-Barre, Pa., from August 4 through August 9, 1959. Theme of this year's conclave was thé millennium of Poland (A.D. 960 to A.D. 1966).

Approximately 150 delegates from 23 arts and cultural clubs, representing almost every State of the Union, participated in the convention activities on the Wilkes' campus. Plans for Poland's millennium program were initiated at the convention and committee members to work on the project were elected by members present. Heading the millennium committee will be Attorney Roman V. Ceglowski, from Detroit, Mich.

The American Council of Polish Cultural Clubs annual conventions provide not only a fertile ground for the exchange of ideas and experiences, but they also give opportunities to compare and to learn from each other. They wake up initiative and stir ambitions while teaching techniques to produce and promote an even higher quality in cultural presentations and performances.

The ACPCC functions as a national representation of local Polish-American cultural groups, which often use the name of "Arts Clubs," and of which the oldest is the Polish Arts Club of Chicago. The Polish clubs were formed and continue to form with the idea of giving their respective communities a better understanding and appreciation of cultural values, based on Polish inspiration or creativeness, both past and contemporary.

The preamble of the ACPCC constitution proudly states the existence of the organization as one that aims "To perpetuate and develop the culture created by our forefathers; to encourage higher education and scholarship among people of Polish descent; to foster in Americans of Polish descent a consciousness and pride in their own heritage; to spread the knowledge of Poland's thousand-year-old culture; to enrich the forming pattern of America's great culture by weaving into it the best from Polish source of inspiration and of accomplishment, we associate ourselves together."

And being the official representative instrument on the national level of all its duly constituted and affiliated organizations, the American Council of Polish Cultural Clubs serves them by:

1. Maintaining a clearing house for the interchange of information and ideas which pertain to the promotion of Polish culture in America, and should be translated into initiative and action on a national scale.

2. Proposing program material and suggesting plans for cultural activities which would stimulate interest and provide member clubs with worthwhile guidance for the fulfillment of their objectives.

3. Encourage the formation of new cultural clubs, particularly in such communities where they do not exist.

4. Cooperating with other Polish or Polish-American organizations, or activities of a similar purpose in order to maintain close contacts with the creative forces of contemporary free Polish cultural life.

National president of the council, Dr. W. J. Wagner, associate professor at the Notre Dame Law School, was unable to attend the 12th annual ACPCC convention in that he had recently been awarded a Fulbright grant from the U.S. Government to teach at the universities of France for 1 year. His departure for Europe coincided with the start of the convention. First Vice President Thaddeus Siesinski, Polish Arts Club, Chicago, was acting president at the convention.

The following resolution was unanimously passed by the ACPCC delegates at the opening session of the conclave. This resolution was sent by telegraph message, August 4, to the Vice President of the United States, RICHARD M. NIXON:

"Whereas the American Council of Polish Cultural Clubs is meeting in annual national convention, August 4 through 9, at Wilkes College, Wilkes-Barre, Pa.; and

"Whereas this convention having received a message with wishes for a successful convention from Dwight D. Eisenhower, President of the United States; and

"Whereas we are convening here to evolve plans and means of enriching the American culture and heritage by acquainting ourselves and our fellow Americans with the achievements of the Polish People in the fields of arts, music, literature, and history, a people who have a cultural background which in 1963 will be 1,000 years old; and

"Whereas we Americans of Polish descent having been thrilled by the spontaneous, enthusiastic, and genuine reception given to RICHARD M. NIXON, Vice President of the United States, at his recent visit to Warsaw, Poland, this reception exemplifying the fact that the people of Poland have love and respect for the United States, its people, and form of government: It is hereby

"Resolved, That this convention send this resolution to Vice President NIXON; and that it be further

"Resolved, That, we the delegates, convening here respectfully request that Vice President NIXON give a message to this convention concerning his impressions of his visit to the people of Poland."

In answer to this resolution, Vice President RICHARD NIXON sent the following letter to the ACPCC convention chairman, Joseph F. Lester, Kingston:

"DEAR FRIENDS: This is just a note to thank you for wiring as you did on August 6. Your thoughtful good wishes expressed through the resolution of the National Convention of the American Council of Polish Cultural Clubs is most gratifying. I can assure you, and I want you to know how deeply I appreciate your most generous comments regarding my recent visit to Poland.

"I can recall no more heartwarming experience than that which occurred when we arrived in Poland, and we shall always remember the great warmth, affection, and friendship expressed to America by the Polish people.

"Again, I should like to thank you for your kind thoughts, and I welcome this opportunity to send to all of you my very best wishes for the future.

"Sincerely,

"RICHARD NIXON."

A. J. Drexel Biddle, major general, the adjutant general, was unable to attend the convention but the following excerpt is part of the letter he sent to the convention chairman:

"The President's proclamation of Captive Nations Week is, for me, a source of real satisfaction, and I feel confident that you share my reaction.

"My thoughts and prayers are always with the gallant people in Poland. They may have been stripped of their rights, but the tyrannical forces of oppression will never succeed in stripping them of their spirit and faith in God.

"I send you my warmest good wishes for a highly successful gathering."

The following editorial about the ACPCC 12th annual convention appeared in the Wilkes-Barre Times-Leader on August 5, 1959:

"With Poland in the limelight because of the official visit of Vice President NIXON, the convention of the American Council of Polish Cultural Clubs, opening in Wilkes College this afternoon, takes on national and even international significance. It is a most happy coincidence for Wilkes-Barre because of the added interest in the sessions which will continue until Sunday.

"Poland has a rich cultural background and has produced scores of internationally known figures in the arts through the centuries. It is the purpose of affiliated clubs, of which the Women's Committee for the Polish Room of Wilkes College is one, to preserve this heritage. The council itself coordinates these efforts.

"In the preamble to the council's constitution, there is this brief outline of its role in American life:

" 'To perpetuate and develop the culture, created by our forefathers; to encourage higher education and scholarship among people of Polish descent; to foster in Americans of Polish descent a consciousness and pride of their own heritage; to enrich the forming pattern of America's great culture by weaving into it the best from Polish sources of inspiration, and of accomplishment, we associate ourselves together.'

"The council maintains a clearing house for the interchange of information and ideas, pertaining to the promotion of Polish culture in America. It suggests cultural activities and provides guidance to clubs for the fulfillment of their objectives. It cooperates with other organizations and maintains close contacts with the creative forces of contemporary Polish cultural life. The council's principal task is one of initiative and inspiration.

"Its projects have covered a wide range. They include the Norwid literary contest, the Marcella Sembrich Kochanska voice contest, and the Mickiewicz centennial. The convention theme this year is the Millennium of Poland, the national observance of which

will be ushered in here, no small distinction for the community as well as the organization. The public will become increasingly aware of this in the years immediately ahead, with the American Council of Polish Cultural Clubs spearheading the movement.

"It is fitting that the 1959 gathering of this distinguished body should be held at Wilkes-Barre which has made so considerable a contribution of leadership to organizations of Americans of Polish extraction. Currently, Charles Rozmarek is president of the Polish American Congress and the Polish National Alliance, and Dr. Joseph Kocyan is chairman of the board of the Kosciuszko Foundation, to cite two of many examples. Joseph Lester is an officer of the American Council of Polish Cultural Clubs and convention chairman. Nowhere could the council meet where it would be more at home.

"It is a privilege to join with President Eisenhower and other notables in extending greetings to the city's guests for the next 5 days and wish them well in their efforts to enrich our national heritage.

"Guest speaker at the ACPCC convention was Prof. Zbigniew Folejewski, internationally recognized authority on Russian and Polish literature and linguistics, who spoke about "Polish Literature and World Literature, A.D. 960 to A.D. 1966."

"In his address, Professor Folejewski traced the continuity of the Slavic traditions, customs, views poetic forms, and brought together the specific development of the Polish state and the outside influence, and the importance to world culture.

"Several problems he highlighted were the following: Kochanowski as the first Slavic poet of international reputation, Polish classicism as a reflection of close contact with the West, Polish romanticism as a national and literary victory in political defeat, Polish realism and symbolism as a continuation of the tradition and as an overcoming of one-sided national attitudes.

"Alexander Janta, executive director of the educational Paderewski Foundation, New York, presented color transparencies of the Polish royal treasures at the keynote session of the ACPCC convention.

"The Polish Royal Treasures Chest was established in 1957 under the auspices of the Paderewski Foundation with the aim of financing the preparation and publication of an illustrated monograph on the Polish national treasures temporarily stored in Canada.

"The unique national collection, evacuated from Wawel Castle in Cracow at the beginning of the Second World War, has been stored in Canada since 1940. In addition to the royal insignia, among them the Coronation Sword, the collection contains tapestries from the 15th and 16th centuries, rare suits of armor and arms and other objects of historic importance and artistic value. These are known to but a few art experts and historians as they have never been fully displayed in the West.

"Ancient Polish chronicles and documents of historical, literary, or religious importance have been added to the rescued collection along with the world's largest treasure of autograph musical manuscripts of Chopin.

"Color transparencies shown by Janta represented choice items of the collection from the photographs of Yousuf Karsh, master photographer of Canada. One of the tapestries included in the collection was evacuated from Poland at the outbreak of World War II. This tapestry is part of the Biblical set made in Brussels for Wawel Castle in Cracow on the occasion of the wedding of the Polish King Sigismunc Augustus to Catherine of Austria in 1553.

"The tapestry, entitled 'The Flood', is considered one of the most cherished possessions of the Polish nation, a prized object in the collection willed in 1571 by the King, a great patron of the arts, to his people.

"Among the honored guests at the concluding dinner-dance at Hotel Sterling, Wilkes-Barre, Pa., were: Dr. and Mrs. Stephen Mizwa; Representative and Mrs. Daniel J. Flood, Wilkes-Barre; Judge and Mrs. Bernard C. Brominski, Swoyersville; Judge Paul Selecky; Mr. and Mrs. John J. McSweeney; Dr. and Mrs. Kocyan; Mr. and Mrs. Fryderyk Janda, Minneapolis, Minn.; Dr. Eugene S. Farley, Wilkes-Barre; Miss Wojnarski, Wilkes-Barre; Mr. and Mrs. Pisczek; Mr. and Mrs. Joseph F. Lester, Kingston; Thaddeus Siesinski, Chicago; Dr. Anthony S. Mallek, Pittsburgh; Mr. aud Mrs. Vincent Znaniecki, Nanticoke; Mrs. Marie Sokolowski, Minneapolis, ACPCC president; Dr. Charles Allan Baretski, Newark, N.J.; Mrs. Mary Jane Gustafson, Minneapolis.

"Visiting delegates to the ACPCC convention attended mass Sunday, August 9, at St. Hedwig's Roman Catholic Church, Kingston, Rev. Joseph Losienieck, pastor, prior to returning home.

"Mrs. Marie Sokolowski of the Polanie Club, Minneapolis, was elected the first woman president of the American Council of Polish Cutural Clubs, Inc., at the convention.

"Her daughter, Mrs. Mary Jane Gustafson, of Minneapolis was elected secretary.

"Other officers named were: Dr. Charles Allan Baretski, Polish Arts Club, Newark, N.J., first vice president; Judge Joseph F. Swaicki, Polonaise Art Club, Cleveland, Ohio, second vice president; and Mrs. Henry Travis, Plish Arts League, Syracuse, N.Y., treasurer.

"Elected to the board of directors were: Dr. Lewis E. Yager, Detroit; Joseph Lester, Kingston, Pa.; Andrew J. Juskiewicz, Norwood, Mass.; Edward V. Stronski, Buffalo, N.Y.; Dr. Anthony S. Mallek, Pittsburgh, Pa.; Henry Szczyrba, Alliance College, Cambridge Springs, Pa.; Helena Przybysz, South Bend, Ind.; Mrs. Irena Jedrzejczak, Milwaukee, Wis.; Thaddeus Siesinski, Chicago, and Dr. Wienczyslaw J. Wagner, South Bend, past president.

"Elected to the millennium committee were: Dr. Anthony S. Mallek, Pittsburgh; Attorney Roman V. Ceglowski, Detroit, Mich., chairman; Miss Angela V. Zybal, East Orange, N.J., assistant secretary; John Wegerzyn, Chicago, Ill.; Joseph F. Lester, Kingston, Pa.; Aleksander Janta, New York City; Joseph A. Kalenkiewicz, Detroit, Mich., general secretary; Judge Joseph F. Sawicki, Cleveland, Ohio; and Dr. Wienszyslaw J. Wagner, South Bend, Ind.

"Congressman DANIEL FLOOD, though not of Polish descent, has shown and demonstrated a vitally keen interest in the propagation of Polish cultures which radiates from Wyoming Valley and to the whole United States.

Two Views on Iowa's Water Really One

EXTENSION OF REMARKS

OF

HON. STEVEN V. CARTER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. CARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include two items today which I think reflect the sentiments and attitudes of all thinking Americans with regard to flood control and the conservation of water, our most valuable resource.

The first of these items is an open letter to the Members of this Congress from Iowa. It appeared in the Ottumwa Daily Courier, the leading newspaper of a city which I have the honor to represent. It was prompted by the President's veto of the public works appropriations measure, which contained the first construction money for Red Rock Dam, a proposed project which would protect the city of Ottumwa from the ravages of the Des Moines River floods which it has known for so many years. I think that the column speaks for itself and clearly conveys the heartbreaking memories of loss of life and property, disease, and the other forms of tragedy that go with this type of disaster.

On the brighter side of a discussion of the water situation, I am including an article by Mr. Cecil Smith, a distinguished citizen and farmer of Fremont, Iowa. He has done a singularly thorough job of telling just what water resources mean to the farmer, whether in Iowa or elsewhere. I heartily commend his remarks to the attention of all my colleagues who are concerned with the future of America's water resources.

Mr. Speaker, although each of these articles is directed at a separate phase of our water problems, I think it is significant to note, and I cannot emphasize this too much, that flood control and water conservation both result from construction of a dam like the Red Rock. I am confident that this House will act in the interest of both city dweller and farmer alike through approval of the second public works bill this week.

[From the Ottumwa (Iowa) Daily Courier]

This is sort of an open letter to Iowa Senators and Representatives. Probably some of our readers will want to send clippings on to Senators TOM MARTIN and BOURKE HICKENLOOPER, and to Congressmen STEVEN CARTER, FRED SCHWENGEL, LEONARD WOLF, H. R. GROSS, NEAL SMITH, MERWIN COAD, BEN JENSEN, and CHARLES HOEVEN along with their own comments.

It's really not an open letter so much as it is a reminder of what happened in Ottumwa 12 years ago, and what can happen again. Needless to say, most of us in Ottumwa and in the Des Moines Valley hope these Congressmen pass over the President's veto the bill that provides a start for Red Rock.

"DEAR CONGRESSMAN: Yesterday we had word here in Ottumwa that Ike had vetoed the public works appropriations bill. That's the measure that includes $1 million for starting the Red Rock dam. This is the same dam that we in the lower Des Moines Valley have been working for and hoping for during the past 40 years. We hope you can do something about it before Congress adjourns.

"It's pretty difficult to explain just how important this legislation is to the people of this valley. It's difficult, also, to report the extent of disappointment when word of the veto came. We appreciate the President's concern about spending and inflation. But we doubt that his budget officers fully appreciate our concern about our lives and our property and our future.

"Just a dozen years ago the river came down our valley in such volume that $20 million in damage was done in 2 weeks. Since then Ottumwa people have mortgaged their future to build flood protection works in the future. But one hand will still be tied behind our backs in the fight against floods unless Red Rock is built.

"Below are a few paragraphs from bulletins the Courier published during that 1947 flood. They do not tell the full story, of course. But they dramatically remind us

of our danger, and of our need for that dam:

"'June 7, 1 p.m.: At noon, for the sixth straight hour there was little change in the stage of the river at Vine Street. The reading was 20.2 feet.

"'Everybody in Ottumwa and the surrounding flood area should have typhoid inoculation at once, warns city physician Ed Hoeven. Vaccine has been flown in by the Red Cross.

"'Officials at the police station said another drowning has been reported. With local boats smashed in the fast water, officials halted small boat operation and were waiting for large Navy crashboats and Coast Guard inboard motorboats. The Navy is also sending helicopters for rescue work.

"'The following neighboring cities either have sent or are sending drinking water: Oskaloosa, Grinnell, Sigourney, Hedrick, Lancaster, Mo., Bloomfield, Albia, Chariton. Distribution centers are being set up.

"'One hundred twenty-five Dain Manufacturing employees, marooned throughout most of the night and today, were rescued by a big inboard Coast Guard motorboat that had just been brought from Burlington.

"'Flood Relief Director Herschel Loveless said at 8 a.m. that the public must cooperate in staying out of the flooded and downtown areas.

"'For inoculation against disease identified with the flood, medical centers have been established. On the north side, go to the American Legion, and on the south side, to the Stuart school.

"'A police official said the department is being besieged for passes to go to the south side. He explained they are doing everything possible to get people out of the south side, and will not issue passes for anyone to go into that area.

"'South side residents are advised that they may get water from the swimming pool. North side residents will continue use of the Lister bags being filled on many corners.

"'A temporary morgue was established in the Red Crown bowling alleys, Fourth and Market Streets, this morning. Bodies of flood victims recovered will be taken there.'"

STATEMENT OF CECIL SMITH, FARMER, FREMONT, IOWA

Everyone should know what water is. It has been, and always will be a problem and a limiting factor in agriculture. Fewer people know that it is a problem and limiting factor in the expansion of industry, business, and just about every facet of modern living.

The supply of easily available usable water in Iowa and most other States concerns all of us. If industry is to expand in Iowa, which it must, and unless you live along the two rivers that border the State, the supply of water is bound to be a question of ever-increasing importance.

Rainfall, whether it shows up as surface water, streamflow, ponds, lakes, or wells, is the major source of usable water in Iowa. There is water deep down in Iowa, but this supply, though abundant, is nearly always mineralized and is expensive to develop and refine. So, for the foreseeable future, Iowa must depend on rainfall for our water supply. Fortunately, if we can make more of the rainfall stay in Iowa, we shall have enough for some time to come.

The water resources in Iowa have not changed much in 50 years, and unless some method of changing the climate, or practical means to induce artificial rainfall is taken, they are not likely to change in the next 50 years.

In the last half century, the average annual rainfall in Iowa has varied from a high of 44 inches to a low of 18 inches.

The average for 50 years is 31 inches plus, and this average varies from a high of 34 inches in the southeast counties to a low of 18 inches in the extreme northwest. Presently, 6 inches of this 31 inches runs off (sometimes in disastrous floods) and accounts for the streamflow in Iowa and so is carried away from Iowa. Twenty to twenty-two inches of the annual rainfall is used in the growing of crops, and seven-tenths of an inch is used for all other purposes. But this use is increasing very fast and probably will double in the next 10 years. All this often adds up to more than we have got and shows up in a water shortage somewhere in Iowa nearly every year.

It takes 6,000 gallons of water to produce 1 kilowatt-hour of electricity (there are powerplants all over Iowa). It takes 6 million gallons of water to produce a ton of synthetic rubber (there is a Firestone plant in Des Moines). It takes 10,000 gallons of water to produce a bushel of corn, and 200,000 gallons to produce a ton of alfalfa hay.

There are lots of other figures that could be quoted. There will be in Iowa, in 1959, about 12 million acres of corn; the average yield of corn has increased a conservative 20 bushels per acre in the last 25 years or so. Multiply this 20-bushel increase by 11 million acres, times 10,000 gallons per bushel, and you get a figure that ought to scare all of us.

In 1956, 250 farmers on 25,000 acres along the major streams in Iowa used water for irrigation purposes, as much water as was used by all of the nonagricultural users. It would not take much irrigation in Iowa to put some of our cities out of the water business.

The danger is plain to be seen, and if the State of Iowa is going to exploit its resources to the fullest, the conservation of the State's water resources must receive more and more attention.

Clearly any gain to be made must be made in the control of runoff, and runoff begins where the rain falls, which is out on the land. We have learned much and have accomplished much in the control of runoff. Much more needs to be known, and much more needs to be done.

What is and can be done is reassuring. Just a good rotation with a grass or legume included will reduce the runoff by one-half, as compared to continuous corn; add to a rotation mechanical practices, contours, strip cropping, terraces, and grassed waterways, and you can cut the remaining half in two. Multiply these savings by the 25 million acres of crops in Iowa, and you are going to fill up a lot of reservoirs, wells, and lakes, and even our streams, with much clearer water, and go a long way toward solving an important and near critical problem in Iowa. As impressive as the progress in soil and water conservation now is, only a fraction of the job is done, and at the present rate, it will take 50 to 100 years to accomplish the job. Will anyone say that Iowa can wait that long? Is there not a possibility that before too long, if present efforts are not accelerated, this problem may become so acute that land might be declared a public utility and, as such, be subject to regulation in the interest of public welfare? And who wants that?

Soil and water conservation, especially soil conservation, is not new in America. George Washington, Thomas Jefferson, Patrick Henry, and others were concerned about it. Except for the last quarter of a century or so, it has been largely ignored, and as a result, millions of acres in America are eroded and depleted past the point of redemption.

A more serious and determined effort has been made in the last 30 years or so, and a number of governmental agencies are involved. All of them have been and are making very important contributions to this problem. To be brief, shall we mention three—the major ones, namely, the Soil Conservation Service, Agricultural Stabilization Committee, and the Extension Service. All three work together and supplement each other—the Extension Service for education, the Soil Conservation Service for technical assistance, and the ASC for financial help.

Since 1940, 100 county soil conservation districts have been organized in Iowa. These groups, with the cooperation of a whole host of other agencies of all kinds, and, of course, with thousands of farmers, have made a very impressive record, but when you compare this record with what remains and must be done, it looks like only a beginning has been made. Progress has been sound but slow, and because of the impact this problem of water supply is having, and shall be in the near future, much too slow.

The President said in his state of the Union address to Congress, that this country needs a totally new farm program. Nothing could be more right. The present program is only a conservation program in part. True, it has encouraged, by conservation payments, the use of many conservation practices of great benefit not only to the participants, but to the country as a whole. But large portions of these payments, especially lime and fertilizer, have the most to do with fertility and crop production and if not accompanied by other conservation practices, contribute but little to water runoff or the conservation of the soil. However, the acreage reserve and conservation reserve were and are true conservation measures and can be of much importance. But the acreage reserve is being dropped. The conservation reserve, to be effective, should be greatly enlarged and augmented.

In the 26 years of the existence of farm programs in America, the original intent and purpose of the programs have been diverted by political expediency, the stimulation of production, and the relaxation of controls caused by two wars.

Crop controls (cross-compliance) have not been enforced. Production payments were made with no compliance and corn acreage allotments made in an unrealistic manner. This served to penalize thousands of honest cooperators. Supports have been lowered and the program made as unattractive as possible.

As a result of these and other mistakes, farmers have increased production (witness the intent of Iowa farmers to increase corn acreage in 1959 by 2 million acres) to maintain their income. Surpluses have increased. The cost of storage has multiplied, the principles of soil and water conservation have been ignored.

The cost to the American taxpayer has increased to a point past endurance. The whole program has been so mangled by these and other forces that little of the original remains. A new program, with a new approach is needed, and it must be bold enough, broad enough, attractive enough (by high supports or some other subsidy) to insure wide and uniform participation.

I think, as a lot of others do, that a soil and water conservation plan which has been developed over the years by the Soil Conservation Service and others, offers this kind of an approach.

The application would be much more uniform than that of the conservation reserve, because the conservation reserve tends to be concentrated on whole farms or parts of farms and will lack the general use that shall be necessary for the complete job.

A conservation plan carries within itself a great deal of crop control and would go a long way toward reducing surpluses, especially during the few years while it is being established. This will not be enough

to bring supply in balance with demand, but if further adjustments are needed, it makes a fair basis from which to start.

The machinery for the administration of this kind of plan is already in existence and can be easily carried out by the governmental agencies now in being.

The cost ought to be very much less than the present program. I believe that if a plan of this kind is offered to the American farmer and made attractive, enough of us will cooperate to bring supply nearer demand, and thus reduce surpluses, the cost of storage, and other ills associated with overproduction, and at the same time, a lot of soil and water is going to stay home where it is needed—not only for the benefit of the man on the land, but for the taxpayer and everyone else as well.

Let's have a new farm program, in the administration of which no farm operater shall be eligible for a subsidy of any kind unless the operator shows that he uses good and effective conservation practices on all the land operated or controlled by him. Let's begin with this and let any other objective be subordinate.

(Figures quoted here come from "Iowa's Water Resources," published by Iowa State College Press, 1956.)

Big Trade Deficit Is Sparking Move To Cut Aid Funds

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. WHITENER. Mr. Speaker, I was greatly impressed with a story appearing in the New York Times for Sunday, September 6, 1959, concerning the big deficit in the U.S. balance of international payments and the effect that our foreign aid spending is having on the matter.

I believe the story will be of interest to every Member of the Congress, and I, therefore, insert the article in question in the Appendix of the RECORD:

BIG TRADE DEFICIT IS SPARKING MOVE TO CUT AID FUNDS—UNITED STATES WORRIED BY DECREASE IN GOLD STOCKPILE AND RISE IN FOREIGN ASSETS HERE

(By Edwin L. Dale, Jr.)

WASHINGTON, September 5—The big deficit in the U.S. balance of international payments, with its resulting outflow of gold and buildup of foreign assets in New York, has begun to have a major impact on administration thinking about foreign aid.

Powerful voices, centering in financial agencies, have begun to argue that the flow of Government capital abroad in the form of aid is too large for the continued strength of the dollar.

The underlying belief in top administration financial circles is that there is an entirely new situation in the world economy, with European currencies gaining strength while the dollar is showing the first faint signs of vulnerability.

EMOTIONS IN CONFLICT

The immediate results of this view came in President's Eisenhower's trip to Europe, during which he urged that European nations undertake a far greater share of the burden of helping underdeveloped countries.

In a sense, the administration is torn between two powerful emotions. One stems from acceptance of the basic idea that the underdeveloped countries must be helped in the interest of the United States as well as for the good of those nations that get aid.

The other is a growing fear for the future stability of the dollar unless two related things happen: domestic finances are controlled and the balance of international transactions is righted. The U.S. deficit in international transactions was $3,400 million last year and will probably be even larger this year.

FUTURE SEEMS GLOOMY

As financial officials see the situation, it will do no good to anyone if there is a larger outflow of aid dollars but the dollar becomes of dubious value. This could happen, it is believed, if U.S. payments deficits continue on a large scale for many more years.

Such a deficit means that foreign countries as a whole obtain more dollars than they spend to buy American goods. They can take the difference in gold or can keep it in dollars and invest them in the financial markets in New York. These invested dollars are potential claims against gold. Already they total $15,651 million, not far below the gold reserve, which has dwindled to $19,524 million.

As the claims grow and the gold stock declines, U.S. short-term liabilities might eventually exceed assets. Even that would not necessarily mean a run on gold or some other crisis. But U.S. officials do not like to contemplate even the remotest possibility of such an event.

Besides, some of them, looking ahead, are unhappy at the thought of potential pressure on the United States from what, in effect, would be its foreign creditors. The United States, which has been exerting the pressure for years, does not want to be on the receiving end.

Foreign countries are already substantial creditors of the U.S. Government. They have invested about $6,200 million in New York in short-term Government securities. Thus, as one high official puts it, "we're borrowing short from foreigners at home and lending abroad long."

The recent deterioration in the U.S. balance of payments has come about mainly because of a drop in exports and a rise in imports, not because of an increase in foreign aid. But as financial officials view the situation, foreign aid is the one element in the total balance over which the Government has considerable control.

It is regarded as certain that the new line of thought in the administration will be a major theme in conversations with foreign finance ministers at the annual meeting here later this month of the International Monetary Fund and the International Bank for Reconstruction and Development.

European countries have been running strong surpluses in their balance of payments while the United States has been in deficit. To U.S. officials this means only one thing: Europe should become a much bigger exporter of capital and the United States a smaller one.

NEW VIEW ON INVESTMENTS

Officials worried about international-payments deficit are even beginning to take a less enthusiatic view of investment abroad by American business. Up until very recently, this was welcomed on every count, by conservatives and liberals alike.

Now, with the payments deficit uppermost in many minds, an investment abroad is frequently seen as a double blow—first an immediate outflow of dollars, and, second, a probable setback to American exports. The export loss occurs when an American manufacturer, for example, builds a plant in Europe to share in the common market rather than try to sell goods made in the United States.

This feeling accounts for the Treasury's opposition to a bill to provide new tax incentives for foreign investment unless its benefits are limited to investments in underdeveloped countries.

A reflection of the growing concern about the international payments position of the United States came in the administration position on the Development Loan Fund in the foreign-aid bill. The President refused to support a Senate move to put the fund's financing on a long-term basis, increase its lending authority and get around the appropriations committees, even though the President's original position backed all three ideas.

Another reflection of the new line of thought, paradoxically, is U.S. support for the new International Development Association, even though this will cost the United States $330 million. Such a new institution has several merits in the eyes of an official worried about the U.S. payments deficit and the problem of the underdeveloped countries.

It puts Europe in the lending picture for the first time on a formal, multilateral scale.

Because it will be equipped to make "soft" loans—loans with easy terms and repayable in the currency of the borrower—it should eventually ease the pressure for a larger and larger Development Loan Fund in the United States. The Loan Fund also makes this type of loan.

Sovereign Rights of United States in Panama Canal Zone

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mr. Earl Harding of New York City in which he comments upon an address I made at Reading, Pa., on August 24, 1959:

NEW YORK, N.Y., *September 3, 1959.*

Hon. DANIEL J. FLOOD,
331 Old House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FLOOD: Your address on "Storm Clouds Over the Caribbean" to members of the Patriotic Order Sons of America at Reading, Pa., on August 24 as introduced into the CONGRESSIONAL RECORD of August 26, 1959 by Representative FRANCIS E. WALTER should be read in every high school and college history class and be made available in pamphlet form in every school and public library. It is invaluable as a brief and graphic summary of crucial dangers that now threaten our national security at the lifeline of our defense, the Panama Canal.

It is indeed heartening to those who have followed your campaign for recognition and protection of North American rights and interests in the Panama Canal Zone to see deserved commendation come to you through a certificate of merit from the oldest patriotic organization in our country. Equally gratifying is Representative WALTER's statement on the House floor that he is pleased to associate himself with you in the fight against communistic forces that will destroy, if they can, our sovereign rights in the isthmian area.

You condensed into 159 words at the conclusion of your address a five-point policy program for action. I believe all informed citizens of the United States will approve, as I do. But they must first be informed.

Public opinion must become acquainted with the background facts set out so readable in your address. And, furthermore, public opinion must penetrate the North American press blackout of news of Panama's attack on U.S. policy before the recent Conference of Foreign Ministers at Santiago, Chile. Panamanian newspapers have been filled with details and editorial approval of charges of treaty violations by the United States made publicly in that Conference by Panama's Minister of Foreign Relations, Miguel Moreno. Have you seen anything of this in our newspapers?

Are Panamanian politicians' claims to sovereignty over our Panama Canal Zone, their threats of peaceful occupation of the zone on November 3, their threats to take the United States before The Hague or the U.N. to enforce Panama's unilateral interpretations of our rights and obligations under binding treaties, and their reiterated demands for more and still more annuity pending ultimate expropriation of our canal by Panama, are these false ideas in Panama to grow into realities because they are allowed to go unchallenged and unanswered? Does the conspiracy of silence encompass both the North American press and the U.S. Government?

Sincerely,

EARL HARDING.

Franco Tricks the President

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, General Franco pulled a fast one on President Eisenhower recently when he arranged for his Foreign Minister to see him in London. Richard Scott Mowrer tells the story in the Providence Journal-Bulletin of August 28, 1959, and I include it here under unanimous consent:

A COUP FOR FRANCO: HIS FOREIGN MINISTER'S SCHEDULED VISIT WITH EISENHOWER IS SEEN AS A TRIUMPH

(By Richard Scott Mowrer)

MADRID.—A raising of diplomatic eyebrows, and not a little admiration, has been caused here by the ability of Gen. Francisco Franco's Foreign Minister to get himself invited to London to see President Eisenhower.

Despite the fact that the President's schedule is tight and that some of the NATO countries' representatives who would have liked to meet the President privately will be unable to do so, Spanish Foreign Minister Fernando Maria Castiella will be among the favored few August 31.

Why this should be perplexes foreign diplomats here. There is no problem affecting Spanish-American relations so serious or urgent that it requires discussion at such high level. It is presumed that the State Department's acquiescence to the idea stems from established American policy to encourage the Franco regime's endeavors to attain international respectability and ungrudging acceptance as a member of the free world.

For Spain the scheduled Castiella-Eisenhower meeting adds up to one of the neatest diplomatic coups ever pulled off by the Franco regime. The fact that the meeting is taking place in London makes it even better, for this reason:

In 1951 Castiella was persona non grata in Britain. He had been designated by Franco as his Ambassador to the Court of St. James, but the British wouldn't have him.

The rebuff stemmed from Castiella's record as an out-and-out supporter of the Axis during World War II. With the current Spanish Ambassador in Washington, Jose Maria de Areilza, he coauthored a book hailing the new order under Hitler and referring to Britain and France as "decadent democracies."

The book, "Reivindicaciones de Espana" (Spain's Claims), listed Spanish claims to various territories, including Gibraltar, in anticipation of the day when the Axis would win the war and divide the spoils. The book, published in 1941, was awarded the National Prize for Literature.

Possibly another reason why the British Government refused to have Castiella as Spanish Ambassador was that he had been a soldier in the ranks of the Blue Division, a Spanish unit which fought alongside Hitler's Wehrmacht on the eastern front. Castiella is a recipient of the German Iron Cross.

Since those days, Spain's Foreign Minister has changed his outlook quite a lot. He has worked hard, and successfully, to improve his country's relations with Britain, France, and other democracies. But there is a risk that a good many Britishers, particularly Laborites, will not forgive easily and that they may cause a rumpus when Castiella shows up in London to see President Eisenhower.

Meanwhile the fact that the British Government was not consulted before the United States invited Spain to join the party is omitted in the papers here. What is printed is a statement of a Foreign Office spokesman in London to the effect that "obviously we have no objection and are looking forward to welcoming the Spanish Foreign Minister to this country." What is omitted is the spokesman's opening statement: "it is true we were not consulted."

If the Spanish foreign minister has changed quite a lot since the war years, the regime's ideology basically has not. In fact it is a matter of pride with Franco supporters that it is the rest of the Western World that has come around, without the Franco regime having had to deviate from its authoritarian ideology. This theme was played up in 1953 when the United States signed the bases-for-aid agreements with Spain. Last month it was played up again when Senators STYLE BRIDGES and MIKE MANSFIELD and a number of Representatives said nice things in Congress about Spain's role in World War II.

The Franco regime never has formally repudiated its past association with Nazi Germany, nor has it felt the need to do so. It is true that there is little lamenting, at least in public, of the Axis defeat. But the press, which is controlled by the state and dutifully reflects its views, regularly omits news that would tend to divulge to Spaniards some of the worst aspects of nazism.

Poison in Your Water—No. 166

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Woborn (Mass.) Times of October 2, 1958 entitled "Federal Action Urged on Oil Spills Along Northeast Coast":

FEDERAL ACTION URGED ON OIL SPILLS ALONG NORTHEAST COAST

A Federal action to control oil spills from merchant and naval vessels causing extensive damage to New England coastal areas annually was urged today by Chairman Edward T. Dickinson of the New England Interstate Water Pollution Control Commission.

At a meeting of the commission here, Mr. Dickinson pointed out that the oil spills "are responsible for a huge economic damage, which in many instances negates over a decade of effort by this commission to provide clean waters for the people and industry of the Northeast.

"The commission has made repeated representations to the Federal Government through the U.S. Public Health Service for assistance in the abatement of this nuisance, but there has been no action."

Oil spills from sea-going vessels, Mr. Dickinson said, cause extensive damage to the shell-fish industry, destroy the value of recreation facilities at beaches, create fire hazards at many places along the coast and cause upstream pollution through tidal action.

"For more than a decade, the New England Interstate Water Pollution Control Commission and its seven member States have been working to bring the problem of water pollution in this area under control. A great deal of progress has been made through interstate cooperation," he said.

"However, pollution of tidal waters through wanton acts of carelessness now threatens to undo much of what has been accomplished here. It threatens one of the greatest economic resources of the Northeast. Unfortunately the individual States concerned have no control over the vessels which are committing this nuisance. Our only recourse is through the Federal Government, which so far has failed to indicated that it will act."

Mr. Dickinson noted that the Navy has been cooperative in controlling pollution of tidal waters through the installation of treatment plants at its New England bases.

"However, neither the Navy, nor the Coast Guard, nor any other Federal agency appears willing to accept responsibility for controlling oil spills from their own or merchant vessels," he said. "Instead, they have passed the buck from hand to hand, with the result that damage from oil spills is greater than ever before. If even greater pollution of the tidal waters of this area is to be avoided, the Federal Government must take the corrective action soon."

Mr. Dickinson is also commissioner of the New York State Department of Commerce. Mr. Dickinson served with the Federal Government as executive director of the War Production Board, as codirector of the foreign military assistance program, assistant to the Joint Secretaries of Defense and as Vice Chairman of the National Security Resources Board. Prior to World War II, he was research assistant to the chairman of the board of United States Steel.

Us or Laos?

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Saturday, September 5, 1959

Mr. SILER. Mr. Speaker, I note in the U.S. News & World Report of September

7, 1959, the statement that U.S. aid to Laos has cost the taxpayers of our country $225 million since 1955. Laos is the little country in southeast Asia where the Chinese Reds are now coming across the border and trying to conquer this small, rugged bit of sovereignty and convert it to their own use and dominion. The headlines of our daily papers are right now full of Laos and the problem of Laos. Apparently the $225 million of U.S. aid has done nothing to secure Laos or to keep it out of the vest pocket of communism. The U.S. aid mentioned has paid for the following, according to the U.S. News & World Report:

1. A local army of 25,000 men.
2. Jungle highways, a power station, irrigation dams.
3. Health services, sanitation, development of farming, communications, mining.
4. Planning for future flood control, power, irrigation projects.
5. Training for teachers and technicians.

Although this $225 million donation may have done nothing whatever toward its intended purpose over in Laos, just think what it would have done for us—not Laos—in some of the underprivileged sections of America if we had sent the aid up the creeks and into the hollows of our own country. With this kind of help we could have built in all the school districts of Kentucky, Tennessee, and West Virginia some adequate and badly needed school buildings; or we could have constructed badly needed flood control projects in every water damaged section in Kentucky and perhaps in one or two additional States besides.

I am willing that no one should ever treat Laos as a louse but I am wondering if it is not time for us to quit treating the good American in our own house as a louse.

Spanish Political Inquisition, 1959

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, it is hard to believe this is the 20th century and not the 16th or 17th when we read of the recent tortures in Spain. Apparently the chief difference is that the persecution today is for political deviations rather than religious.

It is an unpalatable fact to accept that we must deal with such barbarous governments as Spain in the 20th century, but at least we can deal with them with our eyes open and remembering the old adage: "He must have a long spoon that shall eat with the Devil."

Under a unanimous consent previously granted, I am including hereafter an editorial from the New York Times of September 3, entitled "Meditations on Spain":

MEDITATIONS ON SPAIN

The favorable notices that Franco Spain has been receiving in and from the United States in recent weeks should not go without a corrective. Power politics have generally transcended what George Kennan once called legalistic-moralistic principles. Nevertheless, when the United States embraces a dictator it should be done with open eyes as well as open arms.

There was a reminder of this elementary principle in a new item published on Wednesday taken from the Times of London. That newspaper's correspondent had gone to Burgos, Spain, and written a moving and shocking story about the treatment of more than 400 political prisoners who have been in Burgos jail from 12 to 20 years under inhumane conditions.

About 2 weeks ago the Guardian of Manchester printed an editorial headed: "Spanish Torture." It called attention to protests made by the Madrid bar council and also by lawyers of the Barcelona bar. The former group condemned the Spanish Government "for permitting the use of torture." The latter sent documents to the Archbishop of Barcelona "describing in appalling detail how the strikers they defended last December were maltreated by the police so as to get them to confess."

This refers to 1959. On could go back to 1958 and each earlier year for similar stories. The Franco government, nevertheless, blandly insists that there are no political prisoners in Spain. If that is the case, why does it not allow foreign correspondents to visit a prison like that of Burgos so that they can see for themselves?

There have been recent protests in Europe about arrests and lack of freedom in Franco Spain—by the British Labor Party, the British Committee on Science and Freedom, the International Confederation of Free Trade Unions and university students in Belgium, for instance.

The practical reasons for our own toleration of the Franco regime are presumably being accepted by many Americans, but even those who accept ought to remember an old adage: "He must have a long spoon that shall eat with the Devil."

UAR Interference With Suez Canal Free Passage Not To Be Tolerated

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 10, 1959

Mr. CELLER. Mr. Speaker, once again, Israel has been forced to lodge a complaint with the Secretariat of the United Nations on Egypt's interference with freedom of passage through the Suez Canal.

This is not a matter which concerns Israel alone. We are faced with an infringement of maritime rights and a fluoting of an international decision on the part of the United Arab Republic, which has gone a long way in establishing a dangerous precedent in the significant area of the freedom of the seas. Basic principles of maritime rights are being violated. It must be kept in mind that it is not only a matter of seizing Israeli ships but of seizing any ships which carry Israeli cargo, such as was done with the barring of the *Ingetoft* from transit through the canal because it carried Israeli cargo. This is only one incident in a long line of incidents.

Yet, the World Bank is seriously considering lending to the United Arab Republic a large sum of money for the enlargement of the Suez Canal. Thus, by indirection, we are placing ourselves in a dangerous position of incurring the continued violation of maritime rights. The World Bank should make no such loan just so long as the Arab Republic is using the Suel Canal as a weapon against a free State in its effort to strangle the economy of Israel. At issue here is not the enlargement of the Suez Canal. The need to do so might very well exist. At issue, is whether international commitments of the right of passage can be arbitrarily violated, and whether such violation shall be encouraged by the granting of the pending loan. Neither the Constantinople Convention nor the United Nations Security Council decision are sufficient, it would appear, to prevent the United Arab Republic from using the Suez Canal for its own political purpose. That the United Arab Republic could impound unlawfully and with impunity, mail bags and scientific equipment taken off Norwegian ships bound for Israel, is hardly an act that can be passably viewed by any of the adherents to international law.

I emphasize again that any active encouragement, among which I would include the granting of a loan by the World Bank for the enlargement of the Suez Canal, aids and abets the establishment of a precedent, which will some day reach forward to shackle us.

Time To Curb Excessive Jet Noise

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 6, 1959

Mrs. DWYER. Mr. Speaker, the price of material progress is sometimes too high in terms of its effects on the health, safety, and comfort of human beings. Such an instance appears to be the increasing concern felt by many at the impact of jet noise on the people who live in the vicinity of airports which service commercial jet aircraft.

This problem is especially important at the major airports in the New York metropolitan area, including the Newark Airport which is adjacent to the district I represent.

I was pleased, therefore, to note that a special subcommittee of the Committee on Interstate and Foreign Commerce held a hearing today at New York's Idlewild International Airport for the purpose of inquiring into the situation. I am hopeful the subcommittee will be able to offer constructive ideas, for it is apparent that the Federal Government has at least a measure of responsibility for controlling the excesses of jet noise.

Under leave to extend my remarks in the RECORD, Mr. Speaker, I include a brief item from the Sunday New York Times of September 6, which cites the particularly bad noise record of certain

domestic airlines using jet aircraft in contrast to flag carriers of other nations. I also include a longer story from United Press International which appeared in the same issue of the New York Times, and which describes the growing concern throughout the country.

Finally, I include the text of a statement I prepared for the Interstate and Foreign Commerce subcommittee hearing in New York today.

The material follows:

[From the New York Times, Sept. 6, 1959]

AIRLINE CRITICIZED FOR JET NOISE HERE

Of five airlines operating jet planes out of New York International Airport, Idlewild, Queens, American Airlines is the only one in "willful disregard of the public welfare" by making noisy takeoffs, the port authority charged yesterday.

John R. Wiley, aviation director of the port authority, which operates the airport, said that American Airlines conformed to noise standards in only 64.3 percent of its takeoffs from Idlewild during August.

Trans World Airlines conformed on 68.3 percent of its takeoffs, he added, an improvement over its 59.6 percent conformance dur- July, but still "far below the acceptable level."

Pan American conformed 91.8 percent, while Aerolineas Argentinas and British Overseas Airways Corp. conformed on all their takeoffs.

There are 25 takeoffs of jet planes daily at Idlewild. Residents of the Jamaica Bay area have complained of noisy takeoffs and landings.

A public hearing into these complaints will be opened at 10 a.m. tomorrow on the fifth floor of the control tower at Idlewild by a House of Representatives subcommittee.

A spokesman for American Airlines said yesterday that his company was "following closely" the voluntary procedures for noise reduction set up by the National Air Transport Coordinating Committee. This organization consists of delegates from all domestic airlines, the pilots' union, and the Federal Aviation Agency.

[From the New York Times, Sept 6, 1959]

PROTESTS OVER JET NOISE MOUNT TO A NEW PITCH AROUND AIRPORTS—SLEEPLESS RESIDENTS SEEK FLIGHT CURBS—PROBLEM IS MOST ACUTE IN NEW YORK, SAN FRANCISCO, AND LOS ANGELES

WASHINGTON, September 5.—America's new jet airliners, conquerors of distance and time, are not doing so well with people on the ground.

Specifically, those irate citizens live near airports and complain vociferously that jet noises is interfering with life, liberty and the pursuit of happiness.

The airliners are frankly worried. The organized protests have reached such proportions that some citizens' groups are demanding a curfew on all jet landings and takeoffs between 11 p.m. and 7 a.m. They have taken their fight to Congress and to the Federal Aviation Agency.

The chief trouble spots appear to be in New York, San Francisco, and Los Angeles. This is the situation in those three cities.

New York: John T. Clancy, Queens Borough president, is spearheading the opposition, directed mainly against jet operations at New York International Airport, Idlewild, Queens.

It was Mr. Clancy who proposed that no jet landings are takeoffs be permitted at Idlewild during sleeping hours—and he would extend that curfew even to LaGuardia Airport, which has no jet service. He also has threatened to start sewer construction projects in Queens that would block traffic into both airports.

San Francisco: San Francisco's International Airport is surrounded on three sides by the bay, and annoyance is limited to one residential area—the city of South San Francisco with a population of 40,000.

For more than a year this community has had an antinoise committee that holds frequent meetings. It even hired a noise expert.

SCHOOLS PROTEST

The complaints center around more than loss of sleep. The South San Francisco school district has at least twelve schools directly under the takeoff pattern, and school officials are considering legal action to keep jet noise from interrupting classes. So loud and frequent have been the complaints that a special telephone had to be installed at the airport to handle them.

Los Angeles: Several local groups from areas near Los Angeles International Airport have formed antinoise committees without getting much more than sympathy.

One school has filed complaints that classes have been stopped by noise. A single rally drew more than 1,000 persons, but the protesting committees have backed away from a proposal to move the airport itself; too many people, including some of the complainants, make their living at the airport.

COMMITTEE FORMED

A group called the Los Angeles Sound Abatement Coordinating Committee has been formed, with the aid of the airlines, Government, and airport officials.

What can be done about the noise problem? The question was put to pilots, the Federal Aviation Agency and the airlines themselves. Their unhappy but unanimous answer: Not an awful lot, for these reasons:

The jets are equipped with sound suppressors (at a cost of $25,000 per plane), but, while they reduce noise to a certain extent, a lot more work must be done in this field.

The FAA, the airlines, and the pilots put safety ahead of noise nuisance. Whenever possible, they try to use preferential runways that avoid settled areas.

RUNWAYS LIMITED

But the preferential runway solution is limited by the low number of such runways. Most airports have only one, and it is not always possible to use it. Under most conditions, particularly hot weather, jets must use the longest runway and this is not always the preferential one.

Some complaining city officials have insisted that pilots climb faster to reduce the noise problem. Pilots already are instructed to attain at least 1,200 feet of altitude as quickly as possible and also hold that altitude as long as possible before landing. Any faster climb than that is impossible under the existing air traffic control situation.

Such drastic solutions as a night curfew would wreck the airlines. For example, suspending all flight operations in New York from 11 p.m. to 7 a.m. would mean that no New York-bound flight could leave Los Angeles after 2:30 p.m. Pacific coast time.

The Federal Aviation Agency is sturdily resisting demands that it take action to reduce noise annoyances. It is convinced not much could be done at present unless the protesting groups wanted to ruin commercial aviation and it believes the noise problem must be settled largely on a community level, not by the Federal Government.

STATEMENT OF REPRESENTATIVE FLORENCE P. DWYER, SIXTH DISTRICT, NEW JERSEY, BEFORE A SUBCOMMITTEE OF THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE CONCERNING THE OPERATION OF COMMERCIAL JET AIRCRAFT AT AIRPORTS IN THE NEW YORK METROPOLITAN AREA, SEPTEMBER 7, 1959, AT THE NEW YORK INTERNATIONAL AIRPORT

Mr. Chairman and members of the subcommittee, I appreciate the opportunity of presenting this statement for your consideration. The problems related to the operation of commercial jet aircraft from the three major airports in the metropolitan New York area—that is, Idlewild, LaGuardia, and Newark Airports—are of intense and increasing concern to the people who live in the areas surrounding these airports.

As the Representative of the Sixth Congressional District of New Jersey, a portion of which lies adjacent to the Newark Airport, I am concerned for the health and safety and comfort of a great many of my constituents, all of which are jeopardized by the frequent use by jet aircraft of Newark Airport.

I hope that the subcommittee, in considering these problems, will give equal attention to all three airports. The problems are the same in each; all three airports serve the same area; all three are operated by the same Port of New York Authority; and, as the subcommittee is aware, Newark Airport has been utilized, more and more often, as a supplemental airport for traffic originally scheduled for Idlewild and LaGuardia when these airports are unable to handle them adequately.

Before any of the substantive problems can be solved, it seems to me, there is a fundamental need to fix responsibility among the several agencies involved with commercial aviation in this area, to determine the specific jurisdiction and the extent of authority which each is assigned. I refer, of course, to the Federal Aviation Agency, the Civil Aeronautics Board, the Port of New York Authority, and the voluntary National Air Transport Coordinating Committee. In my own experience and in that of other Members of Congress, there has been in recent years a great deal of ambiguity and confusion and avoidance of responsibility whenever efforts are made to control the operation of aircraft in the area in the interests of the general public.

Specifically, I believe that Congress must determine what agencies have effective authority to impose necessary conditions upon the operation of aircraft, both in the air and on the ground, in order to restrict noise and otherwise provide for the safety and health and reasonable comfort of those who reside in the vicinity of the airports. If sufficient authority has not been granted to date, then I believe further that Congress should undertake the responsibility of assigning it—in clear and specific terms.

For these reasons, I have supported House Resolution 162, introduced by our colleague, Mr. BOSCH, of New York, which would establish a select committee to study these problems. However, in the event this subcommittee, with its extensive background of experience in the field, would be willing to undertake such a study, then I should be among the first to encourage you to do so.

Certainly, the seriousness of the noise problem justifies your attention. As part of its noise reduction procedure for jet aircraft, the Port of New York Authority set a maximum level of 112 perceived noise decibels. While this level is extremely liberal when compared with the 60 decibels level which medical and acoustical authorities have recommended for the hours from 11 p.m. to 7 a.m., even this high level has been frequently exceeded by aircraft operating out of New York area airports.

Levels, for instance, of 124 decibels and 129 decibels have been verified by the Port of New York Authority as having been reached by jet aircraft operating in the area within the past 2 months. In understanding these figures, please remember that 140 decibels represents the very top of the sound scale, that physical pain will be experienced at sound levels above 130 decibels, and that a level of 108 decibels (substantially below the maximum set by the Port of New York Authority) is the equivalent of the noise

produced by 30 Niagara Falls roaring simultaneously.

It is obvious that exposure to constant noise disturbances of these magnitudes will seriously affect the health and comfort of people living in the area over which jet aircraft must operate flying in and flying out of New York airports.

A section of Elizabeth, N.J., called Elizabethport, is situated within 1 mile of the most heavily utilized runway at Newark Airport. This is the runway, you will recall, which was specially built following three successive crashes of aircraft operating out of the Newark Airport in a very small section of Elizabeth. Planes which land or take off from this runway in a southerly direction fly over the Elizabethport section at levels below 400 feet—considerably lower than even the most liberal permissible minimum altitude.

Despite the past assurances of Port of New York Authority officials, these aircraft increasingly are jet aircraft, since jets have recently been permitted to use Newark Airport as an alternative to Idlewild and La-Guardia. On recent evenings, as many as five huge jet transports have thundered over this residential section of Elizabeth at incredibly low altitudes. The effect on the population has been upsetting and disturbing in the extreme. One of my constituents, for example, has been forced to replace no less than nine ceilings during the past few years as a result of the physical shock of the sound of constant lowflying aircraft. The cost of this situation in terms of lost sleep, impaired health, and shaken nerves is, of course, incalculable.

Yet, the justified complaints of our people go unheard and increasingly, in fact, unacknowledged. If the public agencies involved, or the airlines themselves, displayed any determined effort to correct this menace or to develop noise controls of one kind or another, then there might be cause for hope. But as far as we can determine there is little or no serious effort being made to live up to the obligations toward the general public inherent in the public franchise enjoyed by airlines and in the responsibilities of public regulatory agencies.

As a last resort, we are seeking the assistance of the Congress: first, to define the areas of authority and responsibility, and then to see to it that the rights of the people to protection of their health and safety are respected.

Thank you very much for your cooperation.

Distinguished Service to Agriculture Award to Senator Stuart Symington

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, September 7, 1959

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the CONGRESSIONAL RECORD, I take pleasure in including a report of the ceremonies attending the award to Senator STUART SYMINGTON, of Missouri, made by the Missouri Farmers Association to Senator SYMINGTON, and notes from his address before the annual convention of the Association in acceptance of the award.

The Missouri association is the largest cooperative State association in the Nation and transacts a larger volume of business annually than any other State agricultural organization. The president of the Missouri Farmers Association, Mr. Fred V. Heinkel, is one of the outstanding agricultural executives of the Nation today.

Senator SYMINGTON before his election to the United States Senate had taken a deep interest in the development of the farm cooperatives of the State and during his service in the Senate has been recognized as an authority on agricultural legislation.

In conferring this distinguished honor upon Senator SYMINGTON at the annual State meeting of the Missouri Farmers Association in session at Columbia, Mo., on August 24, President Heinkel said:

Because of your distinguished record as U.S. Senator from Missouri, and as a member of the Senate Committee on Agriculture, and because of your firm insistence on truth, honesty, and positive action as a member of that committee, because of your perfect 100-percent voting record on farm legislation while a Member of the U.S. Senate; and, further, because of your loyal support of REA, farmer cooperatives, soil and water conservation programs, forestry, and flood control; and because of your sincere interest in the health and well-being of the people of this Nation as a whole, and American farmers in particular, we feel that you have earned and are eminently deserving of the highest honor and award the Missouri Farmers Association has to offer.

Therefore, the board of directors of the Missouri Farmers Association has voted unanimously to bestow upon you the MFA's Award for Distinguished Service to Agriculture.

In response, Senator SYMINGTON said in accepting the distinguished award:

Mr. President, there must be unity in agriculture if we are to have prosperity in agriculture.

Nobody can deny that the American farmer is the forgotten man of our present economic recovery. The record proves that while other groups in our economy have moved forward from last year's recession, the American farmer has moved backward.

Part of that unfortunate record follows:

For the first 6 months of 1959, total national income is up 10 percent over 1958; but farm income is down 8 percent; in fact, parity today is the lowest in 19 years.

For the first time in our history, the farmer's share of the consumer's food dollar has sunk below 40 percent.

And as we all know, farmers' expenses are now at record levels.

The record is also clear in showing that the farm policies of this administration are pushing the farmer further toward the bottom of the economic heap. The farmer's share of the Nation's income has declined from 5.2 percent in 1952, to 3.2 percent so far in 1959, a reduction of about 40 percent in less than 7 years.

Unless our great Nation is satisfied with partial economic health, something must be done to bring farm income back to a fair return for work expended.

In addition to the income squeeze, the farmers of America now find themselves in the midst of one of the biggest administrative messes in the history of our Government.

The Government investment in farm commodities has increased from $2.5 billion in 1952, to $9 billion in 1959—and at the present rate of increase this investment will be over $12 billion by this time next year.

The resulting drain on taxpayers is tremendous, as witnessed by the fact the present Secretary of Agriculture has spent more money in his 6½ years in office than all the previous Secretaries of Agriculture in the history of our country.

Nevertheless Secretary Benson continues to reject congressional attempts to deal with this growing problem.

Of 124 agriculture bills introduced in the Senate, during his term of office, he has opposed all but 14.

Yet despite his promise to the Senate last February 16, Mr. Benson has yet to come up with any overall farm plan of his own.

As an interesting aside, note that processors of agriculture products are now making, in effect, comparable complaints against retailers that farmers have been making over recent years about processors.

If we don't stop this trend toward the vertical, soon a very few people will control it all—and this goes beyond agriculture.

FOOD-FOR-PEACE PLAN

Our agricultural abundance, instead of being an economic curse, can be used as a potent tool in our efforts to build world peace.

We should declare to the people of the world now plagued with hunger and starvation and disease and poverty that the people of the United States are willing to share our abundance—our blessings—of food and fiber.

REA

One of the greatest examples of the value of cooperation and unity in agriculture is in REA.

In 1935, less than 6 percent of our American farms had central station electric power.

Then the wheels of cooperation began to turn. Individual farmers, working hand in hand with their neighbors and with their Government, forged an organization and a network of powerlines which now provide more than 96 percent of our farms with the benefits of electric power.

But even with these outstanding achievements, we must continue to cooperate and unite against those who do not have the best interest of the farmer and REA at heart.

Some of these attacks come from the very people who are supposed to represent the American farmer.

I am glad to announce that, only last Friday, the Senate passed the Aiken resolution, which reaffirmed and restated the sense of Congress that REA shall continue to serve the American farmer.

Here again is the evidence of farmer cooperation through their representatives in Congress, to unite and cooperate to preserve this great institution.

UNITY IN AGRICULTURE

Perhaps this very meeting this week, here in Columbia, Mo., can stimulate wholehearted efforts on the part of farmers, farm leaders, and all of us interested in the future of agriculture, to unit—to speak as one voice.

I pledged my full support toward that goal.

Politics Carried to an Extreme

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the Idaho Daily Statesmen of September 4, published at Boise, Idaho.

It is to be earnestly prayed for that the resolution referred to in the edi-

torial—calling for diplomatic relations with Red China—will die where it was born. Such recognition of a bandit government would heap ignominy on the heads of the countless thousands of persons who have suffered, and are suffering, at the hands of the Red Chinese.

The editorial follows:

POLITICS CARRIED TO AN EXTREME

With a single dissenting vote, it is reported, some 100 delegates at a meeting in San Francisco of the Western States Conference of the Young Democratic Clubs of America have adopted a resolution calling for early establishment of diplomtaic relations with Red China.

Evidently the Young Democrats must have been under some pretty serious compulsion to take this action at this particular time when Red China, at war with the United States and the United Nations ever since the Korean police action, has lately resumed bombardment of Quemoy and is currently terrorizing Laos with guerrilla warfare and challenging an incomprehensibly friendly India with aggressive advances upon Indian protectorates and across the border into India itself.

It would be utterly unreasonable to expect any responsible administration in the United States to make a play for Red China's favor at this time.

Such action on our part could be not only more humiliating than the British experience when they eagerly stretched out a diplomatic hand to the Communist regime when it first came to power in China's mainland, and then watched the British Ambassador cool his heels on the threshold of Peiping. But it most assuredly would be devastating to whatever standing or prestige we may have among the non-Communist nations that hitherto have stood aloof and only now are beginning to recognize the threat that Red China lowers against them.

Reasons advanced for the Young Democrats' importunity are shoddy and suspect.

One suggests a settlement of the status of Formosa. On that we would have to start to deal with Red China's thesis which is like unto that of the anaconda, and it's not at all likely to be changed by any moral suasion.

It's suggested that we should engage with Red China in an exploration of the possibility of a widespread system of disarmament and the control of nuclear testing. The answer to that might be that a trustworthy agreement with the Russians might leave nothing at all in that area to be taken up with the Red Chinese.

Then it's suggested that an establishment of diplomatic relations might lead to a mutually profitable trade and cultural exchange. It's a proposal that ignores the fact that 25 years after we recognized the government at Moscow, we bought from Soviet Russia last year some $16 million worth of stuff and we sold the Red Russians goods valued at something less than $4 million, which is less than the value of the total value of a year's output of one of Idaho's larger industrial establishments.

The motivation for the Young Democrats' resolution is not at all obscure. It's an attack upon the policies of the present administration.

It carries partisan political considerations to a perilous extreme.

It's pronouncement is definitely ill considered, and it's dangerous insofar as it may influence others as unthinking and recklessly oblivious of consequences as its authors have shown themselves to be.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of September 5, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The importance of every vote was demonstrated when the House sustained the President's veto of a public works bill by just one vote. With a two-thirds majority needed to override, each vote to sustain equals, in effect, two votes. The President, bent on balancing our budget, asked for no new starts on projects this year. In this I wholeheartedly concur. Each Member, of course, defines fiscal responsibility his own way, and I was the only Texan to support the President's position on the final vote. Two hundred and seventy-four Members (263 Democrats and 11 Republicans) voted to override, and 138 (132 Republicans and 6 Democrats) to sustain. Starkly dramatic was the demand for a recapitulation, with the Speaker refusing Minority Leader HALLECK's request for an announcement of the vote count before any recapitulation. Several vote switches could have been decisive. The one-vote margin means that each man among the 138 sustainers cast the deciding vote. The possibility of majority reprisals against the 138 became a topic of speculation. The Trinity survey funds were not deleted from the proposed substitute bill, though threatened. In all the political jockeying to take credit, or place blame, any real concern for sensible economizing is often lost.

The 1-cent gas tax increase debate was controversial, but generally not partisan. Argument centered around whether to (1) keep the program pay-as-we-go, by raising tax; (2) keep program at present high level of construction, or stretch it out; (3) dedicate more of highway user taxes to road fund. Everybody was for maintaining the highway program, one way or another. The President's proposal to boost the gas tax temporarily by 1½ cents per gallon was defeated, and a 1-cent increase agreed upon, plus earmarking other present user taxes for the highway fund. I opposed any tax increase (see July 25 and August 1 newsletters) believing that what we need is not more money, but more for our money. I feel we should check carefully into the still unexplained but soaring increases in cost estimates before increasing any taxes.

Another housing bill was vetoed and for practically the same reasons as before. The President has urged extension of FHA's insuring authority, and a slowdown or cutback in most other areas. The bill sent to him went far beyond budgeted figures in programs for college classroom construction loans, direct loans for additional housing for elderly persons, public housing, and urban renewal.

The Government interest rate ceiling brought on a heated debate, and probably this session's least understood one. The technical nature of the Treasury's debt-management problems, and the political appeal of being against "money lenders and their profits" helped muddy the water of fact and truth. Refinancing the national debt, and paying new bills run up by Congress, forces the Treasury Secretary to go into the open market and borrow under the best terms he can get. Yet he must do this under out-of-date Government-set interest rates for loans over 5 years. Unable to do so, he is forced to borrow for shorter terms, on which no such ceilings apply. Result? The Secretary is handicapped in trying to refinance on the best terms possible, and the Government is forced to compete with individuals, families, and small businesses for the short-term money available. The administration proposal to remove arbitrary interest restrictions on all Government borrowing was defeated, and only the interest ceilings on E- and H- (savings) bonds were removed. How the Treasury will refinance $85 billion of Government indebtedness during the next year was not faced up to, nor was the fact that the credit of the United States and the value of your currency is at stake. The present "political" interest ceilings will wind up costing John Doe Taxpayer much more. And the President has clearly warned that, if they refuse to act, the Democrat leadership in Congress will be responsible for the consequences.

The labor bill conference agreement, generally conforming to the stronger House bill, passed handily, 352–52. Only one Republican was among the 52 stanch labor supporters who opposed. While on labor affairs, two other items, appearing in the RECORD this week are worthy of note: (1) a quotation of Senator KENNEDY's apt and honest description of his labor bill as "worked out carefully with President Meany and his lawyers" (CONGRESSIONAL RECORD, Sept. 3, A7683) and (2) a résumé of Congress-threatening James B. Carey's past affiliations with Communist front organizations as well as his opposition to them upon occasion (RECORD, Sept. 3, A7600).

Another National Guard armory in Dallas was included in the military construction conference report adopted this week.

Khrushchev's visit opposition may at least prove to him that the American people are not taken in by his duplicity. It is my fervent hope and prayer that (1) he will sense the tremendous "sleeping giant" strength of the American people, so he will not miscalculate our ability and determination, (2) that more good than harm comes from his visit here. Khrushchev's visit is of grave concern to most here and ever present in the thoughts of many, despite preoccupation.

The Invitation to Khrushchev Could Be Withdrawn

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the RECORD, an editorial which appeared in the Cleveland Plain Dealer of August 22:

THE INVITATION TO KHRUSHCHEV COULD BE WITHDRAWN

The Communist aggression against Laos is still going on, as reported in the news dispatches and as discussed in the column on

this page by Joseph Alsop. An invasion from Communist North Vietnam has been predicted and may already have begun; Peiping has been threatening to take action against nonexistent American bases in Laos; and the presumption is that this new aggression has the support of Soviet Premier Nikita S. Khrushchev, since Ho Chi Minh, the Communist Vietnamese boss, was recently Khrushchev's guest in Moscow.

This situation somewhat resembles the maneuvers which preceded the North Korean invasion of South Korea. It could lead to serious trouble in southeast Asia, trouble in which we might become involved.

According to Alsop, some officials of the State Department already have taken the position that it would be difficult, if not impossible, for President Eisenhower to receive Khrushchev as his guest while the attack on Laos continues. Khrushchev must know this; either he is incredibly stupid to let the attack go on, and to lend his support to it while arrangements are being made to entertain him in this country, or he has lost control over his Asiatic allies.

At any rate, we should insist that the attack on Laos be halted, and be halted permanently. And we should make it clear that unless this is done promptly, Khrushchev will not be welcome in this country. He is not very welcome as it is, but the invitation for him to visit the United States could be withdrawn just as easily as it was extended.

Stockpile Alcohol Instead of Corn

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks, I will include a recent letter to the editor of Wallace's Farmer from Charles Henderson, of Guthrie Center, Iowa, who supports the Jensen-Mundt bill which provides that 5-percent alcohol made from our surplus grain shall be used in all motor fuel and which would consume almost 800 million bushels of our costly price-depressing surplus of grain annually.

It is noteworthy that a number of years ago Brazil had a great surplus of sugar which was by degrees destroying their farm economy as well as their economy as a whole. Yet their problem was quickly solved by a law that required a 10-percent sugar alcohol blend in all motor fuel.

Mr. Henderson's letter and the editor's note follows:

STOCKPILE ALCOHOL INSTEAD OF CORN

To the EDITOR:

Today we have a burdensome surplus of corn. Why not convert it into alcohol? Some could be used for motor fuels and other purposes, and the rest could be stored.

Why build more steel bins? Of the two nearest alcohol processing plants, one is standing idle and the other is used at far less than capacity. Put the unemployed to work converting grain to alcohol.

Many people contend that smog in our cities is due to petroleum products and that a little alcohol will reduce it.

In case of war, foreign sources of fuel are not dependable. We would need an immense amount of alcohol. Our enemies fought the last war with the aid of "ersatz" fuel.

Alcohol has many uses as a fuel to produce heat, light or power; as an antifreeze, solvent, and in the manufacture of countless drugs.

Grain in the form of alcohol is less bulky for storage and transportation. There's less chance of spoiling, and practically no lose due to deterioration by age. Our climate is not suitable for storing grain.

CHARLES HENDERSON.

GUTHRIE COUNTY, IOWA.

(Representative BEN F. JENSEN has introduced a bill (H.R. 4186) which would require the use of alcohol in gasoline. The amount required would be 2 percent for the first year, then 5 percent. The alcohol would have to be made from farm products.—EDITOR.)

Indifference, Ignorance of the Facts, Inertia

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of September 4, 1959:

On Picasso, three eyes look good, but will U.S. airlines and pilots be doomed in the jet age by our own Government's three I's?

The three dangerous I's of Government are indifference, ignorance of the facts, and inertia.

Any one of these three I's can spell disaster to the international airlines of the American aviation industry, and to thousands of workers who have built it into the world's greatest achievement of this modern age—not the least of whom are the pilots. And, even worse, they can mean disaster to the Nation itself, for the whole is made up only of its component parts—each interdependent upon the other.

Free enterprise doesn't mean management against labor. Free enterprise is made up of both management and labor. Pilots are just as much a part of the free enterprise system as any executive, shareholder or banker. Like the Nation, each is interdependent on the other.

Therefore, we—the pilots—rightfully ask our own Government why?

Why is it that foreign-flag lines, generally chosen instruments of their governments, operating without regard to profit-or-loss statements, strangely receive preference so frequently over our own international airlines?

Why is it that we (who proclaim to the world that the private enterprise system is the only one for men everywhere) must see our Government, via the State Department and the CAB, favor foreign governmentally controlled airlines over our very own?

Why is it that monopoly on the great circle route over the Pacific to Tokyo is tolerated in this Nation, a nation built on the thesis that only through healthy competition can men be free?

Why is it that the pressing problems of new fast cargo planes receive lowest priority in a day when delay is tantamount to self-destruction?

Why is it that, in this country which has always deplored militarism in others, the world's biggest airline is MATS—with hundreds of hostesses, flying competitive routes against our free enterprise American-flag lines?

Why is it that no one remembers it to be the commercial, not the military airplanes, on which the Nation must rely when there is a war or a sudden emergency—yet MATS is our chosen instrument competitor from within?

Why is it that no one remembers what happened to our American merchant marine of the sea—and takes lessons learned to prevent the same tragic occurrence destroying our merchant marine of the air?

The jet age has changed many things. We—the pilots—do not oppose technological advance. We fight for it—even though one Boeing jet 707 or Douglas DC-8 can do the work of 3 DC-7's (and thus means the loss of jobs).

Because—we—the pilots—know that American technology, American know-how, American ingenuity, if only given a chance, will cut fares, find new ways-and-means, find more jobs for our pilots—and everyone will be better off, including the traveler and the air cargo shipper.

Why? Can it be those three I's.

Can it be either indifference or ignorance of the facts or inertia?

Or can it be all three I's?

William Penn was a gifted administrator who lived long before our present jet age. Yet, so long ago, he said:

"Governments, like clocks, go from the motion men give them, and as Governments are made and moved by men, so by them they are ruined also. Therefore, governments depend upon men rather than men upon governments."

Don't tell us that William Penn knew more about the jet age and its problems than the CAB and our own State Department.

We the pilots ask the answer—Airline Pilots in the service of Pan American World Airways, members of the Air Line Pilots Association International (affiliated with AFL-CIO).

Andrew Jackson May

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. CHELF. Mr. Speaker, we are all deeply saddened by the passing of our former colleague from Kentucky, Andrew Jackson May. "Uncle Jack," as he was affectionately known, served the good moutain people of Kentucky of the Seventh District, for seven terms. He was the chairman of the old Military Affairs Committee that had to do with the U.S. World War II effort.

I shall never forget that as a new and young Member of the House—back in January 1945—"Uncle Jack" had up before the House the Mobilization of Civilian Manpower—the commonly known work-or-fight bill. Having been retired from the Air Corps a short time before I was elected to Congress in 1944, "Uncle Jack" asked me if I would speak on his committee's bill. He said that it was in trouble. He told me that he thought if I would urge the membership to support the measure—that they would be inclined to do so—since I had just left the armed services. I did speak out on

the bill. I took the position that if the Congress could draft a young boy to leave home, train, fight, and even die in the defense of his country—surely then the Congress had the power and the moral obligation to draft a man to work and to fashion the tools, the guns, and the munitions for him to use in his fighting. The bill passed the House and later "Uncle Jack" was kind enough to tell the newspapers that my speech in behalf of the legislation was the difference between victory and defeat of the bill.

Andrew J. May lived to be 84 years of age. He passed away quietly at the hospital in his hometown of Prestonburg in his beloved Kentucky mountains.

Andrew J. May led nearly every fight for every major piece of legislation that gave our great country her strength, manpower, and her vast striking power during the war. He carried this terrible load of work and great responsibility all during the entire World War II period. Specifically, he piloted the draft bill and the GI bill of rights through the House of Representatives.

Mr. Speaker, Andrew May should be remembered for the many, many good things that he did. As one of two members of the Kentucky delegation who served in the House of Representatives with "Uncle Jack"—I want to say that he was, in my opinion, kind, considerate, sympathetic, understanding, sober, and capable. He loved his home, his family, his people, and his State. May God rest his soul in peace.

To his family, I extend my deepest sympathy on this sad occasion, and may the good Lord bless them and keep them always.

Mr. Speaker, there follows excerpts from a story appearing in the New York Times of September 7, 1959:

ANDREW MAY DIES—EX-LEGISLATOR, 84

PRESTONSBURG, KY., September 6.—Andrew Jackson May, a power in Congress until war-bribe charges destroyed his career, died today in a hospital here. He was 84 years old.

Mr. May's wife, the former Julia Grace Mayo, died in the 1940's. They had three children, two of whom survive—Robert and Mrs. Olga May Latta, both of Prestonsburg.

ATTAINED PROMINENCE IN WAR

An obscure Representative from Kentucky until World War II, Mr. May gained national prominence as head of the powerful House Military Affairs Committee.

* * * * *

He had assumed that post in 1938, after having served in Congress since 1930.

* * * * *

In 1946, the Mead committee, headed by Senator James M. Mead, New York Democrat, began investigation of war contracts. * * * In a speech on the floor of the House, he branded the committee a court of inquisition, described Dr. Garsson as his "very good friend," and said that he had acted out of patriotism in aiding the syndicate.

* * * * *

Mr. May had once said that with a name like his (Andrew Jackson) he had to be a fighter. Ill and worn at 72, he fought hard at his trial to prove that he had never accepted money from the Garsson brothers and that he had not done favors for them that he would not have done for others.

* * * * *

On June 26, 1952, the Kentucky Court of Appeals restored Mr. May to his standing as a lawyer because it was "not in keeping with Christian principles" to deny him another chance. On December 25, 1952, former President Harry S. Truman granted a full Presidential pardon that restored his citizenship rights.

Since then Mr. May had lived in Prestonsburg, less than 15 miles from Langley, where he was born on June 24, 1875.

He began his career as a schoolteacher and later was admitted to the bar and entered politics. From 1901 to 1909, Mr. May was Floyd County attorney. He later was a special judge of the circuit court of Johnson and Martin Counties.

Entering business, Mr. May served as president of the Beaver Valley Coal Co. In 1930, he was elected to the 71st Congress. He was reelected successively until 1947.

The President's Veto of the Housing Bill Brings Protest From the People at Home Who Realize What the Effect Will Be

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. McFALL. Mr. Speaker, those of us who worked and voted for good housing legislation only to have the wishes of the majority thwarted by Presidential opposition three times in the past 2 years are understandably disturbed and disappointed.

But even more concerned are the people on the home front who are faced with the prospects of no housing legislation because of the veto.

I am hopeful that before we adjourn we will enact a new housing bill, as good or even better than the defeated bill of 1958, the trimmed down vetoed bill No. 1 of 1959 or the even further curtailed but still vetoed bill No. 2 of 1959.

Every person in the country is hurt if our housing program is stopped, not only the real estate salesmen, builders, carpenters, and suppliers who are direct effected by shutdown of the FHA program, but all the others who are indirectly hurt.

Following are telegraphic comments from some of those in the 11th District of California who know firsthand the harm that is being done by these vetoes:

From Dean C. DeCarli, mayor of Stockton:

The city of Stockton is extremely disappointed over the veto of the housing bill by the President. As this bill is needed to assist us in financing our West End redevelopment project to provide for a needed 200 units of public housing and to provide for Federal assistance for displaced people, we urgently request that you override the President's veto.

From John E. Hirten, executive director, Redevelopment Agency, city of Stockton:

Veto of housing bill will have serious effect on entire urban renewal and housing program for the city. Completely stops possibility of renewal and redevelopment of 200 acres West End skidrow area. Also kills 200 public housing units needed to replace obsolete city owned Lanham Act war housing. We appreciate your efforts in the past and once again implore your assistance to override the President's veto. Two years without appropriate housing legislation will certainly restrict our programs and hurt interest and initiative shown by citizens of this community. It can truthfully be said that the lack of housing legislation will have detrimental affects on our community and its economy. Of all legislation the housing bill comes closest to paying for itself in increased tax base of communities and their economy.

From C. P. Kenyon, administrator, San Joaquin County Board of Supervisors:

The President's veto of the housing bill affects several vital projects in San Joaquin County. We feel that the public housing bill should be passed and we urge your vote to override the President's veto.

From Henry Hansen, secretary of the Central Labor Council of Stockton:

Housing bill is vital to Stockton. Appreciate your support to override the veto.

From executive director of the San Joaquin County Housing Authority, Allen R. Reed:

Thank you for your letter of August 28 and your attached newsletter No. 34 on the subject of difficulty of enacting good housing legislation. We were both somewhat surprised and shocked when we learned of the President's veto of the second housing bill. All we can do at this time is to express our appreciation for your good work and await the outcome of the override action. In a telephone conversation with the Commissioners today they asked me to express their most heartfelt appreciation for your work and support of the housing bills.

Educating the Layman in the Law

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, the process of our Government to be appreciated must be understood. We often feel that the legislative process is not sufficiently understood by many of our constituents and we try to help them understand them. We know that we ourselves have trouble understanding the executive process from time to time.

As for the judicial process, those of us who are lawyers, know that many of our nonlawyer friends have a very poor opinion of courts and lawyers, often with good reason.

The American Broadcasting Co. on ABC–TV has been running a series of courtroom programs called Day in Court. They have been contributing significantly to a better understanding of the judicial process.

This particular series is of special interest to me because a long time friend of mine, Prof. Edgar Allen Jones, Jr., professor of law at the University of California at Los Angeles, sits as the judge.

Under unanimous consent previously granted, I am including here an article about this TV series, entitled "Phi Delta Phi Plays Leading Role in New TV Courtroom Dramas," from the spring 1959 issue of the Brief, quarterly publication of the international legal fraternity of Phi Delta Phi:

PHI DELTA PHI PLAYS LEADING ROLE IN NEW TV COURTROOM DRAMAS—"JUDGE" JONES (MINOR 1950) LEADS DOUBLE LIFE

Quiz shows, comedy shows, and musical variety shows have faltered by the wayside, but if the hard riding TV westerns should ever pause for a backward look down the narrow and tortuous rating trail, they may be disturbed by the relatively new phenomena of courtroom drama shows coming on like the U.S. Cavalry after a batch of Indians. The bemused trial lawyers who have been wont to speak of courtroom "drama" with self conscious hyperbole, now suddenly find the element of truth in the day by day commercialized reproduction of their performances. The thought of 700,000 viewers (a network guess of the number who watch "Traffic Court") is a startling one for the practitioner conditioned to work before a scattering of unhappy defendants awaiting their turn and a few habitues with nothing else to do.

Actually the entertainment industry has long recognized the dramatic potential of courtroom localities for the playing out of human problems. But it has afflicted attorneys and judges with representations of the administration of justice which have considerably deviated from reality. All too often a distorted picture is given to the public of the processes of justice. Judges have been portrayed as pompous ignoramuses, lawyers as unscrupulous connivers. "Justice" has seemed more a search by venal men for self-preferment than the dedicated goal of a profession. Rarely has "show business" shown a genuine concern for authenticity in picturing court business.

The new development in television, however, is premised on nothing more elaborate than reasonable facsimile presentations of daily courtroom fare. The afternoon matinee at the courthouse has turned out to be a smash hit when trimmed down and taken on the road.

Backbone of the nationwide network courtroom dramas is provided by the American Broadcasting Co. television network and its three different court programs: "Day in Court," "Accused," and "Traffic Court." Each has received favorable ratings in network appearances.

Actual (though unnamed—per Canon 27) attorneys present the cases to a "judge" who, without makeup, is professor of law at the University of California at Los Angeles, Edgar Allan Jones, Jr. (Minor Inn, University of Virginia, 1950). "Judge" Jones sits at five different sessions, one-half hour each on three different programs each week.

ABC–TV presents a total of seven half-hour courtroom programs. On two of the "Day in Court" sessions (the series runs Monday through Friday in the afternoon for the soap opera clientele) an ex-professor of speech and drama, William Gwinn, presides in adoption and domestic relations proceedings. On the balance, Professor Jones sits as "judge."

The most recent of the three ABC–TV courtroom programs "Accused," appears weekly on Wednesday evening across the country. "Traffic Court," a highly rated local program in Los Angeles, now in its second year, may well soon be back on a network since it achieved a high rating in the large metropolitan areas of New York, Chicago, and Philadelphia.

In excess of 50 persons are involved in bringing each half hour to the video screen. Originator of the court shows for ABC–TV is network Vice President J. Seligman, himself a Harvard law graduate and former Government attorney.

Law students at a nearby university do the basic case research, submitting briefs of cases involving aspects of tort, contract, probate, criminal law, adoption and domestic relations. The requirements for prospective cases as submitted to the programs' writers are legal accuracy and dramatic potential. The briefs go to the three writers assigned to the court programs. They take the skeleton of law and cloak it with a credible dramatic half-hour show which must both be entertaining and retain the aura of authenticity.

The scripts thus produced are then given to professional actors and actresses to "read" so they may be cast for the parts. Although the scripts present lines and cues, the actors and actresses are instructed by the director not to feel bound to match cue and cue, but to convert the thought into their own words. The script indicates the sequence of development of situation and character. The ad libs of the performers tend to enhance the spontaneity of the drama.

Not infrequently, of course, the transition from law student brief to dramatic script to portrayal by an actor or actress actually changes the previously indicated legal solution as set forth in the original brief. The responsibility for catching that kind of change, for converting any errors along the way into dramatic profit and legal accuracy, and for getting the show off the air exactly on time (within 15 seconds) falls upon "Judge" Jones. His facility for quick reaction and repartee prompted Newsweek recently (Jan. 12, 1959) to describe him as "the leader of the new breed of ad libbers," and John Lardner to comment in the New Yorker (Aug. 2, 1958) that this "facsimile judge with a turn for the theatrical" made "the work of law enforcement in 'Traffic Court' to be sharp and skillful, as well as picturesque."

To avoid preconceived notions concerning the decision which will actually be rendered upon the basis of the evidence presented while the "court" is on the air, and to preserve the spontaneous effect, "Judge" Jones never reads the scripts or briefs before appearing at the studio for the initial rehearsal. The total time involved in producing a half-hour show, from the point of first rehearsal to the end of the show as seen by the audience across the country, is about 3 hours.

During those 3 hours, a dry rehearsal is held, during which the "Judge" first meets the attorneys involved and hears the case for the first time. The case is presented at that time to see what problems of admissibility and procedure are written into the script. Attorneys are encouraged to object to anything objectionable. Even the director, Larry Robertson, has become so sensitive to the usual courtroom faux pas after repeated exposure to the dry rehearsals that he plays a key role in moving the show around legal shoals. Questions are rephrased, foundations are laid, and so forth, so that no basis for objection will remain, except those which are retained for dramatic effect. If necessary, the case is basically reoriented to make it legally believable while still preserving its dramatic impact.

The cast for that particular show then go before the TV cameras on the actual courtroom set, the klieg lights are turned on, and the show proceeds through a dress rehearsal on closed circuit TV cameras. Seconds and minutes are pared by cuts of the script and careful meshing of action so as to compress the case within the required time limits. Finally, in the last half-hour of the 3 hours, the program is gone through a third time, this time being recorded on magnetic tape, complete with whatever ad libs or errors may take place. It is then flown all over the country for simultaneous release on the Nation's video screens.

At least 150 attorneys have thus far appeared on the ABC–TV courtroom programs. The three bailiffs, three clerks, and two court reporters are either active or former court attachés. The services of eight disability retired police officers are utilized to portray policemen when necessary. Similarly, California highway patrol officers are used. Two practicing attorneys are retained by ABC–TV for direct consultation with the writers on problems as they arise. The Los Angeles County probation department cooperates actively with the production of the program, its 20 male and 20 female probation officers appearing on the air as needed. Doctors, laboratory technicians, fingerprint experts, insurance adjusters, fire department officials, all are utilized to put their real-life talents and experience to work as expert witnesses as the cases may demand. An average of more than 50 actors and actresses are employed each week, including nonprofessional "specialists" like professional boxers or wrestlers, circus performers, organ grinders, burlesque grinders, and such.

The "fan" mail reflects a conviction on the part of the audience that the viewers are watching a real judge operate in a real courtroom. This is so although the announcer regularly makes clear at the outset and conclusion of the program that recreations rather than actual cases are being seen. It also reflects a surprising number of persons who first realized that they had legal problems or neglected rights when viewing one of the courtroom programs. The judge constantly cautions criminal defendants on arraignments to secure counsel and also emphasizes at every opportunity that no litigant need lose his rights for lack of counsel and no person need ever go unrepresented by counsel for lack of financial means.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate passed agricultural trade development extension and took up bill on savings bond interest rates.

House passed miscellaneous bills and sent to conference bill extending Public Law 480.

Senate

Chamber Action

Routine Proceedings, pages 16796–16818

Bills Introduced: 2 bills and 1 resolution were introduced, as follows: S. 2651–2652; and S. Con. Res. 76.

Pages 16800, 16801

FNMA Mortgages: By unanimous consent, it was ordered that vote on August 20, 1959, on S. Res. 130, expressing the sense of the Senate with regard to the exchange of FNMA mortgages for Government bonds, include the name of Senator Neuberger as voting in the negative as he did and that the Journal be corrected accordingly. **Page 16894**

Agricultural Trade Development: By 68 yeas to 14 nays (motion to reconsider tabled), Senate passed with amendment H.R. 8609, to extend the Agricultural Trade Development and Assistance Act of 1954 (after discharging Committee on Agriculture and Forestry from its further consideration), the amendment being the substitution for its language the amended text of S. 1748, companion bill, which had already been further amended as follows:

Adopted: First branch of Humphrey amendment (on behalf of committee) inserting provision for assistance to meet emergency relief requirements other than for surplus food not exceeding $2 million for any fiscal year; Aiken amendment authorizing $300 million annually for title II (enrichment and packaging of certain donated commodities) from January 1, 1960, to December 31, 1962, plus any unexpired authority coming over from preceding year; Johnston (South Carolina) amendment to add new section on enrichment of cornmeal, grits, and white flour; by 44 yeas to 38 nays (motion to reconsider tabled), Humphrey amendment to insert provision on food stamp and food allotment plan in six communities; Cooper amendment giving priority to distribution to U.S. needy before sale for foreign currencies of surplus agricultural commodities; Mundt amendment to add new section on annual rates on conservation payments; Anderson amendment to insert new section on national marketing quota of 1960 cotton crop; Humphrey amendment to authorize CCC to make available stocks of animal fats and inedible oils for donation to charitable organizations; and modified Humphrey amendment respecting use of certain foreign currencies by any jointly controlled nonprofit foundation established in a foreign country pursuant to agreement between U.S. and such country for promoting research, education, health, and public welfare; and

Rejected: Balance of Humphrey amendment (on behalf of committee) on emergency relief requirements other than surplus food; by 37 yeas to 44 nays (motion to reconsider tabled), Butler amendment requiring delivery directly to export vessel at U.S. port of shipments of exported surplus U.S. commodities; by 18 yeas to 64 nays, Hart amendment to add title IV on direct food distribution program authority of the Secretary of Agriculture.

Senate insisted on its amendment, asked for conference with House, and appointed as conferees Senators Ellender, Johnston (South Carolina), Humphrey, Young (North Dakota), Aiken, and Hickenlooper.

S. 1748, companion bill, was indefinitely postponed.

Pages 16791, 16818–16820, 16824–16868

Tribute to Labor: Senate adopted H. Con. Res. 435, expressing realization and appreciation of Congress of the basic role that labor plays in U.S. economy and the contribution made by laboring men and women to America's well-being.

S. Con. Res. 76, companion measure, was indefinitely postponed. **Pages 16801–16802, 16868–16869**

Savings Bond Interest: Senate made its unfinished business H.R. 9035, to permit issuance of series E and H savings bonds at interest rates above the existing maximum and to permit Secretary of Treasury to designate certain exchanges of Government securities to be made without recognition of gain or loss. **Page 16868**

Record Votes and Quorum Calls: During Senate proceedings today, four record votes and two quorum calls

Appendix

Labor, the Strong, Vital Force of Our Nation, Is the Thrust Born in the Hearts, the Minds, and the Hands of the Worker

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. RANDOLPH. Mr. President, Labor Day in West Virginia, as is true throughout most of the United States, is a holiday truly dedicated in numerous appropriately located communities to the honoring of the men and women who toil that America be strong and remain free.

It was my privilege to have participated in one Labor Day eve observance at Morgantown, September 6, when I was dinner host to the executive committee for Labor Day celebration events in Morgantown, Monongalia County, and a public reception which followed.

My brief remarks on that occasion were a prelude to and extracts from two addresses I had the honor of delivering in areas of southern West Virginia on Labor Day. The first was the annual celebration at Harris Memorial Park, Smithers, Fayette County at noon, under the auspices of the upper Kanawha Valley local unions. The other event was the United Mine Workers' annual Labor Day celebration at Comfort, Boone County.

Several thousand persons were in attendance for each of these traditional programs in the largest bituminous coal producing State. The workers, whether members of organized unions or toilers in unorganized activities, were all accorded honors of the day.

Mr. President, I ask unanimous consent that the speech which I delivered at these celebrations be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY SENATOR JENNINGS RANDOLPH, LABOR DAY, SEPTEMBER 7, 1959, AT UPPER KANAWHA VALLEY LOCAL UNIONS' ANNUAL LABOR DAY CELEBRATION, HARRIS MEMORIAL PARK, SMITHERS, FAYETTE COUNTY, W. VA., AND UNITED MINE WORKERS' ANNUAL LABOR DAY CELEBRATION COMFORT, BOONE COUNTY, W. VA.

Ladies and gentlemen, members of the United Mine Workers, and friends, I am grateful for this opportunity to join with you in celebration of the one day of the year set aside for commemoration of the men and women of American Labor.

"Labor Day differs," said Samuel Gompers, "in every essential from the other holidays of any country." Fifty years ago, the father of the American trade union movement stated that "All other holidays are in a more or less degree connected with conflicts and battles of man's prowess over man, of strife and discord for greed and power, of glories achieved by one nation over another. Labor Day * * * is devoted to no man, living or dead; to no sect, race, or nation."

This is the occasion on which we pause in the course of our own labors to acknowledge the sweat and toil of the men and women who created much that we see about us. It is fitting, too, that Labor Day should have come to be acknowledged in the manner that it has. The product of no Executive fiat, no Act of Congress—except for the District of Columbia—the acceptance of Labor Day itself is an expression of the free and voluntary character of the American trade union movement.

First propounded in 1882 by Peter J. McGuire, a carpenter in New York, every State has independently adopted the day which, in the words of Mr. McGuire, "shall be Labor's—an occasion devoted to the industrial spirit, the great vital force of every nation."

This vital force is the thrust born in the hearts, the minds, and the hands of the worker. It is this force which has built railroads to span the continent and raised buildings to scrape the sky; it has built and manned our factories and gone into the bowels of the earth for fuel to fire them. All of these are the product of the efforts and dreams of the American worker.

In thus pausing to survey the achievements and reckon the gains of American labor, it is therefore appropiate for us to recall some of the milestones in the union movement. Some of you here have your own milestones—the struggles to achieve recognition, the victories and defeats of organization. You also recall the grim days of the depression. And for many of you, I am sure, the road has seemed long and arduous, a road along which you have been guided by hope, but on which you have met also with the face of despair.

But in the history of man and in the history of labor, 75 or 100 years is not a very long time in which to create a new institution. And let us not ignore the fact that the trade union movement is indeed just that—a new and compelling social institution in mankind's history. Only 50 years ago Prof. William Graham Sumner was still preaching to the bright young men at Yale University the doctrine that "every experiment only makes it more clear that for men to band together * * * instead of being a remedy for disappointment * * * is only a way of courting new calamity."

This was the typical and mistaken response of the conventional wisdom of the period when Samuel Gompers and a handful of other union leaders met in Pittsburgh in 1881 to form the Federation of Organized Trade and Labor Unions. Five years later this organization was succeeded by the American Federation of Labor—the same year as the Haymarket riot in Chicago. Since that time the history of American labor has been a chronicle of the march toward an ever broadening realization of the dictum of Mr. Justice Holmes that "liberty of contract begins where equality of bargaining power begins."

It is a record marked in its early stages by bitter and last-ditch struggles of management to resist the recognition of unions. The uses of injunctions, "yellow-dog" contracts, and private labor spies live still in the memories of many union leaders and rank and file workers.

It was only 89 years ago that the first written contract was signed between coal operators and coal miners. Less than 70 years ago—in 1890, to be precise—and within the lifetime of the dynamic and dedicated leader, John L. Lewis—the United Mine Workers of America organized formally. While it was not until some 30 years later, in 1922, that the UMWA won its famous case against the Coronado Coal Co., in which the Supreme Court declared that a strike was not a conspiracy in restraint of trade.

Though organized labor made slow but steady gains from the 1880's to the 1930's, its security was not assured until the arrival of the New Deal under the leadership of President Franklin Delano Roosevelt. And I am happy to have had a part in those exciting times as one of the original members of the F.D.R. team in the Congress. For, it was our passage of the National Industrial Recovery Act, the Fair Labor Standards Act, and the National Labor Relations Act, which, for the first time, established national policy protecting the right of workers to organize and to elect their representatives for collective bargaining.

These are only some of the high points of labor's progress. The record has not been unmarked by violence on the part of both labor and management—we have had the Haymarket riots, the Pullman strikes, and Little Steel strikes. But in spite of the occasional eruptions of violence—in spite of the sometimes ruthless actions of reprisal—the chief mark of the American labor movement has been its use of legal and democratic methods to forge social and economic advancement.

The free American labor movement has confounded the Marxist dogma of class antagonism and has refuted the Marxist prophecies of blood and iron. Here, working within the framework of a cooperative capitalism, American labor most clearly distinguishes itself from many of its counterpart movements in Europe.

The goal of the trade union movement in the United States has not been to inflame the jealous passions of the dispossessed and the "have nots" against the "haves," but to seek a more abundant life for all. Karl Marx—blinded by his own sense of being an outcast—failed to see this; and present-day Marxist leaders—blinded by their own dogma of Marx and Lenin also fail to see this.

The wisdom of American labor's use of peaceful, legal, and democratic methods is apparent to us today. For organized labor has finally—in many areas—achieved full partnership with capital in the American productive system. With this increase in power, working men and women have won new rights. But these rights carry new responsibilities as well.

And the first responsibility is that which goes with all power—the obligation to use one's strength wisely for the benefit of the general good. This position—you know and I know—has not been universally and consistently upheld by all of our present-day labor leaders. This can be said also for the use and the abuse of power by some management leaders.

Our Founding Fathers wisely recognized that power is inherently dangerous. There-

fore, they sought to disperse political authority as widely as possible within the Federal structure of government and between the Federal and State Governments. As our civilization has become more complex and our society more centralized the same problems of the distribution of political and economic power have developed within nongovernmental institutions. Parallel to this development there has grown the need to erect and maintain democratic safeguards against the misuse and abuse of power throughout the range of American life—in the great communications media, in industry, and to a lesser extent, in labor.

I speak quite candidly on the subject of the labor-management reform bill recently reported by the Senate-House conference committee, accepted by the Senate, and awaiting House action, probably today or tomorrow. I was a member of this committee and participated for 12 days in the exacting business of its deliberations. At the outset I had determined that I would vote for those reform measures which had been revealed to be necessary by the Senate Rackets Investigating Committee, but that I would not associate myself with any punitive or repressive provisions which would restrict the legitimate rights of organized labor. I held as firmly as possible to that position, as did my Senate Democratic colleagues.

The bill as reported admittedly will not please every one. It does not fully satisfy me. But it is doubtful that any law passed by the representative legislative process will ever be acceptable to all because, in such issues as these, there are as many points of view as there are parties to the discussion. But democracy is the art of the possible—and in this instance we have done all that could be accomplished within the latitude afforded by the differing versions passed by the two Houses of the Congress.

There has been much exaggerated talk at both extremes regarding Senate and House actions on labor-management legislation. And though it may take time to assess its impact, this I can state from knowledge based upon intimate study and contact with its preparation: It is a measure aimed at eliminating the racketeer element from honest labor and restoring democratic safeguards to those unions where they have been lost. These accomplishments can be brought about under the terms of the legislation without destroying the hard-won and legitimate rights of organization and collective bargaining.

In discussing the conference report in the Senate on Wednesday of last week, I said: I toiled to prepare a report which would be restrictive where necessary but would not be repressive to the legions of loyal labor so vital to the strength of our country.

At this point I state emphatically that, in my opinion, the conference chairman, Senator JOHN F. KENNEDY, of Massachusetts, spoke with complete accuracy when he informed the Senate, also on Wednesday, when he said:

"There were serious shortcomings in the reform bill which passed the House, and the conferees on the Democratic side, the Senator from Michigan [Mr. MCNAMARA], the Senator from West Virginia [Mr. RANDOLPH], and the Senator from Oregon [Mr. MORSE] shared my view that we could not under any circumstances have voted for the Landrum-Griffin bill. While many Members of the Senate hold an opposite view, if the Landrum-Griffin bill had come to the floor of the Senate in the form in which it passed the House * * * all the Senators would have regretted it finally. * * * And when we view the significant provisions of the Landrum-Griffin bill, one after another, we must admit they go far beyond reform. They go into an area which would limit what we all would consider legitimate activities of men and women who bargain collectively."

But I do not choose to inflate out of its proper proportions the importance of the issue of so-called labor reform. Whatever the merits of the issue, the problem has not been one in the great body of the institution of trade unionism. This has always been, and remains so today, a movement necessary to the welfare and strength of a democratic system.

My concern for the welfare of organized labor in America goes deeper than the issue of reform. In these closing minutes I would like to address what seems to me a more fundamental issue—more fundamental for the labor unions and for the welfare of American democracy. I refer now to the loss of what might be called a "sense of mission." And I do not use the term lightly.

For the trade unions have always acted their best—as has the United States itself—when imbued with a sense of mission—a mission to perform not for themselves alone but for all Americans. This was the lesson of the life of Samuel Gompers. It was from this sense of mission that the unions fought for gains for all Americans—for free public schools, child labor laws, minimum wages, workmen's compensation, social security, and a host of other advances which have been to the benefit of all American citizens.

Thus have the trade unions always best served themselves when they have served the American heritage, when their actions have been charged by the belief that they could create a future of greater worth and human dignity. This belief—this belief in the possibilities of man and the dignity of labor—has shaped the destiny of America.

American labor, led by the trade unions, is today a full participant in that destiny. But if we are to live up to the fulfillment of America we must live beyond the preoccupations of our particular job or craft. This is a responsibility which one cannot defer to his political or union leaders. It is an obligation which rests upon the individual heart and will of each of us.

"The American journey has not ended," stated Archibald MacLeish. "America is never accomplished, America is always still to build; for men, as long as they are truly men, will dream of man's fulfillment." This is the mission to which we must again rededicate ourselves; this is the mission which Samuel Gompers saw with such clarity.

Thus, as citizens and as workers, it is up to each of us to rekindle the faith in the American future, and to live with a renewed vision of the possibilities of man. We Americans have reason thus to live; whether we have the will depends upon the individual heart. And if we do so live, our work, whatever its nature, will be ennobled in its service to the greater benefit of man.

Oil Industry Facing Future With Confidence

EXTENSION OF REMARKS
OF
HON. GEORGE E. SHIPLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. SHIPLEY. Mr. Speaker, we have considerable oil activity in my congressional district and in looking over the magazine Highway Highlights of July–August 1959 on pages 12 and 13, I read an article written by Mr. Frank Porter, president of the American Petroleum Institute which I found most interesting in view of the fact that I know something about the petroleum industry. On these pages appear two pictures of Mr. Porter and under one it reads:

The reason the oil industry has made such remarkable progress in just 100 years: "It has been able to operate in a free economy—one that has been free up to now of burdensome governmental controls."

Under the other it reads:

Concerning highway transportation: "The petroleum industry, of course, is certainly in favor of good roads, properly engineered and properly financed."

I was impressed with this article as I know many others will be and, therefore, take this opportunity of placing it in the RECORD:

"The long-range picture is bright."

Doing the talking was Frank Porter, affable president of the American Petroleum Institute. Seated at his desk in the API offices in Rockefeller Center in New York City, he was giving Highway Highlights his views on the past, present, and future of the petroleum industry, currently marking its 100th anniversary.

In viewing the future optimistically, Mr. Porter said he was doing so "assuming that there will be no burdensome or unnecessary Government controls and that the system and the philosophy that has prevailed in this country and which has enabled the industry to grow, will still continue."

The system and philosophy: "Free enterprise and free markets. Any time you stifle a marketplace, you stifle free enterprise."

Mr. Porter feels strongly about this. He points out that the biggest stimulant the industry has had during its first 100 years is that "it has been able to operate in a free economy—one that has been free up to now of burdensome governmental controls."

President of American Petroleum Institute—composed of about 11,000 members—since 1950, Mr. Porter originally was from Oklahoma. He has been engaged in one form or another in the petroleum field all his life.

It shows. When he talks about any facet of the industry, he does so with conviction, with authority. He answers questions promptly, directly, and without equivocation.

About the petroleum industry as a whole, he declares:

"I think that the industry is of paramount importance to the economy of this country. It certainly is the third largest industry, excepting only agriculture and the combined utilities. It furnishes over 70 percent of our energy."

Tracing the tremendous growth of the industry during the century it has existed, Mr. Porter observed that "It's come from nothing to where it is today."

While oil was discovered at Titusville, Pa., in 1859, one of the events that gave the industry its biggest boosts, he feels, when, in 1901, "Spindletop" came in on the gulf coast "and gave every indication that there would be a supply of oil in abundant quantities." Another milestone, he said, was the development of the gasoline buggies and the growth of roadbuilding.

"The petroleum industry, of course, is certainly in favor of good roads, properly engineered and properly financed," the API head emphasized. "The industry and highway transportation go hand in hand. And highway transportation, like oil, will continue to grow, too."

What has been the industry's greatest achievement in its relatively short history? Mr. Porter was asked.

Pausing a moment, he replied:

"I think one of the greatest achievements of the industry—and one that has worked in the public interest—is in the field of conservation. Working with the regulatory authorities of the various oil-producing States, conservation laws have been enacted which really have a twofold purpose: the protection of the relative rights of the operators, and also, of course, the conservation and proper producing methods of this valuable resource."

About the present condition of the industry, Mr. Porter had these observations:

"The oil industry, just like any other industry, has its good, its fair, and its bad times. In some respects, 1958 was a trying year. I think the consensus is that 1959 will be a better year, that there will be some increase in demand.

"It must be borne in mind, though, that the above ground stocks of products are too high for this time of year. That is always a matter of concern. But this is something that the industry itself can take care of by exercising some restraint in production.

"I don't know what you would call our biggest problem at the moment. But there was put into effect recently a mandatory import order which restricts the amount of crude oil that can be brought into this country. It hasn't been in operation long enough to have all the 'bugs' out of it. I wouldn't say that everyone is happy with it."

How about taxes?

"Taxes are everybody's problem these days," he said. "And anything that would conceivably change the tax regulations adversely to the production of oil and gas would seriously hamper our operations and would undoubtedly lead to higher prices for the particular product affected—all of which would not be in the interest of the public."

He added that the API remains opposed to any increase in the Federal gasoline tax, as proposed by the administration.

The dawn of the atomic power age doesn't disconcert him. In commenting on this, he remarked:

"All predictions, of course, are that the energy requirements of this country will grow tremendously in the next two decades—and oil and gas will be called upon to furnish a great share of this increase.

"Atomic energy will come into the picture, of course, but the best thinking is that it will merely complement the present liquid and other forms of energy.

"The oil industry has always carried on vast research programs. There has been a great deal of work in the field of petrochemicals—which is a growing field. Did you know that out of gas and oil, some 2,500 articles are now manufactured?"

The listener hadn't known * * * and he left with the feeling that Frank Porter had not merely been employing words when he said:

"The long range picture is bright."

The Future of Agriculture

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, September 8, 1959

Mr. YOUNG of North Dakota. Mr. President, an old acquaintance and friend of mine, Mr. Robert Harriss, is among the businessmen who have a deep concern for the future of agriculture.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement that he has prepared for presentation to the Senate and House Agriculture Committees.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

DESTROY AGRICULTURE AND DESTROY AMERICA

(Statement by Robert M. Harriss sent to the U.S. Senate Agricultural Committee and the House of Representatives Agricultural Committee)

Gentlemen, I am a native Texan, but now a resident of Florida. I have been interested in agriculture for the past 40 years and have farms and ranches in Texas, Florida, and old Mexico. I have also had experience in foreign exchange, currencies, and exporting and banking.

Agriculture being our greatest and basic industry upon which the existence of our Nation depends, I believe we agree that this problem should be given first consideration. It is all vital to our national security. I believe if we destroy agriculture we destroy America.

I also believe we will agree that paying our farmers not to produce for the past 25 years has proved uneconomic and destructive. It is against nature's or divine law. While we have been paying our farmers not to produce, Communist Russia and Communist China have been doing everything possible to increase their agricultural production. Our present surpluses are not a liability but could prove one of our greatest assets in combating communism, provided a constructive program is adopted for the disposal of same among the starving, hungry, and needy of the world.

I believe you will agree the American farmer, the man who is feeding and clothing the Nation is entitled to a fair or parity price on that portion of his major nonperishable commodities domestically consumed and leave him a freeman to compete in the world markets at world prices on any surpluses produced above his allotment for domestic consumption. Such a program would be rather simple in administering and would save the Government and taxpayers billions of dollars. If the farmer produced in excess of his domestic allotment he would have the option of either selling it in the world market at world prices or holding his surplus against his allotment for the following year. If the domestic consumption should prove less than anticipated then the excess production could be held by the Government for a reduction in the allotment for the following year. If the domestic consumption should prove more than the allotment, then the farmer or the Government could be permitted to sell the shortage out of their surplus.

Regarding the existing surpluses in major nonperishable commodities, the selling of them should not be left to the discretion of any one man. A portion of them should be stockpiled for national emergency and the selling of the remainder should be definitely fixed equally over a 5- or 10-year period but only for disposal in the world markets.

To facilitate the disposal of existing surpluses three things should be done without delay:

1. Government credit insurance to American exporters on liberal terms guaranteed by reputable foreign buyers.

2. Long term loans with acceptance of foreign currency of friendly free nations as collateral.

3. Outright gifts to the people of certain nations who are in dire need of food and clothing and under the control of our Government.

Regarding the perishable crops: It would be impracticable to have a domestic allotment on these. However, I think you will agree that our farmers are entitled to the domestic market on these crops and should be fairly protected against the importation of perishable crops from foreign countries that they can produce with their cheap labor and low taxes at much less than our American farmers with high labor and standard of living and taxes. Many of our American manufacturers are now beginning to find that they cannot compete with foreign nations for this same reason. In a recent article Mr. Leslie Gould, one of the outstanding financial authorities in the country, stated, "Today, foreign steel producers can and are underselling American companies in the domestic market and in neighboring Canada. The same for many other goods."

There may be opposition from certain foreign sources regarding adoption of the domestic allotment plan and the orderly disposal of existing surplus commodities. However, why should we permit foreign sources to dictate our economic and agricultural program. Why should the domestic market not be protected for our own farmers at fair or parity prices and why should they not be left free men to compete in the world market at world prices on any surpluses.

In connection with the foregoing it would be well for us to take into consideration the following farm and agricultural statistics:

According to Government figures the national income has increased 100 percent during the past 12 years and at the same time agricultural income has declined 20 percent, and to make the situation worse the purchasing power of the paper dollar they receive has declined 33 percent. In other words, in terms of dollar purchasing power agriculture is receiving only about half of what they received 12 years ago. The farmers' situation is even worse. According to Government figures, the net farm income, compared to national income, was 104 percent more 12 years ago and, considering the decline in the purchasing power of the dollar, he is only receiving a net income of about one-third what he received 12 years ago. Is it any wonder that during these 12 years the farm population has declined more than 6,500,000 despite the increase in the national population from 144 million to 174 million? Has not the influx of farm population to the cities and factories had a direct influence on unemployment and relief?

I do not believe the domestic allotment program would be the fundamental solution of our economic troubles, but it would be helpful and constructive for agriculture and our economy and save the Government and the taxpayers billions of dollars.

I believe the most helpful step that could be taken for a sound national recovery would be a free gold market. Since the value of gold was arbitrarily fixed 25 years ago, the general price level and labor costs have risen about 300 percent, while the only recognized medium of exchange—gold, has been arbitrarily pegged at $35 per ounce. How can we have a sound recovery in our country or world recovery until we have a free medium of exchange on which exports and imports and world trade is based—gold. This would naturally result in a higher price for gold in terms of the unredeemable paper dollar, which would be essentially helpful not only to agriculture, industry, business, and labor, but a sound national and world recovery. This because such a free gold market would permit foreign nations to buy more of our agricultural and manufactured products for less gold. During the past 24 months we have been losing gold at an alarming rate; about $3 billion of gold has been lost during this period. In Associated Press, June 24,

1959, article by Mr. Sam Dawson, he stated, "Uncle Sam's stock of gold is dropping below $20 billion for the first time since 1940, when it was nearly $25 billion. At the same time total payments by the United States to other nations continue to exceed receipts from them. Latest figures show exports slipping while imports hold high." New York Times article on financial page, June 25, 1959, also stated U.S. gold stock was below $20 billion for the first time since 1940. About one-half the gold in the United States is earmarked or belongs to foreigners or foreign governments. Why wait for the inevitable to happen and, in the meantime, permit confusion and inflation and economic conditions to grow worse? Until we establish a free gold market and find out what the paper dollar is worth in terms of gold, economists whose opinion I value and agree with, believe the inflation and debasement of the paper dollar will continue.

Some argue that because England, Canada, Australia, South Africa, Russia, and other countries urge higher price gold we should not cooperate in same. They also argue it would be helpful to Communist Russia. May it not be the case that because Communist Russia advocated higher price gold they do not want it because they know their advocacy would be a handicap in bringing it about? Also higher price gold is not important to Communist Russia as the free world, because Communist Russia produces gold with slave labor. The record shows the present price of gold is destroying the gold mining industry in the United States and adversely affecting allied mining. Eighteen years ago we produced 270 percent more gold than now. In any event we own a large part of the gold. Therefore, higher price gold would be helpful to our exports of agriculture, manufactured goods and our economy; also a free gold market is essential to free trade. In the long run this would be most detrimental to Communist Russia.

Not long ago Dr. Ludwig Erhard, Economic Minister of West Germany, who is credited with engineering Germany's prosperity to its present world position, when asked if he saw any end to the gradual decline in the purchasing power of money, replied: "There is no way of knowing whether the dangerous trend toward inflation will come to an end, so long as there is no real progress toward making currencies freely convertible into gold." Recently I attended an all-day seminar on the gold, dollar and inflation question given by Dr. Franz Pick, who is considered one of the outstanding world authorities on gold and the money question. Dr. Pick was of the opinion that inflation, debasement of the dollar and confusion would continue and grow worse until we had higher price gold. With your permission I would like to leave a few articles that have a direct bearing on Dr. Erhard's and Dr. Pick's statements, if you desire them for the record.

As some of us may remember, in March 1933, when our country was in the depths of the worst depression in history, we were forced to place an embargo against the exportation of our gold. This was promptly followed by unbelievable economic recovery in agriculture, industry, business, and employment.

Economists, whose opinions I value, do not advocate the arbitrary raising and pegging the price of gold at a fixed price. We advocate a constructive monetary policy on gold, medium of exchange for 6,000 years; first, an embargo on the exportation of our gold followed by a free gold market, to determine what the value of the unredeemable paper dollar is worth in the terms of gold. When this has been determined we can return to redeemable currency and with economy in Government and a balanced budget. We can go forward with a sound prosperity for agriculture, industry, and world trade and recovery.

Attached are some statistics, reports, and data, substantiating the foregoing, which I believe conclusively prove:

1. That inflation will continue as long as we are on a paper unredeemable dollar and end in disaster.

2. That in order to return to redeemable currency we must have higher priced gold.

3. We should stop the export of gold until it can be determined what the dollar is actually worth in terms of gold.

4. That higher priced gold would be of great benefit to agriculture, industry, and labor because it would make it possible for foreign countries to buy more of our surplus commodities and goods and make it more difficult to dump cheap foreign products on the American market.

5. On pages 9 and 10 of the gold report it shows the falsity of the Communist propaganda that higher priced gold would help Communist Russia and that the reverse is true—that higher priced gold would be of great benefit to the economy of our country, the free nations, and damaging to Communist Russia and other Communist countries.

Khrushchev Before Congress?—That's Going Too Far

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to insert into the Appendix of the RECORD an article which appeared in the Oelwein Register on the question of Khrushchev speaking before the Congress.

It should be noted that it is not necessary that Khrushchev be invited to speak before the Congress. Heads of state are not extended this courtesy as a matter of course, nor do these meetings accomplish very much. As a general rule these remarks made on such occasions are of a polite and innocuous nature. Very little is learned from these polite speeches.

It seems to me that a far more important and fruitful way to proceed with Premier Khrushchev would be if particular committees such as the House Foreign Affairs Committee and the Senate Committee on Foreign Relations invited Khrushchev to discuss with these two committees in a joint meeting problems of world peace.

The article follows:

[From the Oelwein (Iowa) Register, Sept. 2, 1959]

KHRUSCHEV BEFORE CONGRESS?—THAT'S GOING TOO FAR

It is one thing to show the Khrushchev family typical American courtesy and to consider their visit something that could improve Russian-American relations if only to prove to the Soviet premier that what he has been told about the American standard of living is true. But it's something quite different to ask him to speak to the House and Senate.

His visit to Iowa is bound to open his eyes. It is interesting that he will appear on television for an hour long speech.

But an invitation to him to address both Houses of Congrese or either House is going a little too far.

Eisenhower has gone a long way toward making it clear to our Western allies that the Khrushchev visit here and the President's visit to Russia will have a bearing on our relationship with our friends, and that no secret agreements will be made. It certainly is important, while taking all reasonable steps to thaw out the cold war, to make sure that the enslaved Hungarians, Czechs, Poles, and other satellite peoples do not become disillusioned by the Khrushchev visit.

He does not deserve the recognition of addressing the Congress. If he is invited to do this, then the leaders of every other nation who visit the United States, including the very smallest, should be extended the same courtesy.

We are not sure where the idea of Khrushchev's appearance before Congress originated. Apparently there were a number of legislators who wanted it. The idea of adjourning Congress temporarily until the end of the Khrushchev visit, we believe, also was misguided. As many legislators have said the past few days, let's get on with normal business, there's much to be done, and not permit the Khrushchev visit to have any bearing on our plans.

An Illogical Cotton Program

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. THURMOND. Mr. President, I call to the attention of the Senate a very important and timely editorial which appeared in the September 7, 1959, issue of the Augusta Chronicle, of Augusta, Ga. It is entitled "An Illogical Cotton Program," and it urges approval by the administration of the petition which has been filed by the National Cotton Council under section 22 of the Agricultural Adjustment Act of 1938, as amended. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ILLOGICAL COTTON PROGRAM

The bewildering impracticability of Federal bureaucracy is no better typified than by the most recent irrationality of the Department of Agriculture.

Ostensibly designed, we charitably presume, to foster the sale of American cotton on the world market, this latest bit of strategy calls for the Government to place a subsidy of 8 cents a pound upon exports of raw cotton, setting a price of 8 cents a pound less to foreign buyers than that paid by domestic users of the staple. In essence, a textile manufacturer in India or Hong Kong or Pakistan or Japan may purchase American cotton approximately $55 a bale cheaper than his counterpart in the United States must pay for the identical commodity.

This new policy—obviously stemming from the one-world-mindedness of some of our so-called leaders in Washington—is effecting even greater constrictions for the American textile industry which, in just the past year or two, has been able to alleviate a depress-

ing situation resulting from the resurgence of Japan as a textile producer.

Although it required extreme nimbleness and persuasion on the part of American textile manufacturers, the Government, 3 years ago, worked out a quota plan with Japan which permitted that nation's exports to the United States to be kept on a scale acceptable to American manufacturers and workable to the extent that it enabled both the Japanese and the domestic industry to function at a profit.

Now, however, new parties have been heard from. India, Hong Kong, Pakistan, Formosa, and Korea are flooding the American market with piece goods and made-up garments. Not only have those countries a formidable differential in wage rates, but now they are given a tremendous advantage in the cost of their raw materials.

Even the American textile manufacturers will argue that this, in addition to being unsound and unfair so far as domestic industry is concerned, is patently unfair to Japan in that that nation has voluntarily agreed to control its exports to the United States, while no such restriction is placed on the other Asian countries. It could lead Japan—and possibly rightfully so—to abrogate its quota plan in order to meet the rising competition from its neighbors.

In that eventuality, the more than 286,000 bales of cotton—some of which finds its way into Hong Kong from Red China—that are currently coming into this country could become many times that number almost overnight.

Should that occur, the American textile manufacturer would be in the position of having to curtail operations and, as a result, reduce his consumption of American cotton.

Even the Department of Agriculture should be able to see that such an eventuality would redound against the American farmer, the man the Agriculture Department theoretically is striving to assist.

Thus, it should be logical to presume that the Department will be willing to act favorably upon a petition by the National Cotton Council for invocation of section 22 of the Agriculture Adjustment Act which imposes upon the President the obligation to take remedial action in this type of situation.

First Major U.S. Mine Tragedy Occurred 90 Years Ago Near Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. James J. Corrigan, of Wilkes-Barre, anthracite industry historical researcher, which appeared in the Wilkes-Barre Sunday Independent of September 6, 1959, in which Mr. Corrigan graphically narrates the mine disaster that took 110 lives at the Avondale Colliery, in Plymouth Township, near Wilkes-Barre, on September 6, 1869:

[From the Wilkes-Barre (Pa.) Sunday Independent, Sept. 6, 1959]

ONE HUNDRED AND TEN PERISHED IN AVONDALE FIRE; FIRST MAJOR U.S. MINE TRAGEDY OCCURRED 90 YEARS AGO TODAY

(By James J. Corrigan)

Ninety years ago today, on September 6, 1869, there occurred at the famous Avondale Colliery, Plymouth Township, America's first major coal mining tragedy and also the worst disaster in the long history of northeastern Pennsylvania's anthracite mining industry.

One hundred and eight tragically-trapped men and boys inside the mine perished through asphyxiation when an uncontrollable fire, originating in a furnace at the bottom of the Avondale shaft, over which the breaker and works stood, flashed upward and destroyed the surface structures. It was the only means of entrance and exit. Two other men succumbed in a heroic rescue descent into the mine and numerous other men nearly met the same fate in rescue attempts. Avondale mine fire fatalities totaled 110.

The Avondale works were completed in September 1867, being considered the finest in the valley. But the tragic neglect or abysmal lack of foresight was responsible for the construction of what proved a disastrous one-way ticket into the mine.

In the 1860's Avondale and the general Plymouth area were settlements largely of persons of Welsh ancestry. Men of this nationality proved their heroic stature in dangerous rescue attempts in descending the Avondale shaft, stifling with obnoxious gases, immediately following the fire. There also was a lesser number of Irish families and European Continent immigrants scattered throughout the anthracite settlement in the vicinity of Avondale.

On the morning of September 6, 1896 (a blue Monday of tragedy), a hoisting engineer at Avondale, Alexander Weir, was the first workman to discover the flames, midway between 11 a.m. and noon shooting up the shaft to the breaker atop.

FLAMES AND FURY

Weir, he told a newspaperman a short time later, was "startled by flames rushing up the shaft with great fury. So rapidly did the fire progress that I merely was able to blow the colliery whistle and arrange matters to prevent a boiler explosion. In an almost incredible short time everything combustible about the entire works was in flames—a line of fire extending from the Bloomsburg railroad track below, along the bank of the Susquehanna, to the mine shaft high above, a distance of not less than 300 feet."

Whitewashed hill homes of workmen at the Avondale were in proximity to the engulfing surface conflagration. For several hours, household goods hurriedly were removed to places of safety by residents of the company houses and friends. By then, thousands were attracted to the Avondale mine coming by wagon, horseback and on foot.

It was late in the day before the fire was extinguished. Then, it was deemed prudent to determine the noxious nature of the gases from and in the mine. A dog, enclosed in a box with a lighted lantern was lowered into the shaft. At 6 p.m., the box was raised to the surface. The dog was yet alive, but the lantern light was out. This test, unfortunately aroused strong hopes that the 108 men and boys inside the mine were alive.

At 6:30 p.m., Charles Varture, 35, was lowered into the shaft in a bucket. Fourteen minutes later, at his signal, he was raised to the surface. Varture reported obstructions in the burned out shaft prevented his further descent.

GASPING FOR AIR

Other rescue volunteers were called upon from the thousands at the Avondale scene. About 7 p.m., two volunteers, Charles Jones and Stephen Evans, supplied with a hatchet, a hook and other rescue appliances, were lowered into the shaft. After about 9 minutes they were raised, gasping for air. The pair reported the ominous news that they had discovered two dead mules near the foot of the shaft.

Hopes for recovery of the entrapped men and boys immediately were dimmed. But, to add to the tragedy, two other heroic men, Thomas W. Williams and Davis Jones, were lowered into the shaft. Receiving no sign or signal after some time had elapsed, two other men were let down the shaft. They found Williams and Jones—dead.

Despite these sober warnings, hope yet was held for the entrapped. On Tuesday morning, September 7, 7 a.m., work was commenced pumping air into the smoke-filled mine. Several subsequent search and rescue parties were compelled to resurface on encountering obnoxious gases which almost cost them their lives.

On Wednesday, shortly before 3 a.m., still another search party was lowered into the burned-out Avondale shaft. On this occasion, two dead bodies were discovered near the underground stable.

About 6:30 a.m., Wednesday, four Welshmen descended into the mine and made the most exploration of the interior yet attempted. The air was clearing. They reached a closed brattice which a majority of the entombed men had constructed in a despairing effort to exclude the life-stifling gases. Breaking through the brattice, the quartet reported on surfacing that their gaze met a view which appalled the stoutest heart among them.

Grouped together, this crew reported, in every possible position, laid the dead bodies of 67 men and boys, some appearing as if they had quietly dropped asleep, while others seemed to have struggled with their impending fate; their faces buried in coal dust. One father was stretched out, a son closely clasped by each arm, with a third son lying between his father's legs, his head resting upon his father's breast. Another father lovingly embraced a young son, and all appeared sweetly sleeping.

A FATAL PROMISE

In another heart-touching incident of the tragedy, a boy, Willie Hatton, aged about 10, was found in an attitude of repose; his father also dead near him. It was said that Willie did not work at the Avondale, but that his father took him that fatal morning, according to a promise he made the boy sometime previously to take him to see the mines.

John Burch and his 12-year-old son, John, Jr., were discovered also by the crew, who saw them exactly as found in the chamber of death. The father's left arm was clasped around his boy, and both looked as if they had slept their lives away.

Then began the work of removing the Avondale dead. By 2 o'clock Thursday afternoon all the 108 bodies originally in the mine at the time of the fire had been brought to the surface. A number of the victims were from Hyde Park section of Scranton.

A 2-day coroner's inquest at Plymouth decided that "the fire originated from the furnace in the mine, taking effect on the wood brattice to the up-cast course leading from the bottom of the shaft to the headhouse." The coroner's jury consisted of E. C. Wadhams and Josiah W. Eno, acting as coroner; William J. Harvey, Charles Hutchinson, Samuel VanLoon, James George, Martin McDonald, and Thomas Patton.

The coroner's jury noted that it regarded the current system of mining as insecure and unsafe to the miners, and strongly recommended "where practicable, two places for ingress and egress, and more perfect ventilation, thereby rendering greater security to the lives of the miners under any similar accident."

The Avondale jury's recommendation was fulfilled when, the following year, 1870, the Pennsylvania State Legislature enacted a law demanding that each coal mine must provide for two openings to the surface, "for the ingress and egress of the men employed therein."

Under the direction of Rev. T. P. Hunt of Wilkes-Barre, a relief fund committee was organized at Avondale on Tuesday, September 7, even before the bodies had been re-

covered. Members included E. C. Wadhams, James McAlarney, J. Fuller Reynolds, George Evans, Dr. Richards, Jacob Roberts, J. W. Eno, H. J. Yaple, Harry Hakes, Samuel Shafer, B. J. Woodward, Robert Boston, John F. Wren, Nathan Van Horn, Frank Turner, H. H. Harvey, Richard Stilwell, John B. Smith, Joseph H. Scranton, Henderson Gaylord, and Hendrick B. Wright.

By October 2, a total of $155,825 had been raised, contributions from all parts of the North Atlantic States, including one from the British delegation at Washington.

The Avondale fund's board of trustees, on September 28, determined, among other measures, of the distribution of the moneys that "each widow shall be paid the sum of $200 in equal monthly payments for the ensuing year. Each male orphan child under 14 and each female orphan under 16, of a deceased miner, shall be paid for the same period monthly, in equal sums, $100."

The Avondale disaster destituted 72 widows and 153 orphans, not counting foreign dependents, it was estimated when relief regulations were formulated.

The Avondale mine, yet producing coal, was leased in June 1863, later became the Steuben Coal Co., merged subsequently with the Nanticoke Coal & Iron Co., lessee from the D.L. & W. Railroad Co.

No Taxes, No Water Tolls in Modesto District—Public Power Pays the Whole Water Bill

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. ENGLE. Mr. President, it is almost a cliche around Capitol Hill, as well as in the West, that power is the paying partner of irrigation. We know it is true, but from time to time I think it is helpful to reinforce the point with proof positive. We do that easily every year with the data that comes out of each annual report on the Central Valley project. However, Federal power under reclamation law is not the only public power that helps pay the cost of irrigation development. Local public power does, too, as proven by the news item I have here from the August issue of Western Water News, published by the California Irrigation Districts Association.

Back in 1923 the Modesto Irrigation District in the San Joaquin Valley built Don Pedro Dam on the Tuolumne River in conjunction with the Turlock Irrigation District. They also built a powerplant at the dam. And they held on to their hydroelectric power, not only in production and transmission, but also in distribution of the power throughout the city and the district. It was true public power all the way from producer to consumer.

What is the result? Well, besides low-cost power for 35 years, Modesto now has really low-cost water—in fact, free water in 1959. Mr. President, that is quite an object lesson in these days of mounting water costs all over the country.

As the article says, the Modesto Irrigation District tax rate this year is zero. Furthermore, there is no water charge. Cheap public power pays the whole bill. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Western Water News, August 1959]

WHAT? NO TAXES? YEP, THAT'S IT IN MODESTO

Water users in the Modesto Irrigation District will not pay any district taxes this coming year as a result of dramatic and far-reaching action of the board of directors. They won't pay a water toll, either.

The district is very much in business. In fact, the budget will exceed $4 million. Electrical revenues will approximate this amount, so—the water users will enjoy a full supply of water in the 81,000-acre district without any tax on their land. The levy totaled approximately $117,000 last year.

In past years the tax on the land has been assessed at the rate of $1.50 per $100 of assessed valuation. The average assessed valuation is about $80 per acre, which made the usual tax for the water users $1.20 per acre—pretty cheap as water goes these days, but quite a bit more than nothing.

The Modesto Irrigation District, with the motto, "Where the land owns the water and the power," is out of debt, too. All the bonds have been paid off. It would appear that Modesto has made a record in achievement.

This Senseless Highway Killing

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. DAGUE. Mr. Speaker, with the delivery of our paper this morning we were confronted with the fact that over 400 of our citizens were killed on our highways over the Labor Day weekend. This senseless slaughter was due in great part to selfish disregard of the rights of others and points up the fact that the human element is the prime factor in highway accidents.

On the other hand, many people who died on the highways in the last few days would be alive if the manufacturers of automobiles had undertaken to build into their product a few simple safety devices that would protect front seat occupants from the inevitable impact with dash and windshield which causes so many fatal injuries.

Over the weekend I had the privilege of a demonstration of a patented device which operates on the front seat in the event of a collision with another car. The seat is so constructed that upon impact it tilts the passenger backward at an angle of some 30 degrees and thereby protects him from those head and chest injuries which in almost every collision are the lot of the unprotected front seat passenger.

The demonstration was arranged by an old friend of mine and at its conclusion I asked him to write me a letter briefly summarizing the advantages of such an appliance which he did as follows:

COATESVILLE, PA., *September 5, 1959.*
The Honorable PAUL DAGUE,
House of Representatives,
Washington, D.C.

DEAR SIR: I am writing this letter to inform you, and Members of Congress, of the greatest invention to prevent automobile injury since the four-wheel brake.

This is the first major breakthrough in the field of packaging the passenger.

This device operates on impact in a head-on collision. At thirty-one one-thousandths of a second the leading edge of the front seat rises 20 degrees. When inertia takes place the seat rises another 10 degrees and moves forward approximately 6 inches. By this motion the seat absorbs all the whiplash and inertia that is trying to throw the passenger through the windshield or against the dashboard and the steering column.

There are three great advantages to this device. The first is that it eliminates all personalities. The passenger does not have to hook up or turn on anything. The device is completely automatic. The second is it eliminates whiplash, which is the common cause of death in automobile accidents. The third is, it also protects the passengers in the front seat in a rear-end collision. The device snaps the locks and lets the seat scoop the passengers forward, so the shoulders are not rigid and there is no snap permeated to the spinal column.

I would like very much to see this device receive its rightful recognition in saving lives.

Sincerely yours,
HERMAN M. BREUNINGER.

In this connection I think it important to emphasize that I have no interest whatsoever in this device or its promotion other than that which stems from an abiding concern in the development of any mechanism that will reduce the number of deaths resulting from collision on our highways.

Incidentally, it occurs to me that our House Committee on Interstate and Foreign Commerce might properly investigate the appliance in question and I am sure that a demonstration could be arranged which should prove convincing and might lead to its utilization, in the first instance, on public vehicles at all levels of government. The ultimate goal will not be reached, however, until this device, or a similar accessory, is installed on all automobiles at the factory.

Veto of Public Works Appropriation Bill Particularly Inimical to States in Pacific Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an editorial from the Oregon Daily Journal of September 1, 1959, entitled "Northwest Hard Hit by Veto."

I endorse the two major themes of this editorial. One is that the veto by President Eisenhower of the public works appropriations bill affects more adversely our Pacific Northwest region than any other area of the United States. I also subscribe to the contention in the editorial that the President of the United States should have authority to veto single items in appropriation bills, so that he does not have to burn down the house to roast the pig, as has been the case with respect to such vetoes as that of the entire public works appropriations bill.

I ask unanimous consent that this editorial from the Oregon Journal of September 1 be included in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oregon Journal, Sept. 1, 1959]

NORTHWEST HARD HIT BY VETO

The President's last-minute veto of the omnibus public works bill appears to hit the Pacific Northwest a harder blow than any other area.

That's because it involves more than $50 million worth of Oregon construction projects, including the indispensable John Day Dam, for which $20 million was sought; $9 million for Cougar Reservoir, $8,300,000 for Hills Creek Reservoir and $7 million for the Dalles dam and locks and other projects already underway.

To make matters worse, the $32 million Bonneville power administration budget is caught in the veto mill, including $22 million for lines and substations that will become imperative in the next three fiscal years as some 2 million kilowatts of new Federal and non-Federal power come into the BPA grid.

Also involved are such continuing projects as the deepening of the Columbia River Channel from Vancouver to The Dalles, which Army Engineers hoped to finish next year, and half a dozen bureau of reclamation projects (Columbia Basin, Talent and Crooked River, for example) about which there has been no argument.

Irony of this situation is that virtually all of these projects do not involve new starts against which the President expressed his ire. They are continuing projects, already fully approved, which will add to the wealth and productive capabilities of the area. With only a couple of minor exceptions they do not fit the "pork barrel" label in any way.

Finally, projects such as John Day, Ice Harbor and The Dalles, where large crews now are busy, will be thrown completely off schedule by costly delays—unless the Congress either overrides President Eisenhower's veto or knuckles under and cuts out every item to which he takes exception.

For these reasons, the scheduled attempt of the Congress to override the veto on Wednesday will be watched with intense interest by residents of the Northwest. The President's 11th-hour veto (the $1,200 million bill for power, navigation, reclamation and flood control would have become effective last Saturday otherwise) has aroused so much angry reaction and genuine concern that he may be overriden on a bipartisan basis. This would upset his otherwise perfect record of making his vetoes stand up.

The problem posed by this latest veto is another clear indication of the need for Presidential authority to veto individual items in appropriation bills. Otherwise the all-or-nothing veto procedure really can hurt.

A New Pension Bill for Veterans of World War I

EXTENSION OF REMARKS
OF
HON. STEVEN V. CARTER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. CARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to make a statement in support of a new pension bill for the benefit of veterans of World War I that I introduced today in the House.

As you know, these veterans are arriving at an advanced age in life and are being forced into retirement because of age, disability, and various other reasons. If it is not already the case, they are upon the threshold, as a group, of facing their waning years of retirement and old age without earning capacity to offset the steadily increasing costs of living. As is the case with all our veterans, we owe this group of men our national gratitude. It appears possible, through such proposals as I have included in my bill, to assist our World War I veterans in their old age on the mutual basis of need and reward.

It would be difficult to determine just how many veterans of World War I are already receiving some form of public assistance through State and local agencies. There are also undoubtedly certain sums of tax money being deducted on a personal exemption basis by the persons on whom many of these veterans have become dependent. These are considerations which should be, and I am confident will be, taken into account in any hearings held on a bill such as I am proposing.

My bill does away with requirements which presently exist to the effect that a veteran must be totally and permanently disabled in order to receive a nonservice-connected pension, even the liberal construction of such requirements. A World War I veteran would automatically qualify for a pension under my bill upon reaching the age of 62 years, regardless of the degree of any disability he might have or the status of his employability, provided his income fell within the maximum limitations prescribed in the bill. This would correct one of the greatest and most glaring deficiencies in our present veteran's pension regulations. To demonstrate, let me quote from Report No. 537 of the Committee on Veterans' Affairs, of which I have the privilege to be a member. This was the committee report accompanying H.R. 7650, which has since become Public Law 86–211.

In addition, the committee has been studying the adjudication of non-service-connected disability pension cases and has reached the conclusion that VA regulations and their current applications are inadequate as they apply to the cases of certain veterans who have high disability and advanced age. In some of the cases examined by the committee, the VA has denied pensions to veterans on the basis that the veteran is employable, notwithstanding the fact that these veterans were above age 60, had high disability, in some instances, from 40 to 80 percent, and were earning far less than the amounts specified by the income limits.

It was noted that VA commonly denies employability in the case of certain farmers, despite the fact that the farmers are old and severely disabled. The denial is on the basis that the farmer is employable even though the farmer's income is very low and the farm which he controls is very small and occupies only a small part of his time.

It is recommended and expected that the Veterans' Administration will review its regulations as they relate to employability of veterans with advanced age and high disability to assure that these elderly veterans with high disability, who are meeting the income limits, will not be denied pensions on the basis of employability when they are not working a substantial part of the time at a gainful occupation.

Therefore, Mr. Speaker, my bill will serve to eliminate that area of administrative discretion which the Committee on Veterans' Affairs feels has resulted in many unfair and inequitable decisions made by the VA in pension matters.

The text of the bill follows:

H.R. 9134

A bill to provide a new pension program for veterans of World War I

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds that a substantial number of veterans of World War I are in need of assistance today. It is therefore the purpose of this Act, as an indication of the appreciation of the United States for the service rendered by such veterans, to provide benefits, based upon the need therefor, to this meritorious group, as a reward for such service.

SEC. 2. (a) Subchapter II of chapter 15 of title 38, United States Code, is amended by adding at the end thereof the following:

"§ 513. World War I veterans

"(a) The Administrator shall pay to each veteran of World War I who meets the service requirements of section 521 of this title, and who has attained the age of 62 years, a pension at rate prescribed by this section.

"(b) If the veteran is unmarried (or married but not living with and not reasonably contributing to the support of his spouse) and has no child, pension shall be paid at the monthly rate set forth in column II of the following table opposite the veteran's annual income as shown in column I:

Column I		Column II
Annual income		
More than—	but Equal to or less than—	
$600	$600	$140
1,200	1,200	100
	1,800	50

"(c) If the veteran is married and living with or reasonably contributing to the support of his spouse, or has a child or children, pension shall be paid at the monthly rate set forth in column II, III, or IV of the following table opposite the veteran's annual income as shown in column I:

Column I		Column II	III	IV
Annual income				
More than—	Equal to but or less than—			
$1,000	$1,000	$140	$145	$150
2,000	2,000	110	110	110
	3,000	75	75	75

"(d) If the veteran is in need of regular aid and attendance, the monthly rate payable to him under subsection (b) or (c) shall be increased by $70.

"(e) The Administrator shall deny or discontinue payment of pension under this section when the corpus of the veteran's estate is such that under all the circumstances, including consideration of the veteran's income, it is reasonable that some part of the corpus be consumed for the veteran's maintenance."

(b) The analysis of such chapter 15 is amended by inserting immediately below

"512. Spanish-American War veterans."

the following:

"513. World War I veterans."

SEC. 3. Section 521 of title 38, United States Code, is amended by adding at the end thereof the following:

"(c) Where a World War I veteran has been granted pension under section 513 of this title, pension may not thereafter be paid to him under this section."

Most Teenagers Aren't Delinquents: Dallas Council of Social Agencies Sets Example

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. YARBOROUGH. Mr. President, teenage crime and violence and stories of juvenile delinquency appear in our newspapers almost every day.

However, most of our young people do not fit into this category. The vast majority of this Nation's teenagers are preparing themselves for adulthood and are exhibiting good citizenship right now.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mildred Young which tells of some services performed by public-spirited teenagers in Dallas, Tex., under the guidance of the Council of Social Agencies of Dallas. The article was published in the Dallas (Tex.) Times Herald for Sunday, August 23, 1959, under the title "Teenagers Cure Boredom With Service to Others."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEENAGERS CURE BOREDOM WITH SERVICE TO OTHERS

(By Mildred Young)

Teenagers seek diversion every fleeting moment. When they do not find it in sufficient quantity, they complain of being bored with it all and begin to seek additional outlets for their endless energy and enthusiasm.

Adults often agree that this desire can be a bad trait which leads to delinquency. But to some 1,500 Dallas young people and 18 service agencies, this excessive energy has meant a summer of helpful and interesting activity.

Three years ago the Council of Social Agencies of Dallas, which provided cooperative planning for effective welfare services, put out a plea for teenage volunteers to serve, without pay, in institutions throughout the city in a wide variety of activities.

RESPONSE GROWS

The first year about 150 responded. The following spring, the promotional meeting was moved from the YWCA to the Statler Hilton Hotel and 400 responded. This year's public presentation was given at the A. Harris & Co. graduation show. In addition to the annual promotional meetings, volunteers are sought through Y-teen clubs in the schools.

Mrs. Raymond Potts, chairman of the youth volunteer committee, says that the volunteer program has not only proved increasingly popular with the young people in Dallas, but increasingly valuable to the whole community.

Agencies now cooperating in the program include: Baylor University Hospital, Bethlehem Community Center, Children's Medical Center, City Park Department, Community Chest, Dallas Day Nurseries, Jewish Community Center, Junior Red Cross, Juvenile Traffic Court, Marillac Social Center, Museum of Fine Arts, Parkland Memorial Hospital, St. Paul, Veterans' Administration Hospital, Well Baby Clinics, Health Department, West Dallas Social Center, Wesley Community Center, and the YWCA.

CAREER LAUNCHED

Though the ideal age for volunteers is 15 to 16, Miss Delores Sands, a 16-year-old, worked for the Camp Fire Girls when she was 12. Miss Sands said that she got tired of not having anything to do. She wrote a letter which led to the Camp Fire job, and the following year she started her present task with the Community Chest public relations office. Miss Sands has wanted to be a journalist for a long time and now thinks that she would like to serve the Community Chest or a similar organization in her chosen field. Asked why she didn't find a job with pay, Miss Sands stated, "Well, when I first started to work no one would hire me because I was too young."

Others are planning to enter a service organization on a full-time professional basis as a result of their volunteer work. Nursing and teaching helpers' positions are especially attractive to the girls. Three volunteers working at St. Paul Hospital are going into nurse's training and a fourth into medical arts study. Most young people took the jobs for lack of enough to do. In putting their spare time to use, some have found a life's vocation.

There are a wide variety of positions open. Volunteers can assist in nursing offices; escort outpatients; serve at the lobby information desks; as library and recreation assistants, office workers, radio disk jockeys; participate in traffic court as officials; assist mothers with babies; weigh and measure babies; serve as a Spanish interpreter, as registrars; assist in bedside patient care and feeding, making surgical dressings and tray favors, folding bandages, work in dental and medical labs, and a hundred other tasks.

What has the volunteer to gain in personal satisfaction? One Baylor volunteer said, "I have always wanted to see the world. Now my ambition has been realized. I am meeting the world at Baylor, all her various phases, and all her people—the French professor, the Irishman with his charming brogue, the age-worn artist, the woman from India, the husband and wife from England. The world has a story to tell and she's telling it to me."

Union Money Talks

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. DEROUNIAN. Mr. Speaker, under leave to extend by remarks in the Appendix of the RECORD, I include the following editorial which appeared in the September 4 issue of the Washington Evening Star:

UNION MONEY TALKS

Some union spokesmen have said that the labor reform bill, as approved by the House-Senate conferees, is bad legislation. They have said that it is a punitive, oppressive, union-busting measure. It is worse, they have claimed, than Taft-Hartley, which, when adopted 12 years ago, was supposed to have enslaved labor.

All such talk is the sheerest nonsense. But after all it is only talk, and in this instance union action, or union money, speaks louder than words. What we have in mind is the announcement by Walter Reuther that his industrial union department of the AFL–CIO has given $1 million to the steel workers to support their strike. And this is only a "first down payment" on $25 million which the AFL–CIO is planning to donate if it is needed for the strikers.

If money talks, and we think it does, this gift gives the lie to all the chatter about the prospective destruction of the union movement. What this $1 million gift says is that the union movement is strong, probably the strongest organized force in the country, and that its leaders have plenty of confidence in its future.

The reform bill does impose some restraints on some abuses of union power. It restrains secondary boycotts of businessmen not directly involved in a strike. It imposes some restraints on so-called organizational picketing—picketing designed to force workers to join unions even though they may not wish to join. It outlaws the hot cargo clause—a favorite coercive weapon of the Teamsters Union. And it permits State agencies to take jurisdiction of some labor disputes which the National Labor Relations Board cannot or will not handle. There is nothing in these provisions which stifles any proper union activity. What they will do, if they prove to be effective, is to prevent intolerable abuses of union power, and that will be a good thing for all concerned.

In its more important provisions, the bill cracks down hard on the thieves, racketeers, criminals, and Communists who have infested labor unions. This crackdown has been a long time in coming, but public pressure resulting from the exposures by Senator MCCLELLAN'S committee has proved irresistable. Even the most prolabor legislators have felt the heat, and are eager to vote for these reforms. If the bill becomes law, as undoubtedly it will, and if it accomplishes what it is suposed to accomplish, honest workers, honest union leaders, and honest businessmen will enjoy something approaching a new birth of freedom. And this is true, no matter what the professional handwringers may continue to say.

How Constituents Can Discourage a Congressman

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. KENNEDY. Mr. President, on October 31 the Louisville Courier-Journal published an editorial which calls attention to a distressing aspect of public life which we have all faced at some time. It refers to the experience of Congressman BRADEMAS, who was unfairly charged by some of his constituents with voting against the confirmation of an Ambassador and the Secretary of Commerce.

Congressman BRADEMAS can properly be credited with taking an active part in the constructive legislation passed by the other body, particularly for his conscientious efforts in behalf of sound labor reform legislation, but it must have come as a shock to him to learn that he was also expected to exercise the prerogatives of a member of the Senate and vote upon the confirmation of appointments to the Cabinet or to an embassy.

I ask unanimous consent that the editorial be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Louisville (Ky.) Courier-Journal, Aug. 31, 1959]

HOW CONSTITUENTS CAN DISCOURAGE A CONGRESSMAN

"Only a small minority commented on my stand on the issues, either from information received from TV talks, or indirectly by word of mouth from others." That was the observation of Stimson Bullitt, a cousin of the Kentucky Bullitt family, when running for Congress in his home State of Washington. He recorded that and many other thoughts in a useful book called "To Be a Politician."

This certainly parallels the experience of many other office-seekers. In an era when voters seem more interested in a candidate's appearance than in his ideas or his past performance, it is easy for politicians to turn cynical and use all their resources on building a glamorous personality.

Yet some vision of a politician's record does linger about his head in the mind of the voter, either as a dim halo or as a dark ugly cloud. The distressing part is that this view is often distorted and even wildly inaccurate. JOHN BRADEMAS, a new and conscientious Congressman from South Bend, Ind., takes rueful note of this peculiarity of politics. He was recently assailed by some of his constituents for his vote on a labor reform bill. Two letter writers added bitter criticism of other votes they believed he had cast, one against Clare Booth Luce as Ambassador to Brazil and the other against Lewis Strauss as Secretary of Commerce.

WHAT HE MUST PRAY FOR

BRADEMAS no doubt explained to these stern critics that he did not and could not have voted on these two confirmations. He is a Member of the House of Representatives. Only the Senate votes to confirm appointments to the Cabinet or to our embassies. Perhaps the young Congressman can convince these two individuals that he is innocent of their specific charges. It will be a miracle, however, if he can root from their minds a prejudice based on misinformation, even if they themselves admit they were misinformed in this instance.

This is all very discouraging for the honest public official. If he holds office in a democratic country, however, he simply has to accept certain limitations of our political system, in return for its great advantages. He must give constant attention to his voting record, praying all the while for three things: that the record will be accurately and fairly reported; that his constituents will grasp and remember its details; and that they will think well enough of him to respect his motives even when they disagree with his actions.

Home Rule

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. GOODELL. Mr. Speaker, I am pleased to place in the RECORD an editorial which appeared in one of the outstanding newspapers in my district. It expresses rather forcefully and persuasively the opinion that the District of Columbia should be granted home rule.

Having lived in the District during my 2-year tenure in the Department of Justice in 1954–55, I believe that I know personally a number of reasons justifying the granting of home rule in some form to the District of Columbia.

I submit herewith an editorial of Thursday, August 20, 1959, appearing in the Olean (N.Y.) Times Herald:

[From the Olean (N.Y.) Times Herald, Aug. 20, 1959]

HOME RULE FOR WASHINGTON, D.C

Once again, the prospects for home rule for the city of Washington, our Nation's Capital, seem within a hairbreadth of success. The Senate has passed a bill that would allow the people of the District to vote for a mayor and legislature, and the House District Committee is considering it.

However, this committee is packed with men who have long been opposed to home rule for the citizens of the capital. A petition is being circulated by Representative ABRAHAM J. MULTER, Democrat, New York, to bypass the committee and bring a home rule measure to the floor of the House where vigorous support is expected.

When originally established by the founding fathers, Washington was given a mayor appointed by the President, and an elective council. From 1812 to 1820, the council chose the mayor, and from 1820, he was elected by the people.

In 1871, Congress repealed the charter of the city, and later established a system of government by appointed commissioners. Ever since then Congress has been burdened with the legislative and administrative details of the Capital city.

It seems strange that the Capital of our great democracy should deny the basic rights of self-government to its citizens. It has been charged that southern Democrats oppose home rule because of the majority of Negroes in the city. While this might be expected from many southerners, certainly the majority of our Congressmen should be ashamed of such a stand.

An administration back resolution in the House asks for a District governor appointed by the President, and elected city council, and an elected nonvoting delegate to the House of Representatives. In other words, the people of Washington are seeking the privileges given them in 1802. It's high time they get them back.

Resolution of St. Regis Tribe of Indians

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution recently adopted by the Council of Chiefs of the St. Regis Tribe of Indians in New York State concerning their lands.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

"RESOLUTION

"Whereas the American St. Regis Indian Reservation in New York State is located adjacent to the St. Lawrence River; and

"Whereas, the said Indian Reservation lands are the only lands still available in the United States and east of the first locks in the St. Lawrence Seaway for industrial and commercial purposes; and

"Whereas the St. Lawrence Seaway has made the availability of such lands of tremendous importance toward industrial and commercial progress in the United States; and

"Whereas we, the Council of Chiefs of the St. Regis Indian Tribe of American Indians, recognize that possible leases of some of the lands of our reservation in this area would inure to the benefit of the tribal membership: Now, Therefore, be it

"*Resolved*, That we, the Council of Chiefs of the St. Regis Tribe of Indians in New York State, residing upon our reservation at Hogansburg, N.Y., recommend that legislation be adopted by Congress declaring that lands owned by the St. Regis Tribe of Indians may be leased for such purposes and for such periods as may be permitted by the laws of the State of New York.

"The clerk of our tribe is hereby directed to forward a copy of this resolution to those representatives in our U.S. Government and other officials for the purpose that such legislation may be adopted at the present session of Congress or any future session.

"Dated: the 31st day of August, 1959."

CERTIFICATION

I, Margaret C. Lazore, certify that I am the duly elected and acting clerk of the St. Regis Tribe of Indians, with post office address, Box 121, Hogansburg, N.Y.; that the resolution attached hereto was duly adopted by the duly elected Council of the St. Regis Tribe of Indians on the 31st day of August 1959.

MARGARET C. LAZORE, *Clerk*.

Howard E. Simpson

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. FALLON. Mr. Speaker, the phenomenal success of any citizen is a matter deserving of the attention of us all. When such a success story applies to a self-made man who now is in a pivotal position affecting the economy of the Nation, it is of especial significance.

Such a favorable life achievement is to be found in the career of Howard E. Simpson, president of the Baltimore & Ohio Railroad. Not only has his notable attainment been an inspiration to thousands of his fellow Marylanders and to others throughout the country, but the further fact that he has ascended to his high post through seemingly insurmountable difficulties makes his story one to be made available in the widest possible way.

The New York Times of Sunday, September 6, gives a graphic description of Mr. Simpson's success story. At first glance, it seems almost fictional, but the factual information it contains is proof positive of the sterling worth of the man and is an example, particularly for the oncoming generation, to attempt to emulate.

Under leave to extend my remarks, I include the article written by Robert E. Bedingfield in the Appendix of the CONGRESSIONAL RECORD:

PERSONALITY: SURE HAND AT B. & O. CONTROLS—SIMPSON CLIMBED TO ROAD'S PRESIDENCY THE HARD WAY—AS AID, HE PROVED BOSS WAS ON THE WRONG TRACK

(By Robert E. Bedingfield)

Howard Edward Simpson became president of the Baltimore & Ohio Railroad by the method most unlikely to succeed in most instances. He kept telling his superiors they didn't know what they were talking about.

Fortunately for Mr. Simpson, and for the B. & O., which is doing remarkably well under his guidance, Mr. Simpson was always able not only to prove his point, but to offer better routes to what the boss had been trying to attain.

The boss that Mr. Simpson tangled with was Roy B. White, chairman of the B. & O. When the two men first met in 1926, Mr. Simpson was an assistant general passenger agent of the B. & O. affiliate, the Central Railroad of New Jersey. Mr. White had just been elected president of the Jersey Central.

Mr. White, on first meeting with Mr. Simpson, told him what he believed was wrong with the railroad's passenger service. After listening to Mr. White's criticism, Mr. Simpson declared:

"We'll do it your way if you insist—you're president of the railroad. But I disagree with everything you've said."

CRITICAL RETORT

That retort started an argument that lasted for an hour or so as Mr. Simpson detailed why he, an assistant general passenger agent thought the president was wrong. Finally, the president said:

"You're right, and I'm wrong. Keep on doing what you're doing."

Having come up through the passenger side of the business, Mr. Simpson has a lingering fondness for those worrisome creatures, a railroad's paying riders. Although he is the first to second the motion made by so many other railroad executives of late—that something should be done to reduce passenger service deficits—Mr. Simpson takes the line about convenience and necessity seriously.

Even if a service is losing money for the railroad, he is willing to continue it "as long as the public patronizes it and it is justified," Mr. Simpson said in a recent interview. "Management has the responsibility under its charter to provide service until it is no longer patronized."

"Take the Royal Blue," Mr. Simpson said. He explained that that crack Washington-Baltimore-New York train service, which the B. & O. finally discontinued in 1958, was a losing proposition after World War II ended. Not until late in 1957, however, when patronage between New York and Washington had dropped ot about 100 paying riders a day for 6 deluxe trains, an average of about 17 riders on each train, did Mr. Simpson petition regulatory authorities for permission to drop the service.

There was no disputing the fact that the passenger was no longer riding the Royal Blue, Mr. Simpson said, and the B. & O. had no difficulty proving its argument to the States involved.

"If we had tried to end the service 10 years ago, however, we would have been rebuffed at every turn," he added.

REALISTIC VIEW

In discussing the unprofitable nature of railroad passenger service, Mr. Simpson is one of the few in his industry who doesn't overdramatize his road's losses. Not because they aren't staggering. They are. Although passenger service traffic accounts for but 6.5 percent of the road's total operating revenues on a full-cost accounting basis the B. & O. lost more than $25 million on the business last year. The out-of-pocket deficit was $14,500,000.

"I don't like to hear people talk about the loss on a full-cost basis," Mr. Simpson said, "not that it isn't correct, but use of that figure merely confuses the issue." Mr. Simpson sticks to the out-of-pocket figure—the actual cost, above that of the rails, of running a train and the amount that he knows the railroad ultimately could hope to save if it stopped running the train.

Obviously, a successful railroad executive—and the B. & O. record since September 1953, with Mr. Simpson in the president's office has been one of the most outstanding among the eastern lines—can't spend all his time on the part of the business that loses money. While he is the first to acknowledge that he is not fully trained in all phases of railroad operation, he has become a keen student of freight traffic since 1946, when he was promoted from general passenger traffic manager to assistant vice president in charge of all traffic.

The most important single commodity in the B. & O.'s freight traffic is soft coal. It accounts for about 44 percent of the road's tonnage and 30 percent of revenues. Steel and steel products are the second most important traffic sources. With about 20 percent of the road's revenues linked to the steel industry, the B. & O. has been hard hit by the steel strike.

While the B. & O.'s carloadings for the first 34 weeks of the year show a 7 percent gain over last year's, loadings in recent weeks have been down more than 14 percent. The toll is reflected in the income statements. The August report will not be issued until next week, but earnings in July fell to $806,000, from $2,900,000 in the 1958 period, when traffic was being reduced seriously by the recession.

Prior to the steel strike, Mr. Simpson had been estimating that the B. & O. this year would achieve a 10 percent increase in carloadings and finish 1959 with earnings at least as "good as last year" when net income was $16 million. Mr. Simpson was hoping that sustained traffic improvement would permit the B. & O. to accelerate its plans for making major improvements to its yards and to extend its several centralized traffic control (automatic remote switching) projects now under way as well as to upgrade its rolling stock. But these hopes were voiced before the steel strike.

LONG AN APPRENTICE

Mr. Simpson, a native of Jersey City, one of the country's busiest railroad centers, has been a railroad man since 1912, when he was only 15 years old. His first job was as a $20-a-month office boy in the passenger department of the Central Railroad of New Jersey.

His first 14 years of service were largely, as he looks back on them now, an apprenticeship, in which he learned his business in the thorough fashion that so impressed Mr. White. After 1926, his rise was steady and, for a railroad executive, swift. He went to work for the B. & O. in 1931 as general eastern passenger agent in New York and 5 years later was transferred to the carrier's executive office in Baltimore.

Mr. Simpson is married to the former Mildred Apgar of Elizabeth, N.J. The Simpsons are simple folks. Their home is the same apartment in Baltimore into which they moved in 1936, when Mr. Simpson was transferred to the head office. Most week nights at home are quiet ones, with Mr. Simpson looking forward to relaxing with his newspapers and listening to his wife play the piano.

Understanding for Victims of Heart Diseases

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. KEATING. Mr. President, a New York City constituent of mine, Mr. Arthur Murray Aibinder, recently sent me a copy of a letter he wrote which was printed in the New York Journal-American on the subject of victims of heart disease. He points out that heart disease must be constructively understood, not merely sympathized, and emphasizes that these victims can often perform useful and important work after their illness.

The employment situation of people in this category and their concomitant psychological problems, should be considered by all of us who have contact with cardiac cases or who consider legislation dealing with heart attack victims. I therefore ask unanimous consent to have Mr. Aibinder's interesting letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HOPE FOR AFFLICTED

About 10 years ago, the patient with diagnosed heart disease was either confined to

bed, or was ambulatory in a wheelchair. Today, modern medicine enables the average cardiac patient to lead a normal life. Depending on the degree of the illness, certain restrictions will be advised by the physician. Unfortunately, not all share the concepts of modern medicine. Prospective insurance policyholders, and applicants for employment, are required to take physical examinations prior to be being accepted. The stethoscope diagnosis of heart disease has caused an unwarranted number of rejections. The psychological results will, in many cases, create an insecure feeling of invalidism. Cardiac patients can be very capable workers, and long-surviving policyholders. It should be understood that the patient with chronic heartbeat has a ray of possibilities.

ARTHUR MURRAY AIBINDER.

MANHATTAN.

Muffle Drums—Last of the Boys in Gray Was Never in War

EXTENSION OF REMARKS

OF

HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. SCHERER. Mr. Speaker, on August 11, 1959, Congress passed a joint resolution authorizing and requesting the President to issue a proclamation calling for a day of national mourning, with the flag to be flown at half staff, on the occasion of the death of the last surviving veteran of the Civil War.

This resolution was passed to honor one Walter G. Williams, of Texas, who would supposedly reach his 117th birthday on November 14 of this year and who is generally accepted as the only and last surviving veteran of the Civil War.

The Cincinnati Post and Times-Star was contacted by a resident of the Cincinnati area who contended that Walter Williams was not a Civil War veteran. The newspaper assigned one of its ace Washington correspondents, Lowell K. Bridwell, to determine the facts. Mr. Bridwell, after a painstaking, thorough, and exhaustive investigation, found that the newspaper's informant was correct in her assertion.

In view of the resolution passed by the Congress, I am calling Mr. Bridwell's finding to the attention of all Members and the President who under the resolution must issue the proclamation, by inserting here in the RECORD his column as it appeared in the Scripps-Howard papers on September 3, 1959.

It seems to me that under the circumstances the Congress should act to nullify its action since it is now apparent that Congress acted on the basis of misinformation.

MUFFLE DRUMS—LAST OF BOYS IN GRAY WAS NEVER IN WAR—RECORDS SHOW HE WAS BOY OF EIGHT WHEN HOOD MADE FINAL STAND

(By Lowell K. Bridwell)

WASHINGTON.—Walter G. Williams, of Houston, Tex., accepted by the Nation as the "last living link with the Civil War," is a Confederate veteran only in his memory-clouded mind.

The Texan, ill and under the constant care of a daughter, is looking forward to November 14, happily anticipating the attention bestowed upon a man on what he figures must be his 117th birthday. It probably matters little to him that old census records indicate he's really only 103.

Just when and where the aged Texan became universally and sentimentally accepted as a member of the famed Confederate Hood's Texas Brigade isn't known. Maybe it resulted from the tales of elderly men passing the time on county courthouse steps.

Apparently no one bothered to check, or no one really cared. Nevertheless, the meticulously kept Confederate records in the National Archives fail to disclose Williams' association with that most lionized of all Texan fighting outfits.

Perhaps, after years of clouding memories, Williams has forgotten that he was a mere lad of eight on his father's Mississippi farm when the unit he now believes he fought with was making its final stand in Virginia and that Gen. John B. Hood, his self-proclaimed leader, was conducting the battle of Atlanta.

The unfeeling facts contained in musty old ledgers and documents also tell their stories. But they were not presented to the veterans' organizations, the State of Texas, the Congress and the President of the United States when they chose on several occasions to honor this supposed last of the 3½ million men who fought this Nation's only Civil War.

Just last month, Congress approved and President Eisenhower signed a resolution declaring the day of Williams' death to be a day of national mourning with the flags to be flown at half staff. In 1958, Congress provided and the President approved a special Federal pension for Williams and a Virginia Confederate veteran who since has died. Two years earlier, Williams was presented a gold medal by an act of Congress.

Just how long Williams' legend has existed, no one knows. It started officially when he applied for a Texas Confederate pension Aug. 5, 1932, the first year of the great depression.

Williams was merely reflecting the pride of his adopted State when he filed a sworn affidavit that he was a member of Company C, 5th Regiment, Hood's Brigade, 11 months before the war closed. The men of Hood even today are looked upon with respect and awe because of their bravery and key parts in Confederate victories over Union forces in 1861 and 1862.

Williams and thousands of others undoubtedly have forgotten that Hood's famed unit was broken up and lost its historic designation long before Williams believes he enlisted.

These cold records preserved in the National Archives, much more complete than is generally accepted, fail to turn up any evidence of Williams' proclaimed service.

"Other than the sworn statement of Mr. Williams, no evidence was required to begin payment of Confederate pension benefits," wrote Gerald Turner, Texas Veterans' Affairs Commission assistant director, when asked about Williams' service record.

"No official records from many source are available which would verify the statements made by Mr. Williams."

Old census records, however, are able to sweep away the eventful years and shed light on the Williams' legend.

They show, for example, that Williams' father, George W. Williams, and his mother, Nancy, lived on an Itawamba County, Miss., farm in 1850 with their two children, Mary L., 8, and Stephen B., 2. Williams' grandparents, Stephen and Mary Williams, lived there, too.

The family's progress and the toll of the years can be seen in the census records taken every 10 years. By 1860, the grandparents and Mary L. no longer were listed. But as some members were taken away, others came, for the Williams family now had two new members, Laura A., 9, and Walter G., 5. Stephen B. had grown to be a lad of 12.

The move westward apparently swept along the Williams family because they moved to Brazos County, Tex., by the time the 1870 census was taken. George W. and Nancy still headed their family. Stephen B. apparently had gone out to make his own way in the world. Laura A., now a lady of 17, was still living at home. Walter G. was a young man of 15.

By 1880, George W. and Nancy were getting along in years. He was 65. She was 62. Laura was gone, but young Walter G. had married and brought his wife, Florence, home to live.

The young Williams couple, in those eventful 10 years, ont only had married, but produced the first three of their family. They were Marth, 6, Thomas M., 3, and Ida B., 1.

At various times over the years, and confirmed by daughter, Willie M. Bowles, who now cares for him, Williams has listed all these persons as members of his family.

Actually, perhaps, the Williams legend can best be seen in light of his own words, uttered at widely separate times. On his pension application, he said his family moved to Texas in 1870. Years later, he told a newspaper interviewer he was 14 years old when he came to his adopted State.

State of Texas Joins Opposition to Radioactive Waste Disposal in Gulf of Mexico: The Chronicle and the Observer on the Same Side

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, September 8, 1959

Mr. YARBOROUGH. Mr. President, the Atomic Energy Commission's attitude of "hear, see, and speak no evil" concerning the dumping of radioactive wastes into the Gulf of Mexico almost succeeded.

However, a number of citizens, joined by me and other Members of the Congress, by newspapers, by community and county governments, by civic and conservation organizations, and by others, protested the proposed move. Now the State of Texas has asked that it be allowed to intervene in the case.

The matter is still under consideration by the AEC, with a hearing scheduled in October. I sincerely hope the Commission will study the application to dump radioactive wastes into the Nation's sea areas careful scrutiny—a closer study than it gave the pollution of some rivers in the Northwestern part of our Nation, which are now reported contaminated because of radioactive wastes dumping.

The Houston Chronicle, one of the largest newspapers in Texas, has led in protesting this move along with some other publications. A militant weekly newspaper which has entered the fight is the Texas Observer. This paper pub-

lished an article which sums up the situation as it is right now. The Chronicle editorial points up the value of citizens doing their own thinking and then having the courage to speak up. An informed, courageous, vigilant citizenry is the best public safeguard in the world. In this day of TV documentaries and mass media of communication brainwashings, individual thinking is more important than at any other period in our history.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Houston Chronicle for Monday, August 24, 1959, entitled "State Enters Fight Against Atomic Dumping Along Coast"; an excellent and factual article from the Texas Observer for August 28, 1959, entitled "Alarms on the Radioactive Drums"; and an editorial from the same issue of the Observer, entitled "Flip That Crazy Junk."

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Houston (Tex.) Chronicle, Monday, Aug. 24, 1959]

STATE ENTERS FIGHT AGAINST ATOMIC DUMPING ALONG COAST

When a locally organized company months ago applied for a permit to build an atomic waste disposal plant here, with plans to dump the wastes in the Gulf of Mexico, only a handful of citizens here, some county officials and the Chronicle questioned the safety of the plan. This opposition was enough to delay the operation.

Then many other groups joined the fight. Coastal members of Congress took up the campaign against the dumping of atomic wastes in the gulf near Texas. Sportsmen voiced their opposition.

Now the State of Texas has entered the fight, through the attorney general. The attorney general has filed a petition with the Atomic Energy Commission, asking permission to intervene in the case now pending before the Commission on the company's application for a license to dispose of the wastes. The attorney general's brief said the State takes the position that disposal plans to date do not include adequate guarantees of safety.

The situation has changed considerably in the last 2 or 3 months. At first some local sources were aghast that anyone would question the scientists who said that there is no danger in dumping atomic wastes in the Gulf of Mexico. One paper called the opposition "witch burning." But later it was discovered that some equally prominent scientists believe it would be dangerous. The more the case is argued the more apparent it becomes that nobody really knows what effect dumping atomic wastes in the gulf, even in concrete containers, would have on marine life. Some of the self-appointed interpreters of the facts of science now seem to be rather juvenile in their viewpoint.

What if a few determined people hadn't started the fight when the matter first came up? By now, marine life along the coast might be contaminated by radioactive wastes.

There is a moral in this for the public. Citizens should do their own thinking and not be afraid to speak out on their convictions.

[From the Texas Observer, Monday, Aug. 28, 1959]

ALARMS ON THE RADIOACTIVE DRUMS

HOUSTON.—When and if the U.S. Atomic Energy Commission gives the four or five people who call themselves the Industrial Waste Disposal Corp. permission to dump radioactive wastes in the Gulf of Mexico, there chosen spokesman here admits, some of the drums are expected to burst, the cement encasements will split, and the wastes will diffuse into the gulf.

But here, says their lawyer, young John S. Kiibler, Jr., is the problem: "What are you going to do with these wastes? There are only two things you can do: Take the really dangerous atomic refuse and lock it behind walls and put it under guard, where it will stay, as at Oak Ridge, for thousands and thousands of years; or take the less dangerous wastes, dump them in the ocean, and let them spread out.

Thus has come home to Texas and to Texans a personal meaning for the atomic age, an intimately personal issue: the purity of the coastal waters, the safeness of shrimp and fish we eat, and perhaps most all the way we feel in our environment.

If the wastes are not taken somewhere they will stay where they accumulate. In the city of Houston alone 80 licenses have been granted for the use of radioactive materials in commercial and medical pursuits. "Why, trucks are traveling the streets of Houston day and night with two or three curies—which is far greater than we can have in any one package," Kiibler said. So the question is not, Shall we dispose of radioactive wastes, but how?

The 3-year-old Industrial Waste Disposal Corp., attorney Kiibler said, proposes to receive the wastes in Houston on hired trucks, convey them in other hired trucks to the company's steel haul vessel, take them to an area roughly 150 miles east of Port Isabel and 180 miles south of Galveston, and dump the stuff overboard into at least 1,000 fathoms of water.

IT'LL SPLIT, IT DIFFUSES

Admitting the cement encasements and the drums can split, and ofter will, when they are dropped into a thousand fathoms of water, Kiibler told the Observer in an interview:

"The fact is that it doesn't make any difference. My Lord, it'll split. That's confusing the issue. It's expected to split. It diffuses."

Senator RALPH YARBOROUGH has speculated that the currents in the gulf could carry radioactivity to the coast.

"The current itself is very helpful," Kiibler responded. "If there were no current it would still diffuse. * * * Believe me, if some got to shore, it would have been washed free of radioactivity. It's safe without a current—it's so much safer with a current—that much safer, that is."

Conveying, by that verbal tangle, a desire to leave no implication that there could be any danger from the waste dumping from which Industrial Waste Disposal Corp. proposes to make a profit over the years, Kiibler, asked if there would be any danger at all, replied:

"This is a matter of proven fact: It is not dangerous if it is handled in the manner specified in the license. This company is fully equipped to handle it."

How many permanent employees does the company have? he was asked. "Probably from four to six," he said, including the president, Dr. Donald Hood, an oceanographer; Miss Edna Wood, a biochemist; the ship captain, and the two of three people the captain hires for his crew.

The company, Kiibler said, is "a small concern engaged in handling industrial wastes," such as oil and chemical wastes from industries along the Houston ship channel. "Our business is finding some way to deactivate the waste so it can be disposed of without contaminating the streams," he said.

Radioactive materials are used for such things as medical work and determining interior strength of metals, he said. Industrial Waste Disposal Corp. would receive them from "anyone that we could economically." He said he has heard that there are seven other U.S. companies doing the same kind of work.

What area would the firm service? "It depends on the shipping rates," he said. "We would expect to get most of it from Texas. * * * It seems a good source of income."

In outcry about the dumping have been heard the voices of YARBOROUGH, Texas Congressmen, the Texas Legislature, the shrimp industry, and sports fishermen. The AEC was required by the politics of the situation to hold up the issuance of the license to Industrial Waste Disposal Corp., as for a brief from the company by September 15, and schedule arguments October 13 in Washington. Attorney General Will Wilson has asked the AEC to be allowed to intervene against the dumping at the October 13 hearing. Kiibler will be there, too.

Representative CLARK THOMPSON, Galveston, has introduced a bill to prohibit radioactive waste-dumping closer to shore than 200 miles and shallower than 1,000 fathoms. Containers would have to be leakproof.

In a recent statement on the subject, YARBOROUGH said THOMPSON'S bill "is a long step in the right direction—namely, deeper and farther away. A mistake here could be fatal. * * * An overdose of radiation is most hazardous to children and can affect generations 100 and 200 years in the future."

WILL COME OUT OF DRUM

The young, alert La Porte lawyer said the waste would consist of such things as test tubes, beakers, contaminated paper, carcasses of dead animals used in experiments, and some materials exposed to radioactivity from radium, such as the containers in which it was stored.

The wastes would be trucked to Industrial Waste Disposal Corp. in drums which would have to comply with AEC standards, so that if the basic container broke, liquids would be absorbed by an inner container.

"Either you or I can carry one of these containers around all day," he said. "The radioactivity is of such a low intensity, it does no harm. It could sit there indefinitely and you could live with it indefinitely."

Could you leave it in your bedroom? "You could have it in your bedroom, yes," he replied. Each concentration of radioactivity "is well below the maximum permissible concentration."

Not opening the drums, Industrial Waste Disposal Corp. would encase some of them in concrete strengthened with wire mesh; drums not filled up with wastes would be filled with concrete instead of encased in it. (Presumably they would have to be opened if they had to be filled with concrete.)

"The main function of the concrete is weight," he said. "They don't need it for protection."

After the drums were dumped, concrete encased or concrete-filled, into the gulf within 2, 3, or 4 miles of latitude 26°20' north, longitude 94°32' west, what chance would there be, the Observer asked Kiibler, of the ocean pressure breaking them open?

"Some of the drums will break," he said. "The concrete will probably break—a shearing break, a sort of crack, that doesn't shift the concrete. It does break. It's expected to break. The wire mesh holds it together—it doesn't come off."

The probability of the drums opening under the pressure, he said, is not great. "The inner metal drum may crack. Then the water rushes in and equalizes the pressure.

"Of course," he said, "radioactive material will come out of the drum."

At this point he reverted to the nature of the problem, What is to be done with radioactive waste?

"You can either contain it and keep it away from man, which is very expensive, very impractical," he answered. "You can put it in steel containers at Oak Ridge under armed guard and leave it there for hundreds of thousands of years—that's just hearsay. Or you can reduce its intensity and scatter it so that it can do no harm. It is exposed to the diffusion process in the ocean—it diffuses very quickly so that it can do no harm."

He said there is "much less chance" of the drum splitting than there is that the cement will crack. "If there is no airspace in the drum, it won't split," he said. "The fact is that it doesn't make any difference. My Lord, it'll split. That's confusing the issue. It's expected to split. It diffuses."

WORST POSSIBLE THING

The Atomic Energy Commission itself, he continued, "envisioned taking the material, transporting it to the bottom, and instantly removing the container—so that you would have raw radioactive material in the ocean. This was the worst possible thing that could happen—why, all the material would be in the water at once."

He said a current helps the diffusion. "It would naturally diffuse with or without a current," he added.

He quoted Dr. Dayton E. Carritt, associate professor of oceanography at Johns Hopkins University, on how much danger there might be:

"Take strontium 90 material, the deadliest kind, 10 curies of it, and sink it to the bottom, dissolve the container, so it's in the water. Also assume no current to aid in the diffusion process. Go out (1¼ miles), sit on the bottom of the ocean—assuming you could drink sea water, you could sit there and drink sea water for the rest of your life, and no harmful effects," Kiibler reviewed.

If there was a 5-knot current you could drink the water at eight-tenths of a kilometer, or half a mile, he said.

YARBOROUGH has also made the point, Kiibler was reminded, that fish concentrate radioactivity in their bodies, since they live off ocean life which has itself in turn attracted the radioactivity.

WHAT ABOUT THE FISH?

"Fish will pick it up," Kiibler agreed. "Fish have the same maximum permissible concentration as humans—it's quite a coincidence."

But they might not die before they are caught and eaten, the Observer observed.

"It's not going to kill the fish," Kiibler said. "They could drink it too."

What about fish within the area where the drinking water would not be safe? "I don't know if you could catch fish at 1,000 fathoms," he said. "All commercial fishing—sports fishing—is above the themocline. Below that there is very little plant life, very little fish life—perhaps a few monsters, that sort of thing."

Could the radioactive materials rise above the thermocline?

"Radioactive oil and very hard plastics are the only two items that could come up from 1,000 fathons," he said. "The rest would be pressed flat by the pressure—clothing, wood, for example. By the time it came to the surface, the oil and plastics, too, would have been rendered harmless."

Then he thinks there is no danger of contaminating gulf fish life? "None whatever." And no danger to boats passing over the dumping grounds? "None."

He said that after 6,000 curies of radioactive waste had been dumped into one spot off the Atlantic coast, scientists went out there to run tests, "and with all their delicate meters, they couldn't even find it." He recalled a figure that the background radioactivity in the Gulf of Mexico is 3,400 million curies. "Since we'll not be dumping more than 10 at a time, you begin to see the ridiculousness of the objection."

The gulf is quite a large area, however. Kiibler responded that the scientists hadn't been able to detect where the 6,000 curies had been dumped off the Atlantic coast.

Had not a drum been found floating off the coast off the Pacific Northwest marked for radioactivity? Yes, he said; but it had had no radioactivity and was thought to be the work of pranksters, according to a story he had seen.

Kiibler thought the public's alarm about the radioactive dumping a healthy thing, but the concern is simply through a lack of knowledge. It's very similar to the first filling station. People were very alarmed about the dangerous properties of gasoline. No one now thinks of gasoline stations as dangerous.

[From the Texas Observer, Aug. 28, 1959]

FLIP THAT CRAZY JUNK

It's easy to be uneasy about dumping drums that will burst encased in cement that will crack full of radioactive refuse that will then diffuse in the Gulf of Mexico 150 miles off the Texas coast. But for YARBOROUGH's alarm, who knows what the smug sanitarians of the AEC might have done? But what is to be done with the lethal, sterilizing, deforming, invisible death being concentrated at points all over the world like a suicide collects knives? Long run there's only one humane solution: put the stuff on rockets and fire it into space. However, there will be consequences. We may have to footnote our poems to the universe with the admission it's also used as a garbage dump. And how will we know where the stuff fires off to? Just as a few heretics defended the Indians of the American continents from exploitation by the invading Europeans, humanitarianism will be challenged by the Martianists, or the Orionists, or the Milkywayans, or perhaps simply the universarians. And they may retaliate. Or maybe they'll dump their stuff on us first, and we'll retaliate. But to return to earth, we are grateful for Senator YARBOROUGH.

The Khrushchev Visit: Dangers and Hopes

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Sunday, September 6, 1959, written by Mr. Henry A. Kissinger, associate director of the center for international studies at Harvard University, and the author of the book, "Nuclear Weapons and Foreign Policy":

THE KHRUSHCHEV VISIT: DANGERS AND HOPES

(By Henry A. Kissinger)

In 9 days Premier Khrushchev is to arrive in the United States. His every gesture will be watched for significance; his every smile will be reported as a harbinger of a happier world; his every affirmation of the desirability of peace will be taken as a sign that Soviet policy has entered a new phase.

In these circumstances it seems almost ungracious to express a word of caution. But it is dangerous for democracies to act as if all issues could be reduced to personalities. The cold war is not the result of a misunderstanding between our leaders and those of the Soviet Union. It is the product of a conscious Soviet policy which includes the suppression of freedom in Eastern Europe (it is less than 15 months since the execution of Imre Nagy, of Hungary); the Soviet refusal to accept schemes for the control of arms; Communist pressure on all peripheral areas, of which Laos is only the most recent example; the unprovoked threat on Berlin. A solution of the cold war can be found only in relation to these issues.

The exchange of visits will assist the cause of peace only if it provides a basis for dealing with these problems. It will be beneficial to the extent that it gives the Soviet leader an incentive to reverse a course which has repeatedly brought the world to the brink of war. Yet the circumstances in which the visits will take place do not inspirt optimism in this respect. If Mr. Khrushchev compares his position now with what it was last November, when he first threatened Berlin, he may well conclude that bellicosity has its rewards. As a result of his pressure on Berlin, accompanied by threats of missile and nuclear attacks, Mr. Khrushchev has already gained the following points:

1. A meeting at the top without withdrawing the threat to Berlin. Whatever the desirability of a visit by Mr. Khrushchev to the United States in the abstract, under present conditions it is a Soviet tactical victory. From the start of the Berlin crisis, we insisted that we would not go to a summit conference under duress, that there had to be some "progress" at a lower level before the heads of state convened. Throughout, Mr. Khrushchev has maintained that the Foreign Ministers could settle nothing and that the "heavyweights" should talk. The threat to Berlin has not been withdrawn; the Geneva Foreign Ministers' meeting was a complete failure. Yet Mr. Khrushchev has done better than achieve a four-power conference. He has been invited to meetings with the President from which our allies are excluded.

2. A demonstration of the lack of purpose in the West. The immediate reaction to the Soviet threat to Berlin was a public debate on what concessions might be made and public accusations of bad faith and irresolution among the allies. Three weeks before the Foreign Ministers' Conference there was still no agreed Western position, and the tentativeness with which the Western plan was presented revealed that the West lacks a clear conception of the purposes for which it might strive.

Rather than concentrating on restoring its unity or developing its own program, the West has been obsessed with determining Soviet intentions. Delegations of political leaders from most countries of the Atlantic community and from almost every political party have descended on the Communist capital. Moscow has become the focus of diplomatic activity. The West has hung on Mr. Khrushchev's erratic pronouncements as if it could do nothing save in reaction to Soviet moves. The Eisenhower-Khrushchev meetings are the culmination of a trend which has seen the Western alliance dangerously close to being split, with each ally essaying his own diplomatic approach.

3. A hardening of the dividing lines in Germany. The attempt by Germany to pursue an isolated policy in the center of the Continent has produced disaster for Europe twice within a generation. One of the important goals of our policy must therefore be to retain Germany as a willing member of the Western community. If Germany should feel forsaken by its allies, it may seek to realize its aims by separate dealings with the East. And among these aims, unification will always occupy a key role. Thus for us a great deal depends on demonstrating that only Soviet intransigency keeps Germany divided. Any other course will in time produce what we should fear most: a dissatisfied, militant power in central Europe.

When an East German delegation was seated at Geneva, a major step was taken not only toward the perpetuation of the division of Germany but toward our acceptance of the East German puppet regime. This was underscored by the lack of conviction with which the Western plan for German unification was presented and the haste with which it was pigeonholed at the first sign of opposition. After the first week in Geneva, the foreign ministers dealt with only one problem: the transformation of our position in Berlin, for which the quid pro quo was to be the withdrawal of a Soviet threat. We were asked to give up our rights while the Soviets would give up a menace. By accepting what amounted to a proposal that we "solve" problems the Soviet Union had created, we were placed in the demoralizing position of letting our well-established rights be called in question with no better argument than that they had become "abnormal."

4. The demonstration of a basic weakness in Western military policy. In our belief that deterrence is best achieved through the threat of maximum destructiveness, we have placed our principal reliance on nuclear weapons and strategic bombing. We were thus caught in the dilemma of deciding whether Berlin is "worth" the tens of millions of casualties of an all-out nuclear war. And it does not matter how determined we "really" are; if the Soviet leaders doubt our resolution they may provoke the crisis we are striving to avoid.

President Eisenhower is reported to have expressed puzzlement that our repeated warnings that we would fight for Berlin have apparently failed to impress Mr. Khrushchev greatly. The reason is not hard to find: Our threat to resort to our only strategy has lost its credibility, not because our leaders are irresolute but because the threat of all-out war has become inherently implausible.

Moreover, once Soviet pressure had begun, few of our actions were calculated to reinforce our words. We did nothing to remedy the weakness of NATO's ground forces; on the contrary, we reduced both our Army and the Marines. We kept stressing the priority of long-range balance over readiness as if we did not face an immediate crisis. These actions may have encouraged a Soviet belief that our show of determination was bluff, that in our quest for relief from the burdens of military expenditures we might be induced to give up our other interest.

When we assess the exchange of visits between the President and Premier Khrushchev in this context, the potential dangers of the meetings emerge clearly. In my opinion, they are:

1. The risk of euphoria. Some of our allies seem to feel that anyone who warns against overoptimism seeks to avoid a settlement. This is not true; no one can be opposed to a genuine end of the cold war. But we must guard against succumbing to the illusion of relaxation while the causes of the cold war remain unsolved and new crises build up in an atmosphere of blandness and "normalcy." And there is a grave danger that the American people will be lulled into complacency by abstract protestations of good will; that we will confuse personal affability with a change of attitude. We may be deflected from the long-overdue reexamination of our policies, both diplomatic and military, if the impression is created that the fact of a conference is more important than the substance of what it achieves.

2. Weakening allied ties. One of the characteristics of the postwar period has been the decline in power and influence of Europe. But one of the paradoxical results of Europe's new status has been a tendency to exaggerate its weakness. As a result, Europe has not fulfilled all her potentialities for political initiative.

It is important that the conference between the President and Mr. Khrushchev do nothing to increase this sense of impotence. Our European allies must not be given the impression that matters affecting their most vital interests can be negotiated without their participation. No one who has read the President's remarks in the course of his European trip could suspect that Mr. Eisenhower would betray our allies. But separate conversations could underscore the junior position of our partners and be a blow to their self-respect.

We must take care that we do not reduce any future summit meeting to ratifying decisions taken by the United States and the U.S.S.R. Mr. Khrushchev has already sought to exploit this possibility. He has stated that after his meeting with the President there might be a conference including our European allies plus Poland, Czechoslovakia, and Hungary. We must guard against having our allies reduced to the status of the East European satellites.

President de Gaulle's reported plan to visit Moscow, following the Macmillan trip to Russia and the Eisenhower-Khrushchev exchange, indicates that a situation could come about in which allied unity—in the diplomatic field, at least—would be little more than a formal pose. If the principle of separate dealings becomes established, we may well be the victims of the next phase of Soviet policy, when an attempt may be made to appeal to our allies against us.

3. The demoralization of the free world. It is a Soviet goal to reduce contemporary issues to a clash of personalities in an effort to make us forget that the cold war has been caused by specific Soviet aggressive actions and that it can be ended only in relation to these issues. The more the Soviets can give the impression that crises stem from individuals (Adenauer's "rigidity," Truman's "failure to follow Roosevelt's policies," etc.), the more uncertain the free world will become, for in any Soviet-provoked crisis the West will be tempted to blame its own leaders or to search desperately for a new approach that will somehow end all tensions. Mr. Khrushchev may indeed make the ultimate decisions in the Soviet Union—as many advocates of conversations at the top maintain. It is nonetheless dangerous for democracies to permit a dictatorship to impose its manner of conducting affairs on them too completely.

Now that the invitation to Mr. Khrushchev has been issued, we must consider how the exchange of visits can be made to bring the best results.

It is likely that Mr. Khrushchev suffers from severe misconceptions about the nature of American society. Although it is not easy to imagine what the Soviet leader is likely to see in a cross-country trip of 6 days to change the attitudes of a lifetime, he should learn of the unity of the American people. Unless Soviet doctrine blinds him completely, he may come to understand, if he ever doubted it, that America has no aggressive designs, that it is unthinkable for the United States ever to initiate hostilities. At the same time, he may realize that the American people will be as one in resisting any attempt to achieve world domination. He could gain an appreciation of our strength and our productive capacity.

Mr. Khrushchev cannot fail to notice the sincerity of the President when Mr. Eisenhower says, as he has repeatedly, that in a nuclear war both sides must lose, but that, if the Soviet Union is prepared to seek security through negotiations and to forgo the quest for empire, it will find us conciliatory and imaginative. And the conversations between Mr. Eisenhower and Mr. Khrushchev will demonstrate our desire for peace to the rest of the world.

Nevertheless, we face a delicate task in the forthcoming meetings. If we negotiate about specific settlements we may disrupt the Western alliance by giving our allies the impression that major decisions are being taken in their absence. On the other hand, if we confine ourselves to generalities we may confuse our people. In that case it will never be clear what was decided upon. Misinterpretation or misunderstanding will be encouraged. We shall not be able to convey even to the Soviet leaders our understanding of the causes of current tensions and the means to overcome them.

We have never had too much difficulty obtaining Soviet agreement "in principle." The frustration has arisen because principle has proved impossible to translate into action.

Court's Irresponsible Race Views Were Drawn From Swedish Socialist

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, September 8, 1959

Mr. THURMOND. Mr. President, the widely read news columnist, Mr. Westbrook Pegler, is currently on a tour of Europe, and at a stopover in Stockholm, Sweden, he has prepared a very interesting and important column which merits the attention of the Congress. It is entitled "Court's Irresponsible Race Views Were Drawn From Swedish Socialist," and was published in the September 7, 1959, issue of the Augusta Chronicle, of Augusta, Ga. I ask unanimous consent that the column be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURT'S IRRESPONSIBLE RACE VIEWS WERE DRAWN FROM SWEDISH SOCIALIST

(By Westbrook Pegler)

STOCKHOLM.—The Earl Warren dispensation of the American Supreme Court by its resort to an irresponsible discussion of the Negro's relations with his white neighbors in the United States touched off the Little Rock trouble, in turn has wrought some damage to our national reputation in other countries. The injury may be momentary. Be that as it may, we are now urged to submit to moral blackmail to win the approval of people who have no authority in our domestic affairs, who plainly do not know certain essential facts, and in all cases have a few moles and warts on their own noses.

The irresponsible discussion which Earl Warren invoked was written by a left wing politician of the Swedish equivalent of the American union racket. Warren and his wife, being of Swedish background, are sentimentally regarded here as ex officio Swedes. The Swede who wrote the opus which Warren seized upon is an inveterate officeholder of the Socialist Labor movement which in most countries has stretches of common front with the Communists. His name is Gunnar Myrdal.

He appears never to have joined the Communist Party but his disposition was expressed when, as Minister of Commerce in

1946, he actively prompted a trade credit of 1 billion kroner, about $20 million in American money, to help Moscow obtain industrial equipment for the modern development by which Khrushchev now threatens to surpass the United States and destroy capitalism. The Russians have cashed this credit to the extent of 550 million kroner. They have undertaken to pay this debt in a stretch from 1961 to 1967 but, obviously at considerable loss to Sweden through shrinkage of the value of the kroner. The deal did not stipulate repayment in kroner of the same value as the kroner which Russia borrowed.

At the dissolution of the wartime coalition government of Sweden in 1945, Myrdal's party, called the Social Demoorats, swept in with firm control. The election was legitimate and the Swedish unions, which are a reckless, wasteful force with their own lavish bureaucracy including their own newspapers subsidized by the wages of the faceless man, exulted in its new power and its great opportunity.

Myrdal was jubilant. He was quoted as having said, "Now is the time to bring in the Socialist harvest."

Myrdal left the government in 1947. Parting was a mitigated sorrow to the party although Myrdal, being severed from the payroll, reasonably may have felt shooting pains. He is a bureaucrat and professional doctrinaire as unfamiliar with actual toil in a personal sense as Rex Tugwell and most theoretical teachers of the social science courses in American colleges. His wife is a doublesome of similar bent now Ambassador to India at somewhere between $8,000 and $9,250 a year. Myrdal himself enjoyed some years in a soft job with the U.N. at about $25,000 a year, tax free.

Some of the conservative Swedish press fought this credit to Moscow. One phase of the program called for enormous orders of manufactured electrical equipment. The biggest Swedish firm in this line resisted involvement in the task on the ground that the reparation of war damage in all directions, plus demands for apparatus newly developed, would provide capacity business for its facilities. Thus there would be no need for made-work production under an ill-disguised subsidy from the Swedish Government. One paper intimated that the party in power then threatened native Swedish industry with an invasion of Sweden by General Electric of the United States to manufacture the stuff. Ultimately, Swedish firms filled a variety of orders for Russia.

Myrdal enjoyed a sojourn in the United States on a grant from a typical tax-free foundation. This grant became, in practical effect, a subsidy which ultimately paid for the court decision based on Myrdal's brief observations of relations between white and colored Americans. And this alien Socialist's findings in this field are now, in similar practical effect, the law of the land, supplanting a time-honored interpretation of the Constitution by the pre-Warren court.

The Good Senor

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Herald Tribune of September 8, 1959:

THE GOOD SENOR
(By Red Smith)

In the autumn of 1955, there spread through the American League an uneasy suspicion that Marty Marion, Chuck Comisky, Johnny Rigney, and affiliated intellectuals in Chicago had all slipped their trolleys. As usual, the White Sox had finished third and as usual Manager Marion and his assistant thinkers longed to beef up the team's girlish attack. In October they took a step in this direction by wangling the muscular Larry Doby off the Cleveland roster, but at a cost which suggested they had taken leave of their senses.

In exchange for Doby they gave the Indians Jim Busby and Chico Carrasquel, one of the best shortstops in baseball, who had served the Sox with distinction for six seasons. It was a desperate gamble, for no team can play first-rate ball without a first-rate shortstop, and a club can search for years and spend a fortune without discovering one of Carrasquel's quality.

All Chicago's eggs were thus dumped into one frail basket carried by a 20-year-old shrimp out of Venezuela, advertised as a live one but a total stranger to the big leagues, with only two seasons in the bushes on his record.

One year later when the 1956 averages were published, Luis Ernesto Aparicio had led the league's shortstops in total chances accepted, led the league in stolen bases, batted .266 and was designated Rookie-of-the-Year by the Sporting News. In 1957 he led the shortstops in assists, in 1958 he was tops again in total chances, and in both seasons he was the league's most proficient thief on the bases.

THE SMART SENOR

Recently there was an item about a poll of American League managers who were asked to name the one player they would select first if given their choice of all the talent in the leagues. There are eight American League managers. There were eight votes for Luis Ernesto Aparicio. Obviously Senor Alphonso Damon Lopez, current manager of the White Sox, must have gone with the crowd. Senor Lopez knows when he is well off.

"I would hafta say," Mr. C. Stengel is wont to remark, "that they got a smart fella for manager because he has never finished worse than second and he used to work for me."

Except for the fact that the White Sox lost twice by one run margins, the weekend series with Cleveland was vividly characteristic of the champions-presumptive and the lop-jawed, tobacco-eating desperado who plays shortstop for them.

In Saturday's game Chicago was trailing, 3 to 2, in the fifth inning when Aparicio beat out a bunt. He stole second. Then he stole third. Then he dashed for the plate on a short fly by Jim Landis, and was thrown out. The Indians squeaked through, 6 to 5.

On Sunday, Chicago's only extra-base hit was a double by Aparicio. Neither team scored until the fifth inning when Aparicio singled, stole second, reached third on a single by Nellie Fox and rushed home when Landis—the big third man in Chicago's terrifying batting order—scratched a hit off the pitcher's glove. That was the only run for the Sox; Cleveland got two.

LARCENOUS LATIN

Aparicio is batting .262 and his Sabbath steal of second was his 49th theft of the season. By way of comparison, the most larcenous operative in the National League is that colorful character, Willie Mays. He has stolen 26. Little Luis ought to bring on another half-dozen thefts before the season ends. Nobody has done anything like that since George Stirnweiss knocked off 55 a decade and a half ago.

As a base runner, Aparicio isn't exactly a throwback to Ty Cobb, who considered it one of his lesser years when he didn't steal more than 90, but he is the most exciting guy on the bases since Jackie Robinson was a newcomer.

In those days, Robinson was the one player around who could stop a game cold by getting on first base. If he walked or singled, all other action froze. The television director in Ebbets Field threw an electronic fit, employing the split-screen technique to show both pitcher and runner. Fans held their breath as Robinson jigged and feinted.

Yet Robinson never had more than 37 steals in his best season and when he led the league one year with 29, Bugs Baer wrote than John McGraw used to demand more than that by the writers traveling with the Giants.

DEAD-END KIDS

Chicago's only .300 batter, Nellie FOX, has two home runs, which is about normal for him. Al Smith has made 14 and Sherman Lollar 20. After Fox's .308, the team's top hitter is Jim McAnany at .279, and this rookie has been around less than half the season.

It is unlikely that even a world series would bring out the best in batters of this stripe, but the Sox are a team that worries the enemy into panic. They're a pack of dead-end kids who sneak up on a victim from the rear, whereupon Fox trips the sucker and Little Luis swipes his watch and chain.

No Editing by the President, So Why Should Senators?

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. NEUBERGER. Mr. President, the CONGRESSIONAL RECORD should be a verbatim record of what Senators and Representatives say in floor debate. However, it is not. The revising of remarks made on the floor has become part of senatorial custom. Every Senator does it. I have done so myself, although I hope that I did so in a manner of circumspection.

The only way to end the practice of revising substantive matters recorded by the very able reporters who take down the daily proceedings in the Senate, as they happen, is by a rule which cuts off the privilege for all Senators simultaneously.

Mr. President, on August 20 the distinguished senior Senator from Colorado [Mr. ALLOTT] and I submitted to the Senate, Senate Resolution 168, which would amend the Standing Rules of the Senate so as to add a new rule prohibiting substantive changes in the recording of remarks made on the Senate floor. The resolution provided that changes would be permissible only to correct grammar and syntax and to eliminate errors made in the transcribing of such remarks.

This proposal has created considerable favorable editorial comment. I ask unanimous consent that comment of sev-

eral newspapers which has come to my attention be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Northern Virginia Sun, Aug. 26, 1959]

NO EDITING BY THE PRESIDENT—WHY SHOULD SENATORS?

A great many Democrats have made fun of the frequent roundabout and unparsable sentences uttered by President Eisenhower at his news conferences. But one Democratic Senator, RICHARD NEUBERGER, of Oregon, has taken a sympathetic attitude toward Mr. Eisenhower in this regard—or, more particularly, toward the President's practice of letting the verbatim transcript remain untouched, no matter how the written words may make the Chief Executive look.

Mr. NEUBERGER has invoked this Presidential practice in defense of his resolution to deprive Senators and Congressmen of the privilege, now liberally exercised, of editing their oral remarks in the House and Senate before they are reduced to cold print in the CONGRESSIONAL RECORD. Senator NEUBERGER is joined in this move by Republican Senator ALLOTT, of Colorado.

"Some persons may scoff and speak of lack of clarity exhibited by (the President's press conference) answers," says Senator NEUBERGER. "Yet I doubt if any Senator has the right to engage in such ridicule.

"Members of the Senate may rigorously revise their remarks. It is my understanding that the President takes advantage of no such privilege," he says.

We cherish little hope that the House and Senate will give up their precious privilege of patching up the errors, faux pas, and inanities uttered, however innocently, during the course of debate, even though this practice smacks uncomfortably of the rewriting of history described in George Orwell's novel, "1984." But perhaps Senator NEUBERGER's gentle chiding will make them a bit more hesitant about deriding the Presidential press conference answers.

[From the Milwaukee Journal, Aug. 26, 1959]

AN UPROAR OVER DELETIONS FROM CONGRESSIONAL RECORD

The CONGRESSIONAL RECORD is supposed to be just that—a verbatim record of what Senators and Representatives say in floor debate. But it isn't. For years legislators have claimed a right of revision.

Supposedly this allows them to correct grammatical errors, eliminate personal abuse and off-the-cuff remarks. Actually, it is frequently used to revamp arguments, change stories, let the speaker appear as an orator of wit and logic.

Last week the situation reached a ridiculous point. Four pages of remarks were deleted from a debate on a banking bill. Senate leaders were involved. There was a tremendous uproar.

Investigation revealed that a staff member of the Senate Banking Committee made the deletions without getting permission of anyone.

Senators NEUBERGER, Democrat, Oregon, and ALLOTT, Republican, Colorado, are trying to stop this practice. They have introduced a resolution to deprive Senators of the revision privilege.

NEUBERGER said, as is now, a man wishes he had said something and is then permitted to go back and say it for the RECORD. He might have added that it also permits the man to wipe the slate, or the RECORD, of something he said and wishes he hadn't.

The Oregonian pointed out that there had been some criticism of President Eisenhower's press conference remarks—the lack of clarity sometimes exhibited. He said Senators had no right to join in such ridicule—"Mr. Eisenhower takes advantage of no revision privilege before his press conferences are released for publication."

Senators, of all people, should be willing to stand on what they say. In honesty, the bipartisan Neuberger-Allott resolution should be adopted.

[From the Christian Science Monitor, Aug. 29, 1959]

"CAB WIT" IN THE SENATE

The British have long had a term for it: "Cab wit." That is, the happy phrasing one might have given a passage in the speech, the devastating irony with which one might have crushed an adversary's argument, the sparkling quip with which one might have rocked the dinner party—all thought of in the cab going home.

There is no speaker or writer who must phrase his thoughts under the exigencies of the moment into words beyond recall but who indulges occasionally in this form of futile penance. Senator RICHARD NEUBERGER recently told the Senate:

"Many men would like to rewrite history. Few get the chance. Among the elite are U.S. Senators. Their vehicle is the CONGRESSIONAL RECORD."

And he has proposed in company with Senator GORDON ALLOTT a new rule prohibiting substantive changes in the recording of remarks made on the Senate floor, permitting only changes to correct grammar, syntax, and errors in transcribing.

He must have made some of his colleagues squirm a bit when he reminded them that the President's responses in press conference are published verbatim in American newspapers. Officially what is said on the Senate floor is what is recorded in the RECORD. Citizens of today and tomorrow are entitled to know how it was actually phrased, unaltered and unembellished with "cab wit."

[From the Daily Oklahoman, Aug. 29, 1959]

A MOTION SECONDED

The Nation should rise in unison and give 15 cheers for Senator RICHARD L. NEUBERGER, of Oregon, and Senator GORDON ALLOTT, of Colorado. These two propose to put an end to the costly privilege of "correcting the RECORD."

This would be the greatest boon to democratic government since the invention of the veto. Anyone who has had occasion to browse around in a copy of the CONGRESSIONAL RECORD may be dumfounded to learn that Congressmen don't always speak in faultless prose sparkling with wit and weighty with wisdom. Their secretaries get a chance to revise their remarks and in the process practice a form of censorship which prevents constituents from getting a true picture of their lawmakers.

If President Eisenhower can submit to having his remarks quoted verbatim so should Congressmen. The RECORD might even become a contender with best selling novels if "printed raw." Senator NEUBERGER thinks his resolution would discourage personal abuse on the Senate floor and would reduce the number of "horseback" opinions on important matters.

Congress is double-dared to adopt the resolution.

West Virginia Is Getting Short-Changed: XI

EXTENSION OF REMARKS
OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. HECHLER. Mr. Speaker, over the past weeks I have stood repeatedly before this House and cited statistic after depressing statistic to bear out my contention that my State of West Virginia has been woefully neglected in the distribution of Defense Department sites, employment, and contracts.

My State, despite its many advantages, ranks a dead last among the 50 States in Defense Department spending and payroll, civilian and military. This, I submit, is an unfair situation.

Now, Mr. Speaker, I have compiled other figures which indicate that the Defense Department is not alone in its discrimination against my State—where unemployment remains shockingly high and where jobs are desperately needed.

Apparently the Commerce Department has a similar disregard for the needs and rights of West Virginia. I have here a list of Commerce Department employment in each of the 50 States, and the proportion of the total population which this employment represents.

Can you imagine where West Virginia stands? Again, at the very bottom of the heap.

West Virginia, with only 37 Commerce Department employees, has only .00184 of 1 percent of its total population on the Department's payroll.

I do not think one single Member of this House can fail to agree that this shocking story of abuse and discrimination deserves to be given fullest distribution.

When I was pointing out how the Defense Department has discriminated against West Virginia, I admitted that certain States were better suited than others for defense purposes. But I felt that, despite this fact, the evidence was clear that West Virginia had, indeed, been shortchanged.

By the same token, I am not suggesting that the Commerce Department install the headquarters of its Maritime Administration or its Coast and Geodetic Survey in a landlocked State such as West Virginia.

However, I am at a loss to explain how equally landlocked Idaho, with barely a fourth West Virginia's population, rates exactly five times as many Commerce employees, or how an inland State like Colorado, with less than two-thirds as many people, merits exactly 10 times as many.

I can say that some regional offices would seem ideally suited for the Mountain State. But apparently the Commerce Department has not even consid-

ered locating these facilities in West Virginia.

For example, my State is highly air-conscious, since the mountainous terrain makes other forms of transportation difficult. Yet there is not one single Civil Aeronautics Administration employee in the entire State.

In the field of business and defense services, which could be a godsend to assist industries and communities in overcoming the effects of a lingering recession, there is not one Commerce Department employee in the entire State. This division, which offers facilities and assistance so sorely needed, is not represented in the State where it possibly could do the most good.

Mr. Speaker, I do not ask needless favors for West Virginia. I do ask for equal treatment and fairplay.

I believe that it is becoming more and more evident that many departments of our Government, which ought to be concerned with helping stricken areas, have instead callously turned their backs on West Virginia, and until something is done to rectify this situation, I intend to keep bringing these disturbing statistics into the open.

Department of Commerce employees by States

	Number of employees	Total (1950) population	Employees as percent of population
Alaska	1,077	128,643	0.8372
Maryland	2,884	2,343,001	.123

Address by Senator Long at Graduation Exercises, Loyola University

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. LONG of Louisiana. Mr. President, one of the finest honors which has ever been conferred upon me was the action by Loyola University of the South recently when the faculty of that institution presented me with an honorary doctor of laws degree.

Mr. President, I ask unanimous consent that my address on that occasion may be printed in the Appendix of the RECORD.

Mr. MORSE. Mr. President, reserving the right to object—and I shall not object—will the Senator from Louisiana permit me to extend him my hearty congratulations for this deserved honor?

Mr. LONG of Louisiana. I thank the Senator very much. I doubt whether I deserve the honor, but I am flattered.

Mr. MAGNUSON. Mr. President, I, too, wish to extend my congratulations to the Senator.

Mr. LONG of Louisiana. I thank the Senator from Washington.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Louisiana?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR RUSSELL B. LONG BEFORE GRADUATION EXERCISES OF LOYOLA UNIVERSITY, MAY 27, 1959

It is indeed an honor to share the platform with your Congressman HALE BOGGS, and speak to you tonight.

Inasmuch as Congressman BOGGS will not have the opportunity to speak tonight, permit me to say that he is undoubtedly one of the great leaders of the national Congress. If we are ever successful in making order out of the chaos that exists in the field of foreign trade, for example, it will be in large measure due to his enlightened leadership. The contribution of HALE BOGGS to the improvement of our National Government has been great indeed, but with each additional year he becomes more effective, more competent, more productive. All Louisiana is proud of your Congressman.

And now speaking for myself, it seems but a short time ago that I was receiving a bachelor of arts degree from my old alma mater. Time flies and things happen in a hurry after you graduate from college. May I be excused for failing to remember what the principal speaker said on the night that I graduated. I cannot recall a word of it.

The night was hot, I had plans for the evening. I wanted to get it over with. Let us hope that my experience was not in that respect a forerunner of yours tonight.

Yet on that June night of 1940, almost every man and woman in the class could have told you then and could tell you now some of the things that our President Franklin D. Roosevelt was saying over radio that year.

He told us that our generation had a rendezvous with destiny. It was true.

We were not of the maturity or experience to become the heads of government and immediately provide the top leadership, but we had the good judgment to help the Nation choose good leaders and we played a part in deciding which direction American policy would take.

Few of us were privileged to make command decisions, but we supported those decisions. We provided the workers, soldiers, officers to make those command decisions successful.

Our generation saw America emerge as the greatest Nation on the face of the earth, and the leader for all free peoples.

We learned how to attain full employment for our millions of workers who had suffered a cruel depression. We discovered many of the secrets of the Diety and made them available for the service of mankind.

We struggled successfully against totalitarian dictators, we were able to preserve the freedom of mankind in many parts of this planet.

Yet in spite of the best we could do, the dangers and the challenges will be even greater for you. Unless your generation measures up to those challenges, then the next 20 years will see world leadership pass from this Nation just as the last 20 years saw it come to us.

Such a result could spell disaster for this planet.

You will be in all respects equal to the task, and your achievements will be greater than those of my day if you can do two things, simple to say, difficult to achieve.

First by working in the right direction.

Second, by trying very hard to get there.

It has been my impression that most of our difficulties in this world and in this Nation exist because there are a lot of people working in the wrong direction.

You will be surprised to discover how many of them there are, and how powerful some of those people are.

Most of them do not think of themselves as doing anything wrong. Most of them are the victims of misunderstanding, on the one hand, or shortsightedness on the other.

Yet such people make it twice as hard for us to get good results. Some of them actually succeed in doing things that hurt their Nation notwithstanding their honorable intentions.

A few years ago, one of our best known Washington cartoonists, Herbert Block, better known as Herblock, published a volume of cartoons demonstrating his philosophy of life. He illustrated vividly one point that some of us never forgot.

Most U.S. Senators work hard, but many of them are working in the wrong direction. Herblock gives this illustration:

"Suppose I am a working man who is in need of a home for his family, and suppose my Senator is fighting against legislation which would help me to get a better deal. Then I am no better off because he is working hard. I would be better off if he had stayed in bed."

More than 30 years ago, a boy by the name of Roy Riegels played center for California's Golden Bears. He made what was perhaps the most famous run in the history of the Rose Bowl. It was a long run—just 6 inches short of 70 yards—but that was not what made it famous. The world remembers that

run and remembers Roy Riegels because he ran in the wrong direction.

There is no reason to discuss here how Roy Riegels happened to make this mistake. The fact is that he did do it and that it typifies in this one memorable act out of a lifetime of acts, the many public officials, businessmen, and leaders in all walks of life, who all too frequently head out in the wrong direction—and who often refuse, as Riegels did, to listen to the shouts of their teammates who know they have gone wrong.

Roy Riegels may have lost his direction temporarily, but he did not lose his courage. He played a lot more good football the next year. He was elected captain of the team.

When statesmen are going in the wrong direction it is even harder to persuade them to turn around and reverse their field. It is hard for a man to be certain that he is wrong; frequently it might actually be popular. It might actually appear to offer personsal profits although the result might be bad for the Nation or for the world. A man might stick to his direction even when he realizes that what he is doing is resulting in more harm than good.

It is for these reasons that we should be fulsome in our praise of a man with the humility to admit his mistake and change his direction. The moral being: If you can't be right, at least be humble.

This misdirection applies to people on all sides. It applies to the businessman who selfishly demands things which are bad law from a legislator. It applies equally to the legislator who is more interested in serving again than he is in serving well.

So let me say this to the men of Loyola who officially take their place in the great arena of the world tonight.

When the great Scorekeeper marks your record down, be certain that all of your yardage was in the right direction. Or, at least, be certain that you tried to reverse your field before you scored for the wrong side.

Now a word about this thing of trying hard enough—time and again statesmanship is failing this Nation and this world because men who know what is right are not doing enough about it.

A great number of us feel that we are not maintaining sufficient armed strength to save this Nation in the event that we are forced to fight. Some of us were successful recently in offering an amendment to a bill appropriating money for the various departments of Government, stating specifically that no further reduction should be made in the strength of the Army or in the strength of the Marine Corps.

Those who represented the U.S. Senate, in conferring with the House of Representatives, threw in the towel on this issue in short order. When Members of the House of Representatives refused to discuss the matter, the Senators on the conference committee were quick to take no for an answer.

Some of us tried to force those who represented the Senate on the conference committee to go back and fight again for the position taken by the U.S. Senate. We lost, but we tried and we tried hard. If Senators who offered excuses for failure had voted with us rather than offer those excuses, we would have won. We will try again this year, and again next year. If we try long enough and hard enough we will prevail.

In dealing with other branches of our Government, we have frequently found that a Federal administrator can make a law work out the way it should work if he determines to reach that result. If he does not want it to work out he can find a thousand reasons why the law cannot succeed. The same thing is equally true of your Representatives in Congress, your Governor, your State legislature, your mayor, and your city council.

As a Member of the Senate of the United States, I have at times kidded other Senators about the excuses that some of them offer for their failure to vote for a matter which they admit to be in the national interest. It is either "too hot" or "too cold"; or perhaps a line from the recently popular song could better describe it: "It's the right time, it's the right place, but it's the wrong face."

At the moment, our Nation is failing to make itself understood among the 1 billion people of the world living in countries which are opposed to communistic slavery. The prevailing view of the ordinary people of the United States and the prevailing view of the people throughout the world toward our foreign aid program is that the program is of benefit to the unscrupulous politicians. Many persons in Government as well as the vast majority of the little people around the world feel that the program should be reformed. The trouble is that there are too many people who take a defeatist attitude about the matter. They are not trying hard enough.

Then, let us consider for a moment the actual problem of mankind's hope for survival due to the threat of all-out thermonuclear war over Berlin, Germany, Korea, or other trouble spots.

How much has actually been achieved in working out some sort of an arrangement to assure that literally billions of innocent people are not exterminated in an atomic war?

How much is being achieved in making sure that the possible causes of war are reduced?

What has been done to assure that there will be some limitation of the battle area and that the combat forces will be confined to those limits should war occur?

What has been done to limit the size of nuclear weapons and to control the testing which is polluting the atmosphere of this earth?

Very little. Yet the Russians have as much interest to survival as we do.

We cannot forever excuse our failures by blaming it all on the other fellow. Sometime we should approach these international conferences with the understanding mutually that both sides will be condemned for failure to come back with some sort of agreement.

Certainly one of two things must be wrong: Either the approach has not been right or the effort has not been sufficiently determined.

We must try again, reconsider our approach, and try harder.

When statesmanship fails the people perish. Statesmanship cannot succeed without steadfastness to a worthy purpose. It cannot succeed without tireless effort.

The flags of this Nation have been at half mast for the past 3 days out of respect to the late John Foster Dulles, former Secretary of State. In a number of ways, I differed with Mr. Dulles. I never disagreed with his purpose.

One thing everyone will forever admire about John Foster Dulles. He gave us everything he had. He drove himself to his grave fighting for a foreign policy which he had helped to shape. Any failure of his policy could not exist because the man failed to fight for it.

This may sound like simple words of advice, but I believe you will find that this advice will bring you a successful and satisfying future if you follow it.

First, be sure you are heading in the right direction and then give it all you've got.

Hope of Big Sandy Valley Fades With President's Veto of Waterways Bill

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks, I would like to include the following article from the Paintsville Herald, Paintsville, Ky., entitled "Hope of Big Sandy Valley Fades With President's Veto of Waterways Bill":

HOPE OF BIG SANDY VALLEY FADES WITH PRESIDENT'S VETO OF WATERWAYS BILL

For the Big Sandy Valley, the President's veto of the waterways bill that carried $200,000 for planning Fishtrap Reservoir in Pike County and $2,500,000 for Pound Reservoir in Virginia, extinguished the hope for the valley's future.

It was only 30 months ago that our people saw the wild, rushing waters of the Big Sandy River spread across their lowlands from hill to hill, sweeping all in its path, and leaving thousands without home, food, clothing, and business. Never in the history of the valley had there been such suffering and devastation. As the days passed, despair deepened as losses were realized, and the ugly dream became a reality.

Then, the citizens of the Big Sandy towns joined hands to present our local flood problem to our Government in Washington. Had not President Eisenhower said that "It is up to the party in power to carry out a sensible program of progress that the American public will approve."

After all, we do have a Government noted for its benevolence, a Government that donated last year $30 million worth of food to the Italian people alone, and $6 million worth of food to the children of Italy this year.

Finally, after the trips of citizens to appear before Senate and House committees in Washington, after thousands of letters and telegrams, it seemed that the goal had been reached. Both the Senate and the House approved funds for Fishtrap Reservoir and Pound. But this hope was like a mirage that deceives so cruelly in the desert wastes. The waterways bill was vetoed by President Eisenhower.

Shocked and amazed, we stand alone. We know that security and homes and jobs and all that is worth while in life depend on our safety from recurring floods. We ask, "Is it sensible to bring a halt to the development of a region, its security, and future? And who is able to foresee the value of these reservoirs to our Nation in future years?

Our national strength is a multitude of localities of which our valley is a single unit. A good businessman spends today for what is essential tomorrow, and money spent for national strength and human welfare is not extravagence.

Our Nation owes its greatness to what it has spent in the past. If other Presidents had acted with the same view to economy, there would have been no Panama Canal; no Louisiana Purchase; no buying of Alaska; no development our our rivers and harbors.

Prior to 1954, the foreign aid program brought the total over an 11-year period to about $100 billion, and billions have been sent to foreign nations since that year 1954.

With incredible amounts sent abroad for defense and rehabilitation for the 10 years from 1945 to 1954, there is evidence of waste and extravagence with our tax money.

We believe the waters of the Big Sandy River could be a blessing and a great economic asset if controlled with dams. The construction work would provide jobs for the unemployed, would stimulate needed business, and provide another link in the vast Ohio River system for flood control. When completed they would be permanent assets, safeguarding the lives and homes and property of the valley's inhabitants, and adding to the national strength and economy.

It is now known that the 1957 flood crest could be exceeded by 10 or more feet. In the face of these facts, surely our people are in a position as critical as any that are now approved for foreign aid from our Government.

During President Eisenhower's campaign, he said:

"The basic long-term issue of this campaign is between two totally different concepts of America and two totally different estimates of the American people.

"On the one hand there is that school of thought whose spokesmen regard America as finished; a 'mature economy'; a land of closed frontiers. There is another and opposite school of thought and of action. It regards America not as a dead end but still at its begininng, in its youth."

Our valley, without flood control, is a closed frontier, awaiting the onslaught of destruction. Our whole existence is linked to flood control. Without the building of these projects, all programs for rural development and community betterment, the studies, and conferences, and surveys, are sounding brass and a tinkling cymbal, a waste of time, money, and effort.

The hope of the Big Sandy Valley, it seems, now lies in the overriding of the President's veto by Congress.

Excerpts From Address of Senator Symington, Delivered at French Lick, Ind.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
FOR
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. JOHNSON of Texas (for Mr. HARTKE). Mr. President, on Saturday, August 29, most of the leaders of the Democratic Party in my home State, and members of the Indiana Democratic Editorial Association gathered at French Link, Ind. to hear an inspiring address by our distinguished colleague, the junior Senator from Missouri [Mr. SYMINGTON]. I would like to share his outstanding remarks with my colleagues and therefore ask unanimous consent to have a report of his address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FRENCH LICK, IND., August 29.—"The American people should demand from this administration a fair return on their tax dollar through the more efficient organization and management of the three Federal agencies which use most of the taxpayers' money," Senator STUART SYMINGTON, Democrat, of Missouri, said here tonight.

The Missouri Senator stated, "The record of many hearings before the Congress this year shows that billions of dollars annually could be saved in the Defense Department alone if that Department were organized in recognition of the nuclear-space age, instead of drifting along on the basis of tradition.

"Introduction of businesslike administration in the Department of Agriculture, plus sound fiscal management throughout the executive branch, would also cut out a great deal of misused tax money."

To support his conclusions about waste in Government, Senator SYMINGTON cited facts and figures. "Including estimates for this fiscal year," he said, "the total spending for the Department of Agriculture amounts to $34.9 billion just since 1952. This is more money than was spent by all the previous Secretaries of Agriculture put together, in the history of that Department."

The Senator added that "in 1958 the administrative costs alone of the price support program were 10 times as much as they were in 1952."

Senator SYMINGTON referred to the unsoundness of continuing to accumulate such large inventories. "Government investment in farm commodities," he said, "has increased from $2.5 billion in 1952, to $9 billion this year, and at the present rate of increase will amount to over $12 billion by this time next year."

Turning to the question of financial management, SYMINGTON said he was "seriously concerned with the mounting national debt, particularly with the increasing cost to the taxpayer of servicing that debt.

"The Treasury Department has failed to follow the well-established principle of debt management, namely, borrow at the lowest possible interest rates, and spread the maturity dates as evenly as possible over the following years."

The Senator cited a number of examples drawn from the official records of the Treasury Department during the past 3 years. He said, "Last March the Treasury Department offered a 4-percent 12-year bond, of which the public offered to buy $1.5 billion worth. Strange as it may seem, the Treasury accepted only $619 million of this subscription.

"Just a year prior to that, investors offered to buy at least $6 billion worth of a 3-percent 8½-year bond, and the Treasury decided to sell only $1½ billion.

"Based on these and similar illustrations," the Senator said, "I have come to the conclusion that the taxpayer would be paying at least a billion dollars a year less for interest alone, if the Treasury Department had acted as a good banker for the people's money."

Senator SYMINGTON said, "By far the largest source of saving of the taxpayers' money could come from a reorganization of the Defense Department. Service rivalries, duplication of weapons systems, and the multiplicity of separate forces without centralized commands result in the waste of billions of dollars every year."

Zablocki's Well Earned Honor

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. LAIRD. Mr. Speaker, President Eisenhower's nomination of the gentleman from Wisconsin [Mr. ZABLOCKI] to represent the United States at the U.N. General Assembly meeting this fall has been confirmed by the U.S. Senate. This recognition of our colleague is well deserved. He will do an outstanding job for our country.

The Milwaukee Journal of last week carried a fine editorial on this appointment. I would like to read it to the House:

ZABLOCKI'S WELL EARNED HONOR

It is a long path from St. Vincent's grade school to the glass and steel palace of the United Nations on the East River in New York City. It is a long way from playing the organ at St. Vincent de Paul's church and teaching languages and music at Kosciuszko junior trade school to representing the United States in U.N. debate.

But CLEMENT J. ZABLOCKI will conclude such a trip this fall. President Eisenhower and the Senate have honored Milwaukee's fourth district Representative by naming him one of the six-member American delegation to the 14th General Assembly of the U.N., which convenes September 17.

ZABLOCKI has earned the honor. Since 1949 he has been a hard-working and conscientious Member of Congress. As member of the Foreign Affairs Committee, he has been studious, responsible, and highly respected by his fellow members. He is considered a congressional authority on American foreign policy in Asia and eastern Europe.

Milwaukeeans will join in congratulating Representative ZABLOCKI, not only on his new honor, but on the opportunity further to serve his Nation in the important U.N. sessions just ahead.

Ten Million More Jobs Forecast by 1965

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. WILEY. Mr. President, the economic outlook fortunately continues to show progress — demonstrating the strength of our free enterprise system.

We recognize, of course, that maintaining high employment is tremendously important to the economy.

What is the outlook?

According to a forecast by the Labor Department's Chief of Manpower and Employment, Dr. Seymour L. Wolfbein, we can expect 10 million more jobs by 1965. These will be available in factories, trades, services, professions, and other fields.

Who will fill these jobs?

According to predictions, the majority of the jobs will go to: First, the over 45 group of men and women; second, just-out-of-school boys and girls; and third, according to predictions, only a minor portion of the total number of jobs will go to persons in their prime working and career years.

Recently, the Green Bay Press Gazette published the syndicated column by Sylvia Porter entitled "10 Million More Jobs Are Forecast by 1965"—taking a long-range look at the employment situation for the future. Reflecting a

variety of thoughtful ideas on the national challenge—that is, maintaining high employment—particularly as it relates to employment prospects for women—I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Green Bay (Wis.) Press Gazette, Sept. 2, 1959]

TEN MILLION MORE JOBS ARE FORECAST BY 1965—THEY WILL BE FILLED BY WOMEN, PEOPLE OVER 45, AND SCHOOL GRADS, SURVEY SAYS

(By Sylvia Porter)

By 1965, there will be 10,400,000 more jobs available in our factories, trades, services, professions, etc., than there have been in the closing years of this decade. Who will be filling them?

Women.

More than half the new jobs to open up these next 5 years will be taken by women.

The over-45, men and women.

About 5 million of the new jobholders in 1965 will be socalled older workers.

The just-out-of-school boys and girls.

Another 4,500,000 of the new jobs will be going to young persons in the 14–24 year age bracket—babies of the war and postwar eras, now mostly in elementary schools and on the way to our high schools.

Only a picayune half-million out of the vast total of new jobs will go to persons in the prime working and career years of 25 to 44.

This is no crystal-ball gazing. What I've just summarized are official forecasts of the U.S. Labor Department's Chief of Manpower and Employment, Dr. Seymour L. Wolfbein. And as Wolfbein remarked in a little-noticed address at the University of Michigan a few weeks ago, "To look ahead to 1965 in this field of employment is a well manageable problem because all persons who will be of labor force age in 1965 (14 years or older) already have been born." And in our country, there is no great influx of people from other lands to complicate the statistics.

Just as it's relatively simple to project who will occupy the jobs, so it's comparatively easy to project why the jobs will develop.

If our population just continues to expand as it has been expanding, for instance, there will be 25 million more of us here in the mid-1960's than there was in the mid-1950's—meaning that every 18 months, we are adding the equivalent of a city the size of Chicago to the United States. This upswing in our population must generate rising demands for housing, highways, factories, all sorts of goods and services.

If our production efficiency just continues to climb at the pace it has been climbing up to now, our Nation will be turning out 50 percent more goods and services in the midsixties than in the midfifties.

TEN MILLION MORE JOBS

So if we are just to take care of our growth in population and in production, we'll develop about 10 million more jobs by 1965.

Where will the workers come from? Not from the 25–34 year age group. In the face of an upsurge in our total population, the number in this working group actually will decline by millions—for the starkly simple reason that this is the age group born in the depression years between 1930 and 1940, an era when the birth rate was at a historic low.

It means that the sex barriers in employment must topple. What all our pleas haven't been able to achieve in crushing sex discrimination in jobs, necessity will achieve.

It means that the age barriers in employment must topple too. What all the studies proving the value of the over-45 worker haven't been able to accomplish in wiping out age discrimination in jobs, necessity will accomplish.

It means that our schools must provide the amount and quality of education to produce workers with the talents and gifts the economy of 1965 will demand. And what we'll need in 1965 will be fewer farmers and unskilled workers but vastly more professionals, white collar employees, skilled and semiskilled craftsmen. What all the warnings about Russia's superior educational techniques haven't done, necessity will do.

Age and sex barriers in employment and second-rate schooling never have been excusable in America. Wolfbein's projections are telling us that in the next few years, they'll become intolerable. The gains that should be coming from reasoning will be brought to us by necessity.

These planners are to be congratulated upon their wisdom and foresight in finding such a unique and interesting way to perpetuate the knowledge, understanding, and love of Abraham Lincoln.

As their Congressman representing the Fourth Congressional Kentucky District, I take pride in giving recognition to all of those wonderful citizens of Larue County, Ky., who have had a part, large or small, during this Lincoln Sesquicentennial year, in paying homage and tribute to the Great Emancipator. Truly it is an honor to be able to serve such "salt of the earth" people here in the House of Representatives.

Participation of Hodgenville, Ky., in the Abraham Lincoln Sesquicentennial

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. CHELF. Mr. Speaker, I want to comment upon the participation of Hodgenville, Ky., in the Abraham Lincoln Sesquicentennial this year.

The birthplace of Lincoln is located near this enterprising town whose fine officials and citizens have taken a great part in the celebration of this outstanding event. The progressive, cooperative spirit which pervades this community and with which its splendid citizens are imbued has prompted them to be significant participants in this event of national importance and magnitude. Their unselfish dedication to this cause elicits the admiration of all who love our country and its great leaders.

The Abraham Lincoln Birthplace Land Corp. devised a brilliant and imaginative plan by which the section of the Lincoln birthplace farm not owned by the Abraham Lincoln National Historical Park is being released to schools, historical societies, prominent citizens, and individuals for their private ownership as historical heirlooms. In the words of the corporation:

This property has been divided into square foot sections to allow as many as possible to share in this wealth of American heritage * * * a treasure with national significance which can be passed from generation to generation with a pride of ownership second to none.

The truth of this is borne out by the fact that the deed which was issued to me, giving me actual ownership in 1 square foot, section No. A–202, parcel A, of the original Lincoln birthplace land, is framed and hanging in a prominent place in my office here in Washington.

Queens County Bar Association's Committee on American Principles Sponsors Second Tour of Washington, D.C., for 26 Queens County High School Students

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. HOLTZMAN. Mr. Speaker, this year, as they did in the past year, the Queens County Bar Association's Committee on American Principles sponsored a tour of Washington, D.C., for 26 Queens County high school students, who had been chosen for their scholastic abilities and all-around activities. The students came to Washington on May 20 and remained until the afternoon of May 22.

Mr. A. Joseph Geist, chairman of the committee on American principles, has written me in detail of the trip and the reasons behind it, and I am taking the liberty of including his letter in the RECORD at this point; together with a report by Mr. Joseph E. Lucas, a vice president of the bar association, on the students' visit; a list of the students who participated in the trip; and a copy of the winning essay by David Norris of John Adams High School, Queens County, entitled "Lincoln's Eternal Precepts."

I would like to emphasize the fact that although the letter from Mr. Geist is addressed to me, it is meant for each and every one of the Queens Members of Congress—Hon. James J. Delaney, Hon. Albert H. Bosch, and Hon. Seymour Halpern, and for Andrew J. Viglietta of the Long Island Daily Press and Star-Journal, who all contributed to the success of the tour.

This is a remarkable example of what can be done to engender a further interest in our American history and way of life in our young people, and in this instance is a resounding success:

QUEENS COUNTY BAR ASSOCIATION,
Jamaica, N.Y., August 29, 1959.

Hon. LESTER HOLTZMAN,
House of Representatives Washington, D.C.

MY DEAR LESTER: Words alone are not adequate to express the profound sense of gratitude which I, as chairman of my

committee and which each of the members of the committee and of the Queens County Bar Association warmly extend to you because of the extensive efforts you made to make the Washington trek of some 26 students of high schools functioning in Queens County, New York City, both inspiring, educational, and enjoyable.

The members of our commitete who accompanied the group, namely, Joseph E. Lucas, vice president of the Queens County Bar Association, and his wife; Charles K. Finch, a former president of the Queens County Bar Association, and his wife, a distinguished member of the bar; and Mr. John Piselli, a member of the faculty of Martin Van Buren High School, and his wife, are deeply grateful to you for assisting them in making this trek an outstandingly successful one, in which each of them participated with equal enthusiasm to that of the students and which each of them likewise thoroughly enjoyed.

This was our second annual program of this nature, and as you remember, it was originally initiated at the suggestion of Dr. C. Frederick Pertsch, associate superintendent in charge of high schools, and Dr. Bernard E. Donovan, assistant superintendent assigned to special functions, of the Board of Education of the City of New York, and it was enthusiastically approved by Dr. John J. Theobald, superintendent of schools. You will also remember that one of the important phases of the plan that was evolved was that the students were requested to submit essays on any incident in American history which symbolizes our American traditions, the American way of life, and American political principles. We were desirous that the trip should not only be an enjoyable and cultural journey to the Capital of the Nation, but also one that would constitute a source of inspiration to the students and a rich opportunity that would be theirs to learn some part of the background of America and to be so inspired and stimulated as a result of it, that each would be gladly willing to write an essay on a subject which would necessitate some research work into and reading of the history of the United States. This would be carrying out the main purpose of the committe on American principles of this association, namely, to help spread the knowledge of American institutions and political traditions so that in no place in our area would there be found fertile ground in which to implant the seeds of the communistic philosophy of life, and so that in every nook and corner and on every block and in every square and in every private and public institution in our community, our democratic way of life, based upon American political principles, may ever endure.

Another matter that I would like to call to your attention and this is almost a case of bringing coals to Newcastle in stating this fact to you that the Queens County Bar Association, of which you are and have been for many years a distinguished member, has now been in existence for a period of 83 years and that it firmly believes that it is the duty and the obligation of its members, as members of the bar, to reach our citizens and teach them what this Nation stands for and what it vitally believes in and of its most advanced form of government on the face of the earth—that our government is one that rules by persuasion of law, rather than by the arbitrary and capricious or unrestricted will of tyrants.

I am appending at the end of this letter a copy of the essay which was submitted by David Norris, of John Adams High School, one of the students who took this last trip on the 20th, 21st, and 22d of May 1959. I am sure that on reading this, you will agree with us that the efforts of the Queens County Bar Association and of its committee on American principles are not without avail and that similar action taken by local bar associations throughout the State of New York and throughout each State of the Union would contribute very largely to a better and richer understanding and appreciation by every citizen of the rights and privileges and obligations of very citizen of our great and progressive Nation.

I am privileged to send you herewith a list of the students who attended this tour and the names of the high schools which they respectively attend. I also attach herewith a copy of the report of Joseph E. Lucas, Esq., who was in charge of this tour.

In 1958, when we planned to defray the expense of a tour to Washington by Queens high school students, we conferred with Hon. William B. Groat, county judge of the County of Queens and also acting justice of the supreme court of our county. Judge Groat has conducted annually for a number of years tours to Washington of Queens County lawyers whose admission to the U.S. Supreme Court he would move en masse or as one group. Accordingly, he has had varied experience in connection with such tours and having been closely and officially associated with Senator Ives in Washington for a number of years, was qualified to advise and counsel and guide us. The many lawyers whom Judge Groat moved for admission to the Bar of the U.S. Supreme Court established a fund which was to be used by Judge Groat as he would determine from time to time. He decided to use such funds to assist the Queens County Bar Association to finance the expense of the Washington trek. Thus last year we received a substantial contribution from Judge Groat out of this fund and again this year. Without his financial help, it might have been impossible for the bar association to defray the entire expense on its own account.

This year, instead of conducting a tour for only a small number of students, we invited two students from all the remaining high schools operating in Queens County which had not furnished any students in the previous year; included in these schools were two parochial high schools. The students were selected as they were last year. The principals and the faculty members of each high school were invited to select two students of their school to take this journey, who the principals and facilities respectively judged to be representative junior citizens, good scholars and the most valuable contributors to the welfare and well-being of their respective high schools. As a result, the students selected constituted a very fair cross-section of the quality and character of students who attend our high schools and truly represent the junior citizenry of our community. In this connection, I desire to state what I said to you last year when I reported to you concerning the tour:

"It may be said that the money of the taxpayers devoted to our educational system has been well spent, and that our student body today which will take over in the next generation or two will be well qualified to do so, and that they will keep and maintain our democratic principles in their pristine condition. We can look for many improvements from them to the well-being of the society of tomorrow. We can entrust our future in the hands of our young Americans. It is worth every effort that we can make as a association of lawyers to sponsor any community enterprise that would tend to develop the character, understanding, education and idealism of our youth.

"We leave to the social workers the solution of the juvenile-delinquency problem, which, I believe all of us will agree, affects such a tiny percentage of our youth that it has not in any way vitally or materially affected the sinew and fabric of the youth of this generation. Our schools, our parents, and our citizens should be proud of the superior quality of the youth that we have raised in this present generation, and so I believe that the activities of our association, through this committee, are fully justified and will be compensated by incalculably strengthening the body of our citizenry of tomorrow."

This year the same travel agency, namely, the Bob Pugh Travel Agency, which organized the tour last year, took charge of the tour. We made some changes by arranging that the Red Line Bus Co. would convey the group from the steps of the General Courthouse in Jamaica direct to Washington and there convey them to and from the various places which they visited and the same bus conveyed them back again to the point of departure. This was a very convenient method of transportation and solved many problems that we faced last year. This year, too, instead of arranging for the group to feed at the hotel where they were stopping, it was arranged that the chaperons on the trip would pay for all the meals wherever taken, out of a fund which was supplied by Judge Groat's contribution. In this manner we avoided the difficulties that arose by requiring young adults to partake of foods specified in table d'hote menus; instead, we offered them the opportunity to make such selection of meals as they desired, particularly on Fridays.

Prior to the bus leaving from Jamaica, all of the students met at the courthouse, together with the chaperones. There Judge Groat was introduced to them, who informed them concerning the rich opportunities that they could realize on the trip, and how valuable it would be to them and how much they would and could enjoy it. Joseph J. Perrini, Esq., president of the Queens County Bar Association, was himself present and delivered a short talk to the assembled students, and indicated to them that the Queens County Bar Association which was a long time in existence and was constituted of distinguished members of the bar of Queens County, were interested deeply in promoting the best interests of the community and creating better and well-informed citizenship on the part of the younger adult groups, and that he was very proud to be at the head of the organization, the host of this Washington trek.

The chairman introduced Mr. Joseph E. Lucas and Mr. Charles K. Finch, as representatives of the Queens County Bar Association, and Mr. Piselli, the official chaperones. Mr. Lucas and Mr. Finch addressed the group.

The chairman also addressed the group and made clear to each of the students present that the very purpose of the Queens County Bar Association in arranging and financing the Washington trek to be taken by them was to give them an opportunity to learn more about the seat of our Government and its operations and to be inspired therefrom in measure sufficient to induce them to study American history and do some research work in order to prepare an essay on any incident in American history which symbolizes the American traditions and the American way of life. For the best three essays chosen, prizes would be selected and given by the Queens County Bar Association and in addition, the next four best essays would receive honorable mention. Thus, it behooved each one of the students to devote themselves assiduously and ambitiously to this task. Here at this opint I interrupt to inform you of the fact that all the 18 students who were selected for the 1958 trip submitted essays in the contest. This year, all the 26 students who were selected for the trip submitted essays in the contest.

It would not be at all proper if I were not to call your attention to the fact that

we were informed that Congressmen DELANEY, BOSCH, and HALPERN were extremely cooperative and participated with you in helping make this journey such a great success, and we feel extremely grateful to Senator JACOB K. JAVITS and Senator KENNETH B. KEATING, both of New York for taking an active part in the program at Washington and giving of their valuable time to assist in making it the unforgettable success it was. The chaperones, as well as the students were all deeply inspired by the attention showered upon them by the Senators and Congressmen whom I have mentioned. They were not only gracious hosts but demonstrated to everyone in the party that we are blessed with representatives both in the Senate and the House of Representatives that are men of profound understanding and wisdom, each actively typifying true Americans in every sense of the word, and may I say, in conclusion, "God bless you all."

With warm regards.

Sincerely yours,

A. JOSEPH GEIST,
Chairman, Committee on American Principles.

REPORT OF JOSEPH E. LUCAS

The second tour of Washington, D.C., sponsored by the Committee on American Principles of the Queens County Bar Association started on Wednesday, May 20, 1959, at the Queens General Courthouse in Jamaica. Prior to boarding the bus for the trip, the 26 high school students, chosen from 13 Queens high schools for their scholastic and all around activities, met their chaperons, Mr. John Piselli, an English teacher at Martin Van Buren High School and his wife, chosen as faculty chaperons; and Mr. Joseph E. Lucas, second vice president of the Queens County Bar Association and his wife, chosen as the representatives of the committee on American principles. Mr. Charles K. Finch, a past president of the Queens County Bar Association and his wife, who were last year's chaperons, joined the expedition at their own expense.

A program was arranged at the steps of the courthouse. The students were addressed by Mr. A. Joseph Geist, chairman of the committee on American principles, who then introduced them to their chaperons and to Miss Hilda Rashba, his secretary, who worked with him on plans for the project. Mr. Joseph J. Perrini, president of the Queens County Bar Association; Mr. Samuel S. Tripp, past president, who in his term, created the committee on American principles, and Judge William B. Groat, who raised some of the finances for the venture, each spoke a few words to the group.

The bus left the courthouse at 1:10 p.m. Our tour director, William Rother, introduced himself to the group and presented our driver, Karl Jacobsen. After some conferences with the chaperons, a flexible plan for the tour was arranged. In a short while the expedition stopped at a restaurant on the New Jersey Turnpike, for a rest and refreshment period. After a pleasant and uneventful trip, we arrived in Washington about 6:15 p.m.

After Bill Rother obtained our room assignments in the Hotel Roosevelt, we freshened up and were taken downtown to a good cafeteria for dinner. We had received buttons from Parker Tours, on which our names were inscribed. They were used for identification in the cafeterias, so that one bill could be obtained from the cashier for our group.

After dinner, we were driven around Washington by our bus. We visited the National Archives and examined the original documents on display. We then visited the Jefferson Memorial and the Lincoln Memorial. The comments of the students, most of whom had never been to Washington before and some of whom were away from home and family for the first time, showed that they were impressed by the exhibits and the city of Washington after dark.

The spirit of the students is exemplified in the statement which one of the girls made to Mrs. Lucas. The student said that it was fabulous that they who had been strangers to each other at noon, had become friends before retiring the first night.

Thursday morning, we were called at 7, left the Hotel at 8 and after breakfast at another good downtown cafeteria, we were driven to the Capitol, where a group picture was taken. We then went to the Bureau of Engraving and Printing and were taken on a guided tour. While the group took a tour of the White House, Mr. Lucas visited Senator JACOB JAVITS' office and Congressman LESTER HOLTZMAN'S office, where final arrangements were made for the luncheon and afternoon program.

Congressman HOLTZMAN met the group outside the House Office Building and escorted us to the Congressional Cafeteria where we had a good luncheon. Congressmen JAMES J. DELANEY, ALBERT H. BOSCH, and SEYMOUR HALPERN joined the group and all of the Queens Congressmen were with us at luncheon. A table had been reserved for us on a raised section of the dining room and while luncheon proceeded, the students each met the Congressman from his or her district. Andy Viglietta had two pictures taken for the Star-Journal and the Long Island Press of the Congressmen and a student from each Congressman's district.

The four Congressmen then escorted the group through the subway and then up to the House of Representatives gallery, where the group stayed for almost an hour, listening to debates on the housing bill. Before we left, Congressmen HOLTZMAN and DELANEY came up to the gallery and answered questions for the students. They then took us to the Senate Reception Room and presented us to Senator JACOB JAVITS, who welcomed the group. We were then welcomed by Senator KENNETH B. KEATING and our picture was taken on the steps of the Senate with both of the U.S. Senators from New York and Congressmen HOLTZMAN and DELANEY.

From there we went to the Supreme Court of the United States. A deputy marshal had a pass to the courtroom for our group. A full Court was in session and we heard one argument and part of another. The students showed a keen interest in the argument on the election of remedies in a condemnation matter, which they had heard.

We then went over to the Senate gallery. A committee meeting was being held in the Chamber. After this we visited the Smithsonian Institution and viewed the exhibitions.

After dinner, we went to Glen Echo Amusement Park, where a little relaxation was afforded the students.

Friday morning, we were up at 7, our bags were packed and we were ready for a hearty breakfast at 8. The morning newspapers carried an account of the passage of the housing bill by the House of Representatives. The students were thrilled to realize that they had witnessed the proceedings in the House the day before.

After breakfast, we went to Arlington, Va., where we visited Christ Church. George Washington and Robert E. Lee had been vestrymen in the church. We continued to George Washington's home at Mount Vernon on the Potomac. On our return we visited Washington Monument. Since there was a very long line waiting for the elevator, 20 students and Mr. Lucas climbed the 898 steps to the top of the monument.

After luncheon, we reluctantly left Washington. On our way north, a stop was made for ice cream at a restaurant on the New Jersey Turnpike.

The bus arrived at the front of the Queens General Courthouse at 8 p.m., where the parents of the students were waiting for their sons and daughters. All were tired but happy.

At this time I want to thank Mr. and Mrs. John Piselli and Mr. and Mrs. Charles K. Finch for their assistance to me in the decisions that were required to be made on the tour.

I desire to express my appreciation to Mr. A. Joseph Geist, chairman of the committee on American principles, and to his secretary, Miss Holda Rashba, for their early and excellent planning of our tour, which operated so smoothly.

My appreciation is expressed to Congressman Lester Holtzman, to Miss Davis and Miss Graham of his staff; to Congressman James J. Delaney, to Congressman Albert H. Bosch, to Congressman Seymour Halpern, to Senator Jacob Javits and to Senator Kenneth B. Keating for their hospitality to us, which made a lasting impression upon each and every member of the group.

Finally, I want to express appreciation for my appointment as the representative of the committee on American principles. My 3 days with the students brought to me an awareness that our historic American principles will be safe in the hands of the next generation. It has also pointed up the disservice done to the youngsters of today as entirely too much is publicized about the delinquents and too little is said about the majority who are good law-abiding citizens, upon whom will rest the future.

Respectfully submitted.

JOSEPH E. LUCAS.

LIST OF STUDENTS AND HIGH SCHOOLS ATTENDED

Holy Cross High School: William C. Donnino, 61–36 223 Place, Bayside, N.Y.; Frank P. LeVeness, 80–78 209 Street, Hollis, N.Y.

William Cullen Bryant High School: Marcelle Arak, 3121 54th Street, Woodside, N.Y.; Robert Friedman, 22–20 77th Street, Elmhurst, N.Y.

Grover Cleveland High School: Robert Whelan, 62–53 60th Place, Ridgewood, Queens, N.Y.; Erika Bieber, 62–69 60th Street, Brooklyn, N.Y.

Aviation Trades High School: Dennis McGuinness, 104–18 Metropolitan Avenue, Forest Hills, N.Y.; Efrain Munoz, 321 East 26th Street, New York, N.Y.

Martin Van Buren High School: Burton Brody, 247–16 83d Avenue, Bellerose, N.Y.; Loretta Tremblay, 94–07 262d Street, Floral Park, Long Island, N.Y.

Bayside High School: Carl Crosley, 9–15 166th Street, Whitestone, N. Y.; Dorothy Meyer, 47–09 188th Street, Flushing, N. Y.

Richmond Hill High School: Richard Suttmeier, 87–83 118th Street, Richmond Hill, N.Y.; Christine Zolotas, 132–01 Metropolitan Avenue, Richmond Hill, N.Y.

Newtown High School: Louis Barnett, 67–38 79th Street, Middle Village, N.Y.; Thalia Comninos, 32–28 88th Street, Jackson Heights, N.Y.

Andrew Jackson High School: Barry Austern, 234–16 129th Avenue, Laurelton, N.Y.; Rita Padnick, 121–19 234th Street, Laurelton, Long Island, N.Y.

Woodrow Wilson Vocational High School: Joseph Wheeler, 144–09 156th Street, Jamaica, N.Y.; Eda Piantieri, 163–39 Phroane Avenue, Jamaica, N.Y.

Jamaica Vocational High School: Miss Bonnie Wheaton, 95–27 Woodhaven Court, Woodhaven, N.Y.; Mary Lou Linsalata, 77–16 95th Avenue, Ozone Park, N.Y.

John Adams High School: Janet Clementi, 107-18 110th Street, Richmond Hill, N.Y.; David Norris, 132-10 Crossbay Boulevard, Ozone Park, N.Y.

Stella Maris Commercial High School: Patricia Power, 425 Beach 131st Street, Belle Harbor, N.Y.; Clara Rodriguez, 1811 East 34th Street, Brooklyn, N.Y.

LINCOLN'S ETERNAL PRECEPTS

(By David Norris, John Adams High School)

As I walk up the glistening marble steps, I am caught in the magnificent yet simple beauty of the Lincoln Memorial. Upon reaching the outer colonnade, I am dwarfed by the immense Doric columns towering 40 feet above me. I enter the memorial. My eyes are raised and held almost magnetically to what confronts them. There enveloped in a soft glow of surrounding lights and the most profound silence, is the statue of Abraham Lincoln. I say statue, for I know not what else to call it. It is made of stone, yet as I stare steadfastly upon it, my gazes seem to be returned. I find myself captivated by a look that seems all joyfulness and all melancholy at the same time, a blending of both, yet a sharp distinction between the two. To add to the confusion of this seeming paradox, I notice the hands of the statue. One hand is clenched in a mighty fist, while the other is open in a tender expression of comfort. As I stand there quietly wondering, my eyes fall upon an inscription just above the statue; it reads, "In this temple as in the hearts of the people for whom he saved the Union, the memory of Abraham Lincoln is enshrined forever." The words "saved the Union" stick in my mind and I begin to recall the greatest threat to American internal unity. From the very outset, Lincoln was plagued by the imminent question of secession. On the very first day after his inauguration, he was confronted with the first sign of the momentous task ahead of him. Major Robert Anderson, Commander of Fort Sumter, the last remaining fort in Federal hands in the harbor of Charleston, sent word that his provisions were running low and that if he could not be supplied within 6 weeks, he would have to abandon the fort. In his inaugural address, Lincoln had promised to "hold, occupy, and possess" places and property belonging to the Federal Government. But if he were to supply Fort Sumter, the seven seceded States might resist with open forces. However, not to supply the garrison would prove that the new administration had not the courage of its convictions. Fort Sumter had grown to be a symbol. For the North, the holding of the fort meant the preservation of Federal authority; for the South the maintenance of a Federal fort within the territory of a seceded State meant humiliation and insult. Lincoln played for time realizing that aggressive action at Fort Sumter would draw the lower South into the war against the North, and might bring about the alienation of the loyal slave States. Soon, however, the situation was such that Lincoln saw the absolute necessity of supplying Fort Sumter. The Confederate government in Alabama replied to this by declaring that the Confederacy would no longer suffer the presence of Federal troops within the territory of a seceded State, and demanding the immediate surrender of Fort Sumter. James Chestnut, Jr., and Capt. Stephen D. Lee, both aides-de-camp to Brigadier General Beauregard, delivered these demands to Major Anderson in the midafternoon of April 11, 1861. Within an hour he replied with a refusal to evacuate the fort. The words were spoken, the deeds were done and war was certain. At 4:30 a.m. the first shot of the War Between the States was fired by Capt. George S. James, Confederate commander of Fort Johnson on James Island. Thus, in the hazy, foggy dawn of an April morning, the "house" was irreparably divided. The Civil War had begun.

The first crash of Lincoln's mighty fist came with his issuance of a proclamation declaring that as the laws of the country were opposed in the seceded States "by combinations too powerful to be repressed by the course of judicial proceeding," he was compelled to call on the States of the Union for 75,000 troops of their militia "to suppress the said combinations." Force was to be met by force; the challenge of the South against Federal authority would not be tolerated.

As battle after bloody battle passed into history, names such as Bull Run, Antietam, Fredericksburg, Vicksburg, and Gettysburg became infamous. The personal tragedy of war struck directly at Lincoln when a young and dear friend, Col. Elmer E. Ellsworth, was killed by rebel sympathizers at Alexandria, Va., on May 24, 1861. Lincoln turned to the sad task of writing to the colonel's parents. With beautiful tenderness the President sought to comfort the stricken couple. "In the untimely loss of your noble son, our affliction here, is scarcely less than your own. * * * The honors he labored for so laudably, and, in the sad end, so gallantly gave his life, he meant for them (his parents), no less than for himself. In the hope that it may be no intrusion upon the sacredness of your sorrow, I have ventured to address you this tribute to the memory of my young friend, and your brave and early fallen child." This was Lincoln, the tender comforter. However, the forceful influence of Lincoln was continuously evident. At one time just prior to open hostilities, he spoke to delegates of a peace conference, hurriedly convened to prevent what was to be inevitable, of his views on the conflicting issues of the moment. With emphasis and fearless conviction, Lincoln stated, "The Constitution will not be preserved and defended until it is enforced and obeyed in every part of every one of the United States. It must be so respected, obeyed, enforced, and defended." It was this opinion which guided him through the war and which prevented any compromise that didn't insure the preservation of the Union.

At last, after 4 long years of devastation and turmoil the Confederacy collapsed and the Union was victorious. On Sunday, April 9, 1865, Ulysses S. Grant solemnly accepted Robert E. Lee's surrender at Appomattox Courthouse. Yes, it was over. The power and the might of Lincoln during the long struggle were indisputable. But an ordeal even more difficult than winning the war now faced the reelected President. And that was to rebuild the "house"; to heal deep wounds and to make national pride overcome sectional hatred. In his second inaugural address, Lincoln summed up his hopes for a united future. In words of tender forgiveness he said hopefully, "With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow, and his orphans—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations." Mighty in his battle yet infinite in his forgiveness was Abraham Lincoln.

As I stand there in that marble temple I begin to understand these inconsistencies. Abraham Lincoln was truly representative of America. In his thoughts as in his acts he displayed all that has come to be synonymous with our heritage and our principles. For every conflict and every display of armed might of which it has been a part, the United States has shown mercy and understanding. Just as was Lincoln, so too is all America—mighty and victorious on the field of battle yet humble and merciful after the struggle is past and destruction is replaced by construction. But more important than tradition and history is the future. And I know that with such influences as the thoughts and deeds of Abraham Lincoln, America has, and forever will accept this pattern of glorious might coupled with compassionate forgiveness as a permanent and lasting way of life.

As I turn and descend the marble steps I begin to comprehend this huge paradox; this tremendous thing of 170 million parts, with each part insuring for us a country now and forever majestically humble and victoriously merciful.

GOP May Recoup Losses in Farm Area

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Friday, September 4, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, I include an article by Columnist Ray Tucker, appearing in the August 10 edition of the Hudson Dispatch, published at Union City, N.J.

The article follows:

[From the Union City (N.J.) Hudson Dispatch, Aug. 10, 1959]

GOP MAY RECOUP LOSSES IN FARM AREA

(By Ray Tucker)

WASHINGTON, August 9.—The Republicans may recoup recent political losses in farm areas from the bipartisan congressional attack on a lobbyist who has virtually converted the popular Rural Electrification Administration's 4 million customers into a Democratic organization of great ballot-box influence.

He is Clyde T. Ellis, former Democratic Representative from Arkansas and for years the Washington manager of National Rural Electrification Cooperative Agency. When he lost out in politics after an unsuccessful try for the senatorial nomination he organized the lobby under a name that is sometimes mistaken for the Government agency itself.

He has fought for larger and larger REA appropriations, for vast extension of electric service, and for low interest rates on money advanced to his co-ops by the Government. Although Uncle Sam must pay more than 4 percent for its borrowings, the co-ops pay only 2 percent.

SERVED AS SPOKESMAN FOR CO-OPS

Ellis has served as their spokesman here, and until recently he wielded tremendous influence with legislators and farmers. Coops' dues have rewarded him with a handsome salary, a million-dollar structure at Washington, a magazine filled with agricultural advertising, and they have formed the basis for organization of a profitable insurance company.

With gross income of $900,000 for 1959, he now plans to form sort of investment company with the surplus funds. Since 96 percent of the Nation's farms have been electrified, he must seek new and more permanent interests.

But he has "led the co-ops astray" recently, according to a floor denunciation by rugged Representative BEN F. JENSEN of Iowa, and numerous Members from the Democratic South. He has alienated conservative rural consumers by denouncing a pending bill to upset a Supreme Court decision favorable to Communists. He is charged with following the CIO-PAC line by Capitol Hill critics.

STATES RIGHTS BILL

The legislation opposed by Ellis in secret letters to Members was introduced by Representative HOWARD W. SMITH, of Virginia, after the Supreme Court overturned the conviction of Steve Nelson as a Communist in Pennsylvania. It is known as the States rights bill, and seeks to protect the States' enforcement powers against Federal invasion.

Numerous members, all supporters of REA, took the floor to assail Ellis for his intervention, in view of the fact that the Smith proposal does not involve rural electrification. Upon receipt of the Ellis letter, Representative JOHN J. PILCHER, of Georgia, telephoned Walter Harrison, president of the NRECA, and reported to the House that Harrison is 100 percent for this bill.

"In opposing this States rights bill," said Representative WILLIAMS JENNINGS BRYAN DORN of South Carolina, "Ellis is not working in the best interests of REA. By joining with the CIO and the National Association for the Advancement of Colored People in opposing this great legislation, he is hurting REA."

ELLIS FACES ATTACK BY BOTH PARTIES

Ellis is also under attack by Republicans and Democrats for associating with the Electric Consumers' Information Committee, advocates of government ownership of power facilities.

Its members include Leland Olds, whose nomination to the Federal Power Commission by Truman was blocked by Senate Majority Leader JOHNSON; Jerry Voorhis, a radical representative who was defeated by Vice President NIXON; Walter P. Reuther, automobile union president; and Clay Cochran, a CIO-PAC economist.

DEMOCRATS IRE AROUSED

In reciting the dangers of such associations before a branch of the Ellis organization in El Paso some years ago, Senator JOHNSON told how Ellis had visited him on behalf of the Olds nomination:

"Because of one man's endorsement," said the Texan, "REA coops were associated permanently with a discredited and disreputable propaganda campaign in which REA should not have been involved. Shortly afterward, the Senate turned down the nomination by a vote of 53 to 15."

Democrats today are as bitter toward Ellis' opposition to the States rights program as Senator JOHNSON was on the question of public versus private power years ago. It could mean the end of Ellis' political influence, and a 1960 boon for the GOP.

One Hundredth Anniversary of Our Oil Industry

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. FASCELL. Mr. Speaker, certainly the oil industry's growth in this country has been a close parallel to and indicative of the great progress which we as a nation have made during the last century.

The tremendous importance of this industry to our security and economy has been demonstrated time and again over the past years since the discovery of oil in our country in 1859. This year the oil industry is celebrating its 100th anniversary; and in my own State of Florida, the last week in August was proclaimed as Oil Centennial Week in Florida. At the end of last year, there were 11 oil-producing wells in our State. Many celebrations and special events were planned to demonstrate the importance of the industry to local communities and the State and to express the feelings of good will which exists in Florida toward representatives of the industry.

Automobile Safety

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 17, 1959

Mr. LINDSAY. Mr. Speaker, I am pleased to insert in the RECORD a paper prepared by Mr. Henry H. Wakeland, a New Yorker who I am honored to have as a constituent, on the subject of automobile safety. This follows on the heels of the passage of H.R. 1341 by the House of Representatives, a bill providing certain minimum safety standards for automobiles owned and operated by the Federal Government.

Mr. Henry Wakeland is a former automobile engineer of talent and demonstrated skill. He has made a careful study over many years of this important problem. He has also identified himself in New York City with other engineering matters of great importance to every citizen. One such is the control and elimination of air pollution caused by exhaust fumes. Mr. Wakeland is a community-minded citizen who is attempting to save New York City for that much-forgotten man—the resident. These are the people who spend much of their life in the city dodging automobiles. Automobile design, he insists, should be directed not only toward the safety of the driver and passenger but for the pedestrian.

POLITICAL GAINS IN THE BILL ON SAFETY STANDARDS FOR FEDERAL AUTOS

The Roberts bill, H.R. 1341, passed by the House and awaiting Senate action, is one of those minor bills which may prove to have major constructive effect.

Everyone knows the appalling statistics of motor vehicle death and injury. The first aim of this bill is to prevent Federal employees from needlessly joining these casualty lists. Federal employees have a right to be protected by the best wits of their employer, and much of the new knowledge of safety which needs to be applied has been found by the Air Force and Public Health Service. It also costs money when employees are out of action. Taxpayers have a right to demand use of the best cost-saving safety knowledge.

The House debate also discussed important effects in encouraging auto design improvements for the general public—in fact, this is the larger benefit sought. For the public, this gentle bill would exert much good effect through a leverage that is genuinely political as well as technical. The best laws are good precisely because they provide solutions to political problems.

Why is Mr. Roberts' little bill political? Not because the problem yet involves public politics, but because the bill opens a way for a new outlook in the policymaking patterns of the auto world. It does this without breaking the general network of present industry theories and it even promises to place these theories in a better light. The bill is nationally important because the policies of the auto world affect everyone.

H.R. 1341 may also have a good effect on the specific processes by which these policy decisions of the auto culture are made. Weaknesses in the political theory and political process of the auto culture are the real reason why the safety problem has come before the National Legislature. If H.R. 1341 strengthens these weaknesses it could stave off a need for legislation on a whole range of serious auto policy problems now rising within the Nation.

Why has the auto world bypassed much of the new safety? Is it only because people won't buy safety? Plainly that is only part of the difficulty. Let us look at the network formed by the more important production and marketing theories.

Almost everyone agrees that machine efficiency of mass production allows the ordinary man to afford an auto. Production is also of such efficiency that money for a new model is available every year. If slowness in improvement is present it results only from the careful approach to design called evolution, not revolution. The great research centers made possible by funds from mass sales are pushing as hard as they can to find basic new improvements, especially in safety. Although evolution is certain to apply these improvements quickly, it is a new evolution not known to Darwin. This evolution needs no profusion of different functional methods from which the best will survive. All can advance more or less together, since safety knowledge is shared freely, and thus wasteful diversity will be avoided. Impetus for improvement is not lacking either, since the unquestioned goal is to give the public what it wants.

This deeply held theory moves on to the primacy of fashion and psychology, prediction of public demand for auto fashions through polls, use of motivational psychology in advertising, and final sales victory through styling. Then the theory turns back to acclaim the least common denominator as necessary arbiter of design. Finally, it is seen that this necessity coincides with the original efficiency of mass production.

The circle is closed. Each questionable part is soothed by the next element. The circle is sealed and armored by the belief that if the automotive giant should stub his toe over some obstacle he may fall out of his castle, slide clear to the bottom of the national beanstalk, and strip off all the prospering beans on the way.

As a whole this theory seems unassailable—until the need to add more safety to the system. For no section of this accepted theory offers a healthy place for the "safety first" request to grow.

"Evolution" of the proven safety belt, for example, apparently took a small step forward at the hearings on H.R. 1341. One manufacturer announced that his 1960 cars would have a dimple in the floor to help mechanics locate the proper place for attaching the safety belt bracket. This was 4-year models after the safety belt was offered as an eccessory. And this floor dimple was ahead of the field.

"Evolution" in pedestrian injury prevention, so necessary here in New York City, is at a standstill. The "spear points" of 1956 were dropped in 1957 in favor of the headlight "sharp mouth." These survived through 1958. The year 1959 offers sharpened cheese cutters," "ax blades," even "scythes."

What about safety research funds from mass sales? In 11 months of 1958 consumers paid $10.1 billion for new autos, according to Automotive Industries. In September of the same year, Dr. Andrew Kucher of

Ford estimated that the auto industry was spending $5 million yearly in safety research of all varieties. Safety research is apparently aided by style-encouraged sales volume to the extent of 0.5 percent.

Ford Motor Co., incidentally, has some creative safety thinkers who are well versed in the field.

H.R. 1341 neither questions this circular theory nor approves it. The bill would simply cause a portion of the demand for autos felt by industry to reflect greater safety. In that portion, evolution would be helped to catch up and research would be encouraged to claim its proper stature.

At the Bureau of Standards conferences which will examine standards for Federal autos there will be no confident claim. "This is what everybody else wants," which has closed the question in the past. When ethical engineers of industry and government meet, it can be freely asked what degree of auto front end sharpness or hardness is least damaging to traffic-directing policemen or daydreaming pedestrians. A rational specification can be discussed far from the veto now held by the styling vice president back at the plant.

There are certain to be disagreements in such discussions, but all concerned will be thinking and arguing in the framework of functional design. The performance of seats in crashes can be discussed in terms of numerical descriptions which actually exist but are not now seen in salesroom specifications. The "rollover strength" of Federal autos may be defined in real numbers rather than by impressionistic demonstrations carried out on soft earth. Experience accumulated around the early specifications can be statistically evaluated for better standards ahead.

In time, design for safety may well emerge as a science in its own right. At the very least, free consideration is a first step to learning on both sides of any conference table. Thus a new constructive element will have been injected into industry's pattern of political theory, and injected painlessly.

The bill would also help to close a gap in another part of the automotive political system. Auto design and engineering in this age is not purely a matter of custom or economic necessity. Designs result from a series all interest at the same time. Policies are defound and specific powers exist. As with any policy, auto design policies cannot favor all interest at the same time. Policies are decided at visible times and places and under describable (if informal) rules. The pedestrian and the auto buyer are interested groups in this system. And the industrial area of the auto world does not always win by any means.

There are natural checks and balances in the constitution of the auto policymaking picture. But some of the most effective checks, such as slowed the horsepower race and produced the compact car, are still mostly outside the system.

Shortages of safety design seem best explained by failure of the auto world's communication system to carry meaningful information to the voters of its own auto-buying public. (The pedestrian public, of course, has no sales vote.)

Anyone can estimate the relative importance of messages about new safety possibilities in advertising of the mass media. Dozens of the new methods have never been mentioned in the mass media. Certainly the standardized safety exhortations of institutions do not include any about auto design. At the end of a holiday one's car radio is plainly convinced that all drivers need retraining, but the radio never seeks to compensate for driver errors by reminders to "fosten seat belts."

H.R. 1341 would place the safer autos of the Government where they could be seen by a number of people and recognized as a present possibility. If the Federal Government can buy such improvements, why can't the city do the same? If the city, why not the citizen?

One need not agree with this political interpretation of the bill to appreciate how it might have a good effect far out of proportion to its legal force. The leadership of the Health and Safety Subcommittee, Messrs. ROBERTS and SCHENCK, are to be congratulated on the bill's good sense and workability. Men of both parties have studied an involved problem and won through to an agreeable action which, whatever its legal theory, hits one of the safety nails squarely.

Now there is hope that the workings of the auto world will face the remainder of the desirable safety policy: creative engineering and production of a coordinated safety auto. To do this industry may need to review its theories and to reeducate its powerful recalcitrant. The whole auto world needs to develop better political mechanisms for the satisfaction of reasoned consumer interests and expression of ethical engineering. Congress has withheld the forecefulness found in the Railroad Safety Appliance Act of 1893. There is time for nongovernmental resolution of the problem.

But other national auto problems are ahead. Automotive air pollution is rising. Public traffic arteries are being clogged by hot weather failures due to marginal engineering. Automotive fuel waste seems to threaten several resource and logistic areas of national defense. Slowness of evolution raises the costs of military vehicles. And auto design is moving toward the center of the national culture. We may not have time for continued public ignorance and belief in the economy of revolving fashions.

So it is comforting to know that our National Legislature has been able to understand and act to this point for fuller safety. Apparently Congress can find leaderly ways in problems of technology. One may hope that the informal legislatures in the world of the auto may be encouraged to continue this leadership.

Poor Little Guy Who Doesn't Belong

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. FASCELL. Mr. Speaker, I should like to present for my colleagues' reading, an editorial from a well-known local weekly newspaper in my district, owned and published by Mr. and Mrs. Jay Morton—the Home News, of Hialeah and Miami Springs, Fla.

This particularly well-written article brings out very clearly the plight of a very large segment of our population which we all know exists, but:

POOR LITTLE GUY WHO DOESN'T BELONG

Poor little guy—his case is a pathetic one. He's a patriotic citizen and he believes in the American way of life. But he's taking a kick in the teeth because he doesn't belong.

He doesn't belong, we mean, to any of the groups dedicated to organized selfishness and therein lies his trouble.

NOT A DOCTOR

He's not a doctor, with all the might of the American Medical Association to shield him should he wish to make money faster and easier. Yet certain practices of physicians—like unnecessary surgery and unnecessary hospitalization of patients—have raised the cost of his medical and hospital insurance.

NOT A LAWYER

He's not a lawyer with the power of the various bar associations back of him to protect him should he, too, wish to make money almost as easily as counterfeiting—yet the frequent $100,000 and $200,000 suits that clever damage attorneys are winning for comparatively minor injuries—have jacked up his auto insurance rate to a new hardship-creating high.

NOT A LABOR UNIONIST

He's not a member of a labor union with the strength of this vast force to win him new rounds of wage increases—yet the effect of the wage increases is constantly raising the prices of the things he can't do without.

NOT A NAM MEMBER

And, of course, this little man—small business owner, white collar worker, artist, college professor, retired individual or person on a fixed income—is not a member of the National Association of Manufacturers with its powerful economic might and ability to form cartels and fix and raise prices.

Our little man—and his name is legion—is caught in a colossal economic squeeze and he is powerless to help himself.

For today, no matter how high-sounding the purported objectives of these various unions—their real aim is to extract more and more from the public for their various members—for doing less and less.

UNORGANIZED ANONYMOUS

What then is the answer to the plight of this little man—member of nothing but "unorganized anonymous?"

Does it mean that he and his kind—as in a game of musical chairs—must rush to grab a place for himself in some organization devoted to specialized selfishness?

INDIVIDUALS NOBODIES

And suppose that he and everyone else does just that—what happens to a democracy in which individuals no longer matter—and only a handful of mighty organizations grapple with each other to see which gains the most—and with it dictatorial control?

Can the poor little guy who doesn't "belong" be helped? Or for that matter—is anyone interested in helping him?

LOST CAUSE?

He may be a lost cause—a symbol of the American tragedy—the extinction of the individual under the steam roller of the big organization—a symbol of the United States that once was but is no more.

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MULTER. Mr. Speaker, the following unsolicited letter was received by me under date of September 1, 1959, and was written by Robert B. Lane, of Colfax, Wash. I am pleased to commend it to the attention of our colleagues:

COLFAX, WASH., *September 1, 1959.*

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE MULTER: Have just read the account of testimony you gave on

August 26, 1959, before the House District Committee as it concerned home rule for the District of Columbia. I wash to congratulate you for an excellent presentation of your views. By virtue of your cogent statements and your desire for compromise, you conveyed—even to the dull brown pages of the RECORD—a vivid impression of legislative democracy on a high level.

Especial congratulations for saying what you did in your closing statement—that parcel about the political facts of life. We on the outside realize they exist, and so long as the good men, like yourself, do your best in spite of them (and, I hope, because of them) we're for you.

With my best wishes, and please, do not bother to acknowledge this, I am,

Yours truly,

ROBERT B. LANE.

Khrushchev's Opening Barrage

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. BOSCH. Mr. Speaker, now that the invitation to Nikita Khrushchev is an accomplished fact, it is necessary that we know and continue to expose his true nature so that in the event he seeks to derive propaganda value from his visit, the American people will not be deluded. I have stated previously and I still adhere to the view that it would be best that he not come here until such time as we would say, in equity, he can come with clean hands.

Under leave to extend my remarks, I include an editorial from the September 14, 1959, issue of U.S. News & World Report which I commend to the attention of my colleagues:

[From the U.S. News & World Report, Sept. 14, 1959]

KHRUSHCHEV'S OPENING BARRAGE

(By David Lawrence)

Nikita Khrushchev has let loose a barrage of propaganda designed to deceive the people of the United States as to the true intentions of the Soviet Government and the real purpose of his visit to the United States.

The Soviet Premier has written a lengthy article in the current issue of Foreign Affairs, a quarterly magazine published by the Council on Foreign Relations, Inc.—a private organization of citizens in New York City devoted to the study of international problems. He made an argument ostensibly for peaceful coexistence of states with different social systems, but in reality he outlines his concept of world conquest by Soviet imperialism.

The whole discourse boldly disregards the facts as they actually exist throughout the world today. Mr. Khrushchev says:

"What, then, is the policy of peaceful coexistence? In its simplest expression it signifies the repudiation of war as a means of solving controversial issues. However, this does not cover the entire concept of peaceful coexistence. Apart from the commitment to nonaggression, it also presupposes an obligation on the part of all states to desist from violating each other's territorial integrity and sovereignty in any form and under any pretext whatsoever.

"The principle of peaceful coexistence signifies a renunciation of intereference in the internal affairs of other countries with the object of altering their system of government or mode of life or for any other motives."

Yet the Soviet Government has violated every single precept contained in the above pronouncement.

Soviet imperialism has violated the territorial integrity and sovereignty of Latvia, Lithuania, and Estonia.

Soviet imperialism has established a firm hold on the governments of the so-called satellite states in Eastern Europe and today maintains troops in those countries to uphold the Communist stooges who are stationed inside each government to see that the Communist point of view is the law of the land.

Soviet imperialism sent its troops and munitions into the mainland of China to help overthrow the Nationalist Government there.

Soviet imperialism has undermined the governments of independent nations in the Middle East.

Soviet imperialism shipped arms into North Africa to help stir up revolt.

Soviet imperialism sent munitions into North Korea in 1950, and direct assistance was given to North Korean armies despite the fact that the United Nations had called on the Soviet Union, as well as on all other U.N. members to repel the aggression in that area.

Soviet imperialism has given support to its ally—Red China—which has violated the territorial integrity of neighboring countries, first, by overthrowing the government of Tibet and now by marching troops into India as well as Laos.

The record of the Soviet Union since 1945 has been one of continuous aggression in different parts of the world.

No continent has been immune from Soviet infiltration. The latest examples include the operations of Communist agents in Cuba and in other Central American countries as well as in Latin America generally.

Nobody questions the right of a people to support theories of State socialism. There is really no important international issue at stake in so-called "ideological differences." The United States does not object to the social system that any other country in the world may choose to adopt for itself. It objects only when such a social system conspires to invade an independent country, violates its territorial integrity, or seeks to undermine its independence.

Mr. Khrushchev is disturbed about the resolution recently passed by the Congress of the United States expressing sympathy with the "captive nations." He says:

"It would be interesting to see, incidentally, how the authors of this resolution would have reacted if the parliament of Mexico, for instance, had passed a resolution demanding that Texas, Arizona and California be 'liberated from American slavery.'"

The answer to this is simple. Let Mr. Khrushchev agree to permit the people of the several states of the Soviet Union and of the satellite states in Eastern Europe to have the same right to vote in free elections as the people of Texas, Arizona, and California have enjoyed in the century that has elapsed since the territory of these States was legally acquired by formal treaty. The United Nations would be glad indeed to furnish impartial supervision. Mr. Khrushchev goes on to say:

"The Soviet Union has liquidated its bases on the territories of other states."

Does not the head of the Soviet Government know that the American people have a free press, that the American newspapers have reported repeatedly the presence of Soviet troops in Eastern European countries which are supposedly independent? Does he think we have forgotten what happened only 3 years ago in Hungary, when Soviet troops deprived the people of that country of the right to determine their own form of government?

As Mr. Khrushchev goes back to 1939, he unwittingly reminds us of the Soviet treachery that enabled Hitler to start World War II. The Soviet Premier declares:

"In the Second World War the Hitlerites occupied Western Europe before advancing against the Soviet Union."

But Mr. Khrushchev omits to say that it was the Soviet Union which made World War II possible when Stalin and Molotov in August 1939 entered into an alliance that protected the Nazis on their Eastern front, and thus gave Hitler free rein to attack France and Britain. That's how Western Europe came to be occupied.

The Soviet Premier prates a good deal about the importance of letting people decide their own fate, but he is unwilling to let the German people form a united republic today. He writes:

"It now seems that no sober-minded leader in the West is inclined any longer to advance the unrealistic demand for the so-called reunion of Germany before the conclusion of a peace treaty, inasmuch as more and more political leaders are becoming aware of the fact that reunion in the conditions now obtaining is a process which depends upon the Germans themselves and not upon any outside interference."

But does not the Soviet Premier realize that the whole world knows East Germany is occupied by Soviet troops today? How can there be any free elections in East Germany as long as Soviet military forces there keep the people under duress? He adds:

"We should start from the obvious fact that two German states exist, and that the Germans themselves must decide how they want to live."

But who is interfering with the right of the German people as a whole to decide "how they want to live"?

Only the Soviet armies are interfering. The free world is ready to see elections held in East Germany as well as in West Germany to establish a single government over both.

Again and again proposals to that effect made by the West were rebuffed by the Soviets at the Geneva Conference last spring. Yet Mr. Khrushchev says:

"As for Germany's unity, I am convinced that Germany will be united sooner or later. However, before this moment comes—and no one can foretell when it will come—no attempts should be made to interfere from outside in this internal process, to sustain the state of war which is fraught with many grave dangers and surprises for peace in Europe and throughout the world."

But at this very moment the Soviet government is interfering "from outside" and is unwilling to let the peoples of the two Germanys determine their own form of government.

Not a single sentence in the article mentions the ultimatum issued last autumn by the Soviet Premier demanding that the West pull its forces out of West Berlin. Yet it was this demand which started the present crisis in the world. The ultimatum has never been withdrawn. Mr. Khrushchev says:

"We resolutely reject any attempts to ascribe to the Soviet Union the intention of seizing West Berlin and infringing upon the right of the population in this part of the city to preserve its present way of life."

But the record of what has happened since last November, when the Soviet Government issued its first note demanding the departure from West Berlin of all Western troops, contains ample evidence that the Soviet Government did threaten to "seize" West Berlin. The words of the threat have been widely printed for all to read.

The Soviet Premier is demanding that the "status quo" be maintained throughout

Eastern Europe. He wishes the past to be forgotten, the injustices of recent history to remain uncorrected, and the conquests by Soviet imperialism to be accepted now by the free world as an accomplished fact. He adds:

"It is necessary that everybody should understand the irrevocable fact that the historic process is irreversible. It is impossible to bring back yesterday. It is high time to understand that the world of the 20th century is not the world of the 19th century, that two diamerically opposed social and economic systems exist in the world today, side by side, and that the Socialist system, in spite of all the attacks upon it, has grown so strong, has developed into such a force, as to make any return to the past impossible."

But the free world is not demanding the return to any social systems of the 19th century. It is protesting against the return to the despotism of the Middle Ages. It is demanding, indeed, a return to freedom and independence. There has never been any time in world history when freedom was considered outdated or liberty was regarded as outmoded.

The lessons of history teach us that peoples do not indefinitely acquiesce in enslavement. Sooner or later they do demand that dictators be removed and that the right of self-determination of peoples be recognized.

Mr. Khrushchev objects to discussion of the idea of "rolling back" communism. But nobody is advocating the "rolling gack" of communism as an ideology or as a theory. What is being advocated by free men everywhere is the "rolling back" of Communist imperialism, which imposes its will by brute force and deprives people in Eastern Europe and Asia of the right to determine their own destiny.

The Soviet Premier evades the real issue and misrepresents it. He is trying to tell the American people that all that is wrong with the world is the existence of "two different social systems."

The American people, however, as well as the peoples of other countries, know the difference between tyranny and freedom. They will never acquiesce in the maintenance of a system of oppression, and they will always reserve the right to express their sympathy for other peoples who are unfortunately the victims of distatorship and autocracy.

Mr. Khrushchev's plea for the "status quo" will not be accepted. The American people will never agree that "peaceful coexistence," as Soviet imperialism interprets it, shall be tolerated along with its far-flung process of infiltration, subversion and aggression in different parts of the world.

How ironical it is to read calls for more trade—the right to import strategic materials for the Soviet war machine—and hypocritical pleas that "no ideological differences should be an obstacle to the development and extension of mutually advantageous economic contacts." Mr. Khrushchev's emphasis is entirely on materialism. He says nothing about the cause of human freedom.

To fill this omission, Francis B. Stevens—who before retirement was in charge of the division of Russian affairs in the Department of State and now is on the board of editors of this magazine—offers an interesting plan. He suggests that the United States reply to the Soviet challenge of "peaceful competition" in industrial and agricultural productivity by proposing in return a "freedom competition." The purpose would be to see which nation could do most to assure liberty for its citizens and self-determination for other peoples.

Such a challenge to the Soviet Union would call upon the Moscow Government and its allies to join with the United States in a crusade to promote and advance in all countries of the world the following freedoms:

Freedom of worship.
Freedom of assembly.
Freedom of information.
Freedom from fear of arbitrary arrest.
Freedom from want.
Freedom of political activity by all opposition parties.
Freedom from external aggression.
Freedom from internal subversion by foreign agents.
Freedom of choice by every nation to determine its own political and economic system.

With reference to the last-mentioned freedom of choice, it is astounding to find Mr. Khrushchev now insisting that this principle has always been accepted by the Soviet Government. The Soviet Premier, in his article, gives vent to the following outburst of piety:

"As for the social system in some state or other, that is the domestic affair of the people of each country. We always have stood and we stand today for noninterference in the internal affairs of other countries. We have always abided, and we shall abide, by these positions."

What is disturbing is not only the effrontery of the Soviet Premier in making such an untrue statement, but his deliberate disregard of what the Soviet Government is doing today with troops and money and agents throughout the world. It is in itself significant that the Soviet Premier assumes an article containing such untruths will actually be accepted as truth by the people of the United States. What an insult, particularly to the intelligence of such a well-informed group of Americans as the members of the Council on Foreign Relations.

What possible motive could have induced Nikita Khrushchev to have such an article prepared for this audience? Does he really believe the American people will not perceive his hypocrisy?

The words in the article may be those of Nikita Khrushchev, but the concepts are those of Adolph Hitler and of all the other dictators in past history who have disturbed the peace of the world.

The forces of freedom sooner or later must arise to defend themselves against such dictators and to help all peoples to liberate themselves from the yoke of tyranny and autocratic government. Meanwhile, the organized deception and injustices perpetrated by despotic governments must be exposed to full view. For they offend truth and violate the right of all men to be free.

The Voice of the Near Future

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, the Western States Conference of the Young Democratic Clubs of America, with only one dissenting vote, passed a resolution recently in favor of negotiation through regularized diplomatic channels with the Chinese Communist government. I submit that this may very well be the voice of the very near future and one which will be heard in Washington more and more until it is heeded.

Under a unanimous consent I include the article from the Washington Star of August 31, 1959:

RECOGNIZE RED CHINA, YOUNG DEMOCRATS ASK

SAN FRANCISCO, August 31.—Young Democratic leaders yesterday called for early establishment of diplomatic relations with Red China as a necessary step toward world disarmament and nuclear control.

The Western States Conference of the Young Democratic Clubs of America, attended by 100 delegates from 13 Western States, wound up a 2-day conference by recommending a resolution for the National YDCA convention in Toledo, Ohio, in November which calls for negotiation through regularized diplomatic channels with the Peiping government.

The resolution, adopted with one dissenting vote, argued that such channels are not now available because of the policies of the present administration.

ASK ATOM INSPECTION

"We therefore call for the early opening of diplomatic relations with China for the purpose of seeking solutions to the outstanding differences existing between our two nations (including settlement of the status of Formosa), for exploring the possibility of a world-wide inspection system of disarmament and the control of nuclear testing, and for the beginning of mutually profitable trade and cultural interchange," the resolution concluded.

As far as is known, this represents the first formal expression by a segment of either of the two major political parties of the idea that effective disarmament and nuclear control eventually will depend on agreement by the government which controls 650 million people on the Chinese mainland.

The resolution declared that present American China policy "is predicated on the assumption that the Chiang Kai-shek government on Formosa speaks for all the Chinese people. This assumption is not in accord with political reality."

CALIFORNIAN IS SPONSOR

The resolution was offered by Mary Louise Allen, California State YDCA president.

Another resolution praised President Eisenhower for his decision to exchange visits with Soviet Premier Khrushchev and called on Americans to greet the Soviet leader in a manner befitting a mature, democratic, and peace-loving people.

Other resolutions called for strengthening the Federal Civil Rights Commission, Federal and State fair employment laws, and stronger antidiscrimination measures in housing and schools.

Exchange of Visits of Premier Khrushchev and President Eisenhower

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, September 3, 1959

Mrs. KELLY. Mr. Speaker, the following letter was sent to the President of the United States by the president of the Supreme Committee for Liberation of Lithuania.

It expresses the fear that they and the other captive nations under the forced domination of the U.S.S.R. have been forsaken by the West, due to the agreed exchange of visits by President Eisenhower with Premier Nikita S. Khrushchev.

I hope all Members of Congress will express in their own manner to these peoples that the American peoples will never give up our efforts to help gain their independence from Soviet Communist control.

When Congress reconvenes in January, it is my intention to hold hearings before the Subcommittee on Europe of the Committee on Foreign Affairs of the House of Representatives to explore the impact of the exchange of visits between President Eisenhower and Premier Khrushchev.

AUGUST 14, 1959.

The PRESIDENT OF THE
UNITED STATES OF AMERICA,
The White House,
Washington, D.C.

SIR: The Supreme Committee for Liberation of Lithuania, representing the silenced Lithuanian people now suffering under Soviet oppression, has always had highest regard for the firm and positive stand of the Government of the United States of America as regards the inalienable rights of peoples to self-determination. The captive Lithuanian nation as well as this committee appreciate especially the refusal of the United States to recognize the Soviet occupation of Lithuania, perpetrated in violation of the law of nations and of all Soviet international obligations and commitments.

This well-established and universally known American position has kindled during all the tragic years of Soviet occupation of Lithuania the hope of the enslaved people to regain their freedom. The Kremlin has done everything to destroy this hope. Each and every, even the slightest, American gesture of cooperation with the Soviet Union was exploited by Moscow to persuade the subjugated people that the United States has abandoned them and that no country would support their efforts to break off from the Soviet control.

The intensification of the cultural exchanges between the United States and Soviet Russia and, particularly, the present official visits have, in accordance with the Soviet propaganda maneuvers, strengthened the Communist pressure upon the subjugated Lithuanian people aimed at convincing them to give up any hope for American support of their struggle for freedom and independence.

The recent visit of the Vice President of the United States in the Union of Socialist Soviet Republics, backed by the invitation extended to the Soviet Premier to come to the United States, have resulted in new Soviet propaganda measures surpassing any previous Moscow efforts to distort the real reason and meaning of these visits. All Soviet media of information—radio, press, television, films, and certainly the speeches of leading personalities—are interpreting to the captive Lithuanian people the American invitation to Mr. Khrushchev as a Soviet victory and as Washington's final recognition of the incorporation of Lithuania in the Union of Soviet Socialist Republics. This misleading Soviet propaganda, based on the exchange of the Soviet-American official visits, is creating distrust and disappointment, as well as forcing the Lithuanian people into despair and distress. Only a strong American political and diplomatic action coupled with a firm determination to oppose the godless Communist philosophy and their inhuman system could reduce, at least partially, the devastating effects resulting from the Soviet propagandistic interpretation of the exchange of official visits between the United States and the Union of Soviet Socialist Republics.

The Supreme Committee for Liberation of Lithuania wishes therefore respectfully to request you, Mr. President, to state clearly and resolutely to the Soviet Premier the unswerving United States stand with respect to the right of the Lithuanian people to choose its own government in free and unfettered elections supervised by the United Nations and to the urgent need for withdrawal of the Soviet armed forces from Lithuania.

A public reiteration of this stand would contribute very much to relieving the enslaved Lithuanian nation of its anxieties and to securing relaxation of international tension and stability in that part of Europe. Moreover, an official restatement to the effect that the United States will not acquiesce in the Communist capture of Lithuania may dissipate the growing suspicion in Lithuania that the Captive Nations Week, which unfortunately coincided with the invitation of Mr. Khrushchev to the United States, had been proclaimed with the purpose of eliminating the regrettable effects of the forthcoming visits; it would restore the conviction that the week was a manifestation of American support for the right and the efforts of all captive European nations to regain their freedom and independence.

I avail myself of this opportunity to extend to you in advance, Mr. President, my profound gratitude for whatever you will deem as proper of doing in support of the great cause of just peace and freedom to men and nations.

Respectfully yours,

Dr. A. TRIMAKAS,
President.

Everybody Isn't for Pork, or Mrs. Stafford's Warning to Liberals

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. HOSMER. Mr. Speaker, from some of the speeches we listened to during the recurrent discussions of the public works appropriation bills I kind of got the feeling that anyone, like myself, who wanted to keep them within reason would be No. 1 on the tar and feathers parade in any 1 of the 50 States. We more or less got pictured as some kind of modern day dragons breathing economy fires that withered and charred the fond aspirations of the entire citizenry for a new America, bright and shiny with bold construction projects proliferating the national landscape. At least I sensed an accusation of being part of a latter-day horde of Genghes Khans smashing the national hope chest out of sheer ecstasy for destruction.

Then along comes a citizen, a lady from Long Beach, Calif., who writes a letter to the editor of her newspaper, the Long Beach Press-Telegram. Now this lady puts a whole new slant on the business. She is the fearless kind. She calls a pork-barrel bill a pork-barrel bill. She even says she is more for less taxes than for more pork. Obviously, she must be smitten with a fantastic notion that the Government really does not get its money out of a pump. Probably she even believes that in some unexplained manner the people always wind up paying for whatever Congress appropriates the money for the Government to buy or build. Proceeding from this misleading premise I can just see her craftily concluding that when people who are living on a bare susbsistence level for their own needs are made to bear extra and nonessential expenses of government, they find themselves below the bare subsistence level. Probably she would even say that those in Congress opposing a lot of nonessential spending are really not against improving our landscape, but really fighting a humane battle to keep those sometimes generally termed the common man—the millions of so-called little men's and little women's heads above the fiscal waters.

This woman is a clear and present danger to all liberals. What if her ideas should contaminate the Congress? What then, I ask, would happen to the jobs of thousands of tax collectors? Could we trust the American people with all that extra money in their hands to spend as they wanted? What would happen to all the people in social welfare agencies taking care of people who do not have enough left to take care of themselves after taxes and inflation have emptied their pocketbooks? Believe me, things could really get tilted. I have asked that her letter be reprinted here for the sole purpose of warning the liberals to put their guard up against people like her, with full confidence that her radical message will never subvert the minds of the truly dedicated.

[From the Long Beach (Calif.) Press-Telegram]

PUBLIC FORUM—ROLLING OUT THE OLD PORK BARREL

EDITOR.—Once again the pork barrel is being rolled out in Washington, D.C.—and who will pay the bill for the costly goodies each vote-conscious politician stuffs into it in spite of the President's warning that we can't afford boondoggling right now? Why the groaning taxpayer, of course—who else?

The Government can't give us a cent which it hasn't first taken from us, deducted half for clerical expenses, etc., and sent a fourth to some other state. So why not take the quarter cent; at least we'd get something back? I'll tell you why:

1. Our taxes have already been increased just to meet current costs—so our governor said. Where then are we going to get our share of the costs of pork barrel projects? Our share will have to come from another increase in taxes. Do our citizens want that?

Well, if they don't they had better grab a pen and tell their Congressman to vote no on the public works bill right now.

2. There's another reason why it's not very smart for California to enter the pork barrel grab bag head first. By the time we come up for air witif our tiny tidbit clutched in our greedy little fist we will discover the project, alas, has grown to enormous proportions, which requires a second, then a third, maybe a fourth tax increase to complete. Thus, on and on we are led into ever bigger and better inflation by the pork barrel addicts in Washington. Unless, of course, we wake up and tell them to dump all the pork barrel goodies in the Potomac and turn the barrel upside down, permanently! Let our legislators earn votes by reducing taxes, not tripling them!

GRACE L. STAFFORD.

A Sectional Analysis of the Civil Rights Bill, H.R. 8601

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. CELLER. Mr. Speaker, I have prepared a sectional analysis of my civil rights bill, H.R. 8601, which has been reported to the House. The analysis follows:

A SECTIONAL ANALYSIS OF THE CIVIL RIGHTS BILL, H.R. 8601

TITLE I (OBSTRUCTION OF COURT ORDERS)

Section 101 of the bill proposes to amend chapter 73 of title 18 of the United States Code with respect to obstruction of court orders in school desegregation cases. Accordingly, it amends that title by adding at the end of the chapter a new section. The measure would make it a Federal offense to willfully use force or threats of force to obstruct or impede court orders for school desegregation purposes; upon conviction, the offender could be punished by a fine of not more than $1,000 or imprisonment for not more than 60 days or both.

It further provides that other injunctive or civil relief against the type of conduct made criminal by this proposal is not to be denied on the grounds that such conduct is a crime. In this regard, provision is made that any fine or imprisonment imposed for the violation of such an injunction shall not be in addition to that imposed for a violation of this section.

It further provides for the exemption of the acts of the student, officer, or employee of a school when the act is done at the direction of or is subject to discipline by an officer of the school.

TITLE II (FLIGHT TO AVOID PROSECUTION FOR DAMAGING OR DESTROYING ANY BUILDING OR OTHER REAL OR PERSONAL PROPERTY)

The proposal would make it a felony, punishable by a fine of not more than $5,000 or imprisonment of not more than 5 years or both, to move in interstate or foreign commerce, to avoid local prosecution, custody, or confinement after conviction for willfully damaging or destroying or attempting to damage or destroy by fire or explosive any building, structure, facility, vehicle, dwelling house, synagogue, church, religious center, or educational institution, public or private. Flight to avoid testifying in criminal proceedings relating to such offenses would likewise be punishable.

TITLE III (FEDERAL ELECTION RECORDS)

Section 301 would require the retention and preservation for a period of 2 years of any general, special, or primary election records involving candidates for Federal office. The Federal offices are the Office of the President, Vice President, presidential elector, Member of the Senate, Member of the House of Representatives, or Resident Commissioner of Puetro Rico. It would include all records and papers in the possession of election officers relating to application, registration, payment of poll tax, or any other act requisite to voting in such elections. Provision is made, however, that where such records are required by State law to be deposited with a custodian, such election records may be so deposited and the duty of retention and preservation then devolves upon that custodian. A willful failure to retain and preserve the records is made an offense punishable by a fine of not more than $1,000 or imprisonment for not more than 1 year or both.

Section 302 provides that any person, whether or not an officer of election or custodian, willfully steals, destroys, conceals, mutilates, or alters any of the records required to be retained and preserved shall be fined not more than $1,000 or imprisoned not more than 1 year or both.

Section 303 provides that such records as required to be preserved by this title shall, upon the written demand of the Attorney General or his representative to the party having custody, possession, or control of them shall be made available for inspection, reproduction and copying by the Attorney General or his representative. Demand, however, must contain a statement of the basis and the purpose therefor.

Section 304 provides that when a demand is made by the Attorney General, the record shall be produced either at the principal office of the person upon whom the demand is made or at the office of the U.S. attorney in the district in which the records and papers are located.

Section 305 provides that unless ordered by a court of the United States, neither the Attorney General nor his representative nor any employee of the Department of Justice should disclose any record or paper produced pursuant to this title except to the Congress and any of its committees, governmental agencies, or in the presentation of a case or proceeding before a court or grand jury.

Section 306 provides that in the event of nonproduction, jurisdiction would be conferred upon the Federal district courts to resolve any dispute which might arise in connection with the exercise of the authority conferred upon the Attorney General by this title including appropriate process to compel the production of the record or paper.

Section 307 defines the term "officer of election" to include any person who under color of the law performs or is authorized to perform any function, duty, or task with any application, registration, payment of poll tax or other act requisite to voting at any one of the enumerated elections at which votes are cast for candidates for the specified Federal offices.

TITLE IV (CIVIL RIGHTS COMMISSION EXTENDED FOR 2 YEARS)

Section 401 would extend the life of the Civil Rights Commission for an additional 2 years. Under the Civil Rights Act of 1957, the Commission is required to submit its final report not later than September 9, 1959. Provision is made in this section also for an interim report to be submitted to the President and the Congress not later than September 1, 1959.

Section 402 of title III would remove any doubt as to the authority of the members of the Commission to administer oaths.

Section 403 would amend the Civil Rights Act of 1957, section 105(a), by deleting the words "in accordance with Civil Service and Classification Laws" and inserting "without regard to the provisions of the Civil Service Laws and the Classification Act of 1945, as amended,"

TITLE V (EDUCATION OF CHILDREN OF MEMBERS OF THE ARMED FORCES)

Title V would amend Public Laws 815 and 874, 81st Congress, as amended, which authorize Federal payments to school districts which provide free public education to children whose parent resides or works on Federal property which is not subject to State or local taxation.

Section 6(a), Public Law 874, now requires the Commissioner of Education to make arrangements to provide free public education for children residing on Federal property if the State and its subdivisions may not spend tax revenues for their education or if no local public educational agency is able to provide suitable free public education for them.

Section 501 of the bill would amend section 6(a) to permit the Commissioner to make arrangements also for children of members of the Armed Forces on active duty, whether or not residing on Federal property, where the schools usually provide free public education for them are made unavailable to them by official action of State or local governmental authority and no local public educational agency is able to provide them with suitable free public education.

Subsection (b) of 501 provides complementary amendments to section 6(d) of Public Law 874. The existing provision permits the Commissioner, when he makes the arrangements for provision of education for the federally connected children, to make such arrangements only with a local educational agency or with the Federal agency having jurisdiction over the property on which they reside. Where this new category of children of Armed Forces personnel are involved, arrangements could also be made with the head of the Federal department or agency having jurisdiction over the parents of some or all of the children.

Section 6(d) of Public Law 874 limits the arrangements to those which provide for the use of either facilities situated on Federal property or facilities belonging to a local educational agency. The amendment provided in subsection (b) of section 501 would make this limitation inapplicable where the Commissioner is required to make these arrangements for the new category of children.

Section 502 of title IV of the bill amends Public Law 815, 81st Congress, as amended. The proposal of the bill would authorize the Commissioner of Education to acquire possession of any school building constructed with the aid of Federal funds after the enactment of the proposed amendments contained in this section, when the local educational agency which owns the building is no longer using it for free public education and the Commissioner needs the building to provide education for children of military personnel or for other children who reside on Federal property. While the school remains in Federal posession, the Commissioner would pay the local district a rental fee proportionate to its share of the cost of constructing the building.

Section 6(b), Public Law 815, 81st Congress, as amended, now requires applications of local educational agencies for the approval of construction projects, which must be filed before the agencies may receive payments to help finance such projects, to contain or be supported by various assurances relating to the authority of the local agency, and other relevant matters. The amendment proposed in section 502 of the bill would add to this provision the requirement of an assurance that any facilities constructed with aid under this law, the application for which is approved after the enactment of the bill, will be made available to the Commissioner in case they are not being used to provide free public education and that the Commissioner needs them to provide facilities for the education of children who reside on Federal property or whose parent is on active duty with the Armed Forces. Subsection (b) of section 502 would amend section 10 of Public Law 874.

Subsection (b) of section 502 would amend section 10 of Public Law 815. Existing law now requires the Commissioner to make arrangements for the constructing or otherwise providing the minimum facilities necessary for the education of children who will be residing on Federal property at the end of the next fiscal year if the State and its subdivisions may not spend tax revenues for their education or if no local educational agency is able to provide suitable free public education for them.

Section 502(b) of the bill would amend this section to permit the Commissioner to make such arrangements to provide, on a temporary basis, such facilities for children of the members of the Armed Forces on active duty, whether or not residing on Federal property, where the schools usually providing free public education for them are made unavailable to them by official action of State or local governmental authority and no local educational agency is able to provide them with suitable free public education.

Section 502(c) of the bill further amends section 10 of Public Law 815 by adding a new subsection which authorizes the Commissioner of Education to take possession of facilities constructed with the aid of funds provided for by Public Law 815, under an application approved after the enactment of the bill, if they are not being used for free public education and are needed by the Commissioner, as minimum facilities necessary for the children residing on Federal property or children of the Armed Forces personnel on active duty. Possession would be taken under the terms and conditions prescribed in regulations of the Commissioner of Education. Payment by the Commissioner of a reasonable rental on the portion of the facilities financed with non-Federal funds would be required. Provision is also made for the return of those facilities to the school district when the district reopens those schools and makes them available to the federally connected children or when the Commissioner no longer needs the facilities for direct Federal operation purposes. However, the best interests of the federally connected children, the objectives of this proposal, and the commitments to the personnel employed in the direct Federal operation would be factors to be considered in determining the appropriate time for the return of the facilities.

TITLE VI (SEPARABILITY)

Section 601 merely provides that if any provision of this act is held invalid, the remainder of the act shall not be affected thereby.

Are Steelworkers Wages Too High?

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. HOLLAND. Mr. Speaker, one of the baseless lies repeated over and over again in steel industry propaganda and by uninformed persons is that steelworkers already get paid too much. Any homemaker in a steelworker's family could tell you how ridiculous this accusation is as she struggles to make ends meet on the meager and very uncertain wage of a steel employee. And anyone familiar with the hard, gruelling conditions under which steelworkers turn out more and more steel per hour would concede that steel wages are hardly adequate.

Much is made of a Bureau of Labor Statistics report that shows average earnings in the steel industry during June 1959, came to approximately $3.10 an hour. The implication is that this is a normal wage rate collected by the steelworker 8 hours a day, 5 days a week, 52 weeks a year, bringing his annual pay to a figure exceeding $6,000. Nothing could be further from the truth.

The $3.10 hourly figure was compiled at a time when the steel industry was feverishly stockpiling its product in anticipation of the mill shutdown it planned to force upon its employees. In estimating average hourly earnings, the BLS lumps together with the base rate of employees all compensation including overtime pay, extra pay for holiday work, incentive earnings paid for extra exertion on the part of employees, shift premiums and all other wage payments which the steelworker deservedly may have coming. There is no assurance he can continue this rate of earnings and there is enough proof to show that he seldom can even approach this earning rate under normal plant operations.

Only once in the last 13 years have steelworkers averaged as much as 40 hours a week. In 1958, for instance, the average steelworker wages for the entire year totaled only $4,700. This is a far cry from the $6,000 a year which industry would like the public to believe that steelworkers earn.

Workers in many other industries earn more hourly and annually than the steelworkers. Seven other industries have base rates which top those in steel.

And while industry profits are customarily quoted after taxes, no industry spokesman ever explains that the steelworkers wage figures used publicly are before taxes and before the many deductions which put quite a hole in the average paycheck. Steelworkers can spend only their take-home pay—not the exaggerated, blown-up and mythical wage earnings which the industry talks about.

It is interesting to note that the city worker's family budget, prepared by the Bureau of Labor Statistics, calls for a minimum income of about $4,700 yearly for a family of four. But in 1958, one-half of all steelworkers did not earn even enough to "afford" the low standards provided by this BLS budget. This budget, mind you, was last calculated by the Government in October 1951, and is based largely on studies of family spending in the 1930's. The standard of living attainable today under this criteria is, of course, hopelessly inadequate. Still, even under these extremely low standards of existence, this budget shows one-half of the union members in steel did not qualify.

The more adequate Heller Wage Earner's Budget in September 1958 required annual earnings of $6,087 for a homerenter and $6,435 for a homeowner. Three-fourths of all steelworkers in 1958 failed to earn $6,000 annually. This factual study by one of our leading universities thus demonstrates how pitifully meager steelworkers wages are in comparison to what they actually need to enjoy a fairly decent standard of living.

Those who have some knowledge of steel mill operations will readily concede that a steelworker earns every penny of his wage. He puts up with intense heat and prolonged periods of concentrated effort calling for the fullest skills and demanding the heaviest type of responsibility. He endures smoke and fumes, dangerous dust and suffocating blasts of gas-laden air billowing and blowing about him. He is exposed to ear-shattering noise and torrid, grimy, and hazardous conditions equaled in few other industries.

In spite of the challenging conditions under which he works and despite the inadequate compensation he gets, the steelworker of today is the most productive and efficient the industry has ever employed.

Year after year, industry records show that less and less man-hours are needed to produce a ton of finished steel. In 1949, it required 16.3 man-hours. By 1954, this figure was reduced to 15 man-hours, and to 13 man-hours by 1956. The latest figures, as of April 1959, show that it takes but 10.7 man-hours to make the same ton of steel.

In the face of these startling employee productivity figures, the American public must be completely baffled by the unfair and purely ridiculous charges of "featherbedding" and "loafing" which the steel companies have injected in current negotiations with the union. This hardly squares with the factual report by Secretary of Labor Mitchell which shows the steel companies are making more and more money with fewer and fewer steelworkers on the job.

Steel profits so far this year are rolling in at the unprecedented and breathtaking rate of $3 billion a year. Yet today there are 44,000 fewer steelworkers on the payrolls than there were in 1953 and this reduced work force has actually turned out 30 percent more steel.

The rich, prosperous steel industry, which accumulated its record profits with the hard work and sweat of its highly productive employees chooses to ignore these plain facts. Instead of helping the union find ways to reward him through wage and contract improvements, the companies are unbelievably trying to punish and set the steelworker backward.

There has never been a more brazen, cruel, and heartless attempt by any industry to not only deprive employees of economic justice but to confiscate what already belongs to them.

Mr. Summerfield Wins a Round Against Peddlers of Smut

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks I enclose an article by Edward Reardon, Washington representative of the Passaic (N.J.) Herald News, concerning an important action recently taken by the House in an

effort to assist Postmaster General Summerfield in his fight to rid the mails of obscene literature. I agree most heartedly with the Postmaster General that the youth of our country must be protected from this smut literature which FBI Director J. Edgar Hoover recently testifying before a congressional committee called one of the chief factors in the problem of juvenile delinquency:

MR. SUMMERFIELD WINS A ROUND AGAINST PEDDLERS OF SMUT

(By Edward J. Reardon)

WASHINGTON.—Postmaster General Arthur E. Summerfield, an earnest, likable man, this week won the first round of his fight against the half-billion dollar obscene literature industry when the House passed a bill which will supply his Post Office Department with the needed legal tools to start the filth peddlers on the run.

Now he must repeat his victory on the Senate side before the Department can really get down to the business of cleaning up the mails.

In Mr. Summerfield's campaign to protect the youth of America against the unsavory merchants of smut, he had the capable assistance of one of New Jersey's freshmen House Members, Representative GEORGE M. WALLHAUSER, 12th District Republican. WALLHAUSER is a member of the House Post Office and Civil Service Committee which hammered out the bill Secretary Summerfield said he needed for his battle against immorality.

Another of the leaders in this crusade for decency was Representative KATHRYN GRANAHAN, Democrat, of Pennsylvania, chairman of the subcommittee which fashioned the bill. Parents of youngsters who will be less exposed to the very great evil of pornography if this bill becomes law, should gratefully remember those two names.

In Passaic, the House action will undoubtedly be noted with satisfaction by members of Perez Council, Knights of Columbus, who for years have waged a crusade against the dissemination of obscene literature.

Those unimpressed with the need for firm action in dealing with the merchants of immorality should be given the opportunity of visiting the Postmaster General's office quarters in the Post Office Department Building here in the Capital.

One room of his office suite has been set aside by Mr. Summerfield for an exhibit of obscene pictures, magazines, and other materials which have been taken from the mails.

It is so disgustingly nauseating, so offensive to decency as to bring a conviction to all right-minded persons that the devil himself must be the operating head of this nefarious business.

"I have no desire to be a censor," said the Postmaster General as he conducted us on a tour of this chamber of horrors, "but I want to enforce the law as passed by Congress and as interpreted by this Department's General Counsel."

Mr. Summerfield estimated that between 700,000 and 1 million youngsters will receive through the mail this year some of the lewd, lascivious, vile material which is on exhibit.

The smut dealers have devised a simple system for gathering youthful victims into their net. A small advertisement inserted in a comic cartoon book or similar publication is the bait which sets the trap. It offers to send a set of interesting pictures or some other article of merchandise upon receipt of some small cash amount up to a quarter. Kids from age 8 into the teens respond. Thus a mailing list is obtained which is the foundation for this infamous multi-million-dollar-a-year business.

The youngster gets by mail the article advertised and contact is established. In due time he gets another solicitation. This one may contain a sample of what he can obtain by sending another quarter or 50 cents.

Generally, the youngster is so shocked by the nature of the material he is fearful of showing it to his parents. So he hides it in a schoolbook perhaps, then passes it around among his classmates.

And the work of undermining the morals of the Nation's children goes on undetected except for an isolated case here and there.

How much does this trafficking in obscenity contribute to the country's teenage crime?

J. Edgar Hoover, head of the FBI, testified before a congressional committee that it is one of the chief factors in the problem of juvenile delinquency. Its members heard a playback of a confession, tape recorded, of a teenager picked up for the revolting murder of a little girl. He admitted his passions had been aroused by lascivious pictures he had received through the mail.

"Remember," the Postmaster General warned us, "the kids who get this kind of filthy stuff could be members of your own family."

He did not attempt to conceal his dislike for some of the Supreme Court decisions which have hobbled his efforts to rid the mails of lewd and indecent literature.

One panel of his office exhibit is made up of magazines which the Court has ruled cannot be prohibited. One group is the so-called art magazines. Another is nudist publications. Despite the opinion of the Court, neither group is of the caliber decent parents would want to fall into the hands of their own youngsters.

Mr. Summerfield stopped before one nudist publication and snorted.

"I have no quarrel with people who want to run around in the nude," he said. "That's their own business. Maybe it is healthful and stimulating as they claim. But I see no reason why they should have their nudity photographed for magazine purposes."

As of today, Secretary Summerfield has one more river to cross in his fight to rid the mails of obscene materials. He must get the Senate to follow the action of the House.

But it is hardly likely this could occur during the present session. Meanwhile the smut merchants—concentrated in Los Angeles, Chicago, and New York—will be fighting tooth and nail to save their lucrative business.

Labor-Management Reform Legislation

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MACDONALD. Mr. Speaker, during the closing days of this session of Congress action was taken on a labor-management reform bill. It is my hope that the President will sign this labor reform bill into law at the earliest possible moment.

When the subject of labor-management reform legislation came before the House last month for consideration I supported the bill that was favorably reported out of the House Education and Labor Committee, the so-called Elliott bill. This bill was designed to do away with abuses of union power that were exposed by the McClellan committee. These abuses included unwarranted secondary boycotting, blackmail, extortion, and picketing. It was also designed to protect the union members from being victimized by unscrupulous leaders and the general public from labor racketeers.

During the last few days of this controversy. I was pressured by both extremes to vote against the committee bill. Some pressure came from those antilabor elements who wanted a punitive law against all unions, other pressure came from those who wanted no bill at all. I felt that it was my responsibility as a Representative of all the people in my district, to resist pressure from both extremes and to support an effective and fair bill which would drive the hoodlums out of power without hurting honest, law-abiding unions.

I stated at that time that if the Landrum-Griffin bill were to pass in its entirety, Massachusetts and the whole New England area would suffer economically. It was my judgment that many of the measures included in the Landrum-Griffin bill were designed solely to prevent the unionization of plants in the South. While this bill paid lipservice to driving racketeers out of the labor movement, it seemed to me that their real intent was to prevent any organizational drives by legitimate unions in the presently nonunionized South.

As you probably know, many of the Southern States now run ads in our papers asking industry to come south, where there is cheaper electric power furnished by public utilities, such as TVA, local tax rebates, and subunion pay scales. The committee bill, which I favored, was stringent, and would have driven out the hoodlums and racketeers while still giving opportunity for legitimate unions to operate all over the country as they do in New England.

I could not understand why plant operators in New England should pay high union wages and have to compete with low wage scales in nonunion Southern States.

I, therefore, voted on three separate rollcalls against the Landrum-Griffin bill. However, I also stated at the time that if the House and Senate conferees would agree on a fair and effective labor reform bill, I would be happy to vote for it. It seemed to me that was the only way we could have labor reform legislation that would serve the best interests of our entire country, labor and management alike.

I was, therefore, pleased that the conference report substantially adopted the Kennedy-Elliott bill and supported the position of such a bill against both extremes. In other words, the conference report as passed by the House and Senate was closer to the Kennedy-Elliott bill than any other bill, and, of course, that bill was patterned after the original Kennedy-Ives bill.

Without going into all the major changes made in the Landrum-Griffin bill by the conference committee, I would like to point out that the following

changes safeguarding the rights of the trade union movement and the workingmen which comprise these unions were made upon the insistenee of the Kennedy-led Senate conferees:

First. Subcontracting: The legality of restricting subcontracting in the garment industry in order to keep out sweatshops was established.

Second. Consumer appeals: The right to publicize nonunion goods to consumers, without causing a secondary work stoppage, is recognized in the conference agreement. Employees will also be entitled to publicize, without picketing, the fact that a wholesaler or retailer sells goods of a company involved in a labor dispute. All appeals for a consumer boycott would have been barred by the House bill.

Third. Organizational picketing: The conference report preserves the right to engage in organizational picketing provided that a petition for an election is filed within a reasonable time not to exceed 30 days. Unless the union won the election, the picketing would have to cease. The House bill would have virtually banned organizational picketing.

Fourth. Organizational picketing: The right to engage in purely informational picketing without filing a petition for an election is secured provided that the picketing does not halt the pickup or delivery of goods or the rendition of services by the employees of other employers.

Fifth. Primary strikes: The conference report recognizes the right to engage in primary strikes and primary picketing, thereby eliminating the danger that the House bill would sometimes invalidate such picketing.

Sixth. Defense to picketing: Although the conference agreement contains a prohibition upon picketing an employer who has a contract with another union, language was added to the House bill which wolud make it a defense to show that the General Counsel had issued a complaint charging the employer with unlawfully dominating, maintaining, or assisting the other union.

Seventh. Union liability for damage suits: The section imposing liability on labor unions for damages in the case of unlawful organizational picketing was elimiated.

Eighth. Federal-States jurisdiction—No man's land: The conference report permits the States to take jurisdiction over labor cases over which the Board currently refuses to assume jurisdiction. Under the House bill the NLRB could have refused jurisdiction over additional cases. The Board's present jurisdictional standards are broader than they have ever been, thus insuring more unions and employers protection of the act.

Ninth. Economic strikers: The House bill contained no provision permitting economic strikers to vote in representation elections. The conference provision permits strikers to vote in representation elections within 1 year after the commencement of a strike.

Tenth. Struck work: The conference report preserves existing law on the question of the right of labor to refuse to work on struck goods. The House bill would have limited this right.

Eleventh. Bonding: The conference report places a $500,000 limitation on amount of bond required to be taken by a union officer; the House bill had no such limitation.

Twelfth. Elections: The conference report makes the Secretary of Labor responsible for bringing suits in a Federal court to remedy improper elections. The House bill would have provided that individual members could bring suits in U.S. district courts to overturn improper elections.

Thirteenth. Membership lists: The House bill gave candidates for union office the right to inspect and copy from membership lists in union shops. Conference report restricts this to one inspection 30 days prior to an election without right to copy.

Fourteenth. Employer reporting: Conference strengthened immeasurably employer reporting section 203 which was meaningless in the House bill.

With these 14 measures incorporated in the conference report that were not contained in the original Landrum-Griffin bill, I voted for passage of the conference report.

Mr. Speaker, I am confident that this conference report on the labor-management reform bill that has passed the Congress will protect union members and legitimate union activity in the overwhelming percentage of cases. At the same time it will eliminate the overpublicized so-called racketeering which has come from a very small percentage of the labor movement which led to a public demand for this action. I am, therefore, pleased that I could support this sound and effective labor reform measure.

Veteran Kicked Out as Temporary Rural Mail Carrier

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MACK of Illinois. Mr. Speaker, a few months ago the people living on Rural Route 2, Brighton, Ill., in my home county of Macoupin, were saddened by the death of Mr. Rolland Ingham, who had served as their rural mail carrier for 32 years.

Before his death Mr. Ingham had appointed Mr. Eugene Arban as substitute carrier. Judging from numerous letters that I have received in the last week, Mr. Arban was a popular choice. For example, Mr. and Mrs. H. L. Krueger wrote, "We feel that Mr. Arban will be just as good in the next 32 years as Mr. Ingham was in the 32 years past."

It appears, however, that Mr. Arban will not get the opportunity to continue his good service to the people of Rural Route 2, not even as temporary carrier. Although Mr. Arban was named temporary carrier after Mr. Ingham's death, he suddenly was shifted back to the substitute position, effective September 5, and a man with no previous postal experience was appointed temporary carrier.

Mr. Speaker, while this procedure may have been legal, I believe most of my colleagues will agree that it is very unusual for political pressure to be brought to bear in the appointment of a temporary carrier. Normally, the substitute carrier continues as temporary carrier until the permanent carrier is appointed.

Mr. Speaker, I do not question the Republican administration's power to direct the appointment of a temporary carrier. I do wonder, however, that political intrigue should penetrate so far down into our postal system as to take away a few months' work from a man who has faithfully performed the task to the satisfaction of everyone on his route. It is especially remarkable when it is considered that the man so unceremoniously deprived of this temporary position is a combat veteran of World War II. Eugene Arban was a member of a bomber crew in the Pacific and suffered during 5 months' imprisonment by the Japanese. He returned to become a useful citizen of the Brighton community. He has served as commander of his American Legion post and as a member of his church's governing board. He also is active in Chamber of Commerce and Masonic activities.

Don't Underestimate the Farmers

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. CONTE. Mr. Speaker, my State of Massachusetts is not generally thought of as a farm State. Admittedly, the scale of agriculture in our part of the country cannot compare in scope with that in central and western America.

Nevertheless, we have a thriving agricultural community which plays a vital role in our economy. Recently a close friend of mine and one of Massachusetts' most distinguished citizens, Mr. Carleton I. Pickett, who is executive secretary of the Massachusetts Farm Bureau Federation, issued an important statement on this subject. I commend it to the attention of all my colleagues. Under leave to extend my remarks, I wish to include it in the RECORD at this time:

DON'T UNDERESTIMATE THE FARMERS

(By Carleton I. Pickett, executive secretary, Massachusetts Farm Bureau Federation, Inc.)

Farming in Massachusetts is still big business. Farmers pay hired laborers $24,454,463 a year and another $1½ million to men and machines where farmers have to hire machine work. It's a sizable payroll.

About 55,000 workers are obtained from employment service agencies and another 11,258 workers are hired direct. The helping hands of the farm family are not counted in this payroll. Neither is lumbering, selling of trees, or hard wood.

The last census shows between 68,000 to 70,000 members of rural families living on Massachusetts farms, some part-time, some full-time, some large indeed.

We have a varied agriculture—cranberries to tobacco. We have big and little dairymen, poultrymen, market gardeners, fruits, berries, swine, etc. The point is that for an urban State, in spite of population moves, new housing, new highways, loss of farm, we still have a thriving agricultural business that is important in our economy.

This industry has more ownership and less debt than most. It has millions of dollars in an expanding nursery stock and flower plant business to beautify the places of business, the industrial plant grounds and the constantly growing number of homes.

The capital investment in our farms is about $50 million.

So what?

So don't ever sell it short—as an economic farce, or as a social factor, or as a political influence.

These farmers are not wards of the Government, they are not subsidized, they are not even properly chargeable with some of the items that are legislated in the name of agriculture.

The Farm Bureau does its best to speak for the organized farmers. This is a voluntary dues paying organization that has no connection with Government except as it tries to make Government understand the viewpoint of the organized farmers.

It is necessary every once in a while to point out these simple truths. It is also necessary to remember as you speed through the new Massachusetts superhighways, almost never seeing a farm, that back from the roads there are enough left to send $150 million this year into the shops and stores along Main Street after paying the towns and the State and Uncle Sam a whacking big hunk of taxes and meeting a payroll of $25 million. * *

Governors express concern over the loss of a factory. Our Senators in Washington move heaven and earth to get military establishments keep going here. Legislatures show grave concern for unemployment. This is proper. This is admirable. But all of them and all of us should take time out to try to protect, promote, and expand our valuable agriculture.

Louis G. Feldmann, Hazleton, Pa., Attorney, New Commander of the Veterans of Foreign Wars

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of September 5, 1959, which comments upon the election of Attorney Louis G. Feldmann as the new national commander of the Veterans of Foreign Wars:

VFW COMMANDER

The name of Louis G. Feldmann has been added to the growing list of Luzerne County residents who have furnished leadership for the country and its organizations in peace and war. The Hazleton attorney, a former local resident, was elected commander in chief of the Veterans of Foreign Wars without opposition at the convention in Los Angeles yesterday.

During national emergencies, including the Second World War, the county furnished generals, admirals and other officers by the score. Time and again, both Pennsylvania and America have turned to this area for leaders, not just in public office, but in professional and fraternal bodies.

A former State, council, and post commander of the VFW, Attorney Feldmann has been active in the national organization for years, serving in many capacities and acquiring the experience necessary for the office to which he now has been advanced.

The signal honor that has come to him is shared by Hazleton, Luzerne County, and Pennsylvania.

Labor Fights for Justice

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. SANTANGELO. Mr. Speaker, on September 1, my colleague [Mr. RIVERS of South Carolina] had inserted in the RECORD a broad attack on James B. Carey, president of the International Union of Electrical, Radio, and Machine Workers, AFL–CIO, which had been published by the Allendale County Citizen, Allendale, S.C., under dateline of August 28, 1959. There was also included correspondence which indicated a personal attack against Mr. Carey, impugning his Americanism.

On the basis of the statement which Mr. RIVERS inserted in the RECORD, it is apparent that my esteemed colleague is unaware of the great contribution Mr. Carey has made in this country. Through Mr. Carey's efforts, thousands, even millions of Americans, have achieved a better life, better pay, better ability to buy the necessities and other good things produced by our country, better working conditions, and the right to hold their heads high in dealings with their employers.

I am sure that Mr. Carey could have chosen to be on the management side with his extraordinary ability, but he elected rather to fight for the rights of the American man and woman who works for a living. It is this dedication to the cause of the workingmen that obviously motivated Mr. Carey's letters to various Congressmen who supported the Landrum-Griffin bill.

There is no question in the minds of many workingmen that the support for the Landrum-Griffin bill was motivated by economic reasons to maintain the competitive edge which cheap labor obtains for several sections of our country. Of course, many supported this bill to clean up the rottenness in labor unions, but no such support developed to clean up the rottenness in management. The Landrum-Griffin bill went far beyond the requirements of protecting the union member and cleaning out the racketeers. That bill disregards the economic effect of the industrial North, East, and West by destroying labor's traditional practices to organize and to obtain a decent wage for the workingman. Many Southern States have no protection for workers in their desire to obtain a decent wage. They do not provide any minimum-wage protection and labor legislation. The Southern States which have no minimum wages are Alabama, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, and Texas. My colleague [Mr. RIVERS] comes from South Carolina, where there is no minimum wage in industries not affected by interstate commerce. Arkansas, whose representative is one of the great fighters for labor reforms, Senator MCCLELLAN, has a minimum wage law, but the minimum is pathetically low and amounts to a minimum of 16 cents per hour; hardly sufficient to keep body and soul together.

Several States have no compulsory compensation laws, and these are Alabama, Florida, Georgia, North Carolina, South Carolina, Tennessee, and Texas.

The existence of cheap wages and its component competitive edge has caused industry to flee from the North to various sections of the country where the climate is right for wages which are cheap and the benefits to management are many.

I have taken the trouble to inquire into a number of industries which have fled from my own city of New York to go to Southern States where management can obtain a competitive advantage over States which have high standards of wages and strong unions. These are as follows:

Company name	From	To
Cohler & Campbell	Bronx, N.Y.	Granite Falls, N.C.
American Safety Razor Corp.	Kings, N.Y.	Staunton, Va.
Arkel Safety Bag Co.	do	Newport News, Va.
Bonner Spring Hinge Co.	do	Londuram, S.C.
Julius Kayser, Inc.	do	Greenville, S.C.
Reynolds Metals Co.	Queens, N.Y.	Alabama.

These firms which employed 100 or more employees left the city of New York thereby creating unemployment in my city and brought material benefits to States which attracted their operation. Is it any wonder that Mr. Carey who has been struggling to obtain decent wages for the working man and who has contributed so much to the labor forces would resent legislators who by their vote tend to destroy the ability of labor to defend itself?

I do not condone threats nor do I appreciate personal attacks upon people for their opposition. America has been great because we can disagree without being disagreeable. We have freedom of

speech and we have the inalienable right to criticize representatives. In fairness to Mr. Carey, who represents a large segment of decent and honest labor forces, I set forth Mr. Carey's record for all to see so that the distorted impression obtained by a reading of Mr. RIVER'S statement would not be accepted by all fair thinking people.

The Wonderful Lady With the Yuletide Name

EXTENSION OF REMARKS
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 20, 1959

Mr. FLYNN. Mr. Speaker, my hometown of Racine, Wis., is privileged to have among its citizens a most kind, thoughtful and wonderful lady with the Yuletide name of Mary Christmas. Many Members of Congress may have read or heard in years past of the great work which Mary Christmas does throughout the entire country with her Shut-In Club; and answering the thousands of requests each year for Christmas greetings. For the past 5 weeks Mary Christmas has been seriously ill in St. Mary's Hospital, Racine, Wis.; and I would like to pay tribute to her and let her know that we are thinking of her as she has, through the years, unselfishly remembered thousands of other shut-ins.

Mary Christmas was born in humble circumstances and her first husband, William M. Kiley, died leaving her with two small children and another child on the way. Mary worked hard to keep her family together and in 1919 married Samuel Christmas, who was born in England and who had served in the British Army prior to coming to America. Other children were born of this marriage and today Mary Christmas has 5 children, 26 grandchildren, and 1 great-grandson.

Over the years Mary had been sending greetings at Christmas time to children in the Racine area; but in the early 1930's, after a newspaper reporter wrote an account of her activities and after a radio appearance in Chicago and New York, her mail increased tremendously. Mary managed to answer all these letters personally. In 1936, an invalid by the name of Bernice Cameron wrote and asked Mary if she could correspond with her and also with other invalids with whom Miss Cameron was acquainted. Within a short time, Mary had hundreds of regular correspondents and it was decided to organize this activity as the Mary Christmas Shut-In Club. The club's activities shortly became nationwide and volunteers helped Mary handle the mail when its volume became too great for her to take care of personally. Contributions were received from interested Racine citizens to cover the postage expenses, but the club's activities were strictly a voluntary project and Mary gave all of her time freely to it. When World War II broke out, thousands of servicemen were added to the list of Mary's correspondents and each was remembered by her.

Mr. Speaker, this brief account will give the House some idea of what one person has managed to do in her lifetime to bring greetings, kind words of encouragement, cheer, joy, and happiness to invalids and others who are too seldom remembered by this busy, selfish world. Only those folks who have received her greetings or have been invalids can really appreciate the wonderful and unselfish work done over the years by Mary Christmas. Now that Mary herself is bedridden, we certainly should take time to remember her and to wish her a speedy and complete recovery. For folks such as Mary Christmas, having done God's work during her life, will be remembered by Him here on earth and in the life hereafter.

Ninety-six Years of Community Service for Newspaper

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 31, 1959

Mr. REES of Kansas. Mr. Speaker, under unanimous consent approved by the House, I am including an article that appeared in a country newspaper in my district, the Enterprise-Chronicle of Burlingame, Kans. This paper has been published for 96 years. The article covers a considerable share of our State's history. The Chronicle has been influential in the development of our State.

The Enterprise-Chronicle this week begins its 97th volume—or 96 years of public service for the Osage County Chronicle which was later merged with the Burlingame Enterprise. The original newspaper was founded by Marshall M. Murdock who sold out in Burlingame to move other printing equipment by teams and wagons overland to the budding community of Wichita, not yet served by a railroad.

Marshall Murdock was one of the colorful men of the old West who was destined to shape the future of Kansas by way of the printed word while others brought law and order to the prairies punctuated by gunfire. Burlingame's first publisher had two sons, Marcellus and Victor, who followed in their father's Wichita newspaper, the Wichita Eagle. Marcellus is present publisher; Victor died a few years ago.

Burlingame, too, had a newpaper before it had a railroad. Printing equipment 96 years ago would not suffice in these modern times as the type was set by hand, presses powered with a foot treadle and drinking water was no doubt carried by the bucketful from a community well.

The slavery question put Kansas in line with the North. The Osage County Chronicle, established in 1863, was accomplished during the War Between the States and there were many other blazing issues at that time. Kansas had achieved statehood in 1861 only 3 years after Burlingame was reorganized on the grounds once known as Council City. Settlement was moving westward in Kansas as cattlemen struggled with homesteaders and sheepmen who were fencing off free range for the purpose of cultivation.

Like the newspapers which were springing up in promising communities with a job press and a shirttail full of type, homesteaders cut farms in the sod with walking plows and a team of horses or oxen. Seed and a few provisions were brought in covered wagons from farther east and the wagons usually had a crate or two of chickens plus a few milk cows following.

Settlements were formed in colonies by Mennonites, Bohemians, Russians, Swedes, Germans, and the Negro settlement of Nicodemus in Graham County which later became famous for its Emancipation Day celebrations in a grove of trees. National differences of the old country were left there. They were left behind in the new land plagued by Indian raids, prairie fires, rattlesnakes, and windstorms. There was little communication between colonies but they met man to man in communities and learned to read the same local newspapers wherever they were provided by long-suffering, outspoken editors of that day.

Cyrus became a popular name for babies as the Atchison, Topeka & Santa Fe Railway began to reach across the Flint Hills into buffalo grass under the able direction of Cyrus Holladay. Perhaps farm folk named a baby Cyrus because of the new reaper invented by Cyrus McCormick because the back-breaking task of cutting wheat was made possible by a new machine which cut and bound the crop in a single operation.

Burlingame's Osage County Chronicle also witnessed the change in transportation as wagons passed through this community toward the silver mines of Colorado when Pikes Peak was a "hole in the ground" or the promise of gold wealth in California. The Old Santa Fe Trail was gouged deep by the wagons of homesteaders, fortune hunters, and buffalo hunters when three forts—Fort Dodge, Fort Hays, and Fort Wallace—were being established to protect settlers from the lawless element as well as Indians who stubbornly refused to give up their hunting grounds.

Time marches on and feeling ran high in selecting communities as official county seats. Osage County was no exception. Open warfare almost broke out when the community possessing the courthouse was approached for removal of records to a preferable location near the center of the county. Another county in Kansas give 36 sections of land to the county north of it to hold to a strategic center. A northwest Kansas county moved the records under cover of darkness to accomplish the task without force of guns. Echoing public sentiment were the newspapers, quite frequently two in a town and both enjoying such freedom in print that rascals were called rascals and thieves were thieves. The editors paid little attention to advertising as a nominal subscription fee—in cash or produce—was sufficient to buy a cow, a few pigs and garden seed to put food on the table and clothes on the family.

The turn of the century found homesteaders well entrenched on the land, black smoke boiling from the "iron horse" on the plains and a few factories in operation. Taxes were hardly felt as rural schoolhouse doors were opened to the overgrown teenage boys who had missed educational advantages in their younger years, and to the little tykes who were able to walk.

Wheat harvest progressed from binding and shocking to header crews and the newspapers carried detailed accounts of big crops which developed a migration of men from across the country to make up crews for any farmer who needed the help on a basis of barter with regard to the crop and the price of grain.

This was perhaps Kansas' early labor troubles as some of the hands were inclined to pad the price of their services when they couldn't tell the difference between the breeching and a bridle. There were those referred to as IWW's—officially, International Workers of the World—but it became evident that these workers were not only lacking in effort, they were trouble makers not too different from the labor hoodlums of modern times. The term IWW was made to mean other things such as "I won't work" and "I want whisky."

Transportation was changing on the Kansas scene as travel on the Old Santa Fe Trail gave way to chugging locomotives. The Santa Fe Railway followed the general direction of the Santa Fe Trail but the only crossing of the two were at historic Switzler Creek in Burlingame. Diagonal roads were abandoned as section lines were marked in criss-cross pattern and the State provided legal procedure to open roads to give access to all farms without trespassing on private property.

The horseless carriage appeared on the prairie perhaps equally as quick as they did on the street of Eastern cities. The industrial age was being felt in the newspapers as the Linotype was proving to be a practical invention for the larger newspapers. These were not the first typesetting machines but they were the most practical approach to relief of hand compositors perched on high stools day in and day out. Linotypes increased the cost of production and newspaper advertising was becoming an important field to retail services which could and did provide income for even the smaller shops to join the march of industry.

Not many could afford the first automobiles—and those who could afford them were prone to lack mechanical skill to keep them operating. Even the short drives were accompanied by such discouraging things as flat tires, running out of gas, sandy roads, and high centers—not to mention all degrees of engine trouble.

Fixing a flat was relatively simple; a tubular box of patching materials would repair the usual puncture and a blowout resulted in pulling of the tire and riding on the rim back to town. Lack of gas at first was quite serious as it was a rare item among farmers. Kerosene was used in lamps of that time but the cheaper fuel would not function in an automobile unless it was first warmed up on gasoline. Sandy spots on country roads were traps comparable to Tanglefoot of that area to catch and hold flies. Once the car bogged down in sand, the high-pressure ties threw sand like a frantic gopher until there was no traction at all. The best way out was to lay brush, weeds (sometimes a fence post) or a blanket under the rear wheels. High centers were not actually high but wagon wheels cut ruts deeper into the ground than the underpart of the car, high as it was in early models. The car would ride the middle ridge until the tires were suspended in the air.

The early makes of cars in Kansas were: Brush, Maxwell, Popehartford, Overland, Buick, and Ford. If there was any copied design, it resembled horse-drawn vehicles rather than that of another automobile. Speed was governed by the condition of the ungraded roads and a smooth stretch might allow 25 miles per hour estimated. It was a timeworn phrase of the times when a team and buggy passed a stalled auto for a person in the buggy to say, "Get a hoss."

Besides creating a great industry for the Nation as a whole, the automobile added new businesses in every community the size of Burlingame and smaller. There were car agencies, repair shops, filling stations, accessory stores and, more recently, motels. Highways were improved as the cars were made faster, providing employment that would not have been possible without the horseless carriage.

The newspapers, like all other industries today are geared to the automobile although, from the reader's standpoint, the printed word remains pretty much the same. It moves the people to focus their attention on the basic welfare of mankind—looking backward momentarily now and then to make comparisons in anticipation of the future. Ninety-six years, the period spanned by the Osage County Chronicle, has witnessed some important changes in the ups and downs of Burlingame.

In some respects our democratic system has failed to make the most of the heritage handed down by the pioneers who first turned the sod. The people, as voters, have allowed Government officials to become soft toward ruthless connivers for power among labor leaders. The IWW's were panty-waist dreamers compared with those who hide behind the fifth amendment but strike fear into the hearts of honest laborers under the cover of darkness.

An overgenerous Government has made weaklings out of laborers by allowing them to feed well at the welfare trough when they might have had the pride of providing for themselves through their own efforts. We have permitted our military services to give recognition to goldbrickers and one branch of the service to resent the efforts of another.

Child labor laws have gone too far when it is next to impossible to teach a teenager good work habits allowing a child to use his mind and hands in coordination to prepare himself for adulthood. The juvenile delinquency problem would quickly disappear if the juveniles had job opportunities in keeping with their physical development. Far more dangerous than a piece of industrial machinery is the high-powered automobile placed in the hands of an inexperienced teenager.

High taxes cannot be blamed entirely on our public officials. Perhaps those public officials have been taught by the voters to seek the popular side of every issue and the middle of the fence on debatable issues. There was a time within the past 96 years when a politician would seek a direct course in government to remain free from campaign, industrial or labor obligations. He was a statesman as stalwart as the pioneer following a walking plow—with a steady eye and a firm grip. All was not success with those statesmen but, failing, they backed away for a better look and returned with a renewed vigor that put wrong things right and the populace got the benefit.

There are times when security is important and it may be needed only as a temporary measure but, for the Government to provide security from the cradle to the grave, robs the individual of rights that should be his—the right to meet his obligations as a man and a member of a free society.

In spite of errors of the past, it is not too late to correct events in the future. Voters need to take a long, awesome look at the present and, understanding what they see, start the wheels of justice and fairplay for all. We, as voters, need to back our politicians against their circular fences and let them know that we will reclaim the right to govern by secret ballot and have our political desires put into practice by representative government on all levels.

Looking at the governments of the globe, none are more practical than ours—none offer as much for the dignity of man. It has stood the tests of time—pressures from within and without; whether it was a Teapot Dome scandal or the greedy fangs of aggressor nations, this Nation has emerged stronger in the concepts of right. The past 96 years should provide strength to overcome individual and collective shortcomings. This can be the heritage of this generation for the next 96 years.

An Oregon Mother Looks at Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. PORTER. Mr. Speaker, for her many worthy civic activities and for her meritorious performance as a mother and a wife, Mrs. H. P. Bosworth, Jr., of Medford, Oreg., was named Oregon Mother of the Year not long ago.

Under unanimous consent I am including a copy of a letter to the Secretary of State, mailed to him on August 28. This letter is an example of her honest and intelligent concern about peace in the world:

MEDFORD, OREG., *August 28, 1959.*
The Honorable CHRISTIAN A. HERTER,
Secretary of State,
State Department,
Washington, D.C.

DEAR MR. HERTER: I truly believe that the visit of Mr. Khrushchev to our country is a step toward peace. It is hoped that he and President Eisenhower can make great progress for nuclear and general disarmament. But, if these two do arrive at agreements, will the people of the United States stand behind our President? In a democracy, universal support comes through arduous effort and often slowly. Let us not be overconfident as the way to peace is a narrower path than the newspaper headlines would lead us to believe.

It occurs to me Congress could make a great contribution if it were not to adjourn before his visit. A full dress performance of the U.S. Congress at work could show Mr. Khrushchev how elected representatives of a free people can debate and make foreign policy. The demonstration would be complete if the great number of lay organizations interested in politics and peace, particularly, were on hand to testify. The issue for debate would have to be properly chosen and presented to enhance the prestige of Congress and democracy in general. The indirect method could bring about greater change in Mr. Khrushchev's ideas and perception about democracy than all the coercion and threats of our atom bomb rattling and it would be hoped that he, in turn, would not even for propaganda, threaten us. If the climate is peaceful there can be some change of heart and modern psychology theorizes that a sense of threat actually hinders perception and change.

The issues to be presented at such a full dress performance could be a debate on how Congress will set up an adequate study of fall-out from bomb testing and from the "peaceful atom"; or a debate on how to strengthen the United Nations and the United Nations Police Force in order to permit general massive disarmament; or a second performance of the debate on the issues concerning the Mutual Security Authorization of last July. This last issue is of such scope that it could show how interdependence between nations has grown from political and military interdependence to the present acceptance of economic interdependence. In this manner, Mr. Khrushchev would see that U.S. foreign economic aid is the beginning of a progress that could lead to a Summit Conference urging joint international efforts to abolish proverty.

What I really want to say is that the tremendous amount of work for peace by Con-

gress, citizens and organizations like the Council of Churches, American Friends Service Committee, International League for Peace and Freedom, and the League of Women Voters, must be presented to counter-balance the pentagon, munitions, and military budget. This visit is an opportunity to use the United States' position of strength and reputation for morality, to acquire support for peace proposals and strengthening the United Nations as a means of carrying out these proposals. The hour is late for such a suggestion but from this, some development may occur that will bring greater hope for peace.

Very truly yours,

MARIE M. BOSWORTH,
Mrs. H. P. BOSWORTH, Jr.

MEDFORD, OREG.

Twentieth Anniversary of Nazi-Communist Attack Upon Poland and Upcoming Khrushchev Visit to United States

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to Members of the House of Representatives by Mr. Jozef Mlot-Mroz, president, Anti-Communist Confederation of Polish Freedom Fighters in U.S.A., dated September 1, 1959, as well as two open letters by Mr. Mlot-Mroz to the President of the United States, one dated August 2, 1959, and the second dated August 13, 1959:

Z.P.W.P., INC.,
ANTI-COMMUNIST CONFEDERATION
OF POLISH FREEDOM FIGHTERS,
Salem, Mass., September 1, 1959.

To the Members of the House of Representatives, Washington, D.C.

DEAR SIR: In the name of the Committee to Commemmorate 20th Anniversary of Poland's Invasion and also in the name of the Anti-Communist Confederation of Polish Freedom Fighters in U.S.A., I am forwarding to the members of the Senate committee and members of the House of Representatives a resolution which was passed on occasion of the 20th anniversary of the treacherous Nazi-Communist attack upon Poland.

I take the liberty of enclosing two copies of open letters, which I am sending to President Eisenhower in connection with the unfortunate invitation to the United States of Khrushchev, executioner and tyrant of captive subjugated nations. As I affirmed in them, for 7 days before the coming arrival of Khrushchev to the United States of America—I am starting a hunger strike of dry starvation and I will continue it if need be to total sacrifice of my life.

This hunger strike of dry starvation I intend to carry out in Washington in front of the White House.

I firmly believe, sir, that after becoming acquainted with the content of the resolution, as well as that of the open letters, you will take a proper stand and you will do everything in your power to bring about the desired effect.

With deepest respect,

JOZEF MLOT-MROZ,
President, Anti-Communist Confederation of Polish Freedom Fighters in U.S.A.

RESOLUTION OF COMMITTEE TO COMMEMORATE 20TH ANNIVERSARY OF POLAND'S INVASION, SEPTEMBER 1, 1959

September 1 will mark the 20th anniversary of Hitler's most hideous and tragic attack on Poland. That day was the beginning of the worst war in the history of all mankind. At dawn on September 1, 1939, Nazi planes and the falling bombs awakened Poland and enveloped her in an artillery fire. Civilized world was aghast.

Yet, at dawn for the beginning of this tragedy one must look back a few days prior to this day, viz, August 27, 1939, when Hitler extended his blood-drenched hand to Russia and signed a ignominious Ribbentrop-Molotov pact.

However, much greater crime was committed on September 17, 1939, when the Soviet Army crossed the Polish border and dealt a treacherous blow by stabbing Poland in her back.

The bloody echo of that September 1939, lives on in the world with its fruit: Yalta, and final enslavement of Poland and the other subjugated nations, which are still held in captivity.

Step by step communism is conquering nations. It is horrible to realize that on this 20th anniversary of September 1939 when the fettered Polish nation looks up with hope to America—at this very moment—Khrushchev, the international murderer, the blood-thirsty executioner of Poland and other conquered nations is invited to the United States by President Eisenhower.

Filled with indignation the Poles of America demonstrate their opposition to diabolical communism and we condemn this new perfidious Khrushchev-Eisenhower pact.

Therefore, in the name of the Americans of Polish heritage the committee commemorating the 20th anniversary of invasion of Poland appeal to the U.S. Government to repair the wrongs inflicted upon the Polish nation and the other captive nations who look toward America, champion of liberty, as their only hope.

We commend and congratulate the Honorable U.S. Congress for adjourning at this time. We appeal to you, statesmen of the United States of America to ignore completely the visit of the Murderer Khrushchev.

We Americans should remember Khrushchev's threat to us when he said: "We will bury you." And we should remember that as long as the spirit of opposition lives in the captive nations, so long can America count on a final victory and triumph of justice.

May this 20th anniversary of that tragic September awaken the conscience and heart of the Americans. Americans, your actions ought to be directed toward the liberation of these captive nations.

War with communism is a must of the present moment. Hand clasping with the tyrant and executioner Khrushchev is nothing but a nail for the cross of the subjugated nations, Poland among them, and grave for the powerful American Nation.

Wake up America, today. For tomorrow may be too late.

For the committee:

Rt. Rev. L. A. SIKORA, P.A.
JOZEF MLOT-MROZ,
JOHN J. TWAROG.

OPEN LETTER

Z.P.W.P., INC.,
ANTI-COMMUNIST CONFEDERATION
OF POLISH FREEDOM
FIGHTERS IN U.S.A.,
Salem, Mass., August 2, 1959.

To the PRESIDENT OF THE UNITED STATES OF AMERICA, DWIGHT D. EISENHOWER,
Washington, D.C.

DEAR MR. PRESIDENT: The bondage of the enslaved nations of central Europe is one of the reasons causing the international conflict and the real reason for failure of bringing about world peace. As long as the enslaved people will be forbidden to decide about their own fate, so long will last the great war tension in the world. Such was the opinion of the world and that of you, Mr. President, just a few months ago.

Your statements on behalf of the enslaved nations at different times, especially your proclamation of the Week of the Captive Nations was an assurance that the miracle of obtaining freedom for these nations, among which is found Poland, must and should come from the West.

Unfortunately, the news, radio, and television announcers for the past few days remark about the cordial invitation extended to Khrushchev to visit the United States. This invitation breaks up the hope of the Polish as well as other nations enslaved behind the Iron Curtain.

Just at the moment when the Polish people are preparing to celebrate the 20th anniversary of losing their freedom, when Khrushchev wishes to succeed in breaking up this feeling of hope, the eyes of Poland are turned to the United States of America with the hope that it will become their defender. To confirm this we see no better picture than the hearty welcome of Vice President NIXON in Poland.

That is why the visit of Mr. Khrushchev in the United States of America will be a vivid expression of breaking up the hopes of the people as well as the nail added to the coffin of Poland. The hearty handshake with the murderer Khrushchev, the smiles of both leaders will naturally break up the spirit and morale of the people of central Europe and certainly will rule out any American doing in obtaining their peace and freedom.

Therefore, as the president of the Anti-Communist Confederation of Polish Freedom Fighters in U.S.A., I permit myself, on behalf of the organization, to ask you, Mr. President, not to invite Mr. Khrushchev to the United States of America.

We, the people of Poland, found in all parts of the world, betrayed at Yalta, begrudged a native land—loyal to God and country, beg of you:

It is not proper and permissible to invite Mr. Khrushchev to the United States of America to break up the spirit and hope of the enslaved nations, to go into partnership with communism, the menace of the 20th century, it is not permissible to join in any work for the coexistence of communism:

It is therefore our duty to safeguard the enslaved nations and bring forth their day of freedom, we must bar the way of communism in their plans of possessing the entire world, embedding within them the communistic ideas, ideas which crippled and destroy the health of the nations.

Only on sound principles will grow up an idea of freedom among the enslaved nations and upon such principles will there evolve a stable world peace and once again will return the peace and happiness for which American people yearn.

These are our pleas which we send to the leaders of the American people.

We, the Polish people of America do not wish that Mr. Khrushchev be invited to the United States of America. If necessary I will give my life on the altar for the love and freedom of Poland.

Seven days before the arrival of Khrushchev to the United States of America and in defense of freedom I will go on strike of dry starvation and continue it until I offer my life for my country and freedom.

With respect,

JOZEF MLOT-MROZ,
Anti-Communist Confederation of Polish Freedom Fighters in U.S.A.

SECOND OPEN LETTER

Z. P. W. P., INC.,
ANTI-COMMUNIST CONFEDERATION
OF POLISH FREEDOM FIGHTERS,
Salem, Mass., August 13, 1959.

To PRESIDENT OF THE UNITED STATES OF AMERICA, DWIGHT D. EISENHOWER,
Washington, D.C.

DEAR MR. PRESIDENT: The sun of freedom shines the same to all countries, and we must understand the meaning of this motto. Their will be no peace at home where harm and misfortune is brought about to our neighbor and friend. Therefore your friendly clasp with Khrushchev, the Poles may well compare to the Ribbentrop-Molotow pact of 1939, when symbols of communism, nazism, and fascism embedded itself in the hearts of Poland.

The President of the United States of America should consider that those who now are the enemies of God are also our enemies and therefore there should be no talk or even thought of cooperation and unity.

The invitation of Khrushchev to the United States of America brought about an unfavorable reaction in Congress. The bill of Congressman LANE, who demands public opinion on inviting Khrushchev here, is the voice of a wise and intelligent politic as well as a defender of enslaved peoples.

President Eisenhower should be convinced and aware that communistic Khrushchev through his visit is trying to ease the tension and probably the carefulness of the American people and in this way built up a cradle of peace and bring about an initiative of communistic politics.

Through his visit Khrushchev is trying to lower the morale of the people as well as their desire of courage and firmness in opposition to communistic designs.

The psychological approach for many years taken step by step was a success for Khrushchev, and the last resort an invitation to the communistic leader to visit the United States of America is the most unfortunate step in the career of the great fighter, leader, and politic, our President—Mr. Dwight D. Eisenhower.

President Eisenhower must remember that Khrushchev is a murderer who with cold blood sacrificed the lives of millions of innocent people just to build up communism. To Khrushchev a human being is nothing more than an animal, a machine, less valuable than modern invented apparatus. Therefore this human being, machine, must be sacrificed for the victory of communistic ideas.

Khrushchev admits that there is no God, he laughs at our feelings and beliefs, he laughs at the American slogan "We trust in God." Just as Governor Harriman admitted, Khrushchev is more dangerous than Stalin.

Khrushchev attempts to possess the world by epitaphs. The first being to force the West to admit the up-to-date communistic ideas of capture, thus to liquidate cold war. Second to bring about communistic revolts in Asia, Africa, and Latin America. Third the gradual overcome of Western Europe and complete preparation to rule the whole world. The fourth to break down the carefulness and the morale of the American politics during his penetrations into the various countries, that is why Khrushchev so willingly accepts the American invitation.

The invitation is also a sign of our agreement to the continuation of the sufferings of the millions of people behind the Iron Curtain.

It is wrong to believe that Kremlin has changed its tactics in reference to politics and that in the future it promises to live in accordance with the different pacts made. The Soviets only wish to have peace as mentioned by His Eminence Cardinal Cushing, a peace that will give them entire possession of the entire world, and each word of Khrushchev is only an empty phrase. Therefore there can be no talk of real peace without freedom granted to the enslaved nations.

O, misery, to this fire of enslavement behind the Iron Curtain President Eisenhower inviting Khrushchev added fuel, therefore further comments are fruitless.

Therefore I call to the conscience of all Americans: America awake, the Red curtain enfolds you, and the fire of enslavement awaits thee, and you with your Ike dream only of your happiness and success and peace, dream only of clear skies and eternal fairness. Awake America, before it is too late. Khrushchev told you: "We will bury you." This threat can hold only one moral for us: Wake up America—facing Communist danger.

That is why President Eisenhower has no authority to invite and entertain Khrushchev and he cannot confer with him for as history teaches us every such conference is a victory for communism and defeat for freedom. This was affirmed by no one else but Khrushchev who stated that he places the victory of communism above freedom and peace. Khrushchev has the ability and slyness of a fox.

That is why in the name of the Polish people in this country and in all other countries I am not begging for grace or alms but for that what is just and ours. Poland is an Alpha and Omega of happenings in the world. Help Poland America, it was betrayed by you, it is your duty. Helping the suffering nations you defend the future and success of your own country.

The kingdom of this world suffers now, and you wish entertain the greatest enemy of peace. Be ashamed, America.

As protest I feel that I must use the only alternative left. As I have stated in my first letter to the President, 7 days before the arrival of Khrushchev I will go on a hungry strike and I will not break it even if I have to give my life on the altar as a sacrifice for the love of my country.

Even though some will consider this a foolish idea, that will not hinder any of my intentions. Only this way and in the face of opposition and foolishness my demonstration is a protest of the feelings of the enslaved nations and the sacrifice of my life is nothing compared to the sufferings of the millions of murdered and being murdered in the communistic regime.

I place forth the call of all those who are still suffering in defense of their own country, for they cannot do so themselves. I speak on behalf of those murdered by the Communists, the Americans who gave their lives in Korea, and those still alive in communistic prisons. I believe in the justice of truth for which I will sacrifice everything, even that what is the dearest worldly happiness, health, and life.

My protest in the form of a hunger strike, let it be a verdict for Khrushchev and warning to America. My death on the altar of sacrifice for the love of country may it be an awakening of the Americans who in luxury and success forget the suffering of others especially the enslaved nations among which is Poland.

With respect,

JOZEF MLOT-MROZ,
President, Anti-Communist Confederation of Polish Freedom Fighters in U.S.A.

Is Lao Attack a Magnificent Deception by Moscow?

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Saturday, September 5, 1959

Mr. PUCINSKI. Mr. Speaker, I believe the following analysis by Miss Marguerite Higgins, one of America's most distinguished journalists, is self-explanatory, and I am delighted to call it to the attention of my colleagues.

The article follows:

[From the Chicago (Ill.) Sun-Times, Sept. 7, 1959]

IS LAO ATTACK A MAGNIFICENT DECEPTION BY MOSCOW?

(By Marguerite Higgins)

WASHINGTON.—It is not just India that is running out of other cheeks to turn to the Communist bloc.

The United States is having troubles, too, along this line. In its anxiety not to "mar the atmosphere" of the September visit to the United States of Soviet Prime Minister Nikita S. Khrushchev, many U.S. officials have been busily looking the other way and generally minimizing the Kremlin's possible connection with the current unpleasantness created by Communist aggressions in Laos and elsewhere in the Far East.

Right after the Khrushchev visit was announced, for instance, a remarkable new theory grew up to account for the Communist activities in the Far East. The attacks in Laos, it was rationalized, were Peiping's way of showing its displeasure over Khrushchev's forthcoming meeting with President Eisenhower and its impatience over any efforts of this kind to really reduce international tension.

In other words the Peiping-Hanoi axis was, in this case, openly acting against the policies being followed by Moscow.

There are a number of very large holes in that theory.

First of all, although the world little noticed, at the time the Peiping-directed attacks against Laos were clearly showing the marks of a planned military campaign considerably before the date when the exchange of visits between Mr. Eisenhower and Khrushchev were finally announced.

Even for the Communists, who keep their expeditionary forces in excellent trim, the primitive mountainous terrain of Laos presents great problems. You do not decide 1 day to send in troops backed by artillery and dispatch them the next. It is more in the nature of a month or 2, or even 3.

Also, because of the Communist tactics of camouflaging all aggression as so-called civil war, the planning has to be particularly careful so that the pretense can be believed.

TRAINING PROCEDURE

To illustrate: The Pathet Lao forces allegedly "rebelling" against the Royal Lao Government have almost totally received their training in Red China or Communist Vietnam. That is standard Communist op-

erational procedure. In Korea the army that led the first attacks in 1950 was largely trained in the Soviet Union.

Thus the first Communist tank drivers we captured at the front could speak only Russian although they were oriental in appearance and could claim remote Korean ancestry. Indeed the first such prisoner interviewed by this correspondent during the war in Korea said he had received combat experience in Stalingrad.

But in a small war, as in Laos, much finer attention to detail is required. Thus to maintain the pretense it is necessary to make sure that some of the "rebel" troops attacking the Lao border provinces of Sam Neua and Phong Saly possess some notion of the local dialect. And that takes careful planning in the disposition of forces.

So it is vital to note that the first phase of the present crisis was underway in Sam Neua and Phong Saly by July 15, long before Peiping could have become piqued about Khrushchev's visit to Washington because at the time Khrushchev could not be sure of the matter himself.

HO CHI MINH'S VISIT TO MOSCOW

Another crucial and little noted fact was the visit to Moscow in July and August of Communist Vietnam's leader Ho Chi Minh.

Isn't it a bit hard to believe that Communist leader Ho, whose victory at Dienbienphu would have been utterly impossible without Molotov trucks, Soviet artillery and automatic weapons, failed to explain and clear the Communist military excursions into Laos being wafted at that precise time from his own military sanctuary?

Moscow may not have instigated the aggressions. But is it logical to suppose that Khrushchev is so devoid of influence over Peiping and Hanoi that Moscow could not bring the crisis to an end if it really wanted to?

Or is the real truth that Moscow is prepetrating a most magnificent deception?

It isn't an old Russian proverb, but it's a frequent human tactic to engage the homeowner in pleasant conversation in the parlor while an accomplice enters through the back door to steal the silver.

A BACK-DOOR STEAL?

Is it possible that Moscow and Peiping hoped that the United States would be so intent on making a "success" of the Khrushchev visit as to let the Communists steal the Lao silver while the Soviet leader was being entertained in the Washington parlor?

The Lao appeal to the United Nations made it impossible of course for the United States either to stand silently by or hope that the crisis would go away of itself.

But Khrushchev's forthcoming trip does offer the chance to make it plain that the United States cannot long be fooled by protestations of peaceful coexistence in the West so long as they are accompanied by war drums in the East.

It may be true that Khrushchev is toying with the theory that after the death of John Foster Dulles the United States began turning into a soft touch. All the more reason to disabuse him quickly for this could be the most dangerous "misconception" of all.

Instead of Taxes

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, September 8, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an address by Willis E. Stone, entitled "Instead of Taxes." This is in support of my House Joint Resolution 23:

INSTEAD OF TAXES

(Speech by Willis E. Stone, chairman, National Committee for Economic Freedom, delivered in the Scottish Rite Temple, Sept. 8, 1959, in Portland, Oreg., before members of Scottish Rite and their friends)

Friends, your illustrious order has given America some of its greatest leaders who faced in their time much the same problem which confronts us today. George Washington, Paul Revere, Benjamin Franklin, and many other Masons of colonial times achieved everlasting fame by solving the tax problem which confronted them. They were required to use more drastic means than is necessary naw.

Basically, the same tax problem to confront the colonists is now tearing our constitutional forms apart. The details are different, but the fundamentals remain the same. If we have the wit and the wisdom to apply the same principles the Founding Fathers applied we will find that we can solve the present day problem with equal effectiveness.

First, let us appraise the dimensions of our problem. In the foreign field it appears that the American taxpayers, who have never known military defeat, have been compelled to pay more treasure into the coffers of foreign powers than all the vanquished people in history have paid to their conquerors.

On the domestic scene the bureaucratic conquest of the American taxpayer is fantastic. More than 700 Federal corporate activities, existing without the slightest pretense of constitutional authority, ride the backs of the American people as interest free, dividend free, rent free, cost free, tax free competitors of taxpaying producers and consumers.

Most people recall that our Constitution was designed to prevent this conquest, but the tax collectors keep us much too busy earning enough to satisfy their demands to know much about the details of what has happened, how or why. Assuming that the function of government is the protection of life and property, we have paid little heed to the enormous conquest of our land by Federal agencies.

To get a comprehensive view of this phase of the problem, let us turn to the U.S. Government Organizational Manual and see what some of the Federal agencies have to say about themselves.

On page 221 of the 1958–59 issue of this manual the Interior Department describes its vast empire by asserting that it has custody of 750 million acres of land. Thus this single agency claims to have jurisdiction over 32.3 percent of the total land and water area of the United States and all of its territories and possessions.

On page 254 of the same manual the Forest Service claims that it administers about 188 million acres. This acreage equals 8.1 percent of the total land and water area of the United States and all its territories and possessions.

This cities the landholdings of but 2 of the more than 700 Federal agencies which have in some way invaded private enterprise. This by no means is all the landholdings in the hands of such agencies, as most of those listed have undertaken to build landed estates for themselves. However, these two are the largest landholders. They have jointly taken over an area greater in extent than the combined land area of 25 European countries. These are:

England, Ireland, Scotland, Wales, Portugal, Spain, France, Belgium, Holland, Luxembourg, Switzerland, Germany, Iceland, Denmark, Poland, Czechoslovakia, Austria, Hungary, Italy, Monaco, Albania, Greece, Yugoslavia, Rumania, and Bulgaria.

This constitutes quite a conquest in itself. Added to the other areas taken over by other Federal agencies, the non-tax-paying but tax-supported political empires come close to representing the majority interest in the United States. Practically all of this land should properly be privately owned and under State jurisdiction. The problem is further complicated when we realize that fully 20 percent of the industrial capacity of the Nation is located on this land, under the control of and operated by the Federal agencies on an interest free, dividend free, rent free, cost free, and tax free basis. This makes one wonder what happened to the American institution of "equal justice for all" to which we pledge our allegiance during each flag ceremony.

This summary of problems has no value unless we are willing to utilize the information as the basis for the development of a solution. It should be readily apparent to everyone that the fabulous costs of these political empires is the primary reason for our high taxes. It is simple logic, then, to presume that by eliminating the problem of Federal invasion of private enterprise we would at the same time eliminate much of our tax problem.

While the problems appear to be massive, and any solution necessarily complex, the facts indicate that all the elements which constitute the problems are soluble by giving new force and effect to the original purposes of the Constitution. The answer to a few basic questions might help to clarify the problem, its solution, and the manner of its application.

Question No. 1. What is it the Federal corporate activities do?

Answer. These Federal agencies have invaded as active competitors almost every field of human vocation.

Question No. 2. Where did these Federal agencies get the capital to go into business as competitors to private citizens?

Answer. The American people were required to provide the capital—an estimated $250 billion gathered through taxes or included in the national debt, for the acquisition of the land, plants, and facilities involved.

Question No. 3. Do these Federal corporate activities operate with constitutional authority?

Answer. No. Actually the intent and purpose of the Constitution was to guard against such activities being undertaken by government. The Federal corporate activities exercise powers without constitutional authority, and have survived through a process of selective law enforcement with fosters political violation of the spirit, intent, and purpose of the Constitution.

Question No. 4. Do the Federal corporate acivities pay their own way?

Answer. No. They have made claims of paying their own way on occasion, but such claims are based upon extraordinary and unrealistic accounting practices which would not be permitted to private enterprise, and do not include such normal items as cost of space consumed, many operational costs, interest, dividends, and taxes. Each year these agencies seek additional tax dollars to pay their losses, underwrite their payroll, and administration or to finance hidden costs.

Question No. 5. Do the Federal corporate activities assume the responsibilities undertaken by private enterprise?

Answer. No. Instead of assuming normal operating responsibilities and supporting the civic interest, they demand services of all kinds from every level of government. Despite this political preference and privilege, which is contrary to our American concept of equality and justice, the Federal corporate activities have consistently lost more than $10 billion per year since 1948,

and in 1959 the losses are estimated to exceed $19 billion.

Question. No. 6. Isn't it true that these Federal corporate activities have only been developed to provide us with the goods and services which private enterprise has failed or refused to provide?

Answer. No. The contention that private enterprise either failed or refused to perform in any economic area has no basis in fact. Political force has frequently prevented private enterprise from functioning, but I find no instance in which private enterprise has failed to meet the challenge when it has been free to do so. In every case, without exception, private enterprise has demonstrated the capacity to produce more and better goods and services at an infinitely lower actual cost than any governmental agency has recorded.

Unfortunately, the political empire builders are not deterred by such facts. They rely on political privilege rather than productive excellence, and seek to use the force of government to subdue competition that they may dominate their fields.

From their vantage point of political preference and prestige, with easy access to fabulous quantities of our tax dollars, and with immunity from the laws which govern the rest of us, the Federal corporate activities devote themselves to expansion. They fight to maintain and expand their lush positions of power, using the wealth and means of the people they attack to sustain their conquest.

Question No. 7. What can we do to control such practices and reestablish constitutional protection for our individual properties and enterprise?

Answer. We can follow the pattern established by the Founding Fathers. They fashioned our Constitution, in which they delegated to Government a few, limited, and carefully designated powers. Not satisfied with particularizing the powers delegated, the first 10 amendments to the Constitution were added to prohibit governmental exercise of any other powers.

The ninth amendment reads: "The enumeration of the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people."

The 10th amendment reads: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

These stipulations are clear and concise, but they are not self-enforcing. They require continuous support of informed public opinion to be kept in full force and effect. They have not had this support. Little by little, through a long series of legislative acts, powers which the Government does not possess have been delegated to governmental agencies, authorizing various enterprises. These statutes are invariably accompanied by declarations of high purpose, and thus public resistance is lulled and public apathy is nourished.

Now we become aware of the enormous political power which has been syphoned from us through this process. We are confronted with the accumulative host of political empires which hold 40 percent of the land area and 20 percent of the industrial capacity of the Nation, and absorb more than half the total revenue of the Federal Government, directly and indirectly, to pay their losses and hidden costs.

With this realization we should also understand that we have the power to correct the problem. We can do this by going back to first principles and again spelling out the terms of our economic freedom in the Constitution. Only in this way can we abolish those practices which we know to be antagonistic to our history, tradition, and well-being. By regaining our economic liberty in this manner, we can eliminate the taxes which sustain this bureaucratic competition against us.

Question No. 8. What device can be used to obtain these objectives?

Answer. A proposed 23d amendment to the Constitution has been prepared. Fifteen years of research and documentation has gone into the task of making certain that it is just and equitable in every detail. These studies have brought to light more than 700 Federal corporate activities, which have been listed in the first issue of Fact Sheet, which is a series of documents analyzing the activities of various Federal agencies. In the first 30 of the agencies studied, direct losses of more than 31 billion tax dollars have been identified. This research has indicated the enormous savings in governmental costs which can result from selling the Federal corporate activities back to the American people from whom they were taken. The savings indicated are greater than the total volume of individual income taxes paid by all the American people combined. Thus it follows that, by getting government out of competition with its own citizens, the individual income tax collections would no longer be necessary and can be repealed.

The proposed 23d amendment designed to solve both the taxing and the spending problems, has been introduced into the 86th Congress by Representative JAMES B. UTT of California, as House Joint Resolution 23. It has been formally approved by the States of Wyoming and Texas. It provides that:

"SECTION 1. The Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprise except as specified in the Constitution.

"SEC. 2. The Constitution or laws of any State, or the laws of the United States, shall not be subject to the terms of any foreign or domestic agreement which would abrogate this amendment.

"SEC. 3. The activities of the U.S. Government which violate the intent and purposes of this amendment shall, within a period of three years from the date of the ratification of this amendment, be liquidated and the properties and facilities affected shall be sold.

"SEC. 4. Three years after the ratification of this amendment the sixteenth article of amendments to the Constitution of the United States shall stand repealed and thereafter Congress shall not levy taxes on personal incomes, estates, and/or gifts."

Question No. 9. What is the process for adding this amendment to the Constitution?

Answer. According to the fifth article of the Constitution, two-thirds of both Houses of Congress concurring can initiate the amendment, or, when the legislatures of two-thirds of the States adopt a resolution identical to that adopted by Wyoming and Texas, Congress will be required to call a Constitutional Convention to submit the amendment to the States for ratification. Initiated by either method, the amendment must be ratified by three-quarters of the States to become a part of the Constitution.

Question No. 10. How would the properties and facilities of the Federal corporations be sold back to the American people, and how would this alter the costs of Government?

Answer. Congress would make the rules governing the sale of the properties to the people, and would supervise the process. It is estimated that the land, buildings and facilities, even under the worst conditions, would bring better than $65 billion, all of which would be applied to the national debt. The House Government Operations Committee estimates the Government's investment in these properties to be $262 billion. We estimate a minimum return of 25 percent of this figure although recent sales of Government property, such as the synthetic rubber plants and property at Oak Ridge, Tenn., returned about three times the book value. However, by retiring only $65 billion of the national debt the interest charges on this would save the taxpayers about $1,950 million in such a year as 1959.

This would also save the amortization cost of paying off this portion of the national debt which, on a 40-year amortization basis, would mean the saving of another $1,625 million per year.

The average annual losses of the Federal corporate activities has been more than $10 billion per year and reached a gigantic $19 billion in 1959. This would not have to be provided by the taxpayers after the properties are sold.

It has been estimated that more than 1 million Federal employees are required to provide service to the Federal corporate activities, and at no cost to them, putting this burden on the taxpayers. With the corporate activities sold back to the American people, these employees will be more gainfully employed by private enterprise, and thus 1 million pay envelopes, each now containing an average $4,300 per year, would not have to be filled with our tax dollars, saving the taxpayers about $4,300 million per year.

One more item. It is estimated that at least $3 worth of goods, services, and facilities are required to maintain every dollar of payroll. On this basis, the saving of $4,300 million in payrolls would mean a related saving of $12,900 million in goods, services, and facilities.

Now let us add up the savings possible by enacting the proposed 23d amendment.

	In millions of dollars
The interest which can be saved	1,950
Amortization cost saved ($65 billion paid in 40 years) average annual cost	1,625
Losses saved by removing the source (1959 level)	19,000
Payroll saved (by removing free services now provided the agencies)	4,300
Costs of goods, services, and facilities saved (estimated at 3 times payroll)	12,900
Total domestic savings from H.J. Res. 23 (1959 estimate)	39,775

As the proposed 23d amendment would also prevent the taxing of the American people to pay tribute for foregin powers, this would terminate the so-called foreign aid programs which have produced such hatred of Americans around the world. The foreign grants and credits which would no longer be financed by our tax dollars amounts to about $5 billion per year, bringing the total potential savings under the proposed 23d amendment to $44,775 million.

We can repeal individual income taxes. They produced, in 1959, $36,900 million leaving a surplus of $7,875 million, permitting repeal of estate and gift taxes which, in 1959, yielded $1,393 million leaving an estimated surplus of $6,482 million.

Question No. 11. These billions of dollars are difficult to understand. Just how does all this affect my tax bill and my take-home pay, and how will it affect the Nation as a whole?

Answer. The proposed 23d amendment would cut the cost of Government more than half—more than enough to offset the revenue lost through repeal of individual income taxes. This means we would not be required to fill out tax form No. 1040 ever again. None of your earnings would be withheld from you. Our take-home pay would be increased an amount equal to the amount we now report on tax form No. 1040. This enormous increase in spendable income would not involve a change in the rate of pay. It would simply restore to us that which we have already earned.

This increase in our take-home pay would permit us to buy the things we have been

wanting. Whether we spend it or save it, it still goes into trade, and would automatically increase the volume of business being done by the present business community by more than 15 percent. The corporation, excise and other taxes on this increased volume of business would amount to an estimated $5,100 million of new revenue for the Federal Government.

Twenty percent of the Nation's industrial capacity now pays no taxes. This would be sold back to the American people and start paying taxes just like other similar business establishments, and it is estimated these new sources would provide the Federal Government with $3,825 million per year in taxes.

Thus, the surplus identified before of $6,482 million added to the increased revenue anticipated from the present business community of $5,100 million plus the revenue anticipated from the enterprises sold back to the people of $3,825 million would produce a total surplus (1959 estimate) of $15,407 million which would absorb the 1959 deficit of $12,900 million leaving a net surplus of (1959 estimate) of $2,507 million.

There are other items of potential savings which do not appear in this tabulation, such as the $200 million spent by the Treasury Department each year to collect the individual income tax, the $40 million in postage costs to handle the flood of mail relating to these taxes, and the $100 million in printing costs to print forms, booklets, and other items regarding income taxes. These three items alone total $340 million which might better be spent to pay off the national debt.

All this and more can be achieved by the enactment of the proposed 23d amendment introduced into Congress by Representative JAMES B. UTT as House Joint Resolution 23, and already approved by both Wyoming and Texas.

Then, instead of the agony of paying individual income taxes we will enjoy the benefactions and incentives of economic freedom.

Instead of the Federal Government operating at an average annual deficit of $12 billion per year, as it has these past 20 years, it will operate with a balanced budget and be able to pay off the national debt in an estimated 50 years.

Instead of our Government being the greatest pauper in history it will be returned to a solvent position and regain the affection of its citizens, and the affection of the citizen is the greatest asset any government can possibly enjoy.

Solution of these problems at the national level will contribute enormously to the solution of many related problems closer to us. Think of the advantage to every businessman when the threat of Federal cost-free, rent-free, tax-free, cutthroat competition is removed. Consider the endless benefits to come from a people whose genius is no longer restrained by political straitjackets or the blight of impossible taxation.

Local tax problems will be enormously simplified as the Federal corporate enterprises go back on local and State tax rolls to share the burden with the rest of us. In some areas this item can be enormous. For example, the Federal Government agencies now own 48 percent of the State of California and 87 percent of the State of Nevada.

In each State, in each city, and to each person, the situation differs, but in every instance, without exception, the economic freedom restored to us through the terms of the proposed 23d amendment means an infinite variety of benefactions beyond our capacity to imagine, just as the Constitution itself held advantages for us far beyond the dreams of those who gave it life.

Even the conflict between labor and management will be largely resolved by the amendment because it will restore to labor the reward for its toil which is now being taken away through the withholding tax. This will put a greater net increase into the pay envelope of every American than any politician or any labor leader ever dared to promise.

With such tremendous rewards available as a result of this single amendment to restore economic freedom, it would seem that we would all support this fight for the right without hesitation or limit. And I would urge that we get at it immediately. Winston Churchill once put it this way:

"If you will not fight for the right when you can easily win without bloodshed; if you will not fight when your victory will be sure and not too costly; you may come to the moment when you will have to fight with all the odds against you and only a precarious chance of survival."

Lawrence Wizard Invents Graph To Aid Investors

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article from the Boston Daily Globe for September 7, 1959, which tells about a constituent from my home city of Lawrence, Mass., Mr. Sumner Gill, who invented the graph for stock market investors.

[From the Boston Daily Globe, Sept. 7, 1959]

LAWRENCE WIZARD INVENTS GRAPH TO AID INVESTORS

(By John J. McKone)

LAWRENCE.—As to the stock market, Sumner Gill's friends think he really has it made.

He works with a mass of financial facts and seasons it with a mathematical process he calls the "positive-negative" theory.

People seek his advice. They stop his dad on the street. They come to Sumner with bundles of cash for investment.

But he turns them down.

"I'm not in the brokerage business for one thing," he tells them, "and further, I don't want the responsibility of anyone's money."

Politely, he pushed away about $150,000 for investment purposes within a few days. Frankly, he has nothing to offer except a graph he has just perfected to aid everyday investors.

It all started when word got around that he was a whiz at stocks because of a formula all his own. He is a gifted mathematician. His hobby is a continuing study of the relationship of numbers. His formula is a profound secret. No crystal ball, no mumbo-jumbo; plain figures, that's all.

Sumner is 34, single, and a maker of maps for a large Boston engineering firm. He says he is "most happy" and you may infer it is from his discovery.

He is a friendly man, but cagey. No close-ups with the camera when he displays his graph. He follows the advice of his counsel attorney Harold Meizler of Boston, who works with him on the possible marketing of his creation.

The Lawrence man remembers two occasions when the product of his labors went to the profit of others because of the human tendency to imitate and appropriate.

He drew on his mathematical genius to create a computation chart for the taxi business. It was copied and is now widely used.

Not a penny came his way

Stock-market graphs, of course, are not new. But they can be vastly different. Sumner's conception embraces more factual points of interest, yet is less complicated, he believes; more for use by the nonprofessional investor.

This positive-negative theory involves comparative quarterly dividends and the relationship of figures. That's about as far as the math man cares to go in discussing it. It has to be admitted that stocks do behave shamefully out of line with facts and figures sometimes, in transitory swings, tempered by news of the day.

"My graph will be a help to the average investor," Sumner said. "It was designed for him. There are some 13 million people who own stocks. Many of them use hit-or-miss methods and they depend more upon what they hear. I find that being my own adviser works out better."

Math factoring tells him far better than a soothsayer about the probable best future course of a stock, most of all maybe the time to sell.

A discovery of this sort could place one in an awkward position, either to keep mum and get rich, or give it to the world.

As to giving things to the world, Sumner has done that already.

Some years ago he invented the Gill Computer and never got a dime out of it, yet his device is being used by the Government today.

While he was at work in Washington he saw experienced mathematicians put in angles of oblique aerial photographs. He invented a computing chart that cut the figuring time to 5 seconds.

At age 8 he amazed friends by multiplying several-digit numbers in a quick mental process. He has toyed with the magic of numbers and their relativity for years.

He is a son of Mr. and Mrs. Maurice Gill, 160 Warwick Street, attended Lincoln Prep, Lincoln Tech and Northeastern University.

Gill has set in with some brokers to talk about his chart of stocks and methods of plotting.

"People are never satisfied with a gain in stocks," he says. "They always want more. A gain of two or three points is never enough. The process can go on indefinitely. Humans are greedy."

Weapons of Freemen

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, September 8, 1959

Mr. HUMPHREY. Mr. President, it was with the deepest regret that I was forced to inform the commander in chief of the Veterans of Foreign Wars, Mr. John W. Mahan, that I could not be with him in Los Angeles to speak before the Veterans of Foreign Wars' annual convention on September 2 because of pressing business in the Senate.

I had hoped to pay tribute to the splendid work of the Veterans of Foreign Wars and its ladies auxiliary and to pay particular tribute to the leadership of Commander in Chief Mahan, Senior Vice Commander Louis G. Feldmann—who has now been unanimously elected as the new commander in chief—Ted

Connell, the new senior vice commander, and Robert E. Hansen of South St. Paul, Minn., newly elected junior vice commander in chief.

The leadership of these men has been extraordinary, and they deserve the congratulations of every American for their work in behalf of American veterans and their families, a strong national defense, and a vigorous community welfare program.

Mr. President, I ask unanimous consent that the address entitled "The Weapons of Freemen," which I had prepared for delivery on September 2, 1959, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WEAPONS OF FREEMEN

Commander Mahan, officers of the Veterans of Foreign Wars of the United States, delegates and distinguished guests, it is an honor to be asked to address this splendid group of men who have given so much for the country we all love, who have served our country overseas, and who continue to serve at the community, the State, and the national level.

The Veterans of Foreign Wars of the United States and their auxiliary are a great power for good in this Nation of ours. I have had the privilege of seeing your effective efforts in my own State of Minnesota. I have seen the good work you have done for young people, for better, cleaner, more healthful communities. I have watched the enthusiasm and vigor with which you roll up your sleeves and go to work on a project. In fact, in just a few days, one such project will be completed, with the dedication of the Veterans of Foreign Wars Cancer Research Institute at the University of Minnesota, to stand as a symbol of all that is unselfish, public spirited, and generous among the men and women who make up your great and vital organization.

I have always admired the way in which the Veterans of Foreign Wars has been able to work tirelessly and effectively in behalf of veterans and their dependents, and at the same time give leadership and impetus to constructive proposal to help all our people.

So during this session, we saw your leadership working ceaselessly to secure a new Senate Committee on Veterans Affairs—which we should have—and at the same time working for a desperately needed balance in our Armed Forces, for urgently needed modernization of our conventional forces, for more airlift and close air support.

I have seen your splended commander in chief and my admired and respected friend John Mahan, giving personal leadership not only to the cause of improved veterans and widows pensions, but also to the cause of preventing that tragic and senseless waste of young lives which we know as juvenile delinquency.

I count it my great good fortune to have as my friend and valued consultants not only Jack Mahan, but also your dedicated and respected director of legislative affairs, Omar Ketchum, the officers of the Minnesota department such as Department Commander Don Otte and Minnesota's brilliant national councilman, Bob Hansen. The advice of men like these is not only welcome, but sought after.

And it is because of the great respect and admiration I hold for you men and your great organization that I wish to speak to you of a very serious matter this morning.

There is an old British saying: "Beware the hug of the bear." I hope that every American will remember those words when the Chairman of the Supreme Council of the Soviet Union begins what could become a spectacular Soviet success in his visit to the United States this month.

For Premier Nikita Khrushchev is a new kind of bear, so far as the history of Russian leadership is concerned. He is clever, able, forceful and vigorous—and dangerous. He kisses babies, he shakes hands, he is disarming in his manner.

But his mighty Soviet war machine is not disarming.

The Russian Premier is above all else a political man. He seems to prefer to outsmart his opponents, to trick them, to undercut them, to outmaneuver them. He can and has used force—as in Hungary—to work his will. He is shrewd, tenacious, and tough. He has survived forty years of purges, secret police, and all the other terrifying trappings of the Communist police state. He has either buried all his principal opponents, or set them to watching the machinery in obscure corners of the Soviet Union.

He would rather talk us into something than go to war about it. He would rather outsmart us, out maneuver us, out-produce us, and out-last us than to take the awful risks of a nuclear exchange.

The President of the United States has invited the Soviet Premier to visit this country. I support that invitation. And I support the President's visit to the Soviet Union.

The President has said that he hopes this exchange of visits with Mr. Khrushchev will "help create better understanding between the United States and (Russia) * * * and will promote the cause of peace."

I hope so. I truly hope so.

Khrushchev's visit to the United States may help to free him from some of the misconceptions about this Nation that he now has. It may help to convince him that the United States is stronger, wealthier and more unified than his own propaganda artists have painted us. Most of all I hope that he is able to see a Nation and a people who have worked hard, and who are working hard, to overcome great and serious problems, who are capable of enormous bursts of energy and of sustaining a high pitch of effort for years on end.

I hope he will have time to discover that ours is not a Nation of lotus eaters, not a people of soft touches. I think it is imperative that he understand that here in America there is an ever sharper and stronger competitive spirit than that which drives the men in the Kremlin.

And when he comes, let us meet him with the courtesy that is bred of strength and confidence in ourselves. We are his hosts. Let us listen to him, let us hear what he has to say.

But being courteous, we can also be candid.

Being pleasant, we can also be persuasive.

Mr. Khrushchev should feel the spirit of this people as well as see the face of our land. It will be both instructive and enlightening, I think, that the Soviet leader should hear and see precisely what the American people think and believe.

He should hear—without any shouting, discourtesy or demonstration—that Americans are ready to cooperate with the Soviet Union in every constructive way—but that we are opposed to the brutality, the oppression, the cruelty of Soviet imperialism. He should discover that the American people—not just what his propagandists call U.S. ruling circles—are passionately united in their belief that man must be free to choose his own way of government, that no nation has a right to rule another, and that freedom of speech, of movement, of assembly, of religion are not just words in a book but rather are articles of a living faith and component parts of our social order. He must see that our people actually believe these are the God-given rights of men and women everywhere. He must know that free men are prepared to struggle harder, more stubbornly, more tenaciously, and more effectively than the forces of communism. He must learn that we are prepared to live and die for these rights. We have before and are prepared to do it again.

It will be a tragic mistake if our people are led to expect too much from the forthcoming exchange of visits, if they are permitted to believe that with perhaps a new era of diplomatic courtesy, the underlying struggle with the forces of world communism has come to an end.

Yes, let us be prepared to talk, to negotiate, to confer. And let us have unfailing patience. Under the shadow of a nuclear holocaust, let us earnestly and sincerely search for a way to reduce tensions, to minimize the chances of a terrible explosion into outright war, to persuade our opponents that it is in their own best interests to resist the temptation to turn to force.

But even as our President and the Soviet Premier are talking in the White House or the Kremlin, the two worlds they represent will be colliding at a thousand points. Today the forces lock together in the great city of West Berlin and in the wild back-country of Laos. Yesterday they were joined in Tibet, Budapest, and Korea. Tomorrow?? Who knows about tomorrow?

We are engaged in a total struggle—far and away more than a question of mere military force. In this kind of struggle—economic, political, diplomatic, intellectual, scientific, cultural—everything counts. Tanks are important. So are teachers. Missiles are vital—so is money. Atom bombs are weapons—so are airways, oil pipelines, and sea lanes. Trained divisions are required—but no less do we require doctors, dentists, and diplomats—the best we have, the best we can train, are needed to strengthen our own society, and to go out to represent us in Asia and Africa and Latin America.

Underlying it all is the yawning gulf between two societies—one which gives no importance to freedom and the dignity of the human person and the other whose very roots strike down to the bedrock of the Judaeo-Christian heritage. With all its internal contradictions, the free world yet stands for the worth of the individual and a moral law.

I, for one, shall not be content to write off half the world as irretrievably lost to the dark forces that deny men and women the light of truth and the warmth of dignity and freedom.

If, then, we are soberly determined to carry on the struggle, then we should beware of falling into two grievous errors:

First, there is the danger that we may see only one narrow area of the struggle and overlook others equally important. If we become preoccupied with the military threat, we may forget the Soviet diplomatic, political, and economic onslaught. Equally dangerous is the tendency to see the struggle solely in terms of economics and politics, and to ignore the powerful military forces that confront us.

A second danger is the temptation to adopt the tactics and values of the adversary. It is said that we must fight fire with fire. In a sense this is true. We need missiles, jetplanes, and ships to defend ourselves against missiles, bombers, and submarines. We need men to fight men. We must develop an international economic strategy to counter the Communist economic offensive. We need the Voice of America to correct the distortions of Radios Moscow and Peking. In this sense we must fight fire with fire.

But we can never permit ourselves to forget that we are freemen and that we can use these weapons only as freemen use them. Communists have no such inhibitions. They can use their weapons with no holds barred, no qualms of conscience. If Radio Moscow lies about us and our objectives, it is not the part of freemen to retaliate by lying

about the Soviet Union. Russia can exploit her allies and send her tanks to crush a popular uprising in Hungary. But freemen must respect the integrity of their allies and accept their criticism of our policies.

Yes, freemen and tyrants may possess the same weapons, but they use them in a different way and for different purposes. Herein lies the fundamental moral distinction between the free world and the Communist world.

To meet the many-sided Communist challenge the arsenal of freemen must furnish many weapons, not the least of which is the weapon of an effective diplomacy. Diplomacy is the art of bargaining, of fighting for what you believe by peaceful means at the conference table.

To be effective, a diplomat must speak from a position of strength. As Carl Sandburg once said, "The cockroach is always wrong when it argues with the chicken."

To go to the negotiating table weak or divided is to invite disaster.

The United States will not be able to negotiate an honorable settlement of the Berlin issue unless we are strong and determined, and unless our strength is reinforced by the strength of our NATO allies.

Negotiation is not a substitute for a strong defense. But negotiation is the indispensable handmaiden of military strength. Our willingness to negotiate is not a sign of weakness, but an indication that we want to explore every honorable path to prevent war on the one hand or capitulation to tyranny on the other.

I support the forthcoming two-power talks. I have supported all our efforts to negotiate with the Russians since the end of World War II. To be sure, we have not yet been successful in settling the German problem or in achieving an effective arms control agreement, but on the other hand have avoided a nuclear war, and not one square inch of Western Europe has been taken by the Soviet Union.

Just as diplomacy is no substitute for military strength, the instruments of modern war are no substitute for negotiation.

I am deeply concerned about our present military posture—as is the Veterans of Foreign Wars. We are a powerful nation. We have many strong and reliable allies. We have the capacity for massive retaliation, although this capacity would be severely limited by a massive surprise attack.

Unfortunately, however, our capacity for retaliation, which serves as a deterrent to any hostile power, is not yet matched by our capacity to deal with limited aggression. We do not near have the balance forces capable of dealing with all likely military contingencies. We are weak on mobility. We are weak on the tactical weapons and manpower required to rebuff a local assault. Our weakness in these areas tends to invite adventurous nibbling from the rim of the Communist world.

In the passion and determination to balance the budget, our military posture has been thrown off balance. In a desire to get a "bigger bang for a buck," the budget-cutters have tempted Russia to run a bigger risk with their ruble.

Civil defense, for example, has been almost criminally neglected. Yet a realistic survival program is critical in a balanced defensive posture. A solid civilian defense effort would add substantially to our deterrent strength.

Let me illustrate what I mean. According to competent experts a medium-sized nuclear attack on the United States today would kill at least 50 million persons, most of them as radiation casualties.

A comprehensive shelter program to protect against radioactive fallout could save as many as half of these victims. In other words, such a civilian survival program could strengthen our country by 25 million survivors in the event of a surprise nuclear attack. This is no small factor in the military calculations of a potential aggressor, to say nothing of the humanitarian values involved.

If a fallout shelter program could save 25 million American lives, and if it would serve as an additional deterrent to nuclear attack, why has our Government not embarked upon it?

The answer we are given is: "It costs too much." Well, how much would it cost? According to Rand Corp. studies and the Gaither committee report, a shelter program of thie magnitude could be accomplished in 5 years with an annual expenditure of less than 10 percent of our present defense budget.

At present the administration is content with a voluntary, do-it-yourself, shelter building program. How can we expect State governments, local authorities, and individual citizens to take civilian defense seriously when their own national government does not even require that shelters be included in new Federal buildings or in federally assisted construction?

Our military and diplomatic weapons would be as weak reeds without a strong economic underpinning. And here, though we are strong, we can be caught napping. Soviet production today is about 40 percent as great as U.S. production. But she is gaining—and fast. Her economy is growing at a rate of 7 to 9 percent. That is approximately three times as fast as our rate of growth.

In the realm of economics, world war III has already started. Premier Khrushchev has repeatedly boasted that the Soviet Union would overtake the United States and eventually win the world to communism by economic, rather than military, means.

"We declare war upon you in the peaceful field of trade," said Khrushchev on November 22, 1957. This boast cannot be lightly dismissed. Soviet sputniks and lunik should have shattered any remaining illusions we once entertained about Russia's technological backwardness.

Furthermore, the Soviet Union has launched a worldwide economic offensive. The two main weapons in her ruble war are trade and aid, which she frankly regards as instruments of her large political purposes. She has succeeded in penetrating strategic countries in the Middle East and in Southeast Asia. By her "no holds barred" economic tactics, she was able to precipitate a serious Cabinet crisis in Finland. I was in Helsinki when it happened, and I know what I'm talking about.

We must meet this competition by increasing our aid and investment program abroad substantially, and by moving hard to make better use of our tremendous reserves of real wealth in the form of American-produced food and fiber.

You can't talk democracy and freedom effectively to a family lacking food, health, shelter, and economic opportunity. The battle for men's minds cannot even begin until at least partial victory is won over poverty, disease, and illiteracy.

In the efforts to help the newly emerging nations of Asia and Africa and Latin America to help themselves, American capital is vital—an important weapon of free men. Through the World Bank, our Development Loan Fund, and the promising International Development Association, our capital can merge with West Europe's increasing capital reserves to support economic growth in the uncommitted areas of the world.

One of the greatest of all our weapons in this vast struggle is that agricultural abundance which some consider a burden and a curse. Yet, if Mr. Khrushchev had our surplus of farm production, what would he not be able to achieve in the world.

Food and fiber in the hands of freemen can accomplish enormous good. I have seen the way American food speaks for us. It is eloquent in pleading the American way of life—from Barcelona to Athens, to Calcutta and Seoul, Korea.

The food for peace program which I have urged for years, and which is now before the Senate, would permit us to use in greater measure our supplies of grain, milk, and cotton in construotive works of peace overseas. With food and fiber we could build hospitals, schools, and laboratories. We would take our food and fiber surplus production out of the storage bins and put it to work in the great world struggle.

The idea for a White Fleet first suggested to me almost 2 years ago by Cmdr. Frank Manson of the Navy—and on which we have worked together ever since—struck me as a most useful and dramatic way of carrying out one part of an expanded American foreign policy based on the works of peace. Yes, we could very well afford to provide a fleet of ships to help carry out technical assistance programs, particularly in the field of public health, along the coasts of Asia, Africa, and Latin America. And we could in so doing provide for disaster relief on a much greater scale, and much greater scale, and much more quickly and effectively than we have provided in the past.

The deeds of a White Fleet would also speak eloquently of the American mind and the American heart.

It is significant that 34 of my fellow Senators joined me in introducing the White Fleet resolution, and that Congressman Ed Edmonson, of the House side, was joined by many of his colleagues.

The White Fleet could take its place among the peaceful weapons of freeman. To heal the sick, to feed the hungry, to cloth the naked, to rescue the distressed, to teach the illiterate * * * here are noble goals firmly rooted in the long American tradition. Pain, hunger, want, and illiteracy—these are worthy enemies—against which we should pit ourselves even if no Communist leader threatened to dominate the world. How much more vital it is, then, that we should throw our resources into the work of overcoming these evils.

Can we afford these great efforts?

How can we afford not to make them?

This magnificently endowed country of ours, this vast productive capacity, this free society which permits the energies of so many men and women to flow into the national effort can and will produce what is necessary to win the world struggle.

It will require planning, it will require decision making, but I am convinced that by voluntary planning, and if necessary sacrifice, our people and our free world allies can outproduce, outwork, and outmatch, and outfight anything that the Communists can put up against us.

And America can do this without becoming a garrison state—a modern Sparta. Indeed, we have the resources to become a modern Athens—rich in the arts of peace, strong in our arms and in our purpose.

A free people cannot expect to survive automatically. It is not written in the stars that because a society is free it will continue forever. Just because we are friendly and openhearted, the leader of the Soviet bloc cannot be expected to let us alone.

Th truth is that we cannot live without leadership, without purpose, without courage.

Edmund Burke, the great 18th century English statesman, warned us long ago when he said, "Evil triumphs when good men fail to act." We must act—but action requires purpose and leadership.

It is clear that we have nothing to fear if we boldly into the future, if we produce leadership wise enough to understand our dangers, bold enough to face them and plan their defeat, imaginative enough to rally our people to the task and the battle.

Gasoline Tax Bill

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 1, 1959

Mr. PHILBIN. Mr. Speaker, I have most vigorously supported and propose to continue to support the Federal highway construction program, which in my judgment is urgently needed to improve our national vehicular transportation travel and for the public safety.

When this program was first adopted by the Congress, adequate long-range financing measures were also adopted. While it is true that since that time, original costs of estimates on various parts of the program have increased, the original formula for raising and disbursing the funds required to advance and ultimately complete this great national project is just as sound today as when it was first proposed and adopted.

The diversion of earmarked funds has most unfortunately reduced receipts from the wide range of excise taxes which together with appropriated funds if undiverted would produce more than enough to meet all the Federal obligations under the road program and defray all necessary costs. There are several strong reasons why I do not believe that it is either necessary, or in the interest of sound principles of taxation, to impose additional taxes on gasoline.

In the first place, current gasoline taxes fall with especially heavy impact upon the American people. Heretofore, the gasoline tax had been considered to be a proper area for State taxation. In some States this taxation, imposed on gasoline at present constitutes more than 40 percent of the total purchase price of a gallon of gas.

To my mind, this is not taxation; it is a form of confiscation most oppressive in its effects. Secondly, the gasoline tax strikes at the more than 65 million automobile owners in the Nation who are required to use gas, and it thus imposes onerous taxation on ordinary consumers who are already very heavily taxed.

Moreover, as I pointed out above, it is entirely possible, feasible, equitable, and proper that Congress should and can finance this great roadbuilding program without further taxation on gasoline.

In addition, extensive roadbuilding construction overseas has been financed under the foreign aid program without the adoption of special taxes to pay the cost thereof.

I can see no logic and certainly no need or sound reason for placing additional special taxation of this kind upon American consumers. The Congress can and should provide all the funds needed to finance the program without the imposition of additional heavy special taxes.

I cannot possibly accept the argument that has been advanced here that failure to adopt this tax would bring the road program to a halt because Congress has readily at hand the means of financing the program on a solid, fundamental basis and should not hesitate to do so. This tax is discriminatory against the use of automobiles, other vehicles, and consumers, and against several great American industries and their employees and I cannot find any justification whatsoever in supporting it.

I think that the present taxes on the people and on business are already truly extortionate in many instances and are causing inestimable damage to our high American standards of living as well as to the fundamental operation of our great free enterprise system, and I express regret that Congress even proposes to add to these heavy burdens which are afflicting our people as a whole and seriously impairing the spirit and the incentives of private initiative. I greatly deplore this excessive taxation and I believe Congress should bring it down to fair, reasonable, unrepressive levels, if we have to stay here until Christmas to do it.

At this time, we need lower taxes, not higher taxes. If we could secure lower taxes, it would bring untold benefits to the Nation, to the American public, and to American businessmen, especially the small businessmen who are struggling so hard these days to make both ends meet. In addition, lower taxes would, in my humble judgment, produce higher revenues in the long run and thus assist in balancing the budget and reducing the national debt—two goals which I believe are of greatest import to the future prosperity and well-being of this Nation.

Poison in Your Water—No. 167

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Boston, Mass., Herald of December 11, 1958, entitled "Sewage Called Damaging to New England Fishing":

SEWAGE CALLED DAMAGING TO NEW ENGLAND FISHING—NAVAL DISTRICT HEAD DENIES HIS VESSELS ADD TO POLLUTION

The chairman of the New England Interstate Water Pollution Control Commission charged yesterday that "irreparable damage" may be caused New England fishing and beaches by the dumping of sewage offshore by naval and merchant vessels.

The commandant of the First Naval District issued a quick denial that the Navy contributed to pollution.

CHARGE MADE IN NEW YORK

Edward T. Dicksonson, chairman of the New England Interstate Water Pollution Control Commission and a commissioner of the New York Commerce Department, made the charge in a New York speech at a commission meeting.

New England communities spend millions annually, he said, to control water pollution, "yet these efforts are constantly frustrated by the dumping of sewage into offshore waters" by vessels with no regard for the efforts and expense of these communities.

"It is highly discouraging," Dickinson added, "for a community to construct with hard-earned tax dollars a facility which will prevent its own sewage from polluting rivers and offshore waters and then to have a vessel—with no apparent concern for pollution—discharge the sewage of hundreds of men.

"There is no excuse for this, when the proper precautions would prevent the pollution of these waters upon which so much of the economy of New England depends."

SAYS PROTESTS IN VAIN

He said the organization has protested to Federal public health authorities oil spills from vessels but that the Commission's attempt to improve the situation "have so far been largely in vain.

"It is imperative," he said, "that some action be taken before irreparable damage is done to the beaches of New England and its shell-fishing industry."

Rear Adm. Carl F. Espe, First Naval District Commandant, denied that naval vessels have polluted offshore waters and pointed out that "nobody has made any complaints to us."

ONLY FEW SHIPS

"The only possible place that might be affected," he said, "is Newport, and that's deep tidal water which would carry refuse out to sea.

"We have only a few ships at the Navy Yard, and we have strict regulations that ships must be a certain number of miles offshore when they refuel or clear their bilges.

"By the way," Admiral Espe added, "don't most of these cities dump their own sewage into the ocean?"

Little Folks' Stake in Bank Row

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, September 8, 1959

Mr. MULTER. Mr. Speaker, H.R. 7950, if enacted, would impose double taxation of earnings on those who are now free from it. I hope that most of our colleagues will agree with me that you do not attain equality or equity by perpetuating inequity.

I believe that the way to attack the inequity created by double taxation of earnings is to fight for the removal of the double taxation, not to imbed that bad principle in our law by urging double taxation of earnings on those who are now free from it.

What the American Bankers Association refers to as tax exemption of mutuals and cooperatives is not tax exemption but merely single taxation on earnings. That sound principle is what the association should stand and fight for. Our democratic way of life should not countenance taxing earnings before distribution and taxing them again upon distribution.

In this connection, I commend to our colleagues the following article by Donald I. Rogers, business and financial edi-

tor of the New York Herald Tribune, which appeared in that newspaper on August 28, 1959:

LITTLE FOLKS' STAKE IN BANK ROW

(By Donald I. Rogers)

During the last week six New York State mutual savings banks announced that they were resigning their memberships in the American Bankers Association. In July the New York State Savings Association resigned from the ABA. Seven individual savings banks immediately followed suit. In addition, 33 savings banks have reported they will allow their ABA membership to lapse when it expires August 31.

The reason for this rift among bankers is a relatively unpublicised piece of legislation pending in Washington called the Mason bill. It would provide for a tax on mutual savings banks on much the same basis that privately owned commerical banks are taxed. Because the august ABA threw its support behind the Mason bill, savings banks are withdrawing from their leading trade association.

It is causing violent behind-the-scenes eruptions in the entire banking industry, though every effort is being made to present a calm face to the public, for the banking fraternity has always felt that the public should see only a natty, if smug, visage whenever it looks upon a banker.

The fact is, though, the public—a large segment of the public—has a major stake in this internecine war as well as in the disputatious Mason bill itself.

The ordinary people of America, the nonbankers and non-politicians, we little people, in other words, have pinched and saved and exercised prudence to a point where we have deposited more than $34 billion in mutual savings banks. This is money squirreled away for the rainy day. It earns, currently, 3¼ percent in most savings banks and will begin to earn 3½ percent in most of them during the last quarter.

AFFECTS 17 MILLION

There are very few accounts of more than $10,000, for that's the limit of insurance for a single account allowed by the Federal Deposit Insurance Corporation. It is estimated that there are 17,377,000 individuals who have deposits in mutual savings banks.

Savings banks grew by fulfilling a need in the communities not met by the commercial banks—the taking of small deposits and making mortgage loans on individual homes. It was this very need which also gave rise to the Federally chartered savings and loan associations.

It is possible that a few small commercial banks might be hurt in some areas by the competition from savings banks, but, if that's what the public wants, then that's what it should get. Another larger and perhaps stronger commercial bank can always step in and take care of commercial needs. Many do it now, anyway.

The Mason bill is heralded as an instrument which will "equalize" the taxes of both the savings banks and the commercial banks. In our opinion, it would not do this. Rather it would take from the savings banks, the thrift institutions, their only advantage.

This is the ability of the savings banks to pay higher dividends on savings deposits. That is something which affects each one of us.

With the Mason bill as law, the commercial banks would be able to offer about the same interest rates as thrift institutions (savings banks). In addition, they, the commercial banks, would continue to offer their full range of banking services, on most of which they make a profit. Savings banks, under present thinking, would acquire no new services to balance things out, to make them competitive in the whole banking field, with the commercial banks.

Even if savings banks decided to compete with commercial banks in the whole spectrum of banking, most of them do not possess the personnel, the background or, in many cases, the locations and contacts to become commercial banks.

There is also this: Mutual savings banks do not operate at a profit, all earnings, after reserves and necessary expenses, being paid back to depositors in the form of dividends. Commercial banks are supposed to be profit-making corporations. They are taxed on their profits.

There is, of course, the other side of the argument. Taxpaying institutions deserve protection from nontaxpaying enterprises. However, the commercial banks haven't made out a case on this point.

Judge Schramm, of Pittsburgh's Outstanding Juvenile Court

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 3, 1959

Mr. FULTON. Mr. Speaker, my good and respected friend, Judge Gustav L. Schramm, 61, nationally known juvenile court judge, died of a heart attack Saturday, September 5, at his home, 37 Mount Lebanon Boulevard.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Pittsburgh Sun-Telegraph of September 7, 1959:

JUDGE SCHRAMM, OF PITTSBURGH'S OUTSTANDING JUVENILE COURT

Before his death, Judge Schramm realized a dream of conducing an international juvenile court institute. He was the founder and director of the Pennsylvania Mason Juvenile Court Institute that ended its sessions here Friday.

For the 10th session of the institute, the State Department sent five Koreans and a representative from Ghana, Africa.

The jurist, who never wore a judicial robe, had personally listened to the problems of more than 350,000 youngsters in nearly 26 years on the bench.

He headed the juvenile court here since it was founded by the State general assembly in 1933. Judge Schramm was appointed the judge. He was serving his third term which would have ended in 1963.

Judge Schramm built the institution into a model juvenile court. His operation has been responsible for many other juvenile courts throughout the country.

In 1958 he received the Pennsylvania Bar Association's Distinguished Service Award.

Last year he was given the highest Masonic honor—the 33° of the Supreme Council of the Scottish Rite. He received the honor in Pittsburgh during the supreme council session.

He was district deputy grand master of the 51st Masonic District of the Grand Lodge of Free and Accepted Masons. In this position, he directed the work of 15 Masonic lodges.

He was a member of the Scottish Rite and Syria Temple. His Masonic lodge was Bellefield Lodge, F. & A.M.

Judge Schramm served as president of the Pennsylvania Council of Juvenile Court Judges from 1951 to 1953 and was president of the national council from 1949 to 1951.

He was born on the south side. His father and grandfather were pastors of the historic "Rooster" Church—the German Evangelical Church of Birmingham. It was in this church that Judge Schramm met his wife—Louise Hammell, his sole immediate survivor.

Judge Schramm held bachelor of science, master of arts and law degrees from the University of Pittsburgh and one in philosophy from Columbia University.

He taught at Pitt Law School since 1916. He served on many boards of child guidance groups.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Gen. William Tunner Warns America To Keep an Adequate Airlift Prepared at All Times

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address made by Lt. Gen. William H. Tunner to the Air Force Association in Miami on September 5, 1959. General Tunner has selected this forum to again remind the Nation that the Military Air Transport Service is obsolescent and every day approaches its inevitable doom if Congress does not provide adequate new inventories enabling it to fulfill its minimum wartime mission.

Mr. Speaker, the cheapest insurance on earth is a military air transport service capable of moving. Mr. Speaker, should disaster strike, this Nation will never forgive Congress if we do not provide MATS with the tools to do its job. MATS must be modernized; MATS present fleet is obsolescent; MATS primary mission is support of SAC; MATS only mission is to serve the Nation. MATS must be modern.

ADDRESS BY LT. GEN. WILLIAM H. TUNNER, COMMANDER, MILITARY AIR TRANSPORT SERVICE, TO AIR FORCE ASSOCIATION CONVENTION, MIAMI BEACH, FLA., SEPTEMBER 5, 1959

Whenever the doctrine of airpower needs support, the Air Force Association can be counted on to do the job.

This distinguished gathering today, in which I am honored to take part, is fresh evidence of that. But there is also an extremely personal reason why I am happy to be here with you.

I want to thank you, and your fine magazine, Air Force and Space Digest, for the splendid manner in which you have supported the Military Air Transport Service at what may well be a turning point in its history.

Like all elements of military power in this country, military airlift must develop its full potential. The operators and users of military airlift need a common goal. They cannot go on being divided much longer.

For there is, I am very frank to say, a developing weakness in our military airlift system which is one of the penalties of disunity. It has not yet reached the point at which we may find ourselves unable to carry out the directives of the Joint Chiefs of Staff as laid down in emergency war plans.

Our successful missions in Lebanon and Formosa last year are the best proof of that.

But unless we act quickly and decisively we may find ourselves seriously lacking in modern military airlift at some particularly dangerous time when we will have the greatest need of it.

Let me proceed to outline the target for you as plainly as I can.

The Military Air Transport Service, by its very nature, must be an integrated system working in harmony with all the military services—with the Army and Navy and Marines, as well as the Strategic and Tactical Air Commands, and the rest of the Air Force. As an Air Force major command, we exist because we have a wartime job to do.

Under the direction of the Secretary of the Air Force as single manager, MATS provides airlift for the Department of Defense. And because we are a two-service organization with 4,000 Navy people helping us serve all elements of the Armed Forces, it is only reasonable that we should look forward to a broader development.

But before there can be unification in that broad sense, four basic requirements must be met to insure an adequate state of readiness in our strategic military airlift. These are:

1. A modern, turbine-powered fleet of strategic military transports sufficient in speed, range, and capacity to deliver our military personnel and their cargoes in sufficient quantity, at the right spot, and at the right time.

2. Effective, day-by-day training at the minimum rate to provide all-important experience for our entire system in handling personnel and cargo flights on routes tying in with wartime requirements.

3. Use of this productive capability by all the military services to permit the most efficient and economical operation.

4. Commercial augmentation at a necessary rate, consistent with the needs of the military establishment, to insure prompt delivery in peacetime, and a powerful reserve force that can be called upon, after the first surge to wartime strength, to help meet any emergency.

Let us see where we stand now on each of these four matters so that we can tell what remains to be done and how it can best be accomplished.

I wish I could tell you that we have a military airlift capability second to none, but it would not accord with the facts. The truth is that, out of our force of 1,100 aircraft, less than half are used in the strategic air transport category and all but about two dozen of these are rapidly becoming obsolete. The rest of our aircraft are assigned to such independent services as rescue, weather, communication, charting and aeromedical evacuation.

What MATS needs is a balanced strategic air transport fleet. This would include at least three specific types of aircraft—those that travel at high speeds, those that can be used for "workhorse" operations and those that can carry all types of outsize cargo which no commercial carrier can possibly handle.

We do not have in our inventory today, immediately ready for use, a single high speed, modern aircraft that we can put on alert status to fly in emergency support. We are trying to supply jet age bombers and supersonic ballistic missiles, and associated requirements, with 190-knot airlift. We are propelling ourselves into space at speeds never before traveled by man, and trying to run our supply system at a World War II pace.

Here may be the weakest link in our chain of military defense. Whether we contemplate small wars or the holocaust of all-out atomic war we cannot fly at a rate even one-half as fast as our bombers.

At the rate at which modern wars are likely to be fought, it could all be over by the time our reinforcements and supplies get there at some future D-day. We are, it is true, making a small beginning on the modernization program. But we face a threat that cannot be met by good intentions, or a symbolic development.

To replace our C–118's and C–121's, and their piston engines which are slow by today's standards, there is urgent need for a number of high-speed modern aircraft. These are intended for the alert force, the aircraft that are always kept in reserve, ready to go wherever they are needed at any time and at maximum speed.

For our C–124's, the backbone of our strategic transport and troop carrier fleets, a larger and speedier "workhorse" aircraft is necessary. We cannot get along on what we have for any appreciable time without impairing our capability. Our C–97's are about to follow our C–54's out of the inventory very soon.

It is only in the category flying outsize cargoes that we are beginning to make some progress. Here, we have the C–133's, which are fulfilling a great need. To show you what modernization really means, for every C–133 we have placed in service, we have been able to retire five C–54's, and we have been able to increase our total cargo capacity and our effective deliveries in spite of it.

That, in itself, establishes the principle that an obsolete air transport fleet can be a dangerous source of weakness, both militarily and economically. Give us the planes, and we will do the job, provided the airlift system can function at an adequate level.

It is this problem of functioning on a day-by-day basis for training that leads to so much misunderstanding of the role of military airlift, and that brings me to my second point.

The Secretary of the Air Force and the Chief of Staff have decided that our strategic airlift system in MATS must be exercised at the rate of 5 hours per aircraft per day.

It means that the entire airlift system—planning, loading, maintaining, operating and all the thousand and one factors in military air transport—must be exercised. You would not expect a championship athlete, who is out of training, to run a 4-minute mile. You could not expect an idle factory, maintained by a skeleton force, suddenly to produce at capacity.

So it is with airlift. What we have on D-Day must be in Existence at that moment; we will not have time, as we did in the Korean war, to surge from a low utilization rate of less than 3 hours to an adequate level. It took us many months to make the change over then, and we should never forget that lesson.

We will never again have that much time.

Now we could fly at a rate higher than 5 hours per aircraft per day for training purposes, but we recognize that this would not be consistent with economical management of our resources. But this does not mean, as some of our critics imply that a high utilization rate is not necessary.

Two requirements are laid upon MATS.

First, we must deploy specific forces to specific locations in support of the nuclear offensive, using aircraft that are on runway

alert or on alert in the continental United States. For this, we have our alert force which is geared to single sortie operations at a low utilization rate.

Second, we have to count on using each assigned aircraft again and again to resupply the nuclear forces, or to provide for continuing support of the Army, Navy, and Air Force elements already deployed overseas, or to deploy additional combat elements. Here, we need high utilization—constant use of every airframe in our strategic airlift inventory.

This is our one-two punch. And we had better have it ready for use when the time comes.

The question arises, of course, whether these aircraft should carry adequate loads in their daily training missions. I do not ask, "Why?" I ask, "Why not?" If all this capacity for military personnel and military cargo were not used as our planes fly on their scheduled routes, it would be bad training, bad economy and bad judgment.

All of us, as taxpayers, would have the right to ask why a transport force should not act as a transport force. The Army's trucks do not roll empty, nor do the Navy's ships sail with vacant holds. If the Air Force's strategic transport fleet were flown empty, it could cost the nation many, many millions of dollars to buy the airlift which we now supply at no additional cost.

I am frequently asked, "Does it really pay to carry these air cargoes? Can't it be done cheaper if it is sent by the more traditional methods of shipments?" That misconception, I am sorry to say, still is held by some in our armed forces.

Let me tell you what the Air Force has discovered. Since we changed our logistic concept and increased our use of air transport several years ago, we have saved nearly $7 billion by being able to cut our very large inventories, reduce pipeline time and save on initial procurement of high value items. As an additional factor, the adoption of a policy of moving all personnel overseas by air has resulted in the more productive use of sufficient personnel to staff three heavy bombardment wings.

With a modernized strategic air transport fleet, we will have the capacity at our established training rate of utilization to handle maximum air shipment requirements of the Army and Navy, as well as the Air Force. Right now, these two services still require airlift for only about half as much personnel and cargo as the Air Force. Together, they could save even more than the Air Force has been able to do thus far, if they adopted a modern—and may I add, a unified—air transport policy.

On the basis of my long experience with military airlift, not only in the Berlin blockade but flying the hump in Burma during World War II, I advise them and urge them to move their personnel and more of their cargo by air. It will have to be done during an emergency, when we may be hard put to get up to required capacity overnight. Why not begin now? In that way, we will always be prepared.

I come now to the role of commercial airlift, certainly a controversial subject during the past few years, and one which has been the source of concern for all of us in MATS. On the part of some of the more enthusiastic proponents of commercial airlift for the military, there has been a tendency to believe that commercial augmentation means commercial substitution for military airlift.

I don't believe that is possible. In an atomic war, the first shock waves will have to be borne by the military in the defense of the Nation. It is their job by training and preparation, by the heritage of service which sends them into battle to follow orders whatever the cost. Nobody questions the ability of patriotism of the commercial crews, and certainly they will be needed in great volume after that first shock is over.

But the D-Day mission belongs to the military and it will be carried out by the military, God willing, with gallantry and devotion. That being so, the training function must be preserved and amplified. There is need for the commercial augmentation program, in alliance with the military, during peacetime, and it stands to reason that it will grow. From 1955, when we spent only $4.5 million for commercial airlift, until 1959, when we spent $71 million, the increase has been enormous and it is likely to continue to go up.

We need commercial augmentation and we should buy as much as is necessary. But nobody has asked for, and nobody really wants, to have the Army, Navy, and the Air Force subsidize the commercial airlines by making unnecesary payments to them through MATS for unnecessary services. I want to add this additional precaution for what it is worth. Nobody is going to gain, and everybody is going to lose, through a prolonged annual dispute over how much commercial airlift the military ought to buy.

It is sound and proper for our military and commercial airlift to work together. It is also sound and proper for the military to buy as much commercial airlift as it needs.

But the military, merely because it is the military, cannot escape the necessity of showing good management and sound economic practice in conducting its wartime training practices. And, because training for military airlift consists of hauling milipassengers and cargo, a military organization should not be unfairly criticized or penalized for making a decent showing. In fact, that is what our critics seem to have against us principally—that we are doing a good job.

And so, in summation, I think it is clear that military airlift has made some progress toward a unified program but a great deal more remains to be done.

We need help. We need our sister services in the Air Force. We need the Army and the Navy. We need our commercial carriers. But most of all, we need public understanding and public support if we are to increase our service to the Nation. And for this, we count on the stalwart assistance of the Air Force Association now as in the past. I want to thank you again for all you have done to support us.

Montana's Favorite News Columnist John Tatsey

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. MANSFIELD. Mr. President, the Senate has put in some long hours and we have been considering some very serious matters of great importance to the Nation and the world. I think it is about time that we injected some humor and human interest into the proceedings that are known as the CONGRESSIONAL RECORD.

Montana's best known newspaper columnist, John Tatsey, has been introduced to the Senate on previous occasions and several months ago he received recognition in one of our large weekly news magazines. Despite his new-found fame John Tatsey continues to write the Heart Butte News, devoted to the everyday incidents that affect his friends and neighbors who live on the Blackfeet Indian Reservation at Browning, Mont.

Mr. President, it has been several months since Tatsey's column has appeared in the CONGRESSIONAL RECORD. Therefore, I ask unanimous consent to have a series of John Tatsey's columns, which appeared in the Glacier Reporter and the Hungry Horse News, printed in the Appendix of the RECORD.

There being no objection, the series of columns was ordered to be printed in the RECORD, as follows:

[From the Glacier (Mont.) Reporter, Apr. 9, 1959]

HEART BUTTE NEWS

(By John Tatsey)

The weather has turned out real nice and the people all moving around, don't seem to know what to do. The weather is so good they overlook what's to be done. Just walk around.

Last Friday was visitors day at the Heart Butte school gym where about 250 people gathered and the visitors made there talk about Mr. and Mrs. K. W. Bergan from Helena. Mr. Bergan made a talk on how Heart Butte School growed in the last few years when only 65 children attended, and this year there are 188 students. He said he was interested in the showing of the school and would do all the can to help keep the school growing.

Miss Harriet Miller, of Helena, State superintendent of schools, was also here for the day at Heart Butte. There she was inducted in the tribe, and given the name Morning Star Woman. The name was given to her by Sam New Breast, Sr.

Elsie Campell, of Conrad, was also a visitor, and also was taken into the tribal membership and was given the name Spear Woman by Pete Stab By Mistake. The Browning people are adopting every summer so Heart Butte will adopt from the south side of the reservation.

Mr. Wayne Pratt, from Washington, D.C., was here Friday for the open house which was held at the school gym, and he got the name Takes Gun Himself Brave Man. To take a gun by himself from the Indian ways. Name was given by Pete Stabs by Mistake.

Mr. George Wagganer of the Bank of Glacier County of Cut Bank was around Heart Butte Tuesday on business. Saw good country. he'll come a second time.

Mrs. Cowan county superintendent of schools in Pondera was here Friday and several others.

There is a shock among the People at Heart Butte when Principal and Mrs. Ducan announced there leaving Heart Butte to teach at Brady next year. They did so well here and improved the school and the children. They did a good job while they were here.

James the reporter for the Great Falls tribune was here to interview the indian Police Tatsey. He must have wasted a dozen films on him taking pictures that he is going to send to New York to some magazine outfit.

Mose the trapper is up along the foot hills trapping and musta went to sleep that one real warm day. He came down Sunday and told the Police that he saw two cowboys rope the devil and dehorn him, hard to believe.

Maggie Jiggs has been bothered by drunks all winter and one night last week she turned things around and chased everybody out of her house.

Stoles Head Carrier has been staying home good. He won't even come for his commodities.

Tatsey visited the school room and talk to the children on what they should do and not to do. The first grade children all small want to see what the jail was like so Mrs

Kennerly the teacher took them over there. When they all got in side Tatsey shut the bar door and all started screaming.

Johnnie Calf Face told his wife he was going to the store and get some things but never returned. The store keeper said he got some gas and said he had to get to the hospital as he had an infection in his arm. Maybe it was in his stomach.

[From the Glacier (Mont.) Reporter, Apr. 23, 1959]

A MINUTE WITH MI

All of the recent publicity our reporter, John Tatsey, has been getting has evidently scared him just a little. At least we haven't seen him for a couple of weeks. We did hear a rumor that he was out looking for the devil, now that Mose swears he saw a couple of cowpokes dehorn him, and was going to challenge him to a stick game, or something, but that, of course, is pure rumor.

We have welcomed a good number of new subscribers as a direct result of John's recognition, coming from California to New York, and from Louisiana to Michigan. One even wanted to know if Tatsey is a real person, or if someone just made him up.

Please believe us, Tatsey is real, and as grandpa used to say, "And there ain't another 'un like him cus while they was makin' him he broke the mold."

[From the Hungry Horse (Mont.) News, May 1, 1959]

HEART BUTTE PLANS JULY 4 CELEBRATION

(John Tatsey, Indian Service policeman, writes Heart Butte community news for the Glacier Reporter, Browning newspaper. Tatsey's columns have been frequently placed in the CONGRESSIONAL RECORD by Senator MIKE MANSFIELD, and recently he was the subject of an article in Time magazine.)

The people had a meeting held Tuesday evening and selecting their committee for the coming fourth of July celebration which will be at Heart Butte. The following members, Joe Running Crane, George Comes At Night, Sam New Breast, William Running Crane, are the collectors and John Tatsey as treasure and Joe New Robe, Paul Running Crane as camp chiefs.

James T. Ingram of Birch Creek has been around moving homes for people, moving them close to the agency where they will live in Dizzyland, a new community.

Miss Cook of the Blackfeet Hospital was at Heart Butte and Swims Under School.

Police Tatsey was down to Lower Black Tail Wednesday and up Birch Creek.

Mr. Joe Mountain Chief of Heart Butte got in on the land sale which was held in Browning last week. One piece of land he sold got in the thousands. Lucky Joe.

Frank Vielle will be living near the agency and Jenson Boy Four Horns is moving from Swims Under School to Old Agency and Dave Margan will have someone near him.

Stoles Head Carrier has left Heart Butte and now staying with John Eagle Ribs to be of some good to the old folks but John Tatsey sure misses him.

Since the weather turned warm everyone on the east end were able to walk early in the morning after a light wind. They are seen walking among the pines with sacks picking up pine knots for fire wood.

Joe Running Crane came to the reporter and told the following story. The prairie gophers and red nose gophers are holding meetings. Red noses want to have Indian days and the others want Sun Dance but the prairie gophers will win out and have the best time.

Louie and Bernard Red Head went down to Shelby where they have some work picking rocks.

Sam Calf Robe and Henry Evans are down east of Conrad working on farms.

Green grass is sure showing up since the last snow storm and people have already cleaned up their yards.

Mr. and Mrs. Peter Tatsey are just about done lambing. They had fair crop of lambs and calf crop is also good and June had a yard fence put in and had her flower bed all worked up.

Mrs. Maggie Spotted Eagle is wondering whether her party name, Maggie Jiggs, was given away with her Indian name Spear Women which was given away by Pete Stab By Mistake.

[From the Glacier (Mont.) Reporter, May 21, 1959].

HEART BUTTE NEWS

(By John Tatsey)

There was no news from Heart Butte last week because the reporter was called to Great Falls on a grand jury hearing.

Gene Head Carrer and Franklin Comes at Night were sent to Billings last week and had a hearing there and were released till June the 8th when they will be called to Federal court.

Some of the People at Heart Butte went to Conrad to put on an Indian show which turned out real good. they enjoyed the buffalo barbecue every one was filled up so they really put a dance on in the evening.

Stoles was there and Tatsey got hold of him and got him on top of a Pickup truck and introduce him to the Conrad People. he was not winking to bad but had enough stuff in him to ask to talk over the Mike and has not come home yet. he is still whooping it up the dusty trail.

One of our dancers never got to Conrad Pete Day Rider. his wife ran him off and left his dancing costume and she locked them in a trunk and lock the house and she left hard luck.

The parade was very colorful and very nice. one of the biggest ever Put on in Conrad. they are doing better each year when they celebrate the whoop up trail days and the rodeo was no bunk. Corrals and stock were first class and the natural grandstand on the side hill was not tire some buck brush and sage. only the rattle snakes and woke up but it was good sitting.

Henry Evans was one of the whoop up dancers and when he came home Sam Calf Robe saw him dancing in front of his house by himself.

Boys around Browning were taken down on the hi line to work on the rail road there were over 50 that went so it looks kinda bad for James Walters migh close up or throw the doors wide open for air. brick motel.

Pughslys has shipped in their cattle on the summer range along the foot hills of Heart Butte. they run around a thousand head.

There were two semi truck unloaded cattle cattle at twin lakes last week for Dick Stone.

There will be lunch and ice cream served at Heart Butte School May 27 for children and Parents. There will be an Indian dance in afternoon all teachers will be there and some may not come back next year so every one that dances bring your costumes. Everyone welcomes farewell Party for teachers and children dancing will be in the square.

There is a committee meeting Wensday program. They will start camping on the 26th June so we are going to put on the best we can. keep posted on the next week news column for more on the celebration.

Miss Cook from the hospital staff was down around Mad Plume district when it rained so hard and slide in the ditch and spent a lot of time looking for help. Her Patient was the one who helped her out. good luck next time.

John Peanuts and his followers from Cree Corner that north of Browning were at Heart Butte Sunday where they locked horns with the boys in stick game but took no money home. come again.

Dizzy land at Heart Butte has been slowed down by the Police but the Party goers have backed up away the Police quarters. they have a new place on Big Badger but the Police have been tipped off on this. so be careful.

[From the Glacier (Mont.) Reporter, May 28, 1959]

HEART BUTTE NEWS

(By John Tatsey)

The boys have all come home from where they worked it rain so much could not work steady.

Pete Stabs by mistake was taken to the hospital last Monday by Dr. King.

Raymond Aims Back has come home from Deer Lodge where he spent few years.

Last Sunday was a fine day and there a lot of People at church and evening the stick game was crowded.

Geo Wippert has got his lights fixed and in use and stick games players had good lights.

Old man Fish Wolf Robe was at Heart Butte Sunday his wife set him in a corner while she looked at the games when she came to where he sat he was gone. she look around for him two old ladys had him out side in a car. the two ladys were from Heart Butte. Mrs. Fish don't take him to H. B. any more.

Boys from Browning that went to work some have come back home and two or three have moved from the railroad tracks to the city home at Chester for disorderly conduct.

Stoles Came home from Conrad and went on through to Browning and has not been seen around since.

Some men had the excuse of their wives being sick so they could not go to work but they left any how and the women got well and ramble the town.

The Police at Heart Butte was driving down along White Tail Creek one evening when he saw a fellow run in the brush. when John went to see who this guy was he saw him on the other side of the creek. it was Bill Old Rock he jumped into a beaver dam. he got away.

John Powers from Black foot was at Caroline Old Rock Home Monday evening disturbing when Police came he was gone. He got away with Carolines daughter and some blankets.

Dizzy land folks are having a well drilled so they will have good water to drink each Monday morning.

Sam Choate was taken to town to Dr King. he was down with the flu.

Henry Duck Head came to Heart Butte Sunday and went to dizzy land and pretty soon one women came after Police. Every one was hiding in a coulee. Henry took over.

Some people are doing some remodeling on the statue of the Virgin Mary at the grave yard.

[From the Glacier (Mont.) Reporter, June 4, 1959]

HEART BUTTE NEWS

(By John Tatsey)

Decoration Day at Heart Butte was sure nice to see the people fixing the graves of their loved ones. There were eight large flags out for soldiers; the graveyard was really beautiful.

The doings at Starr School were good and there were lots of people there to look on different races pulled off. The outstanding runner was Alex Doore, son of James Doore, and the Black Lodge dance was crowded. Visitors from other tribes all received gifts, evening to talk and fix up the 4th of July blankets and money; all had plenty to eat.

Mr. and Mrs. Roy Doore were at Heart Butte Sunday. Decorated Mrs. Doore's brother's grave, a hero of World War II.

Henry Williamson and Bob Ploots, of Rexford, were at Heart Butte last Sunday, where Bob was looking, and said it was beautiful country, and also spotted some beautiful girls. He may come back because he is single.

All teachers have left for different parts to spend the summer. Mr. and Mrs. Ducan left for Missouri to visit their folks. Mr. and Mrs. Hobbick are going to Missoula, where he will attend summer school. And Richard Gregory and wife also left for across the mountains. Only Mr. and Mrs. Hiram Crawford are still at Heart Butte; they will be leaving for Havre soon.

John Powers, of Blackfoot, was around last week disturbing at Heart Butte. When he left there was a young woman missing, so everyone knew that he got away with her and some army blankets. He went to Idaho. The young woman was Cathrine Old Rock Mad Plume. Lucky man.

Bob England is left to be a caretaker of the Heart Butte school buildings. Tatsey will be there.

Rev. Father Cassidy from Spokane is here visiting Father Mallman; he came Sunday and was taken out by Police Tatsey. He was safe on his trip to Heart Butte.

Stoles Head Carrier got in the big money last week; the first thing he did was to buy a Nash car. The last he was seen was on Two Medicine on the shortcut to Heart Butte sitting with two flat tires and no gas and had his car brought in for repairs and hitchhiked out.

Mrs. Margaret R. Crane came to town and she met Wesley Ackerman; she told him she hired Henry Morning Gun for a baby sitter and Henry was taking care of Joe R. Crane in the car.

Mr. and Mrs. Dick Faught lived long enough in Browning to be grandparents. They are lucky to have a granddaughter.

There is a piece of writing in the Cut Bank paper where Frank P. Sherburne mentioned where the name Blackfeet came from. Next week from Heart Butte News will come the real story.

There will be a meeting at the George Wippert place Friday evening to discuss the program for the celebration at Heart Butte on 4th of July.

Peter Tatsey has all his ground plowed and disked and ready to seed into oats and barley; he has about 40 acres.

The holiday weekend last weekend caused some people to lose one another—one lost her husband and another lost his wife.

[From the Hungry Horse (Mont.) News, June 5, 1959]

WOLF ROBE STRAYS AT HEART BUTTE

(John Tatsey, Indian Service policeman writes Heart Butte news for the Glacier Reporter, Browning newspaper.)

Old man Fish Wolf Robe was at Heart Butte Sunday his wife set him in a corner while she looked at the games when she came to where he sat he was gone. She look around for him two old ladies had seen him outside in a car. The two ladies were from Heart Butte. Mrs. Fish don't take him to Heart Butte any more.

Boys from Browning that went to work have come back home and two or three have moved from the railroad tracks to the city home at Chester for disorderly conduct.

Stoles came home from Conrad and went on through to Browning and has not been seen around since.

Some men had the excuse of their wives being sick so they could not go to work but they left any how and the women got well and ramble the town.

The police at Heart Butte was driving down along White Tail Creek one evening when he saw a fellow run in the brush. When John went to see who this guy was he saw him on the other side of the creek. It was Bill Old Rock he jumped into a beaver dam. he got away.

The boys have all come home from where they worked it rain so much could not work steady.

Pete Stabs by Mistake was taken to the hospital last Monday by Dr. King.

Raymond Aims Back has come home from Deer Lodge where he spent a few years.

Last Sunday was a fine day and there a lot of people at church and evening the stick game was crowded.

George Wippert has got his lights fixed and in use and stick games players had good lights.

Some people are doing some remodeling on the statue of the Virgin Mary at the grave yard.

[From the Glacier (Mont.) Reporter, June 18, 1959]

HEART BUTTE NEWS

(By John Tatsey)

The well in Joy Land has been completed. The first one was not any good so they drilled at another place and struck good water.

Leo Overfelt state stock inspector from Great Falls was around Heart Butte checking on some stock.

U.S. marshall from Great Falls was at Heart Butte serving sobpoenas on the Head Carrier and Comes at Night cases.

George Comes At Night and family and Mr. and Mrs. William Running Crane drove to Pablo to play stick game with the Flathead Indians last Sunday.

Gene Head Carrier and Franklin Comes At Night were called to Great Falls last Monday. Stoles Head Carrier was along and said that he had a fine trip but never knew when he left the Falls till he got home on Tuesday morning.

The sheriff from Conrad and deputy from Dupuyer were here Sunday and also Mr. Leo Overfelt stock inspector from Great Falls.

Week before last when the rivers were bank full Miss Cook the field nurse made her rounds at Heart Butte. She went down to Stoles when she drove into an old crossing which was dammed up by beaver. The water was so deep she could not open the doors of the car but managed to get out into the water waist deep. Stoles only had a hangover.

Last Sunday the people had a gathering at the Bull Shoe ranch where they had horse races. Joe Carlson from Two Medicine brought four of his running horses.

Lloyd Spotted Eagle was picked up by James H. Walters last week and was taken to the nut house at Warm Springs. There are more around that are heading there.

The reporter from Heart Butte was going to tell in this news how the Indians got the name Blackfeet. Will write a good story on it when the writer has a little more time. Its Blackfeet and not Blackfoot and did not come from burned grass. It will be a short story.

There was a lady from the east during the track meet at Starr School who wanted to know when was the Blackfeet Indians happiest day they enjoyed. A man by the name of Flood Water told her that the happiest time was when they are jerking meat. White man calls it drying meat.

The committee at Heart Butte had a meeting last Friday and had their plans. They are going to have horse races on the first day of July with purses given and dancing from the 2 to the 7. They will also be other Indian doings and they also mentioned about drinking and disturbance in camp. They are going to have a good bunch of young Police officers and anyone comes in a drunk condition will be picked up and pay a fine large enough. If he can not pay it he will be sent to J. H. Walters till the celebration is over so come sober and have a good time. Veterans day is on the 4th. Everyone that has horses to run bring them and make some expense money. Everyone welcome and it wont cost anything. Also bring your cameras.

Tatsey and Stoles Head Carrier and others have gone to Great Falls Wednesday to attend Federal court.

The 4th of July races will be from 100 yards to a half a mile. Four horse races and foot racing.

There was a car wreck at Little Badger Tuesday morning with four person in it. All shakin up not bad.

There was an old man who is blind. One morning his son was fighting his wife. The old fellow went to stop them. He got hold of his son's wife around the waist and was sure hanging on.

Negro Group Takes Sensible Stand Against Forced School Integration

---

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 9, 1959

Mr. FORRESTER. Mr. Speaker, I recently read an editorial which appeared in the Herald, a Negro newspaper published at Anderson, S.C. It was written by Davis Lee, a man who had labored many years for the welfare of his race and who stated in his editorial that integration is not a cure-all for the Negro's problems.

Forced integration is opposed by most southern Negroes, whose views, along with the views of the white people of the South, have not been taken into consideration by those who, for political or financial gain, are bringing about trouble between the two races.

Under leave to extend my remarks, I include an editorial from the Columbus Enquirer, Columbus, Ga., which is based upon a wire sent to President Eisenhower by Samuel H. Moore, president of the Southern Negro Development Association of Alabama, who says emphatically that "both races in the South are unalterably opposed to the integration of races in the public schools."

The editorial follows:

[From the Columbus (Ga.) Enquirer, Sept. 3, 1959]

NEGRO GROUP TAKES SENSIBLE STAND AGAINST FORCED SCHOOL INTEGRATION

A highly interesting development occurred in the school integration fight when a Negro group in Birmingham wired President Eisenhower that most southern Negroes do not want forced integration.

Samuel H. Moore of Birmingham, president of the Southern Negro Development Association of Alabama, said the message was sent to the President on behalf of that organization. He stated that his group has more than 5,000 members in Alabama.

The president of the body told the President that:

"I assure you both races in the South are unalterably opposed to the integration of races in the public schools.

"Racial hate and racial prejudice that was dead is now reconstructed. Threat of forceful integration has created fear and hate in many of our white friends."

"Since this is free America, why not put your racial policy upon voluntary action of the citizens, not forceful compulsion? Why not have the Government take a poll of the majority of the southern Negroes?"

The president of the Negro group asserted that such a poll should be confined to southern Negroes because "our northern Negro brothers * * * do not live in the South and therefore do not understand our southern bicultural society."

Moore urged Mr. Eisenhower "not to use force to integrate the schools and deny our race a major symbol of our progress—all-Negro schools." He added that "for lasting and enduring advancement of our race our progress must be achieved with good will from the white people among which we live."

There is much good sense in what this Negro has to say against forced integration.

There is much in his point in behalf of the all-Negro schools.

The agitators do not care what the southern Negroes as a whole think about the desegregation issue. They argue long and loud for the constitutional rights of those who do not want to go to school with the white children. These agitators give little consideration for the rights of the whole mass of the Negro population in the South. Though they accept token integration as a means of making progress in the fight, the aim of the agitators is far beyond the mixing of the races on a small scale. They want the door of white schools opened wide to Negroes—to all Negroes.

The race baiters are yelling loud for the rights of those who are perfectly satisfied with matters as they are.

There are some few Negroes who allow themselves to be used by the professional racial disturbers, but we are sure the the great majority of the Negroes of the South do not look with favor upon this upsetting influence that is sweeping the South in a move to effectuate the 1954 ruling of the Supreme Court for desegregation.

The Birmingham organization made a good point in stating that "racial hate and racial prejudice" are being "reconstructed." This is to be deplored. The members of both races are put to a great disadvantage as a result.

Negroes want to go to their own schools. This movement for integration has spread an unwholesome atmosphere over the country. Especially is this true in the South, where the Negroes and their white friends are greatly disturbed by the agitation.

Florida Leads Nation in Educational Television

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. HOLLAND. Mr. President, some of my distinguished colleagues in their comments in recent years have indicated that they are inclined to feel the South is a little backward in the field of education. Therefore, I hope they will listen to this brief statement of mine and then read the article from the Tampa Tribune of September 7, 1959, entitled "Florida Leads Nation in Educational Television" which I ask unanimous consent to have printed in the Appendix of the RECORD.

Florida now has educational television stations in operation at Miami, Jacksonville, the Tampa-St. Petersburg area, and the University of Florida in Gainesville. A fifth station is expected to go on the air early next year at Florida State University in Tallahassee.

The people of Florida are rightfully proud of such progress in this new field of education.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tampa (Fla.) Tribune, Sept. 7, 1959]

FLORIDA LEADS NATION IN EDUCATIONAL TELEVISION

TALLAHASSEE, September 6.—Private organizations and individuals are playing a big role in placing educational television before thousands of students in Florida.

Money, equipment, and services totaling more than $1,500,000 have been put into the program by foundation grants, the Federal Government, and local groups.

James Etheridge, Jr., executive secretary of the Florida Educational Television Commission, said the State's leadership in the E–TV field was one of the reasons for the contributions from non-State sources.

Commercial television stations and other businesses and civic, education, and labor interests have helped put the State's four educational TV stations into operation. This is more stations than any other State has on the air, Etheridge said.

The four stations are in Miami, Jacksonville, Tampa-St. Petersburg, and at the University of Florida.

The fifth station, at Florida State University, is expected to go on the air early next year.

Etheridge said the State probably is paying the biggest part of the E–TV costs, but grants from two funds established by the Ford Foundation have been substantial.

Grants totaling $563,000 have been made by the fund for adult education and the fund for the advancement of education. The Ford Foundation itself has put in $52,000 and the Federal Government has provided about $100,000 to pay programing costs.

But the stations at Jacksonville, Tampa-St. Petersburg, and Miami have drawn even greater support at the local level.

The Politically Popular Policy of Bloated Spending Programs No Excuse for Creating Economic Calamity

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 12, 1959

Mr. COLLIER. Mr. Speaker, the House of Representatives of the United States is charged with the constitutional responsibility of spending the tax dollars of this Nation. As a Member of the House, I am aware of how easy it is for some to say "yes" to every vast spending program that dips into the barrel at the Federal Treasury—and obviously some seem to think it is a bottomless barrel.

In this session of Congress my voting record for economy and a balanced budget is undeniably among the top 10 percent of the House and the Senate. I feel an obligation to the citizens of this country to use some prudence in the allocating of their tax dollars and in so doing, control inflation which attacks those who are least able to protect themsleves.

The expanded spending programs espoused by the do-gooders which create inflation do more harm than good to the very people who can least bear the burden of higher living costs—the widow attempting to raise a family on the proceeds of an insurance policy, the old folks dependent on pensions and the millions of people in this country with relatively fixed incomes.

I would like to bring to the attention of my colleagues an authoritative study of the effects of our living and spending far beyond our income and the hard inevitabilities we face as a consequence. This report is by Director of the Bureau of the Budget, Maurice B. Stans and appeared in the July issue of Reader's Digest:

MUST WE DELUDE OURSELVES INTO DISASTER?

As the Federal Budget Director—and as an American and a certified public accountant—I must pass on to you a solemn warning. Unless we as a government insist right now upon living within our income, we face certain hard inevitabilities. Either there will be more tax increases, piled on top of our already heavy tax load, or there will be a mounting national debt and growing inflation with disastrous rises in the cost of living and a dangerous weakening of our national strength.

Either way the prospect is menacing. Few of us want to pay more taxes. And all of us have been victimized by past cycles of inflation, the economic fever that jacks up the prices of everything we buy, that mercilessly drains our earnings and savings. Yet inflation is a manmade sickness, one we can combat—if every citizen recognized the causes and does something about them.

Inflation feeds on the delusion that the Federal Treasury is a free-flowing well, that money from Washington doesn't cost anyone a cent. It is this something-for-nothing delusion that allows special-interest groups to smooth talk the public into believing that all their Federal spending proposals are possible. This is why gigantic spending bills are passed without tax measures to pay for them. This is why astronomic national spending goes on regardless of the revenue that comes in and despite the efforts of economy-minded members of both parties in Congress. And this is why these pressure groups are trying to push us headlong into ever greater debt, heedless of the nightmare of inflation that would result.

The President, his Cabinet, all the rest of us in the executive branch feel it is essential that America wake up and face these grim facts. Behind this conviction is a significant series of events you should think about.

Despite our warnings a year ago against too much panicky recession spending, and in the face of dwindling tax receipts, Federal spending surpassed all expectations. Last September, when staff experts at the Bureau of the Budget came to me with sheaves of figures for the 1959 fiscal year, our worst fears were confirmed. The Government was

piling up the biggest 1-year budget deficit in peacetime history—a staggering $13 billion. And, with a nearly $3 billion deficit from the year before, the Treasury for the 2 years was in the hole by almost $16 billion, or an additional new debt of $360 for every family across the land. The total national debt had risen to an alltime high of $285 billion, or some $6,400 for every family.

To add to our worries high Government officials returning from trips abroad met us with disturbing news. They told us that other nations were beginning to question America's financial stability, and its will to face up to dangerous fiscal practices that in the past had almost destroyed them.

If you are just a citizen who doesn't want economic calamity for yourself and your children, then insist on prudent government. To block the self-serving special interests that are ceaselessly driving us toward bankruptcy, I urge you to mobilize yourselves. Make yourself heard. Now. It is your own future that is at stake.

Found: The Ideal Community for Locating New Industries

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. WILEY. Mr. President, we recognize that industrial growth and expansion play an extremely significant role in our economic progress. Throughout the country, communities are taking action to find ways and means to encourage the growth and development of new industry. The objective is to benefit the community economically, and also provide more consumer goods to meet the needs of our people.

In providing the climate in which new industries can grow and prosper, there are a wide variety of factors involved, including: equitable taxes, adequate water, electrical and other utilities, a network of transportation, availability of an adequate labor force and other features that augur well for industrial progress.

Naturally, there is no utopia in this, or in other fields. In Wisconsin, and across the Nation, however, communities are making constructive efforts to provide the kind of climate that will induce the development of new industries. The task is a complex one. Communities can often benefit from guide lines laid down through large-scale surveys.

Recently, the Milwaukee Journal's business news carried a useful article outlining an arrangement of factors which are most conducive to industrial growth, entitled "Found: The Ideal Community for Locating New Industry." Reflective of the kind of accommodation which communities are striving to provide, in part or wholly for industrial purposes, I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee (Wis.) Journal, Sept. 6, 1959]

FOUND: THE IDEAL COMMUNITY FOR LOCATING NEW INDUSTRIES—LOW COSTS, EQUITABLE TAX DISTRIBUTION ARE FEATURES OF "INDUSTRIAL UTOPIA"

At last an ideal community has been found for industrial development—a community in which almost any company would be happy to locate a new plant.

The community was found by compiling the factors most sought by industry in selecting sites for new plants.

The ideal community, created from a study of more than 800 different factors listed by national firms in comparing communities and selecting locations for new facilities, was described in a recent address by H. McKinley Conway, Jr., president of Conway Publications, Inc., North Atlanta, Ga., who is regarded as an authority on industrial development.

Conway's "Industrial Utopia," he said, "reflects the composite thinking of the top planning experts in the Nation's 'blue chip' firm—the kind of firms almost every community would like to have."

What is the makeup of Industrial Utopia?

LOW-COST LEVEL CITED

One is a production cost level that is below the national average. Another is a fair and reasonable distribution of taxes.

Conway pointed out that the cost of producing goods in Industrial Utopia is below the national average not because of low wage rates but because of high efficiency and productivity inherent in the character of the labor force.

There is an adequate labor supply available, and good relations between local labor and the industries already located in the area, he added.

"Moreover," Conway said, his Industrial Utopia "has a right to work law and intends to keep it."

In addition to an equitable distribution of taxes, he said, the ideal community also has a low per capita debt.

"There are no giveaways or tax exemptions for new industry," he added, "but Government officials are noted for the fine cooperation they give in extending utilities and providing other assistance for new plants."

Conway noted that Industrial Utopia is a small city, one of less than 100,000 population but whose population is steadily increasing. It is a satellite community that offers easy access to a major city nearby. About two-thirds of "the significant new plants" in the United States are being located in such cities, Conway said.

GOOD TRANSPORTATION FACILITIES

Industrial Utopia is located on a major rail line, has feeder airline service connecting conveniently with larger systems, has a hard surface airstrip with lights and radio facilities, and also is on a navigable waterway for inexpensive transportation of bulk materials.

The community also is just off a branch of the new Federal Interstate Highway System.

Industrial Utopia, Conway continued, "has a comprehensive planning and zoning program with adequate facilities and long-range expansion plans for traffic control, parking, schools and hospitals, sewage handling and water supply.

Also, Conway added, "the city fathers have seen to it that there are plenty of good plant sites available at reasonable cost. Good tracts along rail lines and major highways have been reserved by zoning or by direct acquisition."

PRIVATE FINANCING AVAILABLE

Industrial utopia also has alert private groups ready to assist in financing a new plant.

Industrial utopia has a well balanced economy and "is geared to handle industries of the space age. There's a vocational training program for developing new skills. More important," he added, "there's a top flight engineering college nearby."

The ideal community, he continued, has an honest government, an effecitve law enforcement program with a crime rate well below the national average and an efficient fire department.

The community also has a strong chamber of commerce, well financed and well staffed.

IS THERE SUCH A CITY?

An outstanding feature of the ideal community, Conway said, is its wealth of recreational activities—swimming, fishing, hunting, and other sports. In addition several major sports events are held each year.

The community also has good visitor accommodations—a new motel on the outskirts or a new wing on the hotel downtown. The sale of alcoholic beverages is legal but carefully controlled.

The community also shows interests in cultural pursuits, and there are churches for the major faiths. There is an alert newspaper and radio station. Television reception in the area is good.

Is there such a community as Industrial Utopia?

No, Conway admitted. But the important thing, he added, is that "most of the factors which affect a community's desirability for industrial development are controllable—the citizens of an area can do a great deal to make their area more attractive if they set their minds to it."

Invasion of Canal Zone Planned for November 3

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two news articles from the Panama American of Wednesday, August 26, 1959, which reports that certain radical elements in the Republic of Panama plan an invasion of the Canal Zone on November 3, 1959:

AQUILINO: "WE'LL MARCH"—SHRUGS OFF FLOOD'S WARNING AGAINST INVASION OF CANAL ZONE

Panama Assemblyman and former Foreign Minister Aquilino Boyd indicated today he would go ahead with plans to march into the Canal Zone on Panama's Independence Day, November 3, despite U.S. Representative DANIEL J. FLOOD's speech Monday against such a proposal.

Boyd emphasized that there is no desire to provoke hostile or violent demonstrations, "but FLOOD and all America can be sure that on that day Panamanians, with a greater motive than ever, will march peacefully into the Canal Zone as an act of reaffirmation of Panama's sovereignty over isthmian territory."

In his speech before the Patriotic Order of Sons of America at Harrisburg, Pa., FLOOD said Boyd's plans for the proposed "peaceful occupation" of the Canal Zone included a "mass invasion by Panamanian demonstrators" and suggested that the Panama Government take steps to prevent any such revolutionary forays into the Canal Zone.

FLOOD said the demonstrators plan to take up seats on the doorsteps of the Panama

Canal administration building, at the portals of the police stations, at the churches, in the clubhouses, and other places of prominence and described it as conforming to the long-range Communist program of indirect warfare.

Boyd, a leader of the Third Nationalist Party, declared that FLOOD's eccentric pronouncements serve the cause of Panamanian nationalists more appropriately than the reactionary principle which induced him to deliver such an address.

He indicated that FLOOD has again made it evident that the time has come for Panama to take action and stop begging for a better deal from the Government of the United States.

In his address, FLOOD said the proposed march, "if permitted to occur, would be as gross an indignity to our Government and flag as if made against the continental United States; and should be so regarded and treated, for it would greatly impair U.S. prestige throughout the world."

The Congressman claimed that advance world publicity "with agitations in Panama (is) aimed at forcing the Canal Zone sovereignty question into an international court for arbitration, or to the United Nations.

Boyd first suggested a peaceful November 3 march into the Canal Zone to mark the 56th anniversary of Panama's independence from Colombia, some weeks ago during a Spanish-language "Meet the Press" program.

PLANS FOR CANAL ZONE INVASION REAFFIRMED—BOYD SAYS MARCH WILL BE CARRIED OUT ON NOVEMBER 3

Former Foreign Minister Aquilino Boyd said yesterday that the proposed peaceful invasion of the Canal Zone as an assertion of Panama's sovereignty over that territory will be carried out November 3.

Boyd issued a press statement in answer to a speech by Representative DANIEL J. FLOOD, who urged the United States to warn against any demonstrations in the Canal Zone.

Boyd, who is one of the leaders of the Nationalist Party, has proposed that Panamanians en masse enter the Canal Zone on November 3, the national independence day, to signify Panama's sovereign rights. Boyd is also one of the proponents of the 50–50 split of the gross earnings of the canal between Panama and the United States.

One of Boyd's close followers, Ernesto Castillero P., has said that on November 3 Panamanians will sit at public places in the Canal Zone.

In his press statement yesterday, Boyd said: "There is no desire to display hostility nor to provoke violent demonstrations in the Canal Zone on November 3, but Representative FLOOD and all America can be sure that we Panamanians on that day, with all the more reason than ever, will go to the Canal Zone, peacefully as a gesture of reaffirmation of Panamanian sovereignty over Isthmian territory."

Boyd referred to FLOOD as "Panama's No. 1 enemy" and said FLOOD's pronouncements help more the cause of Panamanian nationalists than the reactionary purposes which moved him to deliver that speech.

The Poll Tax at Long Last To Get the Ax

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial of the Louisville (Ky.) Courier-Journal, in its issue of September 6, entitled "The Poll Tax at Long Last To Get the Ax." It deals with the substance of the issue, and calls attention to the leadership of our colleague, the distinguished senior Senator from Florida [Mr. HOLLAND], in offering the proposed constitutional amendment.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Courier-Journal, Sept. 6, 1959]

THE POLL TAX AT LONG LAST TO GET THE AX

There are more ways than one to skin a cat, or to accomplish a social reform. The point has been proved again by the long fight to abolish the poll tax as a requirement for voting.

For at least two decades, it has been apparent that a large majority of Americans find this restriction on a basic right distasteful and undemocratic. A product of the late years of the 19th century in the South, the poll tax was designed not only to curb Negro voting, but to deny the ballot to poor whites who had shown a liking for the Populist movement. It has been a handy tool of corruption for political machines in some southern cities. They have made a practice of buying up blocks of poll tax receipts, using them for controlled voters they could herd to the ballot box.

Despite all the sentiment against the poll tax, it has been impossible up to now to uproot it from its last sanctuary in the Deep South. Several Southern States have dropped it voluntarily—Tennessee, North and South Carolina, Florida, and Louisiana. It lingers in only five others, Alabama, Arkansas, Mississippi, Texas, and Virginia. Action by Congress to outlaw the poll tax altogether as a voting restriction in Federal elections has been tried repeatedly. The House of Representatives passed repealers in 1942, 1944, 1946, and 1948. Each time the reform was dashed to pieces on the rocks of a Senate filibuster.

Now at last the issue seems on its way to solution, by means of a constitutional amendment. Moderates proposed this method years ago. It was considered too slow by eager proponents of repeal, and they kept butting their heads against the stone wall of the Deep South resistance.

MUCH SOUTHERN SPONSORSHIP

Even now, the National Association for the Advancement of Colored People is opposing the amendment method. We believe they are ill advised. The cardinal point is to get rid of a restriction that denies so many people the franchise, and the way now lies open to get a two-thirds majority in the Senate for an amendment to the Constitution. It should be no real problem to follow with ratification by three-fourthes of the State legislatures.

The bill for a constitutional amendment is offered by a respected Southerner, Senator HOLLAND, of Florida. A dozen other southerners are among its 66 cosponsors. Three of them are even from States that still retain the poll tax, JOHNSON and YARBOROUGH of Texas, MCCLELLAN of Arkansas. Lined up with them are many northerns liberals. The new votes from Hawaii and Alaska can be counted on.

The amendment only concerns election to Federal offices. It leaves to the States their right to make such rules as they see fit for election to local and State offices. An amendment to the Constitution is the long way around to reform, but it is the safe and sure way.

Baltimorean Now Heads Catholic War Veterans

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. GARMATZ. Mr. Speaker, commendable it is for a loyal citizen of our country to be singled out for distinction as the head of a nationwide patriotic organization. One of my constituents has just been accorded such a deserved tribute by the Catholic War Veterans of the United States at their organization's 24th annual convention in Pittsburgh. He is Robert T. O'Leary, an attorney of Baltimore City, residing at 3564 Elmora Avenue in the Third Congressional District.

The fact that the purposes and principles of this organization are directed toward the preservation and advancement of our Nation's institutions is worthy of note, and our congratulations go to the guiding head of such an association of proven patriots.

The account of deliberations at the recent convention is set forth in the current issue of the Catholic Review of Baltimore and, under unanimous consent, I include this article in the Appendix of the RECORD:

BALTIMOREAN NOW HEADS CATHOLIC WAR VETERANS

Robert T. O'Leary, Baltimore attorney, last week was elected national commander of the Catholic War Veterans of the United States at the organization's 24th annual convention in Pittsburgh.

Mr. O'Leary, who is a veteran of World War II, lives at 3564 Elmora Avenue.

He has been serving as national first vice commander, and is a past national trustee, and past department of Maryland commander. He succeeds Peter J. Hopkins of New York.

Two other Baltimore veterans also won national office. Joseph J. Stumpf was elected national officer of the day, while Henry C. Einolf, past department commander, was appointed adjutant general.

Mrs. Irene Hennigan, Middle River national treasurer and past department auxiliary president, was elected national second vice president. She also received the national president's award.

A resolution deploring the recognition and honor afforded Soviet Premier Nikita Khrushchev by an official White House invitation to visit the United States was adopted by the 3,000 delegates.

The same resolution urged a campaign of prayer calling upon almighty God to direct and guide the officials of our Government in any relations they may have with the Soviet Premier.

In other actions, the group urged Spain's admission into the North Atlantic Treaty Organization; deplored the exclusion of Nationalist China from the 1960 Olympics; restated its opposition to admission of Red China into the United Nations; recommended ouster of the Hungarian delegation from the United Nations.

It also commended President Eisenhower for his policy on West Berlin; supported the strengthening of internal security laws along lines recommended by the House of Delegates of the American Bar Association, and commended Postmaster General Summerfield for his campaign against indecent literature in the mails.

John Albert Johnson, of Minnesota

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. HUMPHREY. Mr. President, this year marks the 50th anniversary of the death, on September 21, 1909, of John Albert Johnson, newspaper editor, lecturer, and Governor of Minnesota.

Johnson, the son of Swedish immigrants, was born on July 28, 1861, near the frontier village of St. Peter, Minn. The struggles incident to his early life of poverty probably influenced his character and temperament in later life. At the age of 13 he left school to work in a grocery at a wage of $10 a month. During this period of his life he read extensively and practiced oratory and debating in that favorite school of politics, the country store. His early environment gave him a lasting sympathy with the common man, and despite hardships he preserved a sense of humor and buoyancy of spirit which enabled him to struggle on in the face of discouragement.

Subsequently he was a clerk in a drug store and then in a general store in St. Peter. He took an active part in the life of the community as a member of a debating club, fraternal organizations, and the National Guard. He sang in a church choir and was for some years secretary of the Nicollet County fair. In the early eighties he became a registered pharmacist, but his health suffered under the confinement of indoor work, and he became a supply clerk, working for a firm of railway contractors in Iowa and Minnesota.

In February 1887 Johnson became editor and half owner of the St. Peter Herald, and through the newspaper he began to be known beyond the limits of the town. His contact with other newspapermen in the Minnesota Editors' & Publishers' Association, of which he was elected secretary in 1891 and president in 1893, created for him a body of influential friends throughout the State.

Although his district was normally Republican, Johnson was elected to the State senate as a Democrat in 1898. He failed of reelection in 1902 by a narrow margin. In 1904 he was nominated and elected Governor in an extremely bitter campaign. He was given a plurality of 6,000 votes at the same time that Roosevelt carried the State for the Republican national ticket by 146,000, and was reelected by greater margins in 1906 and 1908.

As Governor, he worked harmoniously with Republican legislatures, and through his influence legislation was enacted providing for employers' liability, the abolition of railroad passes, schools for delinquent girls, and a reform of the civil service. In addition, he was instrumental in effecting local and national reforms in insurance laws. His prestige as Governor was not diminished by the quiet, though determined, method employed by him in dealing with the miners' strike of 1908. One of his most notable acts in office was his veto, in 1909, of a tonnage act on iron ore, on the ground that such an act would establish double taxation of a certain class of property, and would work great hardship on one section of the State.

Johnson was a popular Governor. His romantic rise endeared him to the public mind while his simple friendliness completed the conquest. He was dignified without being pompous. During his years as Governor the recognition of his talent as a public speaker was not confined to the people of Minnesota. It was after his speech at the Gridiron Club banquet in Washington, in December 1907, that he was first mentioned as a presidential possibility. In 1908 his name was presented to the Democratic convention by the Minnesota delegation and he received 46 votes. His untimely death, due to appendicitis, in 1909, plunged the State into sorrow and has occasioned much speculation as to whether, had he lived, he might not have won the Democratic nomination which was awarded Woodrow Wilson in 1912.

John Albert Johnson was a giant cut down long before his time.

Mr. President, I ask unanimous consent that an article entitled "Governor Johnson Honors Set," published in the St. Paul Pioneer Press, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNOR JOHNSON HONORS SET

(By Fred Neumeier)

Fifty years ago on September 21, 1909, Gov. John A. Johnson, whose national reputation indicated he might some day be called to the presidency of the United States, died.

On Sunday, September 20, St. Peter, his birthplace, will observe that anniversary with a program in front of the court house there where stands a monument in his memory.

He was a Democrat and three successive times he was elevated to the governorship in a State strongly opposed to his political party.

Cyrus Northrop, president of the University of Minnesota, wrote at the time of his death "mourning over his untimely death has hardly been equaled by the mourning of any other citizen except Abraham Lincoln."

Men and women wept in public when his death at Rochester following an operation became known. Fifty thousand persons were said to have been in the sad procession of farewell at the State capitol and their footsteps wore a path in the stone.

On the day of his funeral in St. Peter all business was stayed. In some degree the whole Nation mourned. Warships in New York harbor dropped their flags to half mast. Telegraph wires were crowded and mails congested with expressions of grief. Hundreds of memorial meetings were held.

Newspapers reported that "everywhere it was sadly realized that the Nation had lost a leader of hope and strength."

After the funeral his staff in the Governor's office raised a trust fund for the perpetual care of his grave and, twice a year, on Memorial Day and the anniversary of his death, to place a floral wreath at his monument in St. Peter.

When the memorial services are held Sunday, September 20, civic and political leaders from throughout the State are expected to be present. Governor Freeman will speak. Arrangements are being made by Henry M. Benson, former State senator and attorney general, and Robert Wettergren, both of St. Peter.

Her Four Rockers Prove a Point

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. McINTIRE. Mr. Speaker, during the 8 years I have had the privilege of representing the Third Congressional District of Maine, I have had the distinct pleasure of working with May Craig, a truly distinguished newswoman.

As the very capable correspondent for the Press Herald Publishing Co., of Portland, Maine, May Craig reports the news of interest to Maine citizens. In addition, she writes an excellent column entitled "Inside Washington," which informs Maine readers about interesting individuals and places and also presents her observations relative to domestic and international issues. These observations are drawn from a wealth of personal experiences at home and abroad, including her firsthand observations of the world leaders.

The Evening Star of September 8, 1959, carried a very interesting feature article about this high caliber newswoman, one written by Rose McKee and entitled "Her Four Rockers Prove a Point."

Mrs. McIntire and I have, on more than one occasion, been present in May's home for dinner. May is a most gracious host.

I wish to take this opportunity of inserting the article previously referred to into the RECORD, thereby paying tribute to one I consider to be among the most distinguished newswomen of America:

[From the Washington (D.C.) Evening Star, Sept. 8, 1959]

HER FOUR ROCKERS PROVE A POINT

(By Rose McKee)

Washington Newswoman May Craig, whose questions on a television press panel have made her something of a national figure, has a home which her friends say "looks just like May."

Its walls and most of its furnishings are in blue or rose. These are the costume colors for which Mrs. Craig was noted on Capitol Hill long before she became a TV personality. Her home is trim and pretty, with crisp white organdy curtains at the windows and, coupled with all the modern amenities, the suggestion of a Victorian air. Each room has a radio for handy tuning in on the latest news.

Mrs. Craig, a grandmother and mighty proud of it, does not admit to having a living room. "I call this a parlor," she explained as she sat back on a blue sofa in her blue-papered front room. She has four rocking chairs in the parlor.

"My friends laugh at me for having rocking chairs," Mrs. Craig said, "but I notice they all like to sit in the rocking chairs."

Her red brick house, 100 years old, has gone through various modernizations, including some to provide an abundance of storage space. The house is filled with pretty things she has picked up on news-hunting travels around the world.

HER DINNERS

Mrs. Craig is noted for her small, intimate dinner parties at which there is usually a guest of honor who is in the news and some of her news-gathering friends. She never has more than 12 at her dining room table and she prefers 10 but thinks 8 "is best of all."

Conversation at her table is apt to turn into a frank and spirited political discussion, as when she has entertained for presidential aspirants before the party conventions. Everything said is "off the record" but reporters are free to check the next day with the guest of honor for permission to use what they consider news.

Possibly one reason May Craig's dinners are such a success is that she has no worry over menus. She has a basic dinner which she serves at every party. She said, "A dinner, like your house, should be typically yours. People remember it if you have a speciality and look forward to it. If you have a good menu, why change? You can't improve it."

She likes her table to be "white and pretty." She always uses white linen, white flowers in a crystal vase on a mirror, white candles in glass candlesticks and gold-edged white china.

The cooking is done by her prized housekeeper, Louise Jacobs, who has been with her since her children were little and has never had another employer.

Mrs. Craig has her personality stamped even on her manner of serving. Everything is always on plates direct from the kitchen to avoid passing, which she dislikes, and the order never varies.

The first course is a big salad, arranged to make the "plate look pretty." Then comes a plate with half a chicken, two halves of spiced peaches that have been soaked in brandy for 24 hours, and maybe a sprig of parsley or green vegetable for color contrast. There is one definite variation to the course—she serves either cornbread, spoonbread, or biscuits.

DESSERT

Fruit with cordial to pour over it is Mrs. Craig's favorite summer dessert. In winter she serves vanilla ice cream with a topping, usually of chopped preserved fruit, the kind used in making fruitcake. Coffee is served at the table in pretty individual cups gathered from around the world.

Her home is so near Capitol Hill that when her children were young they used the big tree-shaded Capitol ground as their playground.

The house has one room that records May's life and times. This is her office, upstairs off her bedroom. Its walls are papered with pictures of the great and neargreat about whom she has written for her Portland (Maine) papers. Included are presidential press conferences in which she is shown and which go back to one held by then President Herbert Hoover. Among autographed photographs is a full-length of Mrs. Franklin D. Roosevelt, taken at the time of F.D.R.'s inaugural. Mrs. Roosevelt has been the honor guest at several May Craig parties.

Harpers Ferry Prepares To Mark Centennial of John Brown's Raid

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, September 9, 1959

Mr. RANDOLPH. Mr. President, it has been my privilege to point out during prior service in the House and recently in this forum the historical significance and picturesqueness of Harpers Ferry, W. Va., at the junction of the Potomac and Shenandoah Rivers—and only a brief driving time distance from the Nation's Capital.

Reenactment of some of the most eventful of Harpers Ferry's history will take place during a 4-day centennial program there, October 15 through 18, 1959.

In this connection, I ask unanimous consent that there be printed in the Appendix of the RECORD two well-written and interesting articles, one by Carl Irving published September 7, 1959, in the Washington Star and the other by Jean White published September 8, 1959, in the Washington Post.

There being no objection, the articles were ordered printed in the RECORD as follows:

[From the Washington (D.C.) Evening Star, Sept. 7, 1959]

HARPERS FERRY PREPARES TO MARK CENTENNIAL OF JOHN BROWN'S RAID

(By Carl Irving)

HARPERS FERRY, W. VA., September 7.—On the dark and rainy night of October 16, 1859, a bearded Ohio farmer and 18 men slipped down from the Maryland heights, crossed the Potomac over a covered bridge and captured a national armory.

Before the night was out, John Brown and the town of Harpers Ferry were bound inseparably in a drama which proved a prelude to the Civil War. His plan to arouse and arm the slaves and form a nation was shattered in less than two days.

Now the residents of the old town and the nearby communities are getting together a centennial observance (not a celebration, they make clear) about the raid, trial and hanging, which were to stir debates that still go on.

The 4-day centennial program, October 15 to 18, will include tours of the restored sections of the town, exhibits of a century ago and a drama, "The Prophet," relating the Brown story.

VIVID LEGEND

The raid is a vivid legend to the old timers who live among the stone houses that perch almost precariously on the slopes of the steeply rising town at the junction of the Shenandoah and Potomac Rivers.

William V. Marmion recalls that his father was a youth at the time of the raid. His grandfather, a physician, tended to some of the wounded who were struck by bullets from Brown's raiders.

"My father (later Assist. Surg. William V. Marmion of the U.S. Navy) often told how he and his brothers went hunting with Brown's men over by their farm in Maryland. Brown called my father Willy and took quite a fancy to him."

Willy and his brothers noticed lots of weapons being stored at the farm, but Brown had told them "he just made a hobby of it," Mr. Marmion, a retired Washington attorney, recalled.

TOWN RESTORED

John Brown would probably recognize Harpers Ferry today. The Park Service is trying to restore parts of the town to the way it looked during its great moment in history.

A careful collection and study of maps and photographs, diaries, letters and newspapers have helped historians get a clear view of Harpers Ferry in 1859.

Several buildings constructed later have been torn down. Others that were there when Brown arrived have been repaired and cleaned up. The block where most of the fighting took place is lined now with empty white stone buildings, their patched windows displaying some of the relics of the period.

Archeologists have dug through layers of flood silt, shattered stone, rusted metal, fragments of wood and brick to expose the foundations of the old arsenal which Brown's men occupied. They are now digging for the remains of the once-famous rifle works now covered by swampy silt, trees and damp shrubbery.

BROWN'S CAPTURE

Brown and the surviving raiders were eventually surrounded and captured in a firehouse at the armory, then across the street from the arsenal. It now stands on the highest point of the town, the abandoned Storer College campus.

Marines, dressed in the uniforms the corps wore then and 2 years later at the first battle of Bull Run, will reenact the storming of the firehouse on October 17.

The old paymaster's office where the wounded Brown was held overnight has been restored and is the headquarters for the Park Service, which designated Harpers Ferry a national monument in 1955.

The jail in neighboring Charles Town, where Brown was taken, has disappeared. But the courtroom in the 123-year-old courthouse is still in use, with the same long, oak benches that were jammed during the week-long trial. The records in the clerk's office next door list the conviction of Brown for treason against Virginia, conspiracy to incite the slaves, and murder. One faded paper carefully notes that Brown was hanged between 11 and 12 o'clock, December 2, 1859.

GALLOWS MARKER

A small stone marker at the corner of a house a mile from the courthouse shows where Brown was hanged.

The centennial play was written by a Texan, Edwin W. Dace, who teaches drama at Sweet Briar College, Virginia. The only nonresident in the cast is Timothy Rice, a drama student at American University in Washington.

"We needed a tall man with a tremendous speaking voice, for without a strong John Brown the play would have fallen to pieces," explained the centennial chairman, Mrs. Cyrus Cavalier.

Mr. Rice, 21, is president of the University Players and won the best actor award 2 years ago at American University. Mrs. Cavalier will direct the cast of 50 and Dr. J. H. Yokum, theater director at American University, will handle the lighting and design the set.

ANTIQUE SHOWS

The residents, who will be attired in costumes of the 1850's, will conduct antique shows and sales and motorcades through neighboring towns.

Mrs. Cavalier pointed out that many residents were only lukewarm about any kind of a program. Brown's raiders killed several Harpers Ferry residents, including the popular mayor, Fontaine Beckham.

The residents decided, for that reason, to tone down the ending of the play, she said. Omitted was Brown's last message, which he had scrawled on a scrap of paper and handed to a bystander as he was led to the scaffold. It said:

"I, John Brown, am now quite certain that the crimes of this guilty land will never be purged away but with blood. I had, as I now think, vainly flattered myself that without very much bloodshed it might be done."

COMMANDER'S PROCLAMATION

Instead, the play will close with the proclamation of a Virginia militia commander:

"So perish all such enemies of Virginia. All such enemies of the Union. All such foes of the human race."

"Then," said Mrs. Cavalier, "there will be the song 'John Brown's Body' and everyone in the audience can decide what to think for

himself. We didn't want the play to end with a sermon by John Brown."

Some of the lighter moments of the centennial will include the judging of costumes and best beards, grown by residents during the summer. There will be concerts by the Charles Town and Harpers Ferry High School Bands.

The Sharpsburg Rifles, a group of men dressed in Union uniforms of the Civil War period from Sharpsburg, Md., will conduct a drill. Similar units in Confederate uniforms are expected to appear during the centennial.

[From the Washington (D.C.) Post, Sept. 8, 1959]

JOHN BROWN'S RAIDERS TO RIDE AGAIN IN HARPERS FERRY CENTENNIAL PAGEANT

(By Jean White)

If John Brown's body lies a moldering in the grave, his legend still goes marching on at Harpers Ferry, W. Va.

Pageantry, drama, ceremony, and sham battles will be featured when Harpers Ferry stages the centennial of John Brown's famous raid October 15–18. The citizens will toss a big affair for the strange, fiery-eyed outsider who came out of the hills to put the little town on the historical map and make it celebrated in song and poetry.

The centennial of John Brown's raid will be the opening curtain on a growing series of reenactments and celebrations coming up in the century after the Civil War.

On a rainy Sunday night, the 16th of October 1859, Brown led 18 raiders down from a farm hideout to seize the government arsenal and armory at Harpers Ferry. The sheer madness of the raid has made it a fascinating fillip to history ever since. For 2 days, Brown and his little band of fellow fanatics held the arsenal, expecting slaves to rise up to support their abolitionist cause.

RAIDERS BOTTLED UP

Townsmen and militia bottled up the raiders until Col. Robert E. Lee and Lt. J. E. B. Stuart—to be heard from again later—arrived from Washington to take command of the forces, including a detachment of marines. Brown and six other survivors were captured in an old enginehouse and later hanged.

The big centennial show this fall will include the world premier of "The Prophet," a three-act historical drama. Timothy Rice, an American University drama student, will resurrect John Brown and take him to the gallows. There will also be a sham battle between Union and Confederate units and a reenactment of the storming of the enginehouse—with the marines called in again to supply officers.

When Brown swooped down on Harpers Ferry in 1859, the attention of the Nation centered on the quiet, thriving town of 3,000. This fall the centennial planners hope again to focus attention—and tourists—on the town, now down to fewer than 700 residents.

ARSENAL NEVER REBUILT

After the war, the arsenal later burned to the ground, was never rebuilt. Floods periodically ravaged the town, and after the great one of 1936 the lower downtown section of Harpers Ferry was abandoned and became a ghost town of tattered posters and dark windows.

But the trains of the Baltimore & Ohio Railroad, which carried the word of John Brown's raid to the outside world, still rumble pass the town, linking the past and present. And the National Park Service now has taken over some 515 acres for the Harpers Ferry National Monument.

Just last month, an archeologist working for the National Park Service dug up the used and twisted remains of 15,000 guns stored in the arsenal—dramatic evidence of the violent events that followed less than 2 years after John Brown's raid. By then, the Nation was at civil war, and Union troops soon were to march to the words:

"John Brown's body lies a-moldering in the grave,
His soul goes marching on."

On April 18, 1861, a small band of Federal troops at Harpers Ferry sprinkled gunpowder over the cache of guns in the arsenal and burned them to keep them out of Confederate hands. Later the Confederates destroyed the gunmaking armories as the little town changed hands some half dozen times during the war.

These days will come back to life during the big centennial.

Helen Mozelle Cavalier has arranged a 4-day schedule to cover the events from the day of final preparation for the raid to the time Brown was captured and removed to the county jail at Charles Town to await trial.

There will be four performances of "The Prophet," a style show with some authentic costumes still in possession of Harpers Ferry residents, a beard-growing contest, a sham battle between the Sharpsburg Rifles and the Big Pool Confederate Unit, and a restaging of the Marine attack on John Brown's fort.

The fort—a white-cupolaed enginehouse—now rests on the campus of Storer College. It was dismantled in 1892 for the Columbian World Exposition in Chicago and then reassembled on the college campus. The National Park Service hopes some day to put it back on the original site—now marked only by a rectangle of stones.

National Park Service has set up self-guided walking tours about Harpers Ferry for visitors, and a museum.

The centennial committee has arranged special excursion trips from Washington and Silver Spring to Harpers Ferry on the centennial days. If all goes well, the citizens hope to make an annual affair of John Brown's raid.

Election Day Holiday Urged

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. GRANT. Mr. Speaker, it has come to my attention that our colleague from Alabama [Mr. ROBERTS] has introduced legislation calling for a new legal public holiday every 2 years to be known as Election Day.

The purpose, of course, would be to overcome the comparatively low turnout of voters in national elections.

Under leave to extend my remarks, I wish to include an article on this subject which appeared recently in the Sylacauga (Ala.) Advance; and also an editorial which appeared recently in the Anniston (Ala.) Star.

The article and editorial referred to follow:

[From the Sylacauga (Ala.) Advance]

FOR GENERAL ELECTIONS, ROBERTS' BILL WOULD MAKE VOTING DAY U.S. HOLIDAY

WASHINGTON.—Would more Americans vote if election day was a national holiday?

Representative KENNETH ROBERTS, Democrat, of Alabama, thinks so. He is sponsoring a bill that would create a new legal public holiday on the present general election day in all the States except Maine: The first Tuesday after the first Monday of November in each even-numbered year.

"In this country," he said in an interview, "we make it difficult for many of our people to get to the polls, and yet we deplore the fact that more of them don't turn out. In the 1958 general elections, for instance, only 60 percent of the registered voters in the United States cast their ballots.

"We note with envey that 90 percent of the registered voters in Finland go to the polls, a record of 97.9 percent have turned out in Austria, 83 to 85 percent in France and in Germany, over 82 percent in Sweden, 77 percent in the United Kingdom and so on.

"But it is seldom explained that these other countries generally hold national elections on a holiday or on a nonworking day."

A few foreign countries, he said, hold elections on Sunday, and on occasion this has been proposed in the United States.

How does ROBERTS feel about that?

"I do not believe the God-fearing American people want Sunday elections," said ROBERTS, who comes from what the late Henry L. Mencken called the Bible Belt.

"Many religious people might think Sunday voting was in conflict with the words of the Book of Exodus: 'Remember the Sabbath day to keep it holy.'"

The other day ROBERTS told a House Judiciary Subcommittee that a lot of potential voters are discouraged by the fact that our general elections come on a regular working day.

"That means for most," he said, "that they must ask special permission from a supervisor to get off and vote. Or that they must wait until after working hours—when the polls are crowded and they are tired."

"It's all very well to spout high-flung phrases about the citizen's duty to vote, and to say that all of us ought to be willing to go to a bit of extra trouble to cast our ballots. But the fact remains that we ought to make it easier for those who like to vote to do so."

ROBERTS thinks that, if Independence Day is important enough to justify a July 4 holiday every year, then surely the day on which millions of voters have a chance to demonstrate their personal independence through the ballot is worth a holiday every other year.

It is doubtful that the subcommittee can act on ROBERT'S proposal this year, since all major departments of Government will be asked for comment on a plan that would mean an additional day off for Federal employees. But the Alabamian is serious about this, and he hopes all concerned will take it seriously, too.

[From the Anniston (Ala.) Star]

ROBERTS SCORES ONCE MORE

The proposal in the House of Representatives by KENNETH ROBERTS, our excellent Representative from this district, has received national attention again by his proposal that general elections in this country be declared national holidays.

The objective in this instance is to get a much larger number of American citizens to go to the polls and to exercise their franchise in behalf of men and measures of their choice.

Old World countries vote on Sunday, but that would not be tolerated in this country.

Nevertheless, it is next to a national disgrace that so many of our citizens fail to vote, as we are far below other civilized nations of the world in that respect. A national holiday for better elections may be the answer to better citizenship, as Mr. ROBERTS believes.

In Praise of Maine and Its Lady Senator

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which appeared in the Portland Press Herald on August 13, 1959, entitled "In Praise of Maine and Its Lady Senator."

While the letter pays tribute to Maine, its emphasis is upon the work and achievements of our distinguished colleague, MARGARET CHASE SMITH, the senior Senator from Maine. As the letter points out so well, Senator SMITH is a great Member of the body, and faithful and effective in her work in the Senate, and to the interests of Maine. The letter also calls to mind the human qualities of interest in the problems of the people she represents, both in Maine and the Nation.

All of us who serve with her recognize her effective and distinguished service, which has been confirmed time and time again by the support of the people of Maine.

I would like to note also that Mrs. Bessie S. Cheatham, the author of the letter, visits the Senate almost every day, and with intelligence and good judgment, is a very discerning observer of the work of the Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Portland (Maine) Press Herald, Aug. 13, 1959]

IN PRAISE OF MAINE AND ITS LADY SENATOR

(Editor of the Press Herald)

Here's to Maine—the only State from Maine to Hawaii that has a lady Senator. How the hearts of the women must swell with pride whenever they name her—MARGARET CHASE SMITH. She is always there, at the Senate's beck and call. She takes no trips while the Senate is in session. She travels in the fall, when the Senate has adjourned and the Senators go to their homes to learn first hand what their constituents want and desire.

I have seen her on the floor, I have heard her speak, I've watched her vote, I've seen her in committee meetings, I've listened to her questions, when she was securing information. She is helpful to constituents when they come to Washington. She delights the groups of high school boys and girls when they come from Wiscasset, Caribou, Lisbon Falls, etc. They think they have seen the best of the Senate when they have seen and talked with her. They speak of her as "Our Representative from Maine." And they are happy when they have met her.

She is most careful in how she votes, so she will be sure to vote right, and as her good judgment tells her. She holds the record as to the number of her votes. She has not missed a recorded vote in 637 times.

If you don't have enough Republicans to reelect her, or enough Democrats to reelect her, then pool your forces and your resources, and reelect Senator MARGARET CHASE SMITH, either to the Senate, or to the vice-presidency.

Mrs. BESSIE S. CHEATHAM.

WASHINGTON, D.C.

The Sad Plight of the Migratory Worker Demands Immediate Congressional Action

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, September 7, 1959

Mr. COLLIER. Mr. Speaker, the fall harvest is at hand, and nearly a half million migratory farm workers will begin their trek across the Nation. In the orchards and fields these workers will gather up nature's yield of a bountiful year.

It is truly a shame that these nomadic toilers are not provided with decent housing, wages, and transportation. In some sections of the country they work under considerably better conditions than in others and the wages are more adequate depending upon the location and type of harvest but certainly it cannot be denied that legislation is sorely needed to establish better minimum standards for these people who are frequently overcrowded in totally inadequate housing facilities with lack of beds and bedding and substandard sanitation facilities.

According to the report of the President's Commission on Migratory Labor, some of these workers are required to sleep in the open, completely exposed to the elements. It is an undeniable fact that these workers are often packed into trucks by the hundreds like sardines for long trips from one area to another.

Tomorrow the Labor Department will conduct hearings which offers some ray of hope for improvement of these conditions and minimum standards for migratory workers.

While these folks choose this type of work and even the way of life it has traditionally required, the fact remains that without them, millions of dollars' worth of fruits and other crops would literally rot on the vine if they did not take to the open country each year.

Among the proposed regulations which will undoubtedly stem from the hearings along with the revelations of the President's Commission report will be: A regulation to provide through State public employment offices, adequate and sanitary housing before such agency will fill any request for workers. This, of course, would mean guarantees conforming to applicable housing and sanitary codes.

The State agencies will probably be required to make sure that pay offered will equal the prevailing rate in the area for similar jobs.

The prospective employer will probably be required to guarantee better transportation than is now provided.

Charging an invasion of States rights some farm State legislators challenge the authority of the Labor Department to implement such regulations. There may be a legal basis for their position. On the other hand, the Justice Department upholds the legality of the Federal Government to legislate standards of this nature. This might or might not be challenged where migratory workers would operate within a State and would not cross State lines in the course of their employment.

Regardless, this is a problem which the legislators can no longer ignore, and legislation at some level should and must be enacted to meet it squarely during the 86th Congress.

In the Law's Finest Tradition

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. CASE of New Jersey. Mr. President, a few days ago the St. Louis Post-Dispatch published an editorial, "In the Law's Finest Tradition." The editorial concerns the award of the American Bar Association's highest honor to Grenville Clark, who has been a member of the bar more than 50 years. The editorial also makes mention of the fine work of Joseph Harrison, of Newark, N.J., who in 1958–59 was chairman of the American Bar Association Committee on Constitutional Rights, originally proposed by Mr. Clark. Under Mr. Harrison, the committee has carried on its work, in the words of the editorial, "in the spirit and tradition of Grenville Clark."

I ask unanimous consent to insert the full text of the editorial in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN THE LAW'S FINEST TRADITION

It is not easy to convey the deep significance of the award of the American Bar Association's highest honor—its gold medal "for outstanding service to the legal profession"—to Grenville Clark, of Dublin, N.H., who became a member of the New York bar more than 50 years ago. For while Mr. Clark's long and distinguished career is an exemplification of the finest traditions of the law, his conviction that a lawyer must be devoted to the practical application of the Bill of Rights has involved him in controversial issues over which his colleagues have split far apart.

On Grenville Clark's Army services in World Wars I and II, in which he was the far-seeing initiator of vital troop training programs, there can be only complete agreement. He helped notably in the winning of both wars and the Distinguished Service Medal which he received was a patriotic recognition fully earned. But when he reminded the American Bar Association in the 1930's that it is "the duty of true conservatives to support the Bill of Rights regardless of the unpopularity of the citizens whose rights might be in jeopardy," he opened up a debate that was still being heard last week on the floor of the American Bar Association's house of delegates at the 1959 convention in Miami Beach.

Grenville Clark's original proposal to the American Bar Association on constitutional rights led to the establishment of the bar's standing committee on the Bill of Rights of which Mr. Clark himself was the pioneering first chairman, 1938–40. Under his leadership the Bill of Rights committee entered aggressively into ugly situations which

needed its attention. For example, it went so far as to file a memorable brief in support of the rights of the Jehovah's Witnesses family in the first compulsory flag salute case, *Minersville (Pa.) School District* v. *Gobitis*, which, after a first defeat, triumphed in the Supreme Court.

Since those early days this important committee has had an uneven record depending on its membership, but the 1958–59 chairman, Joseph Harrison of Newark, N.J., saw to it that its work was in the spirit and tradition of Grenville Clark. When Mr. Harrison presented the committee's detailed 6-to-1 report with the conclusions that the recent Supreme Court decisions had not harmed national security, this set off one of the sharpest debates in the American Bar Association's house of delegates in many years. Past Presidents Loyd Wright of Los Angeles and Frank E. Holman of Seattle attempted to table the findings. Past President David F. Maxwell of Philadelphia and Charles S. Rhyne of Washington, supported by President Ross L. Malone of Roswell, N. Mex., led the fight, not as supporters of the report, but in the belief that it should be received for attention and study, without formal approval or disapproval.

In the end the open-minded, forward-looking leadership won out and the report was not tabled or suppressed but accepted in accordance with practice. It was just such a battle as Grenville Clark carried through to success more than 20 years ago, for the fight for liberty is continuous and never ending. Many important subjects were taken up at the American Bar Association's 1959 convention, some of them in the presence of leaders of the British and Canadian bench and bar, as well as before Justices Brennan, Clark and Stewart of the U.S. Supreme Court and other legal and judicial leaders. But none is more urgent than the responsibility of the individual lawyer, whoever he is and wherever he may be, to stand up in his own life and work for civil liberties at home and for peace in the world through reliance on the rule of law between nations.

The Time To Act Is Now

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. ADAIR. Mr. Speaker, elsewhere in today's RECORD, I included an article from the Indianapolis Star. Herewith is an editorial relating to the same matter—that is, the Communist menace in Latin America:

THE TIME TO ACT IS NOW

Senator STYLES BRIDGES, of New Hampshire, has called for a congressional investigation of the dangerous attempts by the U.N. Economic Commission for Latin America to obtain secret industrial information from Latin American power companies—information that could lead to massive industrial sabotage. This attempt is especially dangerous when it is known that the head of the ECLA energy development and hydraulic resources program is hardly a reliable character. The U.S. Attorney General once demanded that the State Department have his U.N. credentials taken from him because of his constant association with Communists and fellow travelers.

Certainly Congress should investigate as much as it can. It should also demand that the State Department do everything possible to prevent this secret defense information from falling into the hands of the U.N. Commission. Possession of such information by any enemy would be a direct danger to the security of the United States. With it in his possession the enemy could paralyze the whole of Latin America in a single coordinated act of sabotage. Without electric power Latin America would be as fully knocked out as if it were hit by 100 atomic bombs.

Investigation into the whole direction of these U.N. economic agencies, staffed as they are with Socialist and Communist experts, is certainly in order. If the activities of these U.N. agencies are threatening the economic and military security of the United States it is time to stop them in their tracks.

The United States pays one-third of the entire U.N. budget. We are the host nation. That surely gives us the right to demand that our interests be protected from sabotage and economic infiltration. It is the duty of the State Department, as it would be the duty of the armed services, to act swiftly to prevent this developing economic and military danger to the United States of America.

The Texas Commission for the Blind Enables Sightless Citizens To Help Themselves and Others

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, September 9, 1959

Mr. YARBOROUGH. Mr. President, although he can no longer see, a blind person has a great many other talents which can be utilized. The Texas Commission for the Blind is helping many sightless people. By learning to utilize his other talents, the blind person receives the invaluable ingredient of self-respect so necessary to a complete life. And society receives another contributing citizen.

A great deal more needs to be done in helping blind persons to complete rehabilitation, but steps are being taken in the right direction.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Vernon Fewell from the Houston (Tex.) Chronicle for Sunday, September 6, 1959, entitled "Offers Security—Plan Uses Talents of State's Sightless."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OFFERS SECURITY—PLAN USES TALENTS OF STATE'S SIGHTLESS

(By Vernon Fewell)

In the black frustration of blindness there is no greater gift than certainty—a strong, sure sense of security in a world of sound and touch.

It was to offer the sightless a secure grip on life that 17 years ago Texas entered into a program to make businessmen of blind men. The investment was well rewarded.

Last year the operators of 120 blind stands in Texas did a gross business of $1,650,000 and collected a net profit of $305,061. This is an average of $250 per month profit per stand.

All of it was done under the business enterprise program of the Texas Commission for the Blind, a program dedicated to putting to use the ample but undirected talents of the sightless.

Fifteen such blind-operated notions and snack bars dot the Houston-Pasadena-Rosenberg area, a dozen of them in Houston.

They are found in public buildings, such as the downtown postoffice or the Veterans' Administration Building and in many private industries where they compete on equal terms with caterers and other concessionaires.

Houston's 12 stands recorded a healthy profit in the fiscal year which ended June 30, averaging a net of $470 a month each. Their gross was $265,000 with a total net profit of $57,000.

One operator, using three full-time employees, chalked up a net of nearly $950 a month on a volume of $9,000.

Such statistics convinced the legislature this year to authorize the opening of 10 more stands in Texas—3 of them in Houston. They are now in the process of location.

Under the law, the legislature appropriates a reserve of funds on which the commission may draw to establish new stands. Initial cost of stock and equipment runs about $3,000.

When a blind person is assigned to a stand under the vocational rehabilitation program he retains all the profits of the operation. The State holds title to all the equipment and charges a small fee for maintenance, depending on the volume of business.

Operators are selected in a careful process of counseling and examination to determine eligibility and aptitudes. A person must be 80 percent sightless to qualify for the State aid, and then must go through a 3-month training period if selected.

Supervising the blind stand program in Houston and southeast Texas is the job of George Broyles of the Commission's District Six office in the M. & M. building.

Keeping an eye on some 20 of the independent agents means maintaining a constant liaison service between them and Austin.

It also means lending a hand with their problems—the purchase of new equipment reordering stock, bookkeeping, or what have you. But the business is a different story. It's all in their hands.

Biggest problem, says Broyles, is opening up new stands.

Once it was thought that public buildings were the best locations. Now locations in private industry have been found to be more desirable and more profitable as well.

Free World Is Facing Danger Grave and Urgent in Southeast Asia

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, September 9, 1959

Mr. ANDERSON of Montana. Mr. Speaker, there is a small section of earth where today forces of evil are violently simmering under the cunning stirring

of the Communists. These evil forces are being directed against Laos, a tiny country which is a vital part of the free world in southeast Asia.

Some writers have been decrying "waste and corruption" in this country, basing their "facts" on hasty visits with a few malcontents, or else "warming over" old scandals at this critical period in Laos' life.

I think Americans deserve better information about Laos and the terrific part it may play in shaping the military lives of American citizens. We have gained prestige and confidence of southeast Asians. Everything we have gained, however, can be quickly lost if we pay heed to misinformation and slanted articles. On the other hand, there are at least two outstanding writers who know at firsthand whereof they speak, and who have the rare capability of fully and fairly evaluating the facts. One of these gentlemen is Ernest K. Lindley of Newsweek. Another is Joseph Alsop, New York Herald Tribune columnist. Mr. Alsop, in his syndicated column Matter of Fact declares "Danger Grave and Urgent" exists. His article follows:

VIENTIANE, LAOS.—The danger created by the renewed Communist aggression against Laos is certainly grave and may be very urgent too.

This renewed aggression took the form of an invasion of Laos by not more than 2,500 troops from Communist North Vietnam. In a normal country it would be outrageous but hardly dangerous. Laos, however, is far from being a normal country.

Laos' small army of 25,000 men, almost devoid of heavy weapons of any sort, with no reliable or rapid communications system, is not a normal national army, even although it is generally a tough and courageous army. Laos' terrain, mountainous, jungle-clad, and almost wholly without roads, is not a normal national landscape. Laos' population, almost 50 percent composed of tribal peoples doubtfully attached to Laos, is not a normal national population.

All of these abnormalities are very heavy initial handicaps in a war like this strange war in Laos—a war against local Communist dissidents fighting in the jungle as guerrilla units, with the strong support of invading Communist units from North Vietnam. The first important thing to note about this war is that the invasion from North Vietnam is the key fact. Until the first border crossings occurred on July 15, the Laos Government and Army were making good progress in unifying the country and liquidating all Communist influence.

The first border crossings in July had immediate effects. They created an acute military problem in the two northern provinces, Phong Saly and Sam Neua. The first effect, therefore, was to drive the Lao Army to strip all the other provinces, in order to reinforce the two invaded provinces.

Meanwhile, of course, the remaining Communist undergrounds in the rest of the country went over into open rebellion as guerillas. The second effect of the invasion in the North was to leave the Lao Army with insufficient resources in the rest of the country to stamp out the suddenly created centers of guerilla activity. Thus something like six important areas of Communist guerrilla power came into being, including an important area in Luang Prabang province, on the approaches to the royal capital.

The first invasion might have done the job, in fact, if the Lao Government had not intercepted a general order from the Communist executive committee for Laos, signed by the military member, Col. Sing Papo. This order, intercepted in May, gave the detailed program of the present aggression. As a result the government moved preventatively.

One of the two Communist battalions in the Lao Army, left over from Lao neutralist period, was quickly disarmed. (The other, unfortunately, escaped to play a big role in the present fighting.) The provincial undergrounds were also greatly weakened by preventive arrests and executions of the better known terrorists.

Quite largely for this reason, the initial aggression on July 15 did not produce the expected results. The northern provinces did not immediately fall to the invaders. Phong Saly, in fact, had been just about cleaned up again when the renewed invasion occurred. The guerillas in the other provinces, although they could not be stamped out, also failed to spread their influence and cause general panic. Just before getting the news of the second invasion of Laos, the commander of the Lao Army, the tough and brave Gen. Ouane Rathikoune, told me:

"The army is stretched to the utmost, but I am sure we can win this war if no more units come in from North Vietnam. Everything depends on that."

When the general said this, the second invasion of Laos had already occurred, although his lack of communications had kept the grim news from him. With the Lao Army already "stretched to the utmost," the design of the second invasion is obviously to stretch the limited military resources of Laos beyond the snapping point. It is easy to see, moreover, how this design can succeed.

Twenty-five hundred men with heavy weapons may not seem like a great many men. But this small number is a serious threat to the government's limited local forces with few heavy weapons and sharply restricted possibilities of reinforcement. Thus the invaders may perhaps take Sam Neua Province at least, for example. If Sam Neua falls, the effect all over the country will be terrible and instantaneous. Fence sitters will flock to the guerilla centers. As another example, the guerilla forces in neighboring Luang Prabang Province, strengthened by new recruits, now having Sam Neua as a rear base area, may perhaps gain enough power to threaten the King's city of Luang Prabang.

In short, this can be a very bad business indeed. Although the new invasion of Laos has taken place in remote mountains and all but impenetrable jungles, it is still aggression, as naked, as flagrant as a Soviet-East German attack on Western Germany.

Bushel and a Peck and Our System's a Wreck

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, September 9, 1959

Mr. NEUBERGER. Mr. President, recently I introduced legislation to direct the Secretary of Commerce to conduct a study to determine the practicability and desirability of the adoption by the United States of the metric system of weights and measures.

My proposal is contained in S. 2420. The bill authorizes a 3-year study to determine the benefits and practical difficulties involved in switching to the metric system.

Since my submission of this measure, there have come to my attention several items bearing on the question with which S. 2420 is concerned. I would like to bring them to the attention of the Senate.

First. Dael Wolfle, executive officer of the American Association for the Advancement of Science, has forwarded to me a carbon copy of his letter of September 2, 1959, to the Senate Committee on Interstate and Foreign Commerce discussing the association's activities with regard to the metric system and urging serious consideration of S. 2420.

Second. In the August 30, 1959, issue of the Oregon Journal, of Portland, Oreg., there appeared an excellent editorial, entiled "Foreign Markets and the Metric System," pointing out the implications of our system of weights and measures in international trade and noting possible business losses this country may suffer in competition with other nations due to our peculiar measuring methods.

Third. In the August 2, 1959, edition of the Journal there was published an amusing and informative article regarding the metric system entitled "Bushel and a Peck and Our System's a Wreck."

I ask unanimous consent that these three items be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE,
Washington, D.C., September 2, 1959.

Mr. EDWARD JARRETT,
Committee on Interstate and Foreign Commerce, Senate Office Building, Washington, D.C.

DEAR MR. JARRETT: I am writing to furnish in a little more detail the information I gave you last week by telephone concerning the interest of the American and British scientific community in studies of the feasibility and possible desirability of the adoption of the metric system.

The question has long been of interest to scientists, for metric units are in most cases easier to use than English units, and are much more frequently used in scientific work. Two years ago the British Association for the Advancement of Science, stimulated by European Common Market thinking, appointed a committee to carry out a rather extensive study of the problems, the costs, and the possible advantages of the conversion of British industry to metric units and of the simultaneous decimalization of British currency. The committee has had the cooperation of British industry, and is now in the process of preparing a report that, I anticipate, will give considerable detail concerning the problems and costs of conversion in various segments of British industry. The British committee has been under the chairmanship of Sir Hugh Beaver of the Guinness Co. and has had as its vice chairman and active leader, Mr. A. H. Hughes of the same company.

The report of the British association committee will probably be a joint publication of the British Association for the Advancement of Science and the British Chamber of Commerce. I hope that it will become available sometime during the winter.

To work in parallel with the British committee, this association appointed a similar committee at the end of 1957. Its chairman is Mr. Wilmer Souder, formerly head of the Metrology Branch of the National Bureau of Standards. Other members are: John

T. Johnson, president of the Metric Association in Claremont, Calif.; Robert J. Painter of the American Society for Testing Materials in Philadelphia; William G. Pollard of the Oak Ridge Institute of Nuclear Studies; Henry D. Sharpe, Jr., president of Brown & Sharpe Manufacturing Co. in Providence; and C. A. Whitten of the Coast and Geodetic Survey.

At our annual meeting in Washington, D.C., last December, one major part of the program consisted of a symposium on national and international aspects of systems of units in science and technology. The papers for that symposium were prepared by men representing a number of different points of view, different countries, and different types of use of various systems of measurement. At our annual meeting this year (in Chicago, December 26 to 31) we are scheduling a further symposium on problems of measurement.

When the Committee on Interstate and Foreign Commerce comes to consider Senator NEUBERGER's bill, S. 2420, if it appears that any of the work or thinking of the committee or the papers of the symposia would be of assistance, we would be glad to supply you with any help we can.
